III. The firſt, or Rough Yellow, or Baſtard Succory. *Its Root is hard, rough, and uſeleſs. It has longer and rougher Leaves than thoſe of the former* Wild Succory; *in one ſort with few or no Cuts at all; in others like unto it, with deep Cuts and Diviſions. The Stalks riſe up to be 3 or 4 Feet high, rough and creſted, divided into ſeveral Branches, with ſmaller Leaves on them, and leſs jagged; bearing ſmall yellow Flowers like unto an* Hawkweed, *at the end of every one; which when they are ripe turn into Down with a ſmall long yellowiſh Seed faſtned thereto, and are both carried away with the Wind.*

IV. The ſecond, or ſmooth Yellow, or Baſtard Succory. *Its Root is long, pretty thick, taper, with ſeveral Fibres, and full of a bitter Milk. It has long and large Leaves as* ſmooth Succory, *but of a whiter green Color, cut in on the edges, but not ſo much nor ſo deep as the former. The Stalks riſe not up ſo high, nor are ſo much branched, and the Leaves on them are leſs cut in, and towards the tops little or nothing at all. The green Heads which ſtand at the tops of the Branches, are greater, and the Flowers which ſpring out of them are larger and more double, ſomething like thoſe of* Dandelion, *of a yellow Color, which turn into Down, and the Seed therewith are blown away with the Wind.*

V. The third, or Sweet Yellow, or Baſtard Succory of Naples. *Its Root is long and blackiſh on the outſide, and white within; ſo full of a ſweet Milk (without any Bitterneſs at all) as is alſo the reſt of the Plant, that it will grow hard like a Gum, if it be not rubbed away, but ſuffered to abide for ſome ſmall time. This in the Form and Diviſions of the Leaves, is very like unto the uſual* Wild Succory, *yet not ſo deeply gaſht, but thicker in feeling, covered with a fine ſoft hairineſs, not rough at all, and of a dark green Color. The Stalk riſes up to be two Feet or more high, round, firm, and whitiſh, becauſe of the hoarineſs thereon; ſometimes breaking out into Branches towards the top; ſet with ſhorter, ſomewhat broader and more divided Leaves than below, cloſing the Stalks at the bottoms; having at their tops green Hairy Heads or Husks, and gold yellow Flowers in long hairy Husks, like unto the* Hawkweeds: *which growing greater when they are ripe, contain within them ſmall long browniſh Seed, with a fine white Down on them, both which are carried away with the Wind.*

VI. The fourth, or our Rough Mountain Succory. *Its Root conſiſts of many long Strings, which ſends forth ſeveral long narrow Leaves next the Ground, very ſharply dented about the edges, but not divided or cut in at all, and rough alſo all over. From among which, riſes up a Stalk branched forth with ſuch like Leaves ſet thereon, and divers large double yellow Flowers at the tops, very like to thoſe of* Dandelion, *which turn into Down as the reſt, and blown away with the Wind.*

VII. The fifth, or ſtrong ill ſcented hoary Succory. *It has a pretty long thick Root, which ſends forth ſeveral weak, round, hairy or hoary Stalks, about two Feet high or more, having divers large long hairy or hoary Leaves next the Ground, deeply gaſht in on both ſides, not much unlike* Succory *Leaves, parted into many Branches, with leſſer Leaves thereon than thoſe below, and leſſer cut in alſo: at the tops of which Branches, ſtand many*

many pale yellow Flowers in green Husks, much like to Groundsel, *which quickly fade in like manner, turning into Down, which with the Seed is carried away with the Wind. This Plant has a strong ill Smell, which is yet more in the hotter times of the Year, from whence came the Epithet,* Fœtidum.

VIII. The sixth, or Wart Succory. *Its Root is small and stringy, dying every Year after Seed time, and never abiding a Winter, unless it springs up from the Seed in* Autumn. *It springs up, and spreads out several long, and somewhat hairy green Leaves next the Ground, cut or divided on the edges into deep Dents, but not deep Gashes, something resembling* Succory Leaves. *The Stalks are straked, and divide themselves into some lesser Branches, with a small long Leaf at every Joint, broad below, and encompassing it at bottom. The Flowers grow severally at the Tops and upper Joints of the Branches, upon short footstalks, being small and yellow, composed of many small yellow Leaves, broad pointed, and nickt in, which turn not into Down as the former sorts do; but into small round and flat hard Heads, parted at the Brims into several Bunches or Knobs, like unto Warts, with a little Tuft or Crown in the middle; in each Knob or Wart whereof, is contained a Kernel or Seed.*

IX. The seventh, or Swines Succory. *It has a small and long Root, from whence spring forth several long and rough Leaves lying on the Ground, smaller at the bottom, and broader towards their*

Swines Succory.

ends, unevenly waved or dented on the edges. The Stalks are a little rough, slender and bare of Leaves spreading out into several long Stalks, about 6 or 8 Inches high, bearing every one a large yellow Flower, like unto Hawkweed. *This Plant* Parkinson *will have to be a Species of the* Hawkweeds, *but* Gerard *and* Johnson, *account it among the number of the* Succories. *There is another of this sort, whose Leaves are smooth and narrower, differing but little in any thing else.*

X. *The Places.* The first, second and fourth are many times found in our Meadows and other moist Grounds. The fifth is often found in Sandy Grounds, and by Woods and Hedge sides. The third *Columna* found growing on Hills in the Kingdom of *Naples*; and the sixth is said to grow in the Island *Zacynthus*, from which places they have been brought to us, and are nurst up in our Gardens. The seventh grows abroad in the Fields, and in waste Grounds and Lanes in divers places of *England*.

XI. *The Times.* They all Flower and Seed about the same time with the other *Succories*; except the second, which Flowers earlier than all the rest.

XII. *The Qualities, Specification, Preparations and Virtues* of these, are the same with those of our *Common Succory*, to which you are referred. This is also to be noted, that in *Naples* and other parts of *Italy*, the *Neapolitan* kind is used instead of the *True Succory*, it being very like to it in its form.

XIII. *The Wart Succory.* Authors say it is very good for the Curing or taking away of Warts. And this they say it does, by eating the Herb as a Sallet; or by taking at Bed-time a Dram of the Seed in Pouder in White-Wine, for certain Days together; so also the Pouder of the Leaves given to a Dram in the same manner. But I think there is not much in all this; if there be any Virtue of this Kind in this Plant, it will be best manifested, and mostly exert its power in that kind, by an external Application to the parts affected, after this manner. Take the expressed Juice of the Plant, and heat it almost scalding hot, with which bath the Warts 3 or 4 times a day or oftner, letting it dry in after every time of Bathing; and continue this so long till the Warts are wasted away. This says *Pena*, will certainly extirpate them, as he and divers others had found by Experience. The said Juice being taken in Wine, is said to be helpful also against the biting of mad Dogs.

CHAP. DCLXXV.

Of SUCCORY *Gum.*

I. *THE Names.* It is called in Arabick, *Candarel*, *Cadiron*, and *Amiron*: in Greek, Χονδρίλλη: in Latine, *Chondrilla*: and in English, *Gum Succory*.

II. *The Kinds.* Authors make thirteen or fourteen sorts thereof, most of which are perfect Strangers to us. We shall only treat of such as are sometimes Nurst up in our Gardens, which are the four following. 1. *Chondrilla prior legitima Dioscoridis secundum Clusium*; *Chondrilla Græca, Tabernæmontani*; *Chondrilla foliis Cicherei tomentosis*; The true Gum Succory of *Dioscorides*: some says, *Dioscorides* called it *Cichorion*, and some *Seris*: and for that the Leaves were like unto *Succory*, they accounted it a kind of *Wild Succory*. 2. *Chondrilla Cærulea, sive purpurea Tabernæmontani*; *Chondrilla Cærulea Belgarum Lobelij*; *Chondrilla altera Dodonæi*; *Chondrilla prima Cichorio similis Cordi*, and *Chondrilla tenera*; *Chondrilla*

dridia cærulea flore Camerarij; *Apate Dalechampij Lugdunense*; *Chondrilla cærulea altera Cichorij Sylvestris foliis Bubini*; Purple Flowerd Gum Succory, or Succory with deep jagged Leaves. 2. *Chondrilla cærulea latifolia*; *Chondrilla cærulea latifolia Laciniata*; *Chondrilla prima Lacunæ*; Broad Leav'd Purple Gum Succory. 3. *Chondrilla Sesamoides dicta, Sesamoides parva Matthioli, Camerarij, Columnæ & Tabernæmontani*; (but *Columna* thinks it may be *Cyanus Plinij*:) *Sesamoides parva Dioscoridis Lobelio*; *Chondrilla tertia species Dodonæi*; *Catenance quorundam Lugdunensis*; (*Baubinus* makes two sorts of this Species, calling the first *Chondrilla cærulea Cyani capitulo*; and the other, *Chondrilla cærulea Cyani Capitulis altera*:) Strange Gum Succory.

The Descriptions.

III. The first, or true Gum Succory of Dioscorides. *Its Root is of a Fingers thickness, blackish on the outside, with some Fibres adjoining to it, and parted at the top into some Heads, which send forth Leaves, &c till it is full of Juice, which is yellowish when it is dry. It has many long,*

Succory Gum True of Dioscorides.

and something broad hoary Leaves lying upon the Ground, covered with a thick Down, cut in on the edges, something like those of Succory: *From among which, rises up an hoary Stalk a Foot or more high, parted into a few Branches with smaller and narrower Leaves set without order, on which are sometimes found yellowish Grains like unto small pieces of Gum, which grow quickly to be hard. At the tops of the Branches stand singly yellow Flowers like those of* Camomil, *which when they are ripe turn into Down, and with the Seed are carried away with the Wind.*

IV. The second, or Purple Flower'd Gum Succory, or Gum Succory with deep jagged Leaves. *Its Root grows deep down into the Ground, and spread into many thick Branches like* Dandelion, *blackish on the outside, and yielding much Milk in every part when broken or cut; which are so apt to grow, that every little piece in the Ground will spring again, and bear Leaves. It shoots forth in*

Succory Gum Purple Flower'd.

the beginning of the Spring, several long winged, or rather jagged Leaves; consisting of many long and narrow jaggs, cut in on both sides to the middle Rib, and equally set almost one against another, of a blewish green color, very tender, and full of Milk when broken or cut. From among which, rise up weak and tender Stalks 3 *or* 4 *Feet high, scarce able to stand upright, very brittle also, and apt to be broken, and as full of Milk as the* Leaves, *which divides it self towards the tops into a few other smaller Branches, with smaller and less jagged* Leaves *upon them; at the top of which grow small blewish* Purple Flowers, *and sometimes white, consisting of ten or twelve small narrow Leaves, standing round about the middle, which when they are ripe, fall away of themselves.*

V. The third, or Broad Leav'd Purple Gum Succory. *This Gum Succory is very like the former in every respect, saving that in this, the Leaves are something broader and shorter, and the Gashes also larger; in which particulars, the chief difference consists.*

VI. The fourth, or Strange Gum Succory. *The Root is small and long, yielding a Milky Juice. It has many long and narrow rough Leaves, pointed at the ends, and jagged in two or three places on the edges, sometimes more or less, lying on the Ground, resembling very much the Leaves of* Coronopus, *or* Buckshorn Plantane; *but with fewer, greater, and longer cuts or jaggs. The branched Stalks are set from their middle, with such*

such like Leaves, but narrower, some without any jagg, and some with but one or two jaggs; bearing at every one of their tops, upon slender bare long Stalks, a small whitish Silver like scaly Head; out of which break forth fair double Flowers, consisting of many Purplish blew Leaves, dented or cut in at the broad ends, with some yellow threads in the middle; after which comes small Seed, like unto Sesamum *being compared, (whence the Name* Sesamoides*) but more like to a* Cyanus *or blew Bottle, or Corn Flower, but browner.* Bauhinus *makes two sorts (as aforesaid) of this Plant, which vary not much one from another, their difference being very probable to arise from the differing Soils in which they are found growing, the like of which has been found in many other Herbs, which yet have been but one and the same Species.*

VII. *The Places.* The first grows Wild in several places in *Spain*; the other grows Wild also in waste Grounds by Ditch-sides and by Path-ways, in Fields and Pastures in several parts of *Italy*; but with us they are only Nurst up (by the Curious) in Gardens.

VIII. *The Times.* They all Flower in the Summer Months, and yield their Seed in a short time after; but are so tender, that they soon perish with our Winters Cold.

IX. *The Qualities, Specification, Preparations and Virtues* of these, are said to be the same with those of our *Common Succory.* The first of these is of the same property with *Wild Succory*, but more bitter, and more drying, and is thereby more effectual in opening Obstructions; and by its drying and astringent Qualities, it stops the Looseness of the Bowels, the *Juice of the Root* being taken in Wine. *The Juice of the Root or Herb*, drank is good against the biting of Vipers, and all other Venomous Serpents; it strengthens the Stomach, and helps Digestion. It is said, the *Juice of the Root* dropt from the point of a Skewer, or some such small thing, upon the Roots of the Hair on the Eye-brows, Forehead, *&c.* takes them away, and hinders their growing again; but of this I know nothing by Experience. *The same Juice with some Nitre dissolved in it*, being Bathed upon the Skin, is said to take away Freckles, Lentills, Tanning, Sun-burning, and other discolorings thereof; as also Scurf, Morphew, Spots, Pimples, *&c.* Injected up the Womb, it also draws down the Courses.

X. The second and third are also of the same Virtues with our *Common Garden Succory*, and in *Italy* they are said to be eaten in their Sallets, as we do our *Succory* here. We have no Author who gives any special Instance of their Virtues, but only they are referred to the Kindred of the *Succories.*

CHAP. DCLXXVI.

Of SUN-DEW.

OR,

ROS SOLIS.

I. *THE Names.* It has no Greek Name that we know of; but it is called in Latin, *Ros Solis*; *Rorella*, and *Rorida* by *Lobel*; and by some *Salsirora*: and in English, *Sun-Dew*, and also corruptly, *Rosa Solis.*

II. *The Kinds.* Authors make two or three sorts hereof, viz. 1. *Ros Solis, five Rorella rotundifolius major & minor*, Round Leav'd Sun Dew, which they will have to be both greater and lesser. 2. *Ros Solis Syvestris longifolius*, Long Leav'd Sun-Dew.

The Descriptions.

III. The first, or round Leav'd Sun Dew. *Its Root consists only of a few small Hairs, Fibres or Threads; which sends up divers small round hollow Leaves, something greenish, but full of several red Hairs, which make them seem to look red, every Leaf standing upon its own Footstalk, reddish hairy likewise; the Leaves have this wonderful property, that they are continually moist, or full of Dew in the hottest day; yea, the better the Sun shines upon them the moister they are; and even at Noon time the Hairs will be full of drops of Dew, more especially if the Sun shines strongly and clearly out; which is with a certain Sliminess which will rise, or draw out as it were into Threads, the small Hairs always holding this Moisture. From among these Leaves spring up (about a Month after them) small slender Stalks about 4 Inches high, which are reddish also, bearing several white knobs one above another, which are the Flowers, of a whitish color, after which in the heads are contained certain small Seed. Some Authors make a greater and lesser of this Species, which is the only difference or variety.*

Sun-Dew round Leav'd, and long Leav'd.

IV. The second, or Long-Leav'd Sun-Dew. *This in its Roots, Stalks, Flowers, Seed, Dew, and Formalities of growing, differs not from the former, but only in its Leaf, which is much larger and also long withall.*

V. *The Places.* They usually grow in Bogs and wet Places, and sometimes in moist Woods; as also in Desert, Sandy and Sunny Places, but yet watery withall; and seldom any where else than amongst white Moorish Moss, which grows on the Ground, as also on Boggs. The second has been found growing near *Dublin* in *Ireland*: It also

alſo grows by *Elleſmere* in *Shropſhire*, by the ways ſides thereabouts.

VI. *The Times.* They are ſaid to Flower in *June*, at which time the Leaves are in beſt condition to be gathered. *Gerard* ſays they Flouriſh in Summer, and Flower in *May* and *June*; and are to be gathered when the Weather is Calm, Dry, and Serene.

VII. *The Qualities.* They are hot and dry in the firſt degree, Aperitive, Aſtringent, Pectoral, Cordial and Reſtorative.

VIII. *The Specification.* It is profitable againſt Catarrhs, and Salt Rheums falling upon the Lungs, Coughs, ſhortneſs of Breath, difficulty of Breathing, Aſthma's; and is ſaid to cure Phthiſicks or Conſumptions of the Lungs: It is Cordial, good againſt Sickneſs at Stomach, Faintings, Swoonings, Palpitation of the Heart, *&c.*

IX. *The Preparations.* You may make therefrom, 1. *A Simple Diſtilled Water.* 2. *A Compound Diſtilled Water.* 3. *A more Simple Tincture.* 4. *A Compound Tincture, commonly called* Roſa Solis. 5. *A Cataplaſm.*

The Virtues.

X. *The Simple Diſtilled Water.* Both *Gerard* and *Parkinſon* tell you that if it be made with a Glaſs Alembick or Still, the Water will be of a Gold yellow Colour. It is ſharp, quick, drying, and binding, good for ſuch as are troubled with Catarrhs, Rheums, Coughs, Colds, Aſthma's, Conſumptions, and all other Diſeaſes of the Lungs, and heals Ulcers of the Lungs, comforts the Heart, and is good againſt fainting of the Spirits. Doſe 2 or 3 Ounces either alone or mixt with a little Generous Wine.

XI. *The Compound Diſtilled Water. Take* Ros Solis *a Pound, Bawm, Limon Peel, Orange Peels,* ana, *a quarter of a Pound, Winters Cinamon in groſs Pouder, two Ounces; White* Lisbon *Wine a Quart, Milk Water a Pint; mix, digeſt a Week, then draw off the Water in a Glaſs Alembick in* Balneo *to drineſs.* It has all the former Virtues, but much more Cordial, and more prevalent againſt Fainting and Swooning Fits, Quartans, Convulſions, Palſies, Lethargies, and the like Diſeaſes.

XII. *The more ſimple Tincture. Take* Ros Solis *freſh gathered a Pound, Bawm, Garden Scurvy Graſs, Garden Creſſes, of each a quarter of a Pound: Aniſeeds, Angelica Seeds groſly bruiſed, of each 2 Ounces; Saffron, Cochinele, the laſt in fine Pouder, of each 3 Drams: Spirit of Wine 3 Quarts: mix, digeſt a Month in a gentle Sand heat, ſhaking the Glaſs once every day; then letting all perfectly ſettle, decant the clear Tincture: and keep it in a Glaſs cloſe ſtopt for uſe.* It has all the Virtues of either of the former, and a moſt potent thing againſt the Scurvy in a cold Habit of Body. Doſe from one Dram to two Drams, in a Glaſs of Wine, or ſome other proper Vehicle, Morning, Noon and Night.

XIII. *The more Compound Tincture*, commonly called *Roſa Solis. Take* Ros Solis *twelve handfuls, red Roſe Leaves two handfuls, Liquorice bruiſed or ſcraped 4 Ounces; Cinnamon, Red Sanders, of each 3 Ounces: Aniſeed, Coriander-ſeed, Nutmegs, of each 2 Ounces, Cloves, Galanga, Ginger, of each an Ounce; Calamus Aromaticus, Cardamoms, Grains of Paradice, Zedoary, of each a quarter of an Ounce; Spirit of Wine or choice Brandy 3 Gallons; mix, make an Infuſion for eight days; then being perfectly ſettled and fine, decant the clear Tincture into another Glaſs, and add thereto of double or treble refined Sugar three Pounds; mix, diſſolve, and keep it for uſe.* It is a Noble Tincture, and has all the Virtues of the former Preparations; and being of a drying, binding and ſtrengthning Quality, is appropriated to the Lungs; and therefore of excellent uſe againſt all Diſeaſes of that Bowel; as alſo of the Heart, Midriff, Meſentery, Inteſtines and Womb. Doſe a Spoonful or leſs, Morning and Night, in a Glaſs of Wine, or other fit Liquor, with which it may be mixed.

XIV. *The Cataplaſm.* It is made of the whole Plant beaten to a Pulp, adding alſo a little Salt. Being applyed to the Skin, it is ſaid to exulcerate and raiſe Bliſters.

CHAP. DCLXXVII.

Of SUN-FLOWER *of Peru.*

I. *The Names.* It has no Greek name, yet Authors call it Χρυσάνθεμον *Peruvianum*; *Chryſanthemon Peruvianum*; *Flos Solis*; *Flos Maximus*; *Sol Indianus*, *Corona Solis*: in Engliſh, Sun-Flower; Golden Flower of Peru, and Marigold of Peru.

II. *The Kinds.* Authors give us the knowledge of two principal Kinds hereof, *viz.* 1. *Chryſanthemum Peruvianum majus*, *Flos Solis major*; The greater Sun-Flower. 2. *Chryſanthemum de Peru minus*; *Flos Solis minor*: The Leſſer Sun-Flower, or Marigold of Peru.

The Deſcriptions.

III. The firſt, or Greater Sun-Flower, or Golden Flower of Peru. *Its Root is white, compact of many Strings, and ſtrongly faſtned in the Ground by ſome greater Roots branching out, and a number of ſmall ſtrings, which grow not deep, but keep under the upper Cruſt of the Earth, deſiring much moiſture, which dye every Year at the firſt approach of Winter; and therefore muſt be new Sown every Year in the beginning of the Spring. It riſeth up from the Seed, at firſt like unto a Pompion with two Leaves; and after two or four more Leaves are come forth, it riſes up into a great Stalk, bearing the Leaves at a due diſtance on all ſides thereof, one above another up to the very top, being ſometimes, and in ſome places, 7 8 or 10 Feet high, which Leaves ſtanding out from the Stem or Stalk, upon their ſeveral great ribbed Foot-ſtalks, are very large, broad below, and pointed at the end, round, hard, rough, of a ſad green Color, and bending downwards. At the top of the Stalk grows one great, large, thick, and broad Flower, bowing down the head unto the Sun, and breaking forth from a great head, made of ſcaly green Leaves, like unto a great ſingle Marigold, having a border of many long yellow Leaves, ſet about a great round yellow thrumb, as it were in the middle, which are very like unto ſhort heads of Flowers, under every one whereof, there is a Seed, larger than any Thiſtle Seed, yet ſomewhat like; alſo leſſer and rounder than any Gourd Seed, which are ſet in*

so close and curious a manner, that when the Seed is taken out, the head with the hollow places or Cells, seems very like unto an Honey-Comb; which Seed is in some plants very black, in the hotter Countries, or very white, great and large, but with us it is neither so large, black, or white, but some-

Sun-Flower Greater.

times blackish or grayish. The whole Plant, and every part thereof, has a strong resinous Scent, much like to that of Turpentine; and the Heads and middle parts of the Flowers do oftentimes, (and sometimes the joints of the Stalks where the Leaves stand) sweat out a most thin, fine, and clear Resin or Turpentine, but in small quantity, as it were in drops, in the hot and dry time of the Year, so like both in Colour, Smell and Taste, unto clear Venice Turpentine, *or* Strasburgh Turpentine, *that it cannot be known from it.*

IV. The second, or Lesser Sun-Flower, or Marigold of Peru. *This in its Roots, Stalks, Leaves, Flowers, Seed, Turpentine, and manner of its growing, is like the former, save that it is altogether lower, the Leaves more jagged, and very few in number. It is either without Branches, or with many Branches, with a black, or with a white Seed, the form of the Leaves and Flowers differing but only in the greatness or smallness, as has been just now said.* Gerard *seems to make this to be twofold,* viz. 1. The Male. 2. The Female. I. The Male kind *he says perishes in its Root, as soon as it has perfected its Seed, being thick, hard, and of a woody substance, with many thready strings annexed thereto. From which rises up a gray or russet Stalk five or six Cubits high, and sometimes as thick as ones Arm. (I suppose this is in its Native Country of* Peru; *for with us in* England; *it attains to no such Magnitude: Its Leaves are set thick, broad Leaves with long Foot-stalks, very brittle or easie to break, of an ash-colour green color, sharp pointed, and jagged cut or dented about the edges like a Saw. The Flower grows at the top of the Stalks, bordered about with a pale of yellow*

Sun-Flower Lesser.

Leaves. The thrummed middle part is blacker than that of the first or greater before Described: And the whole Flower is encompassed about likewise with divers such Russet Leaves, as they which grow lower upon the Stalks, but lesser and narrower. The Plant and every part thereof smells of Turpentine, and the Flower yields most clear Turpentine. The Seed is long and black, with certain Lines or Streaks of white running along the same. II. The Female kind *has also a thick and woody Root, from which rises up a straight* Stem, *dividing it self into one or more Branches, set with smooth Leaves, sharp pointed, and slightly indented about the edges. The Flowers grow at the tops of the Branches, of a faint yellow color, the middle part being of a deeper yellow, tending to blackness, of the form and shape of a single* Marigold, *the Magnitude excepted. This Plant says another Author, shoots out into many Stems, and a great many Branches, requiring very much room, so that it is apt to choak other Flowers which grow near it: For which reason, when it is arrived to a reasonable height, and before it is full green, it is to be clipt with a Garden pair of Scissars, to retrench those Branches which spread too much, and such as shoot up too high.*

V. Of the first or Greater Sun-Flower at Sect. III. above, *Gerard* gives us another kind of Description, which because it is something remarkable, we will also give you here. *Its Root (he says)*

is white, compact of many Strings, which perish at the first approach of Winter. It is a Plant (says he) of such a nature and tallness, that in one Summer, being Sown of a Seed in April, it rose up (in his Garden) to the height of 14 *feet; where one Flower was in weight three Pounds two Ounces; and cross overthwart, the Flower was by measure* 16 *Inches broad. The Stalks are upright and straight, of the bigness of a strong Mans Arm, beset with large Leaves even to the top, like unto the* Great Burdock. *At the top of the Stalk comes forth for the most part but one Flower, yet many times there spring out sucking Buds, but they come to no perfection. This great Flower is in shape like to a Camomil Flower, beset round about with a pale, or border of goodly yellow Leaves, in shape like the Leaves of the Flowers of* White Lillys. *The middle part of which, is made as it were of unshorn Velvet, or some curious Cloth wrought with a Needle: which brave Work if you do throughly view, it seems to be an innumerable sort of small Flowers, resembling the nose or nosle of a Candlestick broken from the Foot thereof; from which small Nosle sweats forth excellent fine and clear Turpentine, in Sight, Substance, Savor and Taste. The whole Plant in like manner smells of Turpentine being broken; and when it grows to Maturity, and the Flowers fall away, in place thereof comes the Seed, which is black and large, much like the Seed of Gourds, set as though a cunning Workman had of purpose placed them in that Excellent and Exquisite Order, not much unlike to an Honey-Comb.*

VI. *The Culture. The first or larger sort* is produced from Seed in a well Dung'd Ground, after the manner of Cucumbers and Melons. It grows generally with us 5, 6, or 7 Feet high, very straight without Branches, with Leaves jagged at the edges, pointed at their ends, and rough to the touch. This, as it has been very common, so it is at present much neglected, and is now Planted in the Obsoleet or almost neglected parts of a Garden, or at the extremities of some Borders. On the top of its Stem appears its Flower resembling the Sun-Beams, whose Disk is commonly of a yellowish Glory or Radiency, made in the shape of a Crown, in the middle of which, are a number of other little Flourishes resting on the Embrio's, separated one from another by Leaves folded Gutterwise, and contained in a scaly Cup, which Embrio's in time become Oblong Seed, each separated from another in particular Cells.

VII. *The second or lesser kind*, tho' it may be raised from the Seed, yet it is generally multiplyed from its Roots, whose Tufts are to be divided to Plant other places with. This as it shoots out into many Stems and a great many Branches, ought to be Planted in broad Allys, and all along with Trees between them, at 3 Feet distance one from another; or it may be Planted in the small Corners of Parterres, or in the middle of the same, without any other Flowers near it, by which it will agreeably entertain the Eye. It agrees in any sort of Earth good or bad, and its Roots being split, must be set three Inches deep in the Ground; which when it has attained a considerable height, is to be clipt and trim'd as before directed (Sect. V.) putting it into what Figure will best agree with it, which is generally that of a round Bush.

VIII. *The Places.* Their Native Place is *Peru*, from whence they have been brought to us, and now grow generally in most of our Gardens, where they Flourish admirably.

IX. *The Times.* The Seed must be set or sown in the beginning of *April*, if the Weather is temperate, and if in good Earth so much the better, and where the Sun has the most power the whole day. The first Flowers in *June*, the second in *August*, and sometimes so late, that the early Frost taking it, the Flower comes not to ripeness.

X. *The Qualities, Specification, Preparations and Virtues of them* are scarcely known, so that Authors have said little or nothing of them. The Heads of the Flowers are boiled and dressed as Artichoaks, with Butter, Vinegar, Salt and Pepper. They are said to be in Quality hot and dry, and vehemently to excite Lust. *Gerard* says they are exceeding pleasant Food, and are by others accounted good Meat; but *Parkinson* says, they are too strong for his taste.

CHAP. DCLXXVIII.

Of SUN-FLOWER *Creeping.*

I. *THE Names.* It is called in Greek; Ἡλιάνθεμον: in Latine also *Helianthemum*, *Flos Solis*, *Chamæcistus*, *Cistus Pumilus*; *Cistus repens*; *Flos Solis repens*; in English *Sun-Flower creping*; and *Dwarf Cistus.*

II. *The Kinds.* Authors give us about half a Score sorts of this Plant, we shall trouble you only with the five following, *viz.* 1. *Helianthemum vulgare*, *Helianthemum Anglicum luteum*; Our English yellow creeping, or Dwarf Sun-Flower. 2. *Helianthemum vulgare vel Anglicum album*, Our white Creeping or Dwarf Sun-Flower. 3. *Helianthemum serpillifolio flore luteo*, *Chamæcistus secundus Clusij*; *Cistus Humilis serpillifoliis Tabernæmontani*, Creeping Sun-Flower with Time-like Leaves. 4. *Helianthemum Luteum Germanicum*, Yellow Creeping, or Dwarf Sun-Flower of Germany. 5. *Helianthemum album Germanicum*; White Dwarf Sun-Flower of Germany. *Clusius* says he should rather refer these Plants to the Family of the Female *Cistus*, making them of his third Order of *Cistus*, and so calling them *Chamæcistus*; because says he, they are like unto them both in Face or Form, and Property. Some take this *Creeping Sun-Flower* to be the *Helianthe Plinij*, which *Cordus* calls *Helianthemum*, or *Flos Solis*, and so do *Lobel*, *Tabernæmontanus*, *Thalius*, and divers others.

The Descriptions.

III. The first, or our English Yellow Creeping Sun-Flower. *It has a hard and woody Root, growing in time to be something great, but not very long, and divided into small Branches at its lower end. From this rise up several small and weak, yet hard and almost woody branches, lying for the most part round about the head of the Root upon the Ground, on which are set by couples, many small and somewhat long Leaves, a little soft or hairy, with other small Leaves also growing between them: at the tops of which grow three or four small pale yellow, and sometimes Gold coloured yellow Flowers, consisting each of five round pointed Leaves, with some yellow threads in the middle, having in some Places or Soils, a pretty pleasing Smell, but less or more in some other places: After which follow small round Heads, containing small yellow Seed.*

This

This dyeth not, but abides many Years, increaſing in Branches, which yield a Viſcous or Mucilaginous Juice, like unto Comfrey, *of an Aſtringent and Auſtere Taſte; for which reaſon I believe it was called by divers (as* Cordus *ſays)* Conſolida aurea, *and ſo ſays* Cluſius *alſo; and ſome have called it* Panax, *and* Panaces Chironium, *but falſely.*

IV. The ſecond, or our white Creeping, or Dwarf Sun-Flower. *Its Root is thick, and of a Woody Subſtance like the former. It is a low and humble Plant, creeping upon the Ground, differing but little from the former, ſaving that this riſes ſomewhat higher. It has many ſmall tough Branches*

Sun-Flower Creeping Engliſh, *Yellow and White.*

of a brown colour, on which grow little Leaves ſet by Couples, thick, fat, and full of Juice, covered over with a ſoft Down, from whoſe boſoms come forth other leſſer Leaves. Theſe Leaves are a little whiter and longer, and not ſet ſo thick together as the former, but are more Woolly. The Flower is alſo ſomething larger, and of a white Color, in which conſiſts the chief Difference. In ſome Places or Grounds, it is a little Sweet, but in ſome other Soils little or nothing at all: and its Juice is of an Aſtringent and Auſtere Taſte like the other.

V. the third, or Creeping Sun-Flower with Time-like Leaves. *Its Root is very Fibrous, and ſpreads much under Ground, and the Plant creeps upon the Ground, much like unto* Wild Thyme, *with ſuch like ſmall Leaves, ſet upon reddiſh Branches very thick, or as it were in a double row, of a dark green Colour, and a little hairy withal, which are a little longer and whiter next to, or near the Flowers, which grow three or four together, each one on a pretty long hairy Foot-ſtalk, conſiſting of five ſmall yellow Leaves like unto the other, and ſomething Sweet.*

VI. The fourth, or Yellow Creeping, or Dwarf-Sun-Flower of Germany. *Its Root is ſlender, Woody, and ſomething red. The Plant is ſaid to be much like to a* Ciſtus, *but leſſer by much, and creeping upon the Ground unleſs it be prop'd up, having a multitude of twiggy Branches, ſlender and fine, on*

Sun-Flower Creeping of Germany, *Yellow and White.*

which grow Leaves leſſer than thoſe of Ledon *or* Ciſtus, *and very like to our* Engliſh White Creeping, or Dwarf Sun-Flower, at *Sect.* IV. *above; of a full or mucilaginous Juicy Subſtance, and ſlightly haired; The Flowers are like unto little Roſes, or the* Wild Tanſie *Flower of a yellow Color.*

VII. The fifth, or White Dwarf, or Creeping Sun-Flower of Germany. *This in its Roots, Branches, Leaves, Flowers, and manner of growing, is ſo like the laſt Deſcribed, that they are not to be diſtinguiſhed aſunder till the time of Flowering, the Flowers in this being White, whereas in the former they are Yellow; this being the chief, or only difference.*

VIII. *The Places.* The firſt and ſecond grow in ſeveral places of *England*, but eſpecially in *Kent*, in almoſt every Tract thereof throughout; which in ſome places is greater than in ſome others, yet that with the white Flowers is not altogether ſo common as thoſe with the yellow. *Gerard* ſays he has found them in many places in *Kent*, upon the Chalky Banks about *Graveſend* and *Southfleet*; and for the moſt part all the way from thence to *Canterbury* and *Dover*. The fourth and fifth differ not much from our *Engliſh*, and I am told, have been found in ſeveral parts of this Kingdom; and by reaſon they ſo little differ from our *Engliſh*

Species, some have thought them to be the same; their difference arising chiefly from the Soil. The third grows in rough, dry, and Sunny places in plain Fields, and upon Mountains. *Clusius* says he found it upon the highest Alps or Mountains of *Austria* and *Stiria*; and as some think, is the first here described, which is the most usual sort growing in *England*.

IX. *The Times.* They all Flower in the Summer Months, from the beginning of *July* to the end of *August*; but the Flowers soon fade, seldom enduring above a day or two, perfecting their Seed in some small time after.

X. *The Qualities.* They are hot and dry in the first Degree, Abstersive, Astringent, Vulnerary and Arthritick.

XI. *The Specification.* They stop Fluxes of all sorts, Catarrhs, or Defluxions of Rheum, all Bleedings whether inward or outward, Spitting or Pissing of Blood, Bloody-Flux, Overflowing of the Terms, Whites, *&c.* cure Sore Mouths, and Ulcers in what part of the Body soever, heal green Wounds, and helps the Biting or Stinging of any Venomous Creature.

XII. *The Preparations.* You may have therefrom, 1. *A Liquid Juice or Essence.* 2. *A Decoction in Wine.* 3. *A Balsam or Ointment.* 4. *A Cataplasm.* 5. *A Distilled Water.*

The Virtues.

XIII. *The Liquid Juice or Essence.* Taken from two Spoonfuls to three or more, in any proper Vehicle, as Barabar Wine, or any other Styptick red Wine, they stop all Bleedings whether inward or outward; Spitting or Pissing of Blood, Bloody-Flux, the Overflowing of the Terms and Whites, Catarrhs, or Defluxions of Rheum, and all other Fluxes of the Bowels whatsoever. Mixt with Wine, they are profitable to wash, cleanse and heal Sore and Ulcerated Mouths, Throats; as also Ulcers in the private Parts of Man or Woman, or in the Legs, Thighs, or in any other part of the Body. Green Wounds being washt with them, it stops the Blood, disposes them to a speedy healing, and conglutinates their Lips, Consolidating, Binding and Strengthning the part, or any other place weakned by any Accident. And Cloths dipt into them, and applyed to Wounds made by the Stinging or Biting of any Poisonous Creature, it hinders the Poison from spreading, and draws it forth; more especially if they be taken inwardly at the same time.

XIV. *The Decoction in Wine.* It has all the former Virtues, and may well be used to all the same Intentions, but as it is weaker, so it is to be given in a larger Dose, as to 4, 6, or 8 Ounces. This as well as the Juice and Essence, being taken inwardly for some considerable time, is said to be profitable in Curing Ruptures of the Bowels.

XV. *The Balsam or Ointment.* It is Vulnerary, cleanses and heals Ulcers, Consolidates Wounds, and quickly heals them; strengthning all the parts it is applyed to.

XVI. *The Cataplasm.* Applyed to the Biting or Stinging of any Venomous Creature, it draws out the Poison; and applyed to the Gout, or any weakned Limb or Joint, it eases the pain, and strengthens the part afflicted.

XVII. *The Distilled Water.* It softens and whitens the Skin, and Beautifies the Face and other parts to which it is applyed, being used several times a day.

CHAP. DCLXXIX.

Of SWEET-GAUL.

I. *THE Names.* It may be called in Greek, Ῥοῦς, ἡ Ῥοῦς, ἄγνος: in Latine, *Rhus Sylvestris*: and in English *Sweet-Gaul.*

II. *The Kinds.* It seems to be a singular Species, *sui generis*; yet Authors describe the two following, *viz.* 1. *Rhus Sylvestris Anglicus, Myrtus Anglica, Myrtus Brabantica Lobelij; Pseudomyrsine Gerardi; Rhus Sylvestris altera Lugdunensis; Rhus Herba Plinij Clusio; Dryophonon Plinij Ruellio; Myrtus Nemoralis; Elæagnus Cordi; Elæagnus Theophrasti Bellonio; Chamelæagnus Dodonæi; Myrtus Belgarum Lobelij*; Our Common Sweet-Gaul. 2. *Rhus Sylvestris Plinij Dodoneo; Rhus Plinij Myrtifolia Lobelio; Dryophonon Plinij quibusdam*: The Myrtle-Leav'd Sweet-Gaul.

The Descriptions.

III. The first, or our Common Sweet Gaul. *Its Root is hard and woody; from whence rises up a low Shrub or woody Bush, not above a Yard high, spreading slender Branches, with many brown yellowish green Leaves, somewhat long, narrow, thick, fattish and roundish pointed, resembling in some sort, both* Box *and* Myrtle *Leaves, but smelling strong and sweet. The Flowers are yellow, and stand upon short stalks, coming forth at the Joints, with the Leaves in small Tufts, many set together; which being past, the said Stalks are plentifully stored with yellowish cornered Seed, bedewed with a clammy Moisture, of a very bitter unpleasing Taste, but strong sweet Smell.*

IV. Gerard describes it after this manner. *Its Root is of a hard and woody Substance, which produces a low and little Shrub or woody Plant, having many brown and hard Branches, upon which grow Leaves something long, hard, thick, and Oleous, of an hot, or Aromatick Savour or Smell, something like that of* Myrtle. *From among the Branches come forth other little ones, on which do grow many Spoky Ears or Tufts, full of small Flowers: after which, come great store of square or cornered Seed clustering together, of a strong and bitter Taste.*

V. The second, or Myrtle-Leav'd Sweet-Gaul. *This has also a hard and woody Root, spread many ways in the Ground, with many Fibres adjoining to it: from whence springs up a low shrubby sort of Plant, having many slender Branches with Leaves set thereon, every one of the largeness of the broad* Myrtle-Leaf, *and standing by couples; but not so closely, or always just opposite one to another, nor so many together, smooth or even, and not dented about the edges. At the ends of which, come forth many small purplish red Threads, set upon, or sticking out of a small head, set one above another; which afterwards turn into a round and somewhat flat crested black Berry, containing therein, small, white, and rough Seed, not much unlike to Grape-Stones. This Plant in some places dyes every Year down to the Ground, Springing again the next Year, for which cause in these places it never Seeds nor Flowers: Nor here in* England *does it ever flower from its first Years shooting, but the next Year it Flowers in many places of this Land, tho' seldom perfecting its Seed.*

VI. The

VI. *The Places.* The firſt grows in many places of *England*, as well as in *Brabant* and *Flanders*, and other places beyond Sea, and therefore *Lobel* might as well have call'd it *Anglica* as *Brabantica*, it being truly a Native of our Country, tho' poſſibly he might not know ſo much. It grows in *Hartfordſhire*, *Kent*, *Suſſex*, *Colebrook*, and near *Old Windſor-Park Corner*; as alſo in ſeveral Marſhy, Plaſhy, Moiſt and Fenny Grounds, as in *Bedfordſhire*, *Cambridgeſhire*, *Iſle of Ely*, *Lincolnſhire*, and the Fenny Countries thereabouts; of which there is ſuch ſtore, that they make Faggots, Bruſhes or Sheaves thereof, to burn and heat their Ovens, and kindle Fires withal, as they do of *Sedge*. It is alſo found growing in moſt places where *Sedge* grows; for which reaſon it is commonly found bound up promiſcuouſly in *Sedge* ſheaves, which Bakers uſe to heat their Ovens with at *Lyn* in *Norfolk*, and other great Towns and Market-Places where it can be conveniently carried by Water, *&c.* The ſecond is a Native in ſeveral Countries in the *Levant* and *Mediterranean* Sea, as the South parts of *France*, *Italy*, *Sicily*, &c. but with us it is only Nurſt up in Gardens. This is that of *Pliny*, *lib.* 24. *cap.* 11.

VII. *The Times.* They Flower in *May* and *June*, and their Seed is ripe in *July* and *Auguſt*.

VIII. *The Qualities.* They are hot and dry in the ſecond degree, Abſterſive, Aſtringent, Auſtere and Styptick; diſcuſſing Wind, Cephalick, Neurotick; and as ſome think Narcotick.

IX. *The Specification.* The firſt kind is only or chiefly uſed: It is good to dry up Humors in the Belly and Stomach, to kill Worms in thoſe parts, to ſtrengthen the Brain and Nerves, and to induce Sleep.

X. *The Preparations.* The firſt of the two Species being only in uſe, the Preparations will chiefly have reference to that; and there is a peculiar uſe of it in 1. *Ale or Beer*, which in ſome places are Brewed with it, as with Hops. 2. *A Decoction in Water or Wine.* 3. *An Infuſion in Wine.* 4. *A Tincture of Leaves and Fruit in Spirit of Wine.* 5. *A Pouder of the Leaves or Seed.*

The Virtues.

XI. *The Ale or Beer.* It preſerves the Drink from ſpoiling, or growing ſowre like Hops, and makes it Drink very ſtrong; and by reaſon of its pleaſing Bitterneſs, gives it a pleaſant Taſte or Farwel. As it makes the Drink to be ſtronger, ſo it may be more apt to get into the Head, and make People Drunk; but it only affects the Brain by its Strength, not by any ill Quality which is in it, as ſome Authors ſeem to hint, it being a true ſtrengthner of the Stomach and Nerves. And ſo far it is an Antiſcorbutick, as all Stomachicks are; the Scurvy being called by the Greeks the Stomach Diſeaſe, and for which they have no other name.

XII. *The Decoction in Water or Wine.* It warms, comforts and ſtrengthens cold, moiſt and weak Heads, Brains, Nerves and Stomachs; reſiſts the Scurvy in its beginning, and cures it when Confirm'd, a quarter of a Pint or more, being taken in the Morning faſting, half an Hour before Dinner, and laſt at Night going to Bed. It is ſingular good alſo againſt Palſies, Convulſions, Gouts, Jaundice, Collick, and other like Diſeaſes of the Brain, Nerves and Viſcera. It kills Worms in the Bowels, reſiſts Poiſon, and cauſes pleaſant Reſt and Sleep, not much unlike to the manner of Opiates; inſomuch that ſome who have been long conſtant in taking it, have with ſome difficulty left it off.

XIII. *The Infuſion in Wine.* It has all the Virtues of the former Decoction, and may be taken in the ſame Doſe and manner; but as it is only a cold Infuſion, ſo it is much more grateful to the Stomach and Bowels, reſiſting Putrefaction, and ſtrengthning them after an admirable manner.

XIV. *The Tincture of the Leaves and Fruit, or Seed.* This is much better in a cold Scurvy, than either of the former, and more potent againſt Cramps, Convulſions, Palſies and other cold and moiſt Diſeaſes of the Head, Brain, Nerves, Joints and Viſcera. It alſo prevails againſt Poiſon, vehement pains in the Bowels, or any extream part of the Body, Coughs, Colds, Aſthmas, Phthiſicks, Hoarſeneſs, Wheezing and ſhortneſs of Breath; ſtops Vomiting, and gives relief in extream Heart-Sickneſſes, Palpitations, Faintings, Swoonings and the like: Doſe 2, 3, or 4 Spoonfuls in a ſmall Glaſs of Wine.

XV. *The Pouder of the Leaves or Seed.* It is given from half a Dram to Dram, for all the purpoſes aforementioned, being an excellent Stomatick: but its chiefeſt uſe is for killing Worms in Children; as alſo in Elder Perſons

XVI. *Nota* 1. In thoſe places where it plentifully grows, as alſo in other places to which it is carried, the Country People lay it in Wardrobes, Cheſts, Trunks, Preſſes, and the like, to keep Woollen Cloths from Moths, Worms, *&c.* and to give them a good ſcent and pleaſant Smell.

XVII. *Nota* 2. The *Rhus Plinii Myrtifolia*, or ſecond Species; tho' we make little or no uſe of it, (becauſe we have it no great plenty) yet *Pliny* ſays it kills Moths, and reſiſts Poiſon.

CHAP. DCLXXX.

Of SWALLOW-WORT.

OR,

SILK-WORT.

I. *THE Names.* It is called in Greek, Ἀσκληπιὰς *(ab Æſculapio)* alſo Κισσὸν *quaſi Hederula*; and Κισσοφύλλον, *Hederæfolium*; and ſo *Ruellius* calls it *Hederalia*: and yet the Leaf is not at all like *Ivy*, but are rather like unto *Bay-Leaves*, ſaving that theſe are ſharper pointed. In Latine *Aſclepias* alſo, and *Vincetoxicum*, (which is a general Word for any Counter-Poiſon; for *Vincetoxicum quaſi Alexipharmicum dictum, & quod illi inſignis adverſus venena vis inſit.* It was alſo antiently called *Hirundinaria*, (as were alſo *Chelidonium majus & minus*) becauſe the pointed Cods when they are open, and the Silk appears out of them, do ſomewhat reſemble a Swallow Flying. In Engliſh, *Swallow-Wort*, *Silk-Wort*, and by ſome, *Silken Ciſley*.

II. *The Kinds.* It is doubtleſs the true *Aſclepias* of *Dioſcorides*, tho' *Anguillara* doubts of it, and *Matthiolus* denys it; yet *Dodonæus* and *Fuchſius* affirm it, and that it is the true *Vincetoxicum*. We have with us, 1. *Aſclepias* ſive *Vincetoxicum Flore albo*, Swallow-Wort white Flower'd. 2. *Aſclepias* ſeu *Vincetoxicum Flore nigro*, Swallow-Wort black Flower'd. 3. *Aſclepias Cretica*, Swallow

low-Wort of Candy. *Fabius Columna*, took the *Italian Aſclepias* to be rather *Apocynum Dioſcoridis*; and *Lobel* calls the Black Swallow-Wort *Periploca minor* (becauſe it clambers like a *Periploca*) but theſe are not only improper Names, but alſo falſe Names as to the Plants they repreſent; for there is this ſpecial difference between *Apocynum* and *Aſclepias*, that the firſt in all its Species has a Poiſonous Milky Juice, whereas the latter, or Swallow-Wort has none, but is the true *Antidote*, or *Counter-Poiſon* to the *Apocynum*.

The Deſcriptions.

III. The firſt, or Swallow-Wort white Flower'd. *Its Roots are a great Buſh of many white Strings faſtned together at its Head, ſmelling ſomewhat ſtrong whilſt they are freſh and green, but more pleaſant when they are dryed. It riſes up with ſeveral ſlender weak Stalks, two or three Feet in length, not eaſie to break, and ſcarce able to ſtand upright; which therefore for the moſt part lean or lye down upon the Ground, if they find nothing to ſuſtain them, and ſometimes they will twine themſelves about it: On the Joints of theſe Stalks are ſet Leaves by couples, being ſomething broad and long pointed at their ends, of a dark green Color, and having ſmooth edges. At the Joints with the Leaves, towards the tops of the Stalks, and at the tops themſelves, come forth divers ſmall white Flowers, conſiſting of five pointed Leaves apiece, of a pretty ſtrong ſweet Smell. After which, come ſmall long Pods, thick above, or next to their Footſtalks, and gradually growing leſs and leſs to the Point; in which lye ſmall flat brown Seed, wrapped up in a great deal of white Silk Down; which when the Pod is ripe, opens of it ſelf, and ſheds both Seed and Silk upon the Ground, if it be not before hand carefully gathered. This Plant yields no Milk of any ſort, White or Yellow in our Country, as the* Apocynum *or* Dogs-Bane *does; but only a thin watery Juice. Both Leaves and Stalks dye away and periſh every Year, and riſe again the next Year in the Spring, the Stalks being at their firſt ſpringing up of a blackiſh brown Color.*

IV. *Gerard* deſcribes this firſt ſort after this manner. *Its Root conſiſts of very many white Thready-Strings, and of a ſtrong Smell. It has divers upright Branches of a browniſh Color, of about 3 Feet high, beſet with Leaves not much unlike to thoſe of* Amara Dulcis, Dulcamara, *or* Woody Nightſhade, *ſomewhat long, broad, ſharp pointed, of a blackiſh green Color, and ſtrong Smell: Among which, come forth very many ſmall white Flowers, Star Faſhion, hanging upon little ſlender* Footſtalks. *After which come in their places, long ſharp pointed Cods, ſtuffed full of a moſt perfect white Cotton, reſembling Silk, as well in ſhew as handling, from which ſome call it* Silken Ciſley; *in which is wrapped up ſoft browniſh Seed.*

V. The ſecond, or Swallow-Wort Black Flower'd. *Its Root is a ſmall Buſh of white Strings, not much unlike the former. It grows in the ſame manner which the other does, having its long ſlender rough Branches, ſtretching out to a greater height or length than the former, and twining themſelves about whatſoever ſtands next unto them, and having on them ſuch like dark green Leaves ſtanding by couples, but ſomething ſmaller than they. The Flowers grow likewiſe in the ſame faſhion, but ſomewhat ſmaller alſo, and of ſo dark a purpliſh Color, that they ſeem to be almoſt black; and are ſcarcely*

Swallow-Wort White.

Swallow-Wort Black.

ſcarcely diſcernible, unleſs one look very earneſtly upon them. After which, come (more plentifully than in the former) ſuch like Cods, with a white Silver Down, like pure fine Silk, in which the Seed as in the former, are wrapped. This Plant nor its Root, ſmells not ſo ſtrong as the firſt; nor does it give any Milk, but a Watery Juice when broken.

VI. The third, or Swallow-Wort of Candy. *Its Root is not compoſed of ſo many Strings as the laſt, but has as well as the reſt of the Plant, a ſtrong Smell, and as ſome think, not much unlike to* Box. *It riſes up in the manner and faſhion as the others do, with many ſlender flexible green Branches, with Leaves ſet by pairs at the Joints, on either ſide, as the white kind has, and are very like unto them, but ſomewhat of a paler green color. The Flowers ſtand in the ſame manner, three or four together upon a Stalk, but are ſomething of a paler white Color, not full out ſo white as they; to whom ſucceed ſometimes but one, but moſt commonly two Pods together, which are thicker and ſhorter than thoſe of the White Kind; ſtraked alſo all along, and double forked at the ends, which contain within them Seeds and Silk, as in the former.*

VII. *The Places.* They grow Wild in rough and untili'd Places, and on Mountains in *Italy* and the Southern parts of *France*, and in other hot Countries; and the laſt is found growing in *Candy*, from whence the Seed has been brought to us: But here in *England* they are only Nurſt up in Gardens, where they thrive admirably well.

VIII. *The Times.* They all Flower in the Months of *June* and *July*, but ſometimes (as the Seaſon may be for Coldneſs) not till *Auguſt*; and their Cods with Seed, are ripe about a Month afterwards; the empty Husks abiding on the dry Branches, when the Silk and Seed are gone, being either fallen on the Ground, or blow away with the Wind.

IX. *The Qualities.* The Roots of theſe Plants are only, or rather chiefly uſed. They are hot and dry in the ſecond Degree, Aperitive, Abſterſive, Diuretick, Vulnerary, Pectoral, Cardiack, Hyſterick, and Alexipharmick.

X. *The Specification.* They are a Sovereign Cure for all ſorts of Vegetable and Animal Poiſons, but in particular for the Poiſon of *Apocynum*, or *Dogs-Bane*, (this being the Counter-Poiſon or Antidote againſt it:) as alſo the Bitings of Mad Dogs, *&c.* It cures alſo the Plague or Peſtilence, and all ſorts of Peſtilential Diſeaſes, Faintings, Swooning, Convulſions, Fits of the Mother, Coughs, Colds, Aſthma's, Phthiſicks, and all other Obſtructions and Diſeates of the Lungs; Obſtructions of Urine, Dropſy, Jaundice, Epilepſy, Pains of the Mother; provokes Urine and the Terms, eaſes the Colick and Gripings of the Guts, kills Worms in the Belly, and is of good uſe to cleanſe and heal all Putrid, Filthy and rotten Ulcers in what part of the Body ſoever.

XI. *The Preparations.* From the Roots are prepared, 1. *A Decoction in Wine.* 2. *A Pouder.* 3. *An Ointment or Balſam.* 4. *A Tincture.* From the Leaves and Flowers are made, 5. *A Cataplaſm.* From the Down, 6. *Dry Pledgets.*

The Virtues.

XII. *The Decoction of the Roots in Wine.* It is a peculiar Cure againſt the Poiſon of *Apocynum*, or *Dogs-Bane*, or *Woolfs-Bane*, or any other Vegetable Poiſon; as alſo againſt the Bitings of Mad Dogs, or the Biting or Stinging of any other Venomous Creature. It gives eaſe in the Colick, and the Griping of the Guts. It prevails againſt the Plague or Peſtilence, Spotted Fever, Purples, Carbuncle, Meaſles, Small Pox, and all other Fits of Malign and Peſtilential Diſtempers. The Decoction made ſtrong in White Wine, and taken for ſeveral days together, a Pint at a time, and Sweating well upon it, cures the Dropſy, alſo the yellow Jaundice, and ſtoppage of Urine thro' tartarous matter in the Reins, Ureters and Bladder. It helps the Coughs, Colds, Aſthmas, Phthiſicks, Hoarſeneſs, Wheezing, and other Diſeaſes of the Breſt and Lungs. It is alſo profitable againſt Vapors, Hyſterick Fits, and provokes the Terms in Women. If it is made alſo with the addition of *Comfrey* Roots, it is good againſt Ruptures of the Bowels, inward Bruiſes, Bleedings, and the like.

XIII. *The Pouder of the Roots.* It has all the former Virtues, much excelling the Decoction, and may be given to a Dram or Dram and half in Canary or White *Liſbon*, Morning and Night. It is good againſt Fainting, Swooning, and other Paſſions of the Heart: Taken with *Peony-Seed* it helps againſt the Falling-Sickneſs; with Pouder of *White Dittany Roots*, it kills Worms in the Belly, and prevails againſt Melancholy.

XIV. *The Ointment or Balſam.* The Pouder two Drams, mixed with ſix Drams of any Vulnerary Ointment, or *Balſam of Tobacco*, &c. Cleanſes, incarnates and heals Wounds, and old Putrid and Rotten Ulcers, beyond that of *Birthwort-Roots*, or of any other Vegetable whatſoever.

XV. *The Tincture.* It has all the Virtues of Decoction and Pouder, excelling them ten times in Virtue and Goodneſs. Doſe a Spoonful.

XVI. *The Cataplaſm of Leaves and Flowers.* It cures hard Tumors in Womens Breaſts, as alſo running Sores and foul Ulcers in the ſame parts.

XVII. *Dry Pledgets of the Silk or Down.* Applyed to old running Sores and Ulcers after cleanſing, it drys them, and in a ſhort time after heals them.

CHAP. DCLXXXI.

Of TANSIE *Garden.*

I. *THE Names.* It is called in Greek, Ἀθανασία: in Latine, *Tanacetum*, *Athanaſia*: in Engliſh, *Tanſie.*

II. *The Kinds.* Authors make many kinds of this Plant, but theſe four are thoſe which are chiefly known to us, *viz.* 1. *Athanaſia Vulgaris*, *Tanacetum Vulgare*, Our Common Garden Tanſie. 2. *Athanaſia Criſpa*, *Tanacetum Sativa Anglica*; *Tanacetum Criſpum*, Criſped or Curled Tanſie. 3. *Tanacetum Verſicolor*, Tanſie Party-Coloured. 4. *Tanacetum Lanuginoſum*, Woolly Tanſie.

The Deſcriptions.

III. The firſt, or our Common Garden Tanſie. *Its Root is tough, and of a Woody Subſtance. It grows up with many Stalks with Winged Leaves, which are long, having many little Ones ſet by couples upon a middle Rib, many of them upon one Foot-ſtalk, almoſt like thoſe of* Agrimony, *and not much unlike to thoſe of the* Female Fern. *The*

Flowers

Flowers grow upon the tops of the Stalks, in certain cluſter'd Tufts (without any Leaves as a Pale about them;) which Flowers are like round But-

Tanſie-Garden, Common.

tons of yellow Roman Camomil, *or* Feathetfew; *and as yellow as Gold. The whole Plant is bitter, and of a very ſtrong Smell, but yet very pleaſant.*

Tanſie-Garden, Criſped.

IV. The ſecond, or our Criſped, or Curled Tanſie. *Its Root creeps under Ground, and ſhoots up again in divers places. Its Leaves are winged like the former, which are hard and green, being many ſmall ones ſet by pairs one againſt another upon a middle Rib, ſnipt about the edges, but cloſer and thicker ſet than the firſt, and withal crampled, which has cauſed it to be called double or Curled Tanſie. It riſes up with ſeveral hard Stalks, on which, and on its Branches at their tops, grow Gold yellow Colour'd Flowers almoſt like Buttons, which being gather'd in their Prime, will hold the freſh Color for a long Seaſon. The Seed is ſmall, and as it were Chaffie; and the whole Herb, both Leaves and Flowers, hath a piercing ſtrong, but very pleaſant grateful Smell, and a ſharp ſtrong bitter Taſte, exactly like to the firſt Common kind; ſo that by the Smell and Taſte only, they are not to be diſtinguiſhed one from another.*

V. The third, or Tanſie Party-Coloured. *This in its Roots, Leaves, Stalks, Branches, Flowers and form, and manner of Growing, is not to be diſtinguiſhed from our common* Garden Tanſie: *The only difference between them is this, That upon the firſt ſhooting up the Heads of Leaves, they are almoſt all White, and after they are grown great, there will be many Leaves remaining White among the Green, which makes it the more pleaſant to behold, ſeeming like a Party-Coloured Feather, in reſpect to the fine cut Leaves of White and Green.*

VI. The fourth, or Woolly Tanſie. *It has a Root which is thick, blackiſh, fibrous and ſpreading, which ſends forth divers winged Leaves, ſomething like unto the former* Tanſies, *and nearly like to* Yarrow Leaves; *of which ſome would make it a Species, but that the Smell convinces us to the contrary, this being very ſtrong and Sweet like to* Tanſie, *whereas* Yarrow *has no Smell at all. The Leaves are alſo very Woolly, ſet cloſe together about the Root; from among which ſpring up ſeveral Woolly Stalks, having ſuch like Woolly Leaves upon them, and at their tops many Tufts of yellow Flowers, much like thoſe of the former* Tanſies.

VII. *The Places.* They are all Garden Plants with us. The firſt three are Natives of our own Land: The Curled Tanſie and the Party Coloured, are *Aborigines* of *England*, and are thought to be Degenerations from our firſt Common Kind, being made ſo by Planting of Slips, which many times looſe ſome parts of their Original Stocks, and ſometimes add ſomething to them, which may alſo be cauſed in part from the differing Soils, and their Richneſs or Poorneſs in which they are Planted: The firſt Common Tanſie grows in ſome Forreign Southern Countries and warm Climates, by Hedge and Ditch ſides, and in the Borders of Fields; and the fourth grows in the Southern parts of *France*, and other Southern hot Countries.

VIII. *The Times.* They all Flower in the Summer Months, *viz.* in *June*, *July*, and *Auguſt*; and if the Flowers are gathered in their Prime, will keep their Colour and Beauty for a long time without fading; from whence might poſſibly come the Greek Name *Athanaſia*, from Ἀθανασία *immortalis*, *ſine Morte*, or *non Moriens*.

IX. *The Qualities.* They are hot in the ſecond degree, and dry in the third. *Tanſie* is Abſterſive, Aperitive, Aſtringent, Diuretick, Stomatick, Neurotick, Hyſterick, Arthritick, Nephritick and Emmenogogick.

X. *The Specification.* It provokes Urine, forces away Sand, Gravel and Stones from the Reins and Bladder, eaſes the Colick, reſiſts Vapors and Hyſterick Fits, provokes the Terms, gives eaſe in the Gout, whether in Joints, Limbs or Stomach; and

is a fingular Remedy againſt the Scurvy, in a cold Habit of Body.

XI. *The Preparations.* You may make there from, 1. *A Liquid Juice.* 2. *An Eſſence.* 3. *A Syrup.* 4. *An Infuſion or Decoction in Wine.* 5. *A Pouder of the Flowers and Leaves.* 6. *An Inſolated or Decocted Oil.* 7. *A Cataplaſm of the Leaves.* 8 *A Tanſie Pancake.* 9. *A Diſtilled Water.* 10. *A Spirituous Tincture.* 11. *An Acid Tincture.* 12. *An Oily Tincture.*

The Virtues.

XII. *The Liquid Juice.* It potently provokes Urine, and cleanſes the Urinary paſſages from Sand, Gravel, Stones, and Tartarous Mucilage, which many times afflict Patients with Strangury or Ischuria; and a heat and ſcalding of Urine. It potently expels Wind, and prevails againſt the Collick, whether in the Stomach or Belly; kills Worms in the Bowels, reſiſts Vapours, provokes the Terms, and is profitable againſt Fits of the Mother. Doſe from 3, to 6 or 8 Spoonfuls in any fit Vehicle, Morning and Night: So taken, it gives eaſe in the Gout, whether in Limbs or Stomach, and carries off by Urine, the Morbifick Tartarous matter of that Diſeaſe.

XIII. *The Eſſence.* It has all the Virtues of the former and much more powerful to all thoſe Intentions; beſides which, it is of ſingular uſe to cure the Scurvy, and prevent Miſcarriage in Women, being bathed warm two or three times a day upon the Belly, and lower parts thereof towards the Share: Doſe from 3 to 5 Spoonfuls, as before directed.

XIV. *The Syrup.* It has the Virtues of Juice and Eſſence, but nothing near ſo powerful for thoſe purpoſes; but is of good uſe againſt Aſthma's, Coughs, Colds, Hoarſeneſs, Wheezing, Phthiſicks, Sickneſs at Stomach, and other Diſtempers of thoſe Viſcera. Doſe two Spoonfuls Morning, Noon and Night, either alone, or in ſome fit Diuretick Vehicle. So taken, it is a very good thing againſt the Dropſy, *Anaſarca*, or *Sarcites*.

XV. *The Infuſion or Decoction in Wine.* They are very Stomatick, and if ſweetned with the former Syrup Pectoral alſo, have all the Virtues of thoſe former Preparations; but as they are weaker, muſt be given in a larger Doſe, as from a quarter of a Pint, to half a Pint, Morning and Night, *&c.*

XVI. *The Pouder of the Heads of Flowers and Leaves.* It is Anti-Collick, kills Worms in Children and elder People; and is found profitable againſt the Epilepſy in Young People. Doſe from half a Dram to a Dram and half, in Ale, Beer, or Wine.

XVII. *The Inſolated or Decocted Oil. It is made of the green or freſh Heads of Flowers and Leaves well bruiſed, and put into choiſe Oil Olive*, &c. It reſtores Nerves ſhrunk up by Cramps, Overſtraining, *&c.* and gives eaſe in pains afflicting any part, whether the Head, Stomach, Belly or Limbs, by anointing, *&c.*

XVIII. *The Cataplaſm of the Heads and Leaves.* Applyed to the Belly of Women with Child, it prevents Miſcarriage, and cauſes then to go out their whole time, who are apt to that weakneſs; and being applyed, it alſo gives eaſe in pains of the Gout.

XIX. *The Tanſie Pancake.* It is pleaſant Food being eaten in the Spring, is very Stomatick, warms and comforts that *Viſcus*, and cauſes good Digeſtion, and precipitates ill Humors from the ſame.

XX. *The Diſtilled Water.* Sweetned with the Syrup, it may be given from two Ounces to a quarter of a Pint or more, againſt Fainting and Swooning Fits, Sickneſs at Heart, ill Digeſtion, *&c.* Outwardly applyed, it cleanſes the Face and Skin, making it ſmooth, ſoft, white and pleaſant.

XXI. *The Spirituous Tincture.* It has all the Virtues of the Juice, Eſſence, Infuſion, and Pouder; and which as it is more powerful than them all, ſo it is to be given in a much leſs Doſe, as from one Spoonful to two Spoonfuls in the Syrup, or in a Glaſs of Stomatick or Diuretick Wine, morning and night.

XXII. *The Acid Tincture.* It is wonderfully Aperitive, and of admirable uſe againſt all Burning, Malign and Peſtilential Fevers, as alſo againſt the Plague it ſelf. It comforts the Stomach, ſtays Vomiting, and kills Worms; and is to be taken in all that the Patient drinks, ſo many Drops at a time, as to give it a pleaſing Acidity.

XXIII. *The Oily Tincture.* This is much more potent in Diſeaſes of the Urinary parts than any of the former Preparations; and may be given againſt Sand, Gravel, Stone, or Tartarous Mucilage in the Reins, Ureters or Bladder, from 15 to 20 or 40 Drops, being mixed with a little white Sugar, and then with ſome proper Diuretick Vehicle. It is alſo good againſt Aſthma's, and other Diſeaſes of the Lungs, Palſies, Cramps, Convulſions, and other like Weakneſſes and Diſtempers of the Nerves.

CHAP. DCLXXXII.

Of TANSIE *Wild.*

OR,

SILVER-WEED.

I. *THE Names.* Tho' it has no known Greek Name, yet it is thought to be the ſame which *Pliny*, *lib.* 26. *cap.* 12. calls *Stephanomelis*, and in *lib.* 25. *cap.* 9. and *lib.* 26. *cap.* 8. *Argemonia*, Ἀργεμωνη: and others *Argemone*: in Latine, *Potentilla*, (*ab extimijs viribus quibus pollet:*) *Argentina*; *Tanacetum Sylveſtre, vel agreſte Brunfelſij*; *Argemone altera Geſneri & Tragi*; *Anſerina Tabernæmontani*; and by ſome, *Agrimonia Sylveſtris*: In Engliſh, *Wild Tanſie*, or *Silver-weed.*

II. *The Kinds.* It is *Planta Singularis ſui generis*; nor do I know any other Author which has given us another Species thereof, it being not a kin to the Tanſies.

The Deſcriptions.

III. Its prime or chief Root runs downward like that of Cinkfoil; *from whence ſprings forth neat ſlender creeping Branches, almoſt like Strings, which creep upon the Ground, taking Root again at the joints every where, round about the place where it grows, ſo that it will quickly overſpread a great deal of Ground. From theſe creeping Branches or Strings, ſhoot forth ſeveral winged Leaves, which are large, and made of many leſſer ones, ſet on both ſides a middle Rib; ſome ſmaller being ſet among*

the greater, but the ſmalleſt are always at the bottom of the ſaid Rib, gradually increaſing in bigneſs as they grew higher towards the top of the Rib, not much unlike in Form to Agrimony *or* Mead-ſweet, *but much differing in ſmoothneſs and color; and almoſt like in Form to* Garden-Tanſie, *from whence it took its Name; all which little Leaves are finely dented about the edges, and are of a fair green color on their upperſide, and of a white ſhining*

Tanſie Wild: Or *Silverweed.*

Silver Color underneath. It ſends up no Stalk, but the Flowers every one of them in particular, ſpring from the Joints (with thoſe winged Leaves) of thoſe creeping Strings, ſtanding upon a ſmall ſlender, and not very long Footſtalk. They conſiſt of five ſmall yellow round pointed Leaves, very like to thoſe of Cinktoil.

IV. *Gerard* deſcribes it after this manner. *It creeps along on the Ground with fine ſlender Stalks and claſping Tendrels; the Leaves are long and winged, made up of many ſmall Leaves, like unto thoſe of the* Garden-Tanſie, *but leſſer; which are on the upperſide Green, but on the underſide very White. The Flowers are yellow, and ſtand upon ſlender Stems, as do thoſe of* Cinkfoil.

V. *The Places.* It grows Wild almoſt every where in moſt parts of *England*, and many other Countries; more eſpecially near High-ways, moiſt places, and running Waters.

VI. *The Times.* It Flowers in the Prime Summer Months, chiefly in *June* and *July*.

VII. *The Qualities.* It is cold and dry in the ſecond degree; Aſtringent, Obſtructive, Anodyne, Vulnerary and Arthritick.

VIII. *The Specification.* It ſtops all Fluxes of the Bowels, even the Bloody-Flux; alſo Spitting, Vomiting, or Piſſing of Blood, or any other inward Bleeding. It helps the Whites in Women, and is profitable againſt Ruptures in Children, and is good to diſſipate Contuſions; faſtens looſe Teeth, and heals Wounds or Ulcers in the Mouth, Throat, Secrets, or in any other part of the Body; drying up old, moiſt, corrupt and running Sores. It reſiſts the Fits of Agues, is ſaid to break the Stone; and is good to cool Inflamations in the Eyes, as alſo to take away all diſcolourings of the Skin, and to cleanſe it from any kind of Deſœdation.

IX. *The Preparations.* You may have therefrom, 1. *A Liquid Juice.* 2. *An Eſſence.* 3. *A Decoction in Wine.* 4. *A Pouder of the Herb.* 5. *A Gargariſm.* 6. *An Ointment or Balſam.* 7. *An Ophthalmick.* 8. *A Cataplaſm.* 9. *A Diſtilled Water.* 10. *A Spirituous Tincture.* 11. *An Acid Tincture.* 12. *An Oily Tincture.*

The Virtues.

X. *The Liquid Juice of the whole Herb.* Taken to 4 or 6 Ounces, 3 or 4 hours before the coming of the Fit of an Ague, it is ſaid to cure it, after ſome few times taking. It ſtops all Fluxes of the Bowels, and Bloody Fluxes of what kind ſoever, whether by the Noſe, Mouth, Bowels, Urinary parts or Womb; ſtops the Whites, is profitable againſt Catarrhs, faſtens looſe Teeth, and is good againſt Ruptures in Children; and to break the Stone whether in Old or Young.

XI. *The Eſſence.* It has all the former Virtues, beſides which, it heals Wounds; cleanſes, incarnates, and drys up old running Sores, foul Ulcers, and weeping Fiſtula's: It is alſo excellent againſt an *Ophthalmia*, abating the Inflamation to admiration; and after a ſingular manner diſſipates Contuſions. Doſe 2, 3, or 4 Spoonfuls or more, in ſome fit Vehicle Morning and Night.

XII. *The Decoction in Wine.* It has the Virtues of the Juice and Eſſence, but in a lower degree, and therefore is to be given in a much larger Doſe, as to half a Pint or more. It eaſes alſo pains and Gripings in the Bowels, and helps Fainting of the Spirits.

XIII. *The Pouder of the Herb and Flowers.* It has the Virtues of the Juice, but operates not with that ſpeed, becauſe it muſt be firſt digeſted in the Stomach. It is chiefly given to ſtop the Carriere of Agues, Spitting and Vomiting of Blood, and the Whites in Women. Doſe from half a Dram to a Dram and half, in ſome Styptick Wine or Decoction, or in the Decoction of this Herb, ſweetned with *Syrup of Comfrey*.

XIV. *The Gargariſm. It is made of a Decoction of the Herb and Heads of Flowers, in Red Poſt or Barabar Wine, with the addition of a ſmall quantity of Alum, ſweetning it afterwards with Honey.* It conſolidates green Wounds, cleanſes and heals Ulcers in the Mouth, Jaws and Throat, they being often Gargled therewith; it cleanſes and heals Ulcers alſo in the Privy parts of Man or Woman, as alſo in the Legs and other places of the Body; eaſes the Toothach, faſtens looſe Teeth, ſtrengthens and fixes the Gums which are looſe and ſpongy; and reſtores the Tone of the *Uvula* when hurt and weakned, ſo as to hang down. If the *Decoction is made with Water and Common Salt*, it diſcuſſes Contuſions, diſſolves congealed Blood, by bathing with it; and ſo alſo it eaſes the pains of the Gout.

XV. *The Ointment or Balſam.* They are very healing, and after cleanſing and incarnating of a Wound or Ulcer, they quickly dry it and heal it up.

XVI. *The Ophthalmick. Take of the Juice or Eſſence four parts; of the Gargariſm aforegoing two parts; rectified Spirit of Wine one part; mix them.* It cures Ophthalmies, inflamed and ſore Eyes, and ſuch as are affected with a continual hot, fiery and ſharp Rheum; it alſo cures running Sores, and Ulcers of the Eyes.

XVII. *The*

XVII. *The Cataplaſm.* It is made of the whole Green Herb, by beating in a Mortar. Being applyed to the Soles of the Feet, it abates the burning heat of Fevers; and bound pretty hard on to the Wriſts of both hands, and kept on for ſome days, it cures Agues tho' of long continuance. Applyed to Gouty parts it eaſes their pains.

XVIII. *The Diſtilled Water.* It is a cleanſer of the Skin from all Diſcolorings and Defœdations; but if to a Pint of the Diſtilled Water you add ſix Drams of *Sal Prunellæ* in fine Pouder, diſſolving the ſame in a gentle Sand heat, and when cold, filtring it thro' brown Paper, it will perform thoſe things much more effectually; not only removing Freckles, yellowneſs of the Skin, Tanning, Sunburning, Pimples, Scurf, Morphew, and the like; but withal making the Skin white, ſoft, ſmooth and very fair.

XIX. *The Spirituous Tincture.* It ſtrengthens the Stomach, reſiſts Vomiting, and ſtops Fluxes of the Belly potently. Doſe a Spoonful at a time Morning and Night, in a Glaſs of generous Wine.

XX. *The Acid Tincture.* It prevails againſt Old Fœtid, Rotten and Stinking Ulcers, and diſpoſes them to heal; and is of ſingular uſe to quench thirſt in all vehemently hot and burning Fevers; and to enervate and profligate the Poiſon and Malignity of the Plague or Peſtilence, and of all other Malign and Peſtilential Diſeaſes. Doſe 50 drops.

XXI. *The Oily Tincture.* It is good againſt the Gout in the Stomach, and gives eaſe in the Gout in the Limbs or Joints, if anointed thereon. It prevails againſt Cramps, Convulſions, Palſies, and other cold and moiſt Diſtempers of the Nerves, and of the parts affected, and very much ſtrengthens them. It gives eaſe in the Stone and Strangury, opening the Obſtructions of thoſe parts, and expelling Sand, Gravel, and Tartarous Slime from the ſame. Doſe from 10 to 30 Drops, in ſome Nephritick or Diuretick Vehicle.

CHAP. DCLXXXIII.

Of TARE *Manured* and *Wild.*

I. *THE Names.* It is called by *Galen* in Greek, Βίκιον, *Bicium*, as the *Aſiaticks* term it: But Σάρακον, and Κύαμον: *Saracum* and *Cyamum*, with the *Athenians:* in Latine, *Vicia*, and in Engliſh, *Tare* or *Vetch.*

II. *The Kinds.* There are 1. *Vicia Sativa*, the Manured Tare or Vetch. 2. *Vicia Sylveſtris*, The Wild Tare or Vetch. 3. *Vicia Sylveſtris flore luteo, Vicia perennis*, Tare Everlaſting, of which ſee in the next *Chapter.*

III. *The Manured Kinds* are, 1. Ἄφακη, *Aphace*, and *Aphaca Matthioli*, *Vicia Sativa*, *Vicia vulgaris Sativa* (*Vicia à Vinciendo* as *Varro* will have it from Binding:) Our Common Manured Tare. 2. *Vicia Sativa alba*; *Vicia Sativa fructu albo*, The White Manured Tare or Vetch. This *Gerard* calls *Vicia Indica fructu albo*, becauſe it is probable, that it was firſt brought to us from the *Indies.*

IV. *The Wild Kinds* are, 1. *Vicia maxima Dumetorum Bauhini*; *Cracca major aliorum*; *Os Mundi*; *Vicia Sylveſtris altera Tragi:* The great Wild Hedge-Tare or Vetch. 2. *Vicia Sylveſtris alba*; *Vicia Sylveſtris flore albo Cluſij*, White Wild Tare or Vetch. This *Parkinſon* ſays is the ſame with *Dodonæus* his *Galega altera*, and alſo with his *Vicia Onobrychidis ſtore*; and may be called *Vicia Sylveſtris Nemorum*, or Wild Wood Vetch. 3. *Vicia multiflora ſive Spicata*, The Tufted Tare or Vetch. 4. *Arachus* five *Cracca major* (which is the Ἄγριος *Galeni*) *Vicia major Tragi*, The greater Wild Vetch or Tare. 5. *Arachus* five *Cracca minor*, The leſſer Wild Tare or Vetch. Theſe two laſt *Dodonæus* thinks may be that kind of Pulſe growing among Corn, which the *Greeks* call Ἄγριος, *Arachis.* Of all which in Order.

The Deſcriptions.

V. The firſt of the Manured, or our common Manured Tare. *Its Root is ſmall, with a great number of Strings, and periſhes every Year. It riſes up with divers ſquare Stalks, ſometimes two Feet or more long, entangling themſelves one with another, that they ſtand in the Field without need of any Prop or Stay. The Leaves are winged, thicker ſet together than in the Wild Kinds, and growing on both ſides of a middle Rib; the end of which, runs out into a divided Tendrel or Claſper, which are larger alſo than thoſe in the Wild Kinds. The Flowers grow two together, and are long and narrow, of a dark Purple Color, and the Cods which ſucceed them are long and ſomewhat broad, in which lye 5 or 6 flat blackiſh Seed, but in ſome Grayiſh.*

Tare or Vetch, Manured.

VI. *Gerard* deſcribes it thus. *It has ſlender four ſquare Stalks, almoſt three Feet long. The Leaves are long, with claſping Tendrels at their ends, which are made up with many little Leaves, growing upon a middle Rib; every one of which is greater, broader, and thicker than that of the Len-*

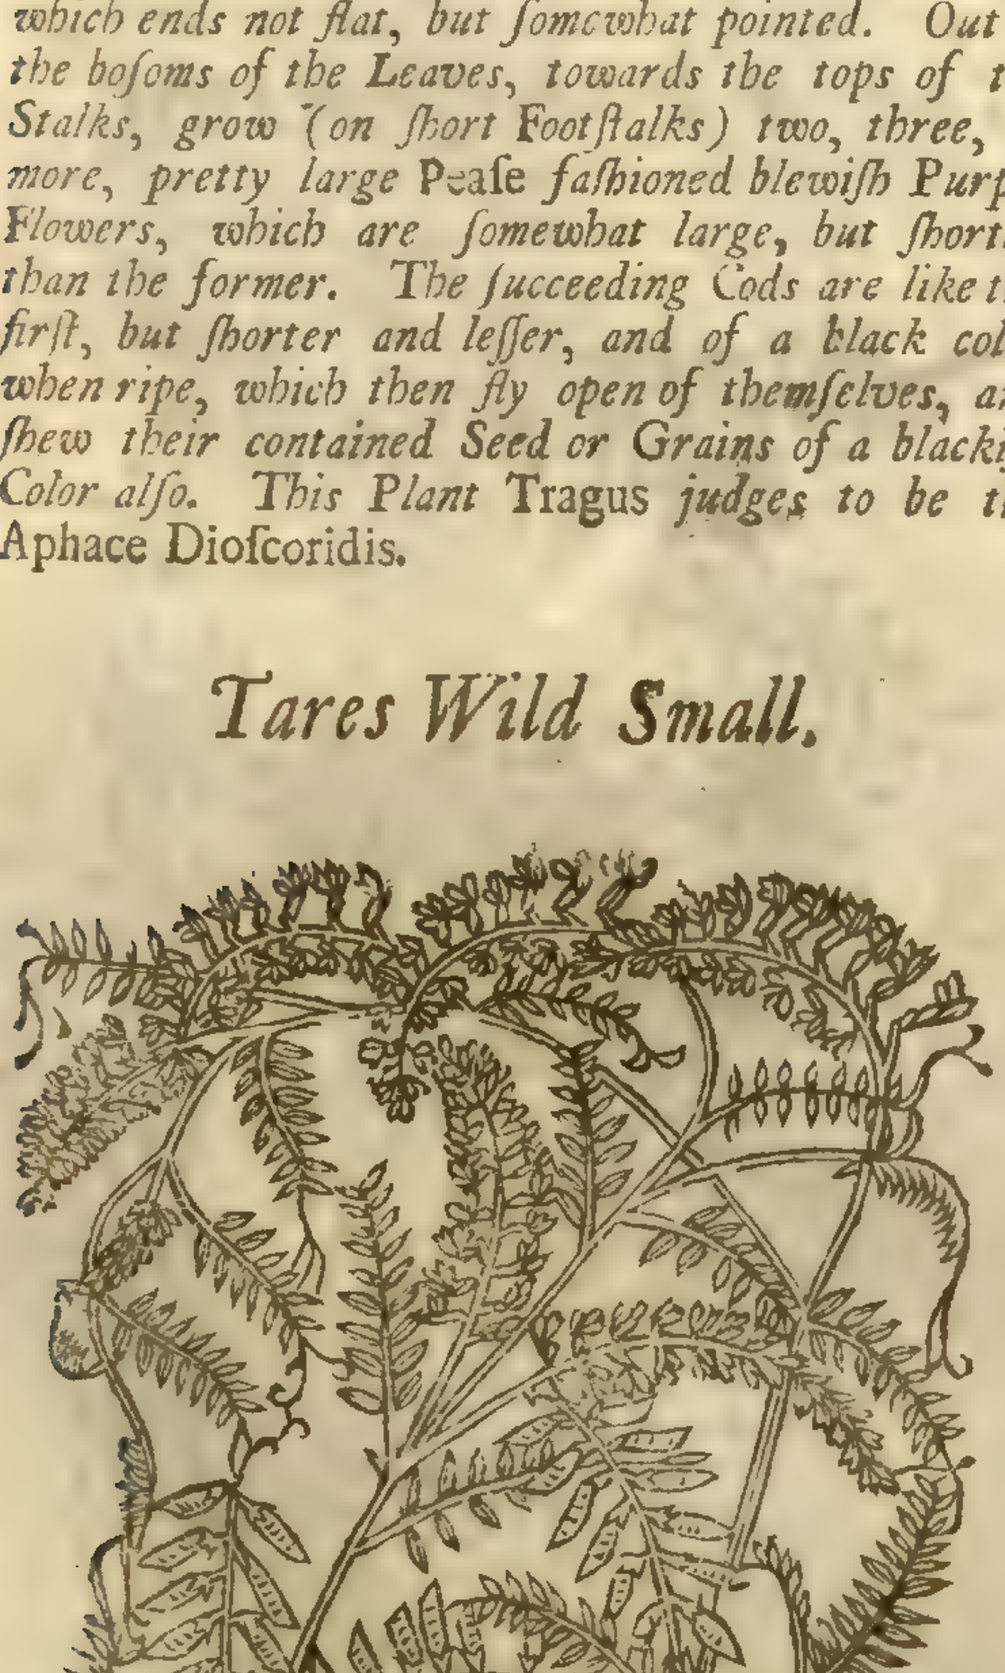
til *The Flowers are like to thoſe of the* Garden Bean, *but of a black Purple Color. The Cods are broad, ſmall and long, containing for the moſt part,* 5 *or* 6 *Grains in each, of a blackiſh color, flattiſh, and of no very pleaſing Taſte.*

VII. The ſecond Manured, or white Manured Tare or Vetch. *This in its Root, Stalks, Winged Leaves, Faſhion of its Flowers, or their Color, Cods, Form and manner of growing, nor ſcarcely in any thing elſe, differs from the* Common Tare *before deſcribed, ſaving, that this grows higher; the Leaves are not ſo thick, and the Fruit is larger and rounder, and of a very clear white Color, more like to* Peaſe *than* Tares.

Deſcriptions of the Wild Kinds.

VIII. The firſt of the Wild Kinds, or the Great Wild Hedge Tare or Vetch. *This has a creeping and living Root, growing much like to the firſt* Manured Tare, *but is larger in the Size, and number of the Leaves. Its Stalks are creſted, being between* 2 *and* 3 *Feet in height. The Leaves are Winged, commonly a dozen growing upon one Rib, which ends in a Winding Tendrel: Each peculiar Leaves broader towards the bottom, and ſharper towards the top, which ends not flat, but ſomewhat pointed. Out of the boſoms of the Leaves, towards the tops of the Stalks, grow (on ſhort Footſtalks) two, three, or more, pretty large* Peaſe *faſhioned blewiſh Purple Flowers, which are ſomewhat large, but ſhorter than the former. The ſucceeding Cods are like the firſt, but ſhorter and leſſer, and of a black color when ripe, which then fly open of themſelves, and ſhew their contained Seed or Grains of a blackiſh Color alſo. This Plant* Tragus *judges to be the* Aphace Dioſcoridis.

Tares Wild Small.



IX. The ſecond, or ſmall White Wild Tare or Vetch. *Its Root is perennial, as many of the Wild Kinds be. It ſends up Creſted Branches about a Foot and half high, growing in Form like unto the other, having thereon, ſuch like Winged Leaves as the former, but whiter, having a kind of hoary Down upon them. The Flowers which grow on ſhort Footſtalks, out of the Boſoms of the Leaves towards the tops of the Stalks and Branches, are of a whitiſh Color, with dark Purple Veins running thro' them. The Cods are like thoſe of the* Common Tare, *and the Seed is flat like them alſo.*

X. The third, or Tufted Tare or Vetch. *Its Root creeps under Ground far about, ſhooting out new Branches every Year, the old ones being periſhed. It has ſuch like trailing Branches as the others have, but weaker; the Winged* Leaves *are more in number,* 12, 16, 20 *or more, ſet on a Rib, longer and narrower than the former, and ſtanding more upright, but they are not always ſet exactly oppoſite one to another, but unequally. The Flowers likewiſe which ſtand upon long naked Footſtalks, are more in number, ſometimes twenty together, but ſmaller, and ſomething like to the Flowers of* Onobrichis, *or* Cocks-head, *and of a bright blewiſh purple Color, and ſometimes of a dark Purple with ſome white in them. The Cods are long, containing within them black Seed.*

XI. The fourth, or the greater Wild Tare or Vetch. *Its Root is ſmall, and periſhes every Year. It has a few ſlender Creſted Stalks lying on the Ground, if it finds nothing on which it can climb or take hold. At the joints come forth Winged Leaves, many ſmall ones being ſet on both ſides of a middle Rib, which ends in a Claſper, but leſſer than thoſe of* Lentils *or the* Manured Tare. *The Flowers are Purple, in form like thoſe of the* Tare, *and grow uſually but one at a Joint. After which come ſmall long black Cods, leſſer than thoſe of the* Common Tare. *The Seed or Grains are alſo leſs, and round, not flat as thoſe of* Tares *are.*

XII. The fifth, or Leſſer Wild Tare or Vetch. *Its Root is fibrous, and has ſeveral ſmall white Kernels hanging among them. This differs nothing from the former but in its ſmallneſs, excepting that this has whitiſh Flowers ſtanding in Tufts at the tops of the Stalks. The Cods which follow, are ſhorter and ſomething hairy, and the Seed or Grains within, Whitiſh.*

XIII. *The Places.* The two firſt kinds are Sown in Fields for their profit of Feeding Cattel, either with the Grain or Straw, or both; and of the Grain the poorer ſort of People in many Countries, are force to make Bread, Cakes, Puddings, *&c.* The Wild kinds are found by Hedge-Sides, in Woods and moiſt Grounds, and among Buſhes in many parts of this Kingdom; for they will grow in any Ground or Soil whatſoever. The fourth and fifth of the Wild Kinds are often found in the Fields among Corn, where they will in a rainy Seaſon quickly overſpread it, and kill it, or any other Herbs they grow by.

XIV. *The Times.* The Manured, and the three firſt Wild Kinds, Flower in *May* and *June*; the fourth and fifth in *July*, and the Cods or Grains are ripe in *Auguſt* or *September.*

XV. *The Qualities.* They are temperate in reſpect to heat or cold, drineſs or moiſture; Aſtringent, Glutinative, Vulnerary, and Reſtorative.

XVI. *The Specification.* They ſtop Fluxes, and cure running Ulcers and Cankers which are ready to Gangrene.

XVII. *The Preparations.* You may make of them, 1. *Bread, Cakes and Puddings.* 2. *Potage.* 3. *A Meal or Flower.* 4. *A Cataplaſm.*

The

The Virtues.

XVIII. *The Bread, Cakes, Pudding,* &c. They are made and uſed conſtantly in many Countries, among the poorer ſort of People; which tho' courſe Food, and ſomething hard of Digeſtion, yet nouriſh much: And in many other places they are forced to be eaten by all ſorts of People, in times of Famine.

XIX. *The Potage.* It is made by boiling them ſoft in Water, then adding thereto Meal, Pork, Cabbage, Coleworts, and other Herbs, or Milk. It nouriſhes very much, reſtores in Conſumptions, and ſtops Fluxes of the Bowels.

XX. *The Meal or Flower.* Applyed plentifully to Bleeding Wounds, and old running Sores, it ſtops the Bleeding, and the Flux of Humors to the part; more eſpecially, if an eighth or ſixth part of Roch Alum in fine Pouder be added to it.

XXI. *The Cataplaſm.* It is made of the Meal or Flower being mixed with Milk, or Smiths Forge Water. Being applyed to running Sores or Ulcers, it ſtops the Defluxion, cleanſes them, and prevents a Gangrene if approaching; and being laid warm all over the whole Body, it ſtops Fluxes of the Bowels.

XXII. *Nota.* The fourth and fifth of the Wild Kinds, are Pulſes with which Doves or Pigeons are much delighted: And altho' the Fowls are wild, yet where the Dove-Houſes are ſerved herewith, they will reſort to the ſame, and in ſome little time become Tame with the reſt. And therefore in ſome Countries, whole Fields are Sown with them to ſerve for that uſe.

CHAP. DCLXXXIV.

Of TARE *Everlaſting.*

I. THE *Names.* It is called in Greek, Λάθυρος: in Latine, *Lathyrus perennis*; in Engliſh, *Tare Everlaſting.*

II. *The Kinds.* We make two ſorts hereof, *viz.* 1. *Lathyrus perennis*; *Lathyrus Sylveſtris flore luteo*; *Vicia perennis, Vicia Sylveſtris flore luteo*; Tare Everlaſting, properly ſo called. 2. *Vicia Sylveſtris perennis, Vicia Sylveſtris vulgaris,* Strangle Tare, and Common Wild Tare.

The Deſcriptions.

III. The firſt, or Tare Everlaſting. *Its Root is ſmall and rough, running infinitely under Ground, ſcarcely to be deſtroyed. It is a ramping* Wild Tare *or* Vetch, *and is the moſt pernicious Herb that can grow on the Earth, for Corn or any other Herbage, by over-running, ſtrangling as it were, and killing them: It ſends forth long rough trailing Stalks, having ſmall, long, and ſharp pointed Leaves ſet on them one oppoſite to another, at due diſtances, with Tendrels or Claſpers at the ends of the Branches: The Flowers ſtand upon pretty long Footſtalks, proceeding from the Boſoms of the Leaves, which are many upon a Stalk, and yellow; after which come ſmall round Cods with blackiſh ſmall Grains within them.*

Tare or Vetch, Everlaſting.

IV. *Gerard* deſcribes it thus. *Its Roots are very ſmall, long, tough, and in Number infinite; inſomuch, that being once gotten into a Ground, it is almoſt impoſſible to root it forth, unleſs the Earth be digged up with the Roots, and both caſt into a River or Burned. From theſe Roots ſpring divers very ſmall ramping Stalks, tough, and leaning this way and that way, not able to ſtand of themſelves without the help of Props, or ſomething ſtanding by them to be a Support. The Leaves are very thin, and ſharp pointed. The Flowers grow along the Leaves, in form like* Peaſe *Bloſſoms, but of a bright yellow Color. Doubtleſs this is one of the moſt hurtful and pernicious Weeds that grows, to all manner of green Herbs, or any Wood whatſoever.* Johnſon *ſays, for the reſemblance it has to* Aphaca, *he uſes to call it* Aphacoides.

V. The ſecond, or Strangle Tare, or Common Wild Tare. *Its Root is long, ſlender and ſtringy, from whence ſprings up many ſlender weak Branches. The Leaves are winged, and much ſmaller than in the* Common Manured Tare, *round or broad pointed, and ſometimes dented in in the middle of the end, ſtanding upon a middle Rib, which ends in claſping Tendrels. The Flowers are of a Purple Color, and commonly grow but one at a joint upon ſhort Footſtalks; after which come long, flat, ſharp pointed Cods, which contain for the moſt part, 9 or 10 Grains or Seeds in each. In ſome Countries this Plant is called* Tine; *it is a ramping Herb, like to the* Common Tare, *climbing up upon Corn, if it chances to grow among it, and will then preſs or bear it down to the Ground, and overgrows the ſame in ſuch a manner, that it ſtrangles, ſpoils and kills it; not only* Wheat, *but all other Grain whatſoever. So that among Country Farmers it is better known than deſired.*

VI. The

VI. *The Places.* The firſt is generally found in Fields and Orchards, and other like places; alſo in Graſſy Paſtures, Borders of Fields, and in Corn Lands almoſt every were: It is found oftner than the Owners of Grounds would have it, being a kind of Plague, or mighty Incumbrance to any place where it once gets footing. The ſecond grows generally in Plowed Lands, where it becomes the Husband-Mans Vexation in hurting and deſtroying his Corn. But both theſe Plants will grow in any Ground or Soil wharſoever.

VII. *The Times.* They Flower in the latter end of *May*, thro' all *June*, and ſometimes in ſome part of *July*; and the Grain is ripe in *Auguſt* and *September*, ſooner or later, according to its time of Flowering.

VIII. *The Qualities, Specification, Preparations and Virtues* of theſe, are the ſame with thoſe of the *Common Manured Tare*, in the former *Chapter*; ſo that no more need be ſaid of them in this place. The Grain may be made into Meal or Flower; or boil'd into Pultage and eaten, as other Pulſes are, but theſe are of a thicker Conſiſtence, and therefore may be thought to nouriſh very much: Without doubt in time of Famine it would be an acceptable Food; at other times they are not eaten, but the Grain, as alſo the Straw, are Food for Cattel, as nouriſhing them exceedingly.

CHAP. DCLXXXV.

Of TARRAGON.

I. *THE Names.* It has no Greek Name that we know of, but it is called in Latine, *Tragum*; *Tragum vulgare Cluſij*; *Tarchon*; *Draco*; *Dracunculus Hortenſis*; *Draco Hortenſis*; and in Engliſh, *Tarragon.*

II. *The Kinds.* It is *Singularis ſui generis*, tho' ſome have held it not to be an Herb of its own Kind: And *Ruellius* was of that vain and falſe Opinion, That it was firſt produced by putting Linſeed into the Root of a Radiſh, or of an Onion being opened, and ſo ſet into the Ground, which when it ſprings up, brings forth this Herb *Tarragon*; which Folly, *Matthiolus* by certain Experience ſays has been found falſe.

The Deſcriptions.

III. *Its Root is white, and creeps about under Ground, by which it much increaſes. It has many long, narrow, ſharp pointed green Leaves, ſometimes of a dark green, and ſometimes of a more light Color, growing upon ſhort ſlender Footſtalks; which are ſo numerous, as even to hide in a manner the Stalks themſelves, which are of the ſame Color, round and brittle, ſometimes two Feet or more high; at the tops of which come forth long ſlender Spikes, of ſmall yellowiſh Flowers, which ſeldom give any good Seed, but a duſty or chaffy matter, which is diſperſed with the Wind, the whole Herb is of a hot and biting taſte.*

IV. *Gerard* deſcribes it after this manner. *Its Root is long and fibrous creeping far abroad under Ground, as do the Roots of* Quich-Graſs, *by which ſprouting up, it increaſes, yielding no Seed at all. It has long and narrow Leaves of a deep green Color, longer than thoſe of our* Common Garden Hyſſop, *with ſlender round brittle Stalks, about two Cubits high. Round the Branches whereof ſpring forth little round Flowers, which never perfectly open, of a yellow Color mixed with black, like thoſe of* Common Wormwood: *after which ſucceeds a certain Chaffy or Duſty matter as it were, which flys away with the Wind.*

Tarragon.

V. *The Places.* For all that I know it is a Native of *England*, and grows with us only in Gardens, where (if the Ground is good) it flouriſhes admirably.

VI. *The Times.* It is green all the *Summer* Months, and a great part of *Autumn*, and flowers in *July.*

VII. *The Qualities.* It is hot and dry in the end of the ſecond Degree: Aperitive, Aſtrictive, Attractive, Digeſtive, Diſcuſſive, Diuretick and Traumatick; Stomatick, Cephalick, Neurotick, Cardiack, Splenetick, Nephritick, Arthritick and Hyſterick; Emmenagogick, Sudorifick, and Alexipharmick.

VIII. *The Specification.* It reſiſts Vomiting, reſtores Appetite loſt, cures Convulſions, Palſies, Trembling and Weakneſs of the Limbs or extream parts; is profitable againſt a *Leucophlegmatia*, expels Wind, gives eaſe in the Cholick, provokes Urine and the Terms in Women; and is an admirable Remedy againſt the Scurvy in a cold Habit of Body.

IX. *The Preparations.* You may have therefrom, 1. *A Liquid Juice.* 2. *An Eſſence.* 3. *A Decoction in Wine.* 4. *A Diſtilled Water.* 5. *A Spirituous Tincture.* 6. *An Acid Tincture.* 7. *An Oily Tincture.* 8. *A Balſam.* 9. *A Sallet.*

The

The Virtues.

X. *The Liquid Juice.* It is an Antidote against a cold Scurvy, prevails against an incipient *Leucophlegmatia*, is good against Faintings, Weakness of the Stomach, want of Appetite and Digestion; *Stranguria*, or Stoppage of Urine, thro' Stones, Gravel, Sand or Tartarous matter obstructing the Urinary Passages. Dose one or two Spoonfuls in a Glass of White *Lisbon*, or other Diuretick Wine Morning and Night.

XI. *The Essence.* It has all the Virtues of the Juice, but more potent, warming and comforting the Stomach and Viscera; it discusses and expels Wind, gives ease in the Cholick, is profitable against Convulsions and Palsies, resists Vomiting, causes Appetite, and admirably provokes the Terms in Women. Dose one or two Spoonfuls in Wine as aforesaid.

XII. *The Decoction in Wine.* It has all the Virtues of the Juice and Essence, but much weaker, and therefore may be given to half a Pint at a time, sweetned with *Syrup of Clovegilliflowers*, *Violets*, or *Marsh Mallows*. It heals inward Wounds, and being drunk constantly at Physical Hours, it disposes old running Sores and Ulcers to heal; more especially if they be outwardly washed therewith, being first sweetned with a little Honey.

XIII. *The Distilled Water.* It is sometimes used as a Cosmetick to Beautifie the Face and Skin, and to take away the Defœdations thereof; which it does more effectually, if either *Sal Prunellæ*, or *Saccharum Saturni*, (half an Ounce of either of them to a Pint of the Water) be dissolved therein. Inwardly taken, it has the Virtues of the Juice and Essence, but in a far weaker degree; however it is profitable in Obstructions of the Reins and Bladder, if it be taken 3 or 4 Ounces at a time, sweetned with *Syrup of Marsh Mallows*.

XIV. *The Spirituous Tincture.* It comforts and warms the Stomach, strengthens it, and causes a good Digestion: And after due purging off the Morbifick matter, it is very profitable against the Palsie, Colick, Gout, Dropsy and Scurvy, restoring after an excellent manner, the depraved Tone of the Viscera. Dose one or two Spoonfuls at a time in a Glass of Wine, or well sweetned with *Syrupus de Althæa*; and this, Morning, Noon, and Night.

XV. *The Acid Tincture.* It is Antifebritick, Antipestilential, and Antiscorbutick; it cools all preternatural Heats, expels Poison, and is singularly Alexipharmick, resisting not only Vegetable Poisons, as those of Henbane, Monks-hood, Nightshade, Wolfsbane, *&c.* but also Animal Poisons, as those of the Bitings of Serpents, as Vipers, Rattle-Snakes, Mad Dogs, *&c.* and the Stingings of Hornets, Scorpions, *&c.* Dose so much as to give the Vehicle (which ought in this case to be some sort of Alexipharmick Wine) a pretty sharp acid taste, so as it may be tolerably drunk.

XVI. *The Oily Tincture.* It is profitably given against the Strangury, Stone, Gravel, Sand, and Tartarous matter in the Reins, Ureters and Bladder; it takes away the heat and scalding of the Urine, gives ease in the pains of the Back, and strengthens it; is good against the Colick, and of singular use in inward Convulsions, as also in Palsies, being taken from 12, to 30 or 40 drops (according to Age and Circumstances) in any appropriate Liquor, Morning and Evening. Anointed with also outwardly any pained, cold, weak, or benumbed part, it gives ease to the same, and in a short time restores and strengthens it.

XVII. *The Balsam.* *Take Chio Turpentine 4 Ounces, Balsam of* Peru *2 Ounces, Bees Wax one Ounce; melt and mix them well together; then add of the former Oily Tincture an Ounce and half; mix and stir them till the Mass is cold.* Applyed to any weak part it strengthens it, and eases pains proceeding from a cold Cause: It also cures simple green Wounds, many times at once dressing: Also old running Sores, putrid and rotten Ulcers, *&c.* it cleanses, incarnates, and heals them up in a short time. Inwardly take a Dram or more at a time, it cures the Bloody Flux, and Ulcers of the Intestines; stops the whites in Women, and a Gonorrhœa in Men, after due cleansing with other proper Medicines.

XVIII. *The Sallet.* It is commonly mixed with cold Herbs, as *Lettice*, *Purslane*, to temper their Coldness, and make them more agreeable to the Stomach and Bowels, and withal it gives them a more grateful or pleasant Flavor, and makes them more Stomatick.

XIX. *Nota.* Authors I must confess have said little or nothing of this Herb; but finding by its Grateful Smell and Taste, that there must be something more than ordinary in it, I was resolved to make some Trials of it in the Practice of Physick, and accordingly at several times, have made all the Preparations of it before named; which after some Years using of them, have found them beneficial for curing, helping, or giving relief in all or most of the Diseases aforementioned; so that whatever I have here said of it, is truly from my own Experience.

CHAP DCLXXXVI.

Of TEASLE *Garden* and *Wild.*

I. *THE Names.* It is called in Arabick *Chir*, and *Moleta:* in Greek, Δίψακος: In Latine also *Dipsacus:* and *Labrum Veneris* from the Greek ἄφεδρικὸς λάτερν: it is also called, *Carduus Veneris:* in English, *Teasle.*

II. *The Kinds.* Authors make many sorts of this Plant, we shall only take notice of two which are common with us, *viz.* 1. *Dipsacus sativus*; *Dipsacus Fullonum*, *Carduus Fullonum*, (which is thought to be *Gallidragon Xenocratis Plinio,*) Our Garden or Manured Teasle. 2. *Dipsacus Sylvestris*, The Wild Teasle. Some add a third, *viz. Virga Pastoris*, Shepherds Rod, which we think is no Species of this Plant, and therefore have treated of it in another place.

The Descriptions.

III. The first, or Our Garden or Manured Teasle. *Its Root is white, long, and somewhat great at the Head, with several long Strings and small Fibres adjoining to it, which dies every Year after the Heads are ripe. The lower Leaves for the first Year are very large and long, formed something like to* Lettice, *of a pale green Color; more gentle, or not so hard as those which are set on the Stalks, but dented about the edges; and the middle Rib on the back or underside thereof, is set very thick with short*

ſhort Prickles. From among theſe Leaves riſe up the Stalks 3 or 4 Feet high, armed from the bottom to the top, with ſmall hard, ſhort, and ſharp Prickles, jointed in ſeveral places, and two ſuch Leaves ſet at them; both of which Leaves are ſo joined together at the bottom or joint, ſo as to encompaſs the Stalk about, that they do contain the Rain or Dew which falls upon them, being ſomething harder and ſtiffer, and more prickly than the lower Leaves, as was before hinted. From between the Leaves and the Stalks on each ſide, ſpring forth Branches prickly alſo, and with Joints, ſet with the like encompaſſing hollow Leaves, but leſſer. And from their Joints riſe long prickly Stalks, but bare of Leaves, having on their tops, a round Head ſomething long, armed with ſtiff, ſhort, and crooked Prickles faſhion'd like Hooks, bending their points downwards towards the Stalk; theſe are green at firſt, but when ripe white. From about this Head, come forth whitiſh hooded Flowers appearing in Circles, and Flowering by degrees, for the moſt part beginning in the middle, and from thence Flowering downwards and upwards. In the ſeveral Cells of which Flowers, is contained the Seed, which is ſmall, ſomewhat long and round, and of a whitiſh Color, almoſt like Fennel *Seed. The middle part of the Head is always hollow, which being opened, you will find it to contain one or more long whitiſh Worms, almoſt like* Catterpillars, *which are (the Head being ripe) for the moſt part found Dead.*

IV. The ſecond, or Wild Teaſle. *Its Root is like the former, ſo alſo its Stalks and Branches, which are full of ſharp Prickles. Its Leaves are*

Teaſle Manured.

Teaſle Manured.

Teaſle Wild.

ſmaller, yet longer, but narrower, armed on the underſide of its middle Rib, with the like ſharp Prickles. It has like Heads as the former, which bring forth like Flowers, *ſaving that they are of a fine Bluſh, or* Pale Carnation, *or Delicate Purple Color. The Prickles on the Heads of Flowers are ſmall, ſoft, and upright, nothing ſo hard, or ſharp, as the other; and ſo not hooked, or with their Points bending downwards as the former: And the Seed is like the ſame, with very little Difference. In the*

the hollow of the middle, there is generally found one long Worm, which in Form and Shape much resembles a Catterpillar, *and of a black Color,*

Wild Teasle.

but (the Heads being full ripe) is for the most part found Dead, like as in the Manured.

V. *The Places.* The first is only Sown in Gardens or Fields, for the use of Clothworkers. The second grows in wild and waste Places, by Hedge and Ditch sides, also in moist Grounds, near Brooks, Rills, and standing Waters, in almost all parts of this Kingdom.

VI. *The Times.* They Flower for the most part in *June* and *July*; and the Heads with the Seed, are ripe in *August*, or not long after.

VII. *The Qualities.* The *Teasle* is said to be cold and dry: *Galen* says it is dry in the second Degree, and Abstersive, or of a cleansing Faculty.

VIII. *The Specification.* It cures Wounds, cools Inflamations of the Eyes and other parts; and is profitable against Frenzy and Madness.

IX. *The Preparations.* You may have therefrom, 1. *A Juice of the Leaves.* 2. *A Cataplasm of the Roots.* 3. *A Cataplasm of the Leaves.* 4. *A Distilled Water from the Leaves.*

The Virtues.

X. *The Liquid Juice of the Leaves.* If it is dropt into the Ears, it kills Worms in them; Snuft up the Nostrils, and bathed upon the Forehead and Temples, it eases the pain of the Head from a hot Cause, and is good against *Deliriums.*

XI. *The Cataplasm of the Roots. It is made of the Roots bruised and boiled in Wine to a pulpy thickness, after which it is put into a Brass or Copper Bason, or Pot, to be Tinctured with the Verdigrise of the same.* This spread upon Pledgets of Tow or fine Flax, and applyed to the Fundament, heals the Clefts thereof; as also *Ficus*, Cankers, Ulcers and Fistula's therein; and applyed to Warts and Wens, it wastes, consumes, and takes them away.

XII. *The Cataplasm of the Leaves. Beaten soft in a Mortar with a little Spirit of Wine, in which some Camphir and Opium are dissolved*, and applyed to the Forehead and Temples, it allays the preternatural heat, gives present ease in vehement Headachs, and abates the Paroxysms of Frenzy and Madness: Applyed also to parts pained with the Gout, it gives ease in the same.

XIII. *The Distilled Water of the Leaves.* Being dropt into the Eyes, it is good to cool their Inflamation, and take away Blood-Shot, and clear them of such Mists, &c. as darken the Sight. The Face and Skin being first washt with warm Water, and wiped with a Cloth, and then washt with this *Distilled Water*, it preserves the Beauty and Fineness thereof, and if lost restores it again; taking away Redness, Inflamations, Pimples, Breakings out, Scurff, Morphew, Scabs, and other the like Defœdations. But it will be so much the more effectual, if to every Pint of the Water, 2 or 3 Drams of *Saccharum Saturni* be added, and dissolved therein.

CHAP. DCLXXXVII.

Of THISTLES *Common and Wild.*

I. *THE Names.* The Thistle is called in Greek, Ἄκανθος and Σκολύμος, (which almost all Authors translate by the General Name *Carduus*:) and Ἄκανθος, (which is also a Common Name for all kinds of Thistles:) but these two latter Names are also peculiar to two singular Plants, or kinds of Thistles, *viz.* 1. Σκολύμος or Σκολίμος, *Scolymus*, which is Κάκτος *Theophrasti*, i. e. *Cinera Sylvestris*, The Wild Hartichoake, which see in *Chap.* 339. aforegoing. 2. Ἄκανθος ἡ Ἀκάνθη, i. e. *Branca Ursina*, Bears-Breech, which see also in *Chap.* 58 of this Book. In Latine, the general Name is *Carduus*, pl. *Cardui*; to which for every particular Species, some proper Epithite is commonly adjoined. The Prickly Heads are called ἐχῖνος, *Echinus.*

II. *The Kinds.* All the kinds of Thistles are too many to be either Named or Treated of in this Work, which would be as Vain as it would be tedious and useless; many of them being insignificant as to their Virtues, and many others Natives of Foreign Countries, and so perfect Strangers to us, that possibly they might not be seen by an *English* Man in many Ages. We shall therefore Treat only here of those which are most Common and Wild in our Land. Fifteen Species of which, we shall discourse of in this Chapter, *viz.* 1. *Carduus Ceanothus, Carduus Viarum & Vinearum, Ceanothos Theophrasti* (Lib. 4. Cap. 11.) *Anguillarâ & Columnâ*; *Carduus Vinearum repens Bauhini*, (because its Root creeps much under Ground:)

Carduus vulgatiſſimus Viarum, The Common High-way Thiſtle. 2. Πολυάκανθος, *Polyacanthos (quaſi ſpinæ multæ)* Πολυκέφαλος, *Polycephalos (quaſi plura capita)* ſo called from the many Prickles and many Heads: *Acanthium Diſſe*: The moſt Prickly Thiſtle, or Thiſtle upon Thiſtle. 3. Ὀνοπύξος, *Onopyxos, (quaſi Aſinius Buxus)* and ſo *Gaza* renders it out of *Theophraſtus, (quaſi ſit Aſinis Cibus gratiſſimus.) Carduus Sylveſtris Dodonæi, Carduus Aſinius Geſneri*: The Common Aſſes, or Way-Thiſtle. 4. *Onopyxus alter anguſtifolius*, Another narrow Leav'd Way-Thiſtle. 5. *Onopyxus parvus aculeatus*, The Gentle Way-Thiſtle. 6. Ὀνοπορδον, *Onopordon, (quod ſi comederint Aſini crepitus reddere dicantur) Carduus Aſinius*; The Aſſes Farting Thiſtle, for that it is ſaid when Aſſes feed thereon, it cauſes them to break Wind backwards more than at other times. 7. Δρυπὶς, *Drypis, dictum patent à Lancinando,) Drypis quorundam Lugdunenſi*, The Lancing Thiſtle, from its Prickles Wounding almoſt like a Lancet, 8. *Carduus pratenſis Tragi, Geſneri & Lobelij*; *Acanthus Sylveſtris Lugdunenſis*, The Broad Leav'd Field Thiſtle. 9. *Carduus pratenſis Acanthifolijs laciniatis Bauhini*; *Eriſithales Plinij*, (Lib. 26. Cap. 13.) *Lugdunenſis*. The Yellow jagg'd Meadow-Thiſtle. 10. *Carduus Bulboſus*; *Leucacantha Anguillaræ*; *Carduus pratenſis Aſphodeli radice latifolius Bauhini*; The Bulbed Field Thiſtle. 11. *Carduus pratenſis Aſphodeli radicibus, Foliis profunde & tenuiter Laciniatis Bauhini*; *Acanthus Sylveſtris alter Dalechampij Lugdunenſi*; *Jacea aculeata ſive Tuberoſa Tabernæmontani*; *Jacea Tuberoſa Gerardi*; Meadow Thiſtle with Aſphodil Roots. 12. *Carduus pratenſis polycephalos Bauhini*, The many Headed Meadow Thiſtle. 13. *Carduus paluſtris Bauhini*, The Marſh, or moiſt Meadow-Thiſtle. 14. *Carduus Avenarius Thalij*; *Carduus Arvenſis Tabernæmontani*; *Carduus in Avena proveniens Bauhini*; *Drypis Loniceri Lugdunenſi*; *Carduus Muſchatus Gerardi*; The Oat-Land, or Musk-Thiſtle. 15. *Carduus Lanceatus latifolius major*, The Greater Broad Leav'd Spear Thiſtle.

III. The remaining Species are, 1. *Carduus Benedictus*, The Bleſſed Thiſtle, of which in *Chap.* 688. 2. *Carduus Tomentoſus*, The Cotton or Woolly Thiſtle, of which in *Chap.* 689. 3. *Carduus Carlina dictus*, the Carline Thiſtle, of which in *Chap.* 690. 4. *Carduus Criſium Dictus*, The Melancholy Thiſtle, of which in *Chap.* 691. 5. *Carduus Lacteus*, vel *Mariæ*, The Milky or Ladies Thiſtle, of which in *Chap.* 692. 6. *Carduus Stellatus* vel *Stellaris*, The Star-Thiſtle, of which in *Chap.* 693. 7. *Carduus Scolymus*, The Thiſtle Scolymus, which ſee in *Chap.* 694. following.

The Deſcriptions.

IV. The firſt, or our Common High-way Thiſtle. *Its Roots are very ſmall and whitiſh, running both deep and far about under Ground, like unto* Quich-Graſs, *but not knotted in the Joints like it, but ſhoots up heads of Leaves from the Branches of the Root, ſo that it will be as bad or worſe than* Quich-graſs, *to root out of any Ground or place, where it is once got in. The Leaves are of a pale green Color, ſomewhat like unto the rough or prickly* Sow-Thiſtle; *a little cut in, and as it were crumpled on the edges, armed with very ſmall and ſharp hard prickles. The Stalk grows to be about a Yard high, ſtraked and prickly, with ſome ſuch like Leaves thereon as the lower be, but ſmaller towards the Tops, where it is ſtored with cruel ſharp, hard, prickly Heads, repleat with Purple Flowers made of Thrums in the middle, which afterwards paſs into Down, in which is wrapped the Seed.*

V. The ſecond, or moſt Prickly Thiſtle, or Thiſtle upon Thiſtle. *Its Root is long, ſlender, and branched forth, having ſeveral Fibres adjoining to it, not running very deep into the Earth. This*

Thiſtle upon Thiſtle.

is the moſt Prickly Thiſtle of the whole kind, and as it were, compoſed wholly of Prickles. The Stalks thereof are very long, and ſeem to be corner'd, by reaſon of certain thin Skins growing to them, proceeding from the Leaves, which are, (as alſo the Branches) plentifully ſtored with ſharp Prickles up to their tops, that nothing elſe is to be ſeen. The Leaves are ſhort and narrow, cut in on every ſide with many deep Gaſhes, ſo thick ſet on both ſides with ſmall ſharp Prickles up to their very ends, that they take up all the ſhew of Leaves. The Heads are very many, and very thick ſet in every place, with ſtiff ſharp Prickles, cloathed with a multitude of Scales, out of which come Purple Flowers like Thrums, with Down and Seed therein contained, as in other Thiſtles.

VI. The third, or the Common Aſſes, or Way-Thiſtle. *Its Root is blackiſh, hard and woody, which periſhes every Year after Seed time. From whence riſes ſeveral long Leaves, lying Compaſs-wiſe on the Ground, very hairy all over, eſpecially whilſt they are Young, of a deep or ſad green Color, long and ſomewhat narrow, rent or torn in on the edges, and ſet with very many ſharp Prickles. From among which, riſe up very Prickly Stalks, armed with ſharp prickly Fibres, branching forth in ſeveral places, and ſet with the like Leaves up to the tops, where grow ſeveral Heads, very much ſtored with ſharp Pricks on all ſides; out of whoſe middle come forth the Flowers, conſiſting of a great number of Purpliſh Threads, of an excellent, brisk, lively Color, which being paſt away, the Seed comes, lying in Down as in other Thiſtles.*

VII. *The*

Asses Thistle.

VII. The fourth, or another Narrow-Leav'd Way-Thistle. *Its Root, Form and manner of Growing, is much like the former, but it differs in this, that the Leaves hereof are longer, narrower, more gasht, or rent in on the edges, and not hairy, but smooth all the Leaf over. It has Heads of Flowers which are Purple like the other, but sometimes white, in its Prickles differing little or nothing from other Thistles; and when the Flowers are past, there remains the Down and Seed, like as in all others of the Species.*

VIII. The fifth, or the Gentle-Way Thistle. *Its Root, Stalk, and manner of Growing, is very like the former, but it differs chiefly in the Heads, which grow many together, and are but thinly set with Prickles, nothing near so much as some of the others; but the Leaves are more jagged, and set very thick with short Prickles. The Stalks are round and a little prickly, but not filmed as the former, and at the tops of the Stalks and Branches are scaly Heads, of like Purple Flowers, containing within them Down and Seed.*

IX. The sixth, or the Asses Farting Thistle. *Its Root is about a Foot long, thick and black, with some Fibres adjoining to it. It has many long Leaves, set on cornered Woolly Stalks, which grow sometimes almost to a Mans height, but not Branched at all; the Leaves seeming like Branches, being a Foot or more long, and much divided into many other Leaves, some long or narrow, others smaller and shorter, set with them at certain spaces, each ending in a sharp long Prickle. From the upper Joints of the Stalks with the Leaves, and at the tops also, come forth Woolly Heads upon small Footstalks, set with long Prickles; from the midst whereof, thrust forth several bright reddish Purple Threads, which are the Flowers, which being past away, there remains the Down containing the Seed, in like manner as in other Thistles.*

X. The seventh, or the Lancing Thistle. *Its Root is white and thick, not growing very deep. It rises up with divers slender Stalks, sometimes almost to a Mans height, whose long and narrow Leaves are made up of many parts, finely cut in or divided into many small points, with a short Foot-stalk encompassing the Stalk at the lower end. At the tops grow single, scaly, green, Prickly Heads, from whose middle comes forth the Flower, which in some is Purpish, in some Whitish, and in others very Red, or of a bright Crimson Color, which consists of a great number of long Threads like a Thrum. After the Flowers are past, there remains the Down, in which is contained the Seed, which is small, smooth, and reddish.*

XI. The eighth, or Broad Leav'd Field-Thistle. *Its Root is something long and thick, abiding several Years, which sends forth several large and long Leaves, cut in on the edges, and every part finely dented, and set with small Prickles which are very tender, of a whitish green Color. Those which grow up higher upon the Stalks are smaller, two of them set together at a Joint, where they so encompass the Stalk, that they will contain or hold Water in them. At the tops upon long Stalks, grow single green Prickly Heads, out of which come pale Coloured Thrums, encompassing a few Purple Threads in the middle. After they are faded and gone, there remains the Down, as in all other Thistles, in which is contained small whitish Seed, something larger than that of* Cyanus, Corn-Flower, *or* Blew-Bottle.

XII. The Ninth, or Yellow Jagg'd Meadow-Thistle. *Its Root is great, long, crooked and spreading in the Earth. It has very large Leaves, almost a Foot long, and somewhat broad, cut in on both sides into 4 or 5 deep Gashes, even to the middle Rib, and set with Prickles at the Dents of the Edges. From whence rises up a straked Stalk about two Feet high, set with a few lesser Leaves; at the tops whereof, stand several small green Prickly Heads, out of whose middles come yellow Threads or Thrums, which afterwards yield Down, in which is enclosed the Seed.*

XIII. The tenth, or the Bulbed Field Thistle. *Its Root is composed of several Tuberous small long Clogs, like unto those of the* Asphodil, *fastned together at the Head. The Leaves are whitish, of an Hand breadth long, something fat and thick, cut in on the edges, but not very deep, armed at every Dent with small sharp Prickles. The Stalk is about a Yard high, hairy and slender, with few or no Leaves thereon, at the top of which, there are harmless Prickly Heads, standing upon long Foot-Stalks, out of which come pale Purplish Threads or Thrums, and after them much Down, in which the Seed is contained.*

XIV. The elveventh, or Meadow-Thistle with Asphodil Roots. *Its Root consists of several, or many long blackish Tuberous Clogs, like unto those of the* Asphodil *or* Peony, *which are fastned together at the Head, which after Seed time, wither and perish every Year. From whence come forth several thick, long, pale, green Leaves, cut into many parts, and armed with sharp Prickles on all sides, every Prick ending in three Points; from among them rises up a small Stalk, a little branched, with one or two Prickly Heads at the top of every Branch, out of which come purplish Threads or Thrums which are the Flowers, and after them the Down, enclosing small long Seed.*

XV. The twelfth, or the many Headed Meadow Thistle. *Its Root is long, hard and woody. It has but few Leaves lying upon the Ground, being both short and narrow, armed with sharp and long*

Prickles. The Stalk is round, ſtraked, and without Prickles, ſpreading it ſelf into ſeveral Branches, bearing many ſmall heads with Threads or Thrums of a purpliſh Color coming out of their middle, which conſtitute the Flower, which Heads are ſet with large and ſharp Prickles, after which is the Seed incloſed in the Down, as the reſt are.

XVI. *Polycephalos alter.* There is another many Headed Thiſtle; *whoſe Root is hard and woody. Its Stalk has neither Film or Prickle, but branched forth into divers parts, and they again into other ſmaller Branches, on which ſtand many Heads, and ſmaller ones under them, with ſeveral ſmall prickles about them, out of which riſe purpliſh Thready Flowers as in the other. The Leaves are but few on the Stalks, being ſhort and narrow, but as thick ſet with Prickles, as the ſecond or moſt* Prickly Thiſtle, *at* Sect. V. *above.*

XVII. The thirteenth, or Marſh, or moiſt Meadow Thiſtle. *Its Root is ſingle, the Stalks about 4 Feet or more high, ſtrait and full of prickles, thick ſet with dark green Leaves, unevenly waved, and ſometimes more deeply cut in on the edges, having a few prickles at them, and branched towards the top, with many ſmall Heads upon ſlender Foot-ſtalks, which bear purple Thrum Flowers, and turn into Down, in which the Seed is involved, like as in other Thiſtles.*

XVIII. The fourteenth, or Oate-Land, or Musked Thiſtle. *Its Root is ſmall and long, periſhing at the approach of Winter. It has an upright Stalk, and riſes up in Corn and Oat-Lands, ſome-*

Thiſtle Oate-Land: *Or,* Musked.

times to a Mans Height, but is found growing lower in other places; on which do grow broad, ſharp, prickly, jagged Leaves, ſet round the Stalk and Branches; the tops are branched out with many ſhort Stalks, into as many ſhort Heads ſet cloſe together, out of which come the Flowers, conſiſting of Threads or Thrums, as in the other Thiſtles, of which ſome will be White, ſome of a White Color tending to Purple, and others of a pale Purple Color tending to bluſh, of a moſt pleaſant ſweet Smell; and in ſome places ſmelling ſweet like Musk, which being faded, Downy Heads ſucceed, in which the Seed is contained.

XIX. The fifteenth, or Greater Broad Spear-Thiſtle. *Its Stalk is armed with Prickles like many other Wild Thiſtles; and the Leaves ſet thereon are very long, cut in or divided on the*

Thiſtle Spear, Broad Greater.

edges, in 2 or 3 places, ſet at diſtances one from another; and the ſeveral parts cut into 5 or 6 points or corners, ſharply armed, the end being long and narrow, pointed like the Head of a Javelin *or* Pike, *(whence came the Name:) The Flowers are purpliſh in ſcaly prickly Heads, after which comes the Seed wrapped up in Down, as in other Thiſtles.*

XX. *The Places.* All theſe Thiſtles Grow Wild by Way-Sides, in Fields, Meadows, Orchards, Gardens, and in Corn Lands in moſt places of this Kingdom, as alſo in many other places beyond Sea; alſo on Heaths, Greens, and waſte places up and down almoſt every where. The thirteenth grows in moiſt Meadows; and the fourteenth in Oat-Lands, and other Corn-Lands. *Gerard* ſays, it grows in the Fields about *Cambridg*; and I have ſeen it in ſome other places adjacent to it.

XXI. *The Times.* They all Flower from the beginning of *June* to the end of *Auguſt*, and their Seed is ripe in ſome little time after.

XXII. *The*

XXII. *The Qualities.* Thiſtles according to *Galen* are hot and dry in the ſecond Degree: They are alſo Aperitive, Diuretick, Stomatick and Nephritick.

XXIII. *The Specification.* They help the Strangury, or ſtoppage of Urine, take away the rank or evil Smell of the Arm-holes, or whole Body, Cure a Stinking Breath; and make Hair grow again upon Bald places.

XXIV. *The Preparations.* You may have, 1. *A Liquid Juice or Eſſence of the whole Plant.* 2. *A Decoction of the Roots in Wine.* 3. *A Decoction of the Leaves and Heads of Flowers, when juſt or newly Blown, in Wine.* 4. *An Infuſion of the whole Plant, when juſt beginning to Flower, in Wine, or in Brandy.* 5. *A Maſticatory.* 6. *A Cataplaſm of the Root.*

The Virtues.

XXV. *The Liquid Juice or Eſſence of the whole Plant.* (*Pliny lib.* 20. *cap.* 23.) ſays, That if any bald place be Bathed with the Juice, it cauſes the Hair to grow again ſpeedily. And if the Juice or Eſſence be made before Flowering, and Drank, he ſays they help a Stinking Breath, and ſtrengthen the Stomach; ſo that it is probable they may be good for the Cure of the Scurvy, that always beginning in the Stomach, and being called by the Greeks, the *Stomach Diſeaſe:* Doſe 2, 3, or 4 Spoonfuls, in a Glaſs of Stomach Wine, Morning and Night.

XXVI. *The Decoction of the Roots in Wine.* *Galen* ſays, that it drives forth Stinking Urine, and takes away the rank or evil Smell of the Arm-holes, and of the whole Body. Doſe half a Pint, Morning, Noon and Night.

XXVII. *A Decoction of the Leaves and Heads of Flowers when juſt blown, in Wine.* It has the Virtues of the Juice and Eſſence, but much weaker; as alſo of the former Decoction of the Roots, and may be taken in the ſame quantity and manner. It is certainly an Antidote againſt the Scurvy in a Cold Habit of Body.

XXVIII. *The Infuſion of the whole Plant when juſt beginning to Flower, in ſtrong Wine or Brandy.* It has all the former Virtues, but more effectual to comfort and ſtrengthen a cold and weak Stomach, and to reſiſt a Cold Scurvy, as alſo to cauſe a Sweet Breath, more than any of the former Preparations. Doſe 2 or 3 Spoonfuls, ſweetned with any proper Syrup.

XXIX. *The Maſticatory.* *Pliny* ſays, that being chewed in the Mouth, it cures a Stinking Breath. But this I ſuppoſe is ſuch an offenſive Breath as is cauſed by ſtinking or rotten Teeth, or ſome Sore or Ulcer in the Gums and Mouth, it drawing away a great deal of Rheum, Purulent and Putrid Stinking matter from the ſame.

XXX. *The Cataplaſm of the Root.* Dioſcorides ſays, that being applyed, it corrects the Stinking and Filthy Smell of the Arm-Pits, and of the whole Body.

CHAP. DCLXXXVIII.

Of THISTLE *Bleſſed:*

OR,

Carduus Benedictus.

I. *THE Names.* It has no Greek Name that we know of, but it may well enough be called, Ἄγαθος Ἐυχρηστος: in Latine *Carduus Benedictus*; and in Engliſh *Bleſſed Thiſtle:* But we oftner call it by the Latine Name, as *Carduus*, and *Carduus Benedictus.*

II. *The Kinds.* It is a ſingular Plant of the Species; but ſome will have it to be a ſort of *Atractylis*, or *Wild Baſtard Saffron*, which I can ſcarcely admit of.

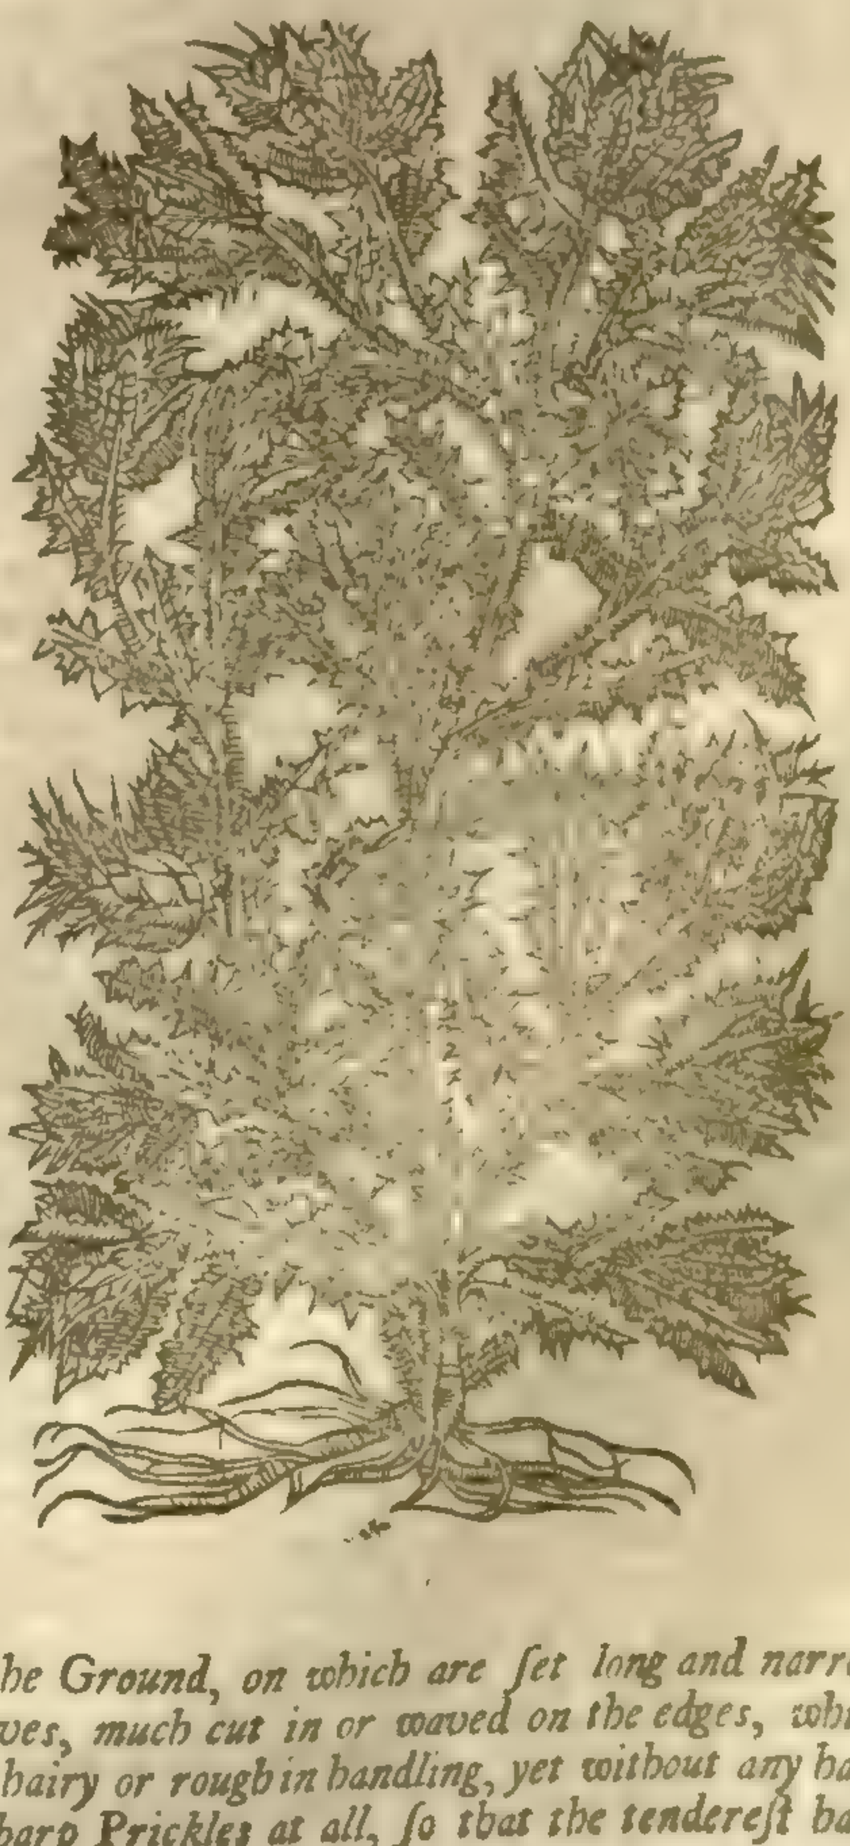
The Deſcriptions.

III. *Its Root is white, long and Fibrous, periſhing every Year after it has given Seed. It has many weak tender Branches, lying for the moſt part*

Thiſtle Bleſſed:

OR,

Carduus Benedictus.



on the Ground, on which are ſet long and narrow Leaves, much cut in or waved on the edges, which are hairy or rough in handling, yet without any hard or ſharp Prickles at all, ſo that the tendereſt hand may

may touch them without harm: but those which grow towards the tops of the Stalks are somewhat more prickly; and the Heads which grow on the tops of the several Branches, are somewhat sharp, set with Prickles like a Thistle. *The Flower is yellow, which being past away, the Head encloses a quantity of Woolly or Flocky down, in which is contained (as in all other* Thistles) *the Seed, which is blackish, long and round, with a few Hairs on the Head thereof.*

IV. *Gerard* describes it after this manner. *The Root is white and parted into Strings. The Stalks are rough, round and pliable, which being parted into Branches, do lye flat on the Ground. The Leaves are jagged round their edges, and full of harmless Prickles. The Heads on the tops of the Stalks, are also set with Prickles, and environed with sharp and pricking Leaves, out of which comes forth a yellow Flower; the Seed is long, and set with white Hairs like a Beard, The whole Herb, Leaves and Stalks, as also the Heads, are covered with a soft and thin Down.*

V. *The Places.* It grows with us only in Gardens, where it Flourishes admirably well; but in the Island *Lemnos*, in the *Mediterranean*, where it grows naturally, it grows wild in Champion Grounds and Fields, as *Petrus Bellonius* says.

VI. *The Times.* It Flowers in *July* and *August*, in which times it is to be gathered for Medicinal Uses; and then it will keep good a whole Year or longer.

VII. *The Qualities.* It is hot and dry in the second Degree, Abstersive, Aperitive, Diuretick, Anodyn and Alexipharmick.

VIII. *The Specification.* It is good against Agues, Malign and Pestilential Fevers, recent Surfeits, Pleurisies, Stone, Gravel, Vertigo's, and the Bitings of Mad Dogs, and other Venomous Creatures.

IX. *The Preparations.* You may have therefrom, 1. *A Liquid Juice.* 2. *A Decoction.* 3. *A Pouder of the Leaves.* 4. *An Extract.* 5. *A Cataplasm.* 6. *The Down within the Heads.* 7. *A Distilled Water.* 8. Roger Dixon's *Antipestilential Sudorifick.* The Herb is chiefly used.

The Virtues.

X. *The Liquid Juice.* Put into the Eyes it clears the Sight, taking away Blood-shot and redness; dropt into the Ear it eases the pain thereof: It kills Worms in the Belly, and given from an Ounce to two Ounces, in any proper Vehicle, it is good against Quartan Agues and the Plague; as also recent Surfeits, and admirably cleanses a foul Stomach.

XI. *The Decoction in Wine, Water, or Posset-Drink.* It is good against Agues of long continuance, and Pestilential Fevers, which if timely given, it has the greater Effects; and is also profitable against Pleurisies, and Stitches in the Side. It is good against a Vertigo, and Deafness, and strengthens the Memory. It provokes the Terms in Women, is good against the Strangury, as also Sand and Gravel in the Urinary parts.

XII. *The Pouder of the Leaves.* It stops Bleeding at Nose, and is given from half a Dram to a Dram, against all the aforenamed Diseases. It is Sudorifick, and cures all sorts of Agues, being given some few Hours before the coming of the Fit, for several times together.

XIII. *The Extract.* It has all the former Virtues, and being given from half a Dram to a Dram or more, it particularly is said to cure the Quartan Ague; kill Worms in the Bowels, and is a Specifick against the *Lues*, or *French Pox.*

XIV. *The Cataplasm.* Made of the Green Herb and applyed, it is good against hot Tumors, Erysipelas, Botches, Boils, Plague Sores, the bitings of Mad Dogs, Serpents, Spiders, Stinging of Venomous Creatures, *&c.* But made up with Hogs Lard and Wheat Meal, and applyed, it cures Stubborn or rebellious Ulcers. The *Cataplasm* made of the Juice with *Orobus* Meal, is profitable also against Gangrenes.

XV. *The Down within the Heads.* Applyed to simple Green Wounds it stops the Blood, and presently heals them: Applyed to Ulcers after Cleansing and Incarnating, it causes a speedy Cure.

XVI. *The Distilled Water.* It is said to have all the Virtues of the Decoction, but is nothing near so effectual, tho' much more pleasant to be taken. It is esteemed a peculiar thing for the Eyes, and help their Soreness, and a Dimness of Sight.

XVII. Roger Dixon's *Antipestilential Sudorifick. Take Leaves of* Carduus Benedictus *and Scabious; Roots of Butterbur, of each 4 Ounces; Posset Drink 3 Quarts; make a Decoction and strain out.* If you have not Posset-Drink, you may make it with thin Water-Gruel. With this Drink, he told me, he Cured many Hundreds of the Plague (when the last Great Plague was in *London*, *Anno* 1665.) who, by drinking largely of it, were Cured (many of them) in the space of twenty four Hours, when nothing but Death was expected: and thereby he also stayed Pestilential Vomitings and Looseneſſes. It produces a potent Sweating an Hour or two: In the Sweating, he gave the Sick Mutton or Chicken Broth, or some proper Alexipharmick Posset-Drink, wiping the Sweat from the Face and Neck with warm Cloths, but forbearing to Shift the Patient; and this Course he took every Day, till the Malignity of the Disease was wholly rooted out.

CHAP. DCLXXXIX.

Of THISTLE *Cotton:*

OR,

Woolly Thistle.

I. *THE Names.* It is called in Greek, Ἀκάνθιον, (being supposed to be the *Acanthium* of *Dioscorides*) in Latine, *Acanthium*, Carduus *Tomentosus*, and in English, *the Cotton or Woolly Thistle.*

II. *The Kinds.* Among the many sorts Authors have given us of this Thistle, there are but four which are frequent with us, *viz.* 1. *Acanthium Vulgare*, as *Camerarius*, *Dodonæus*, *Durantes*, *Lobel*, *Lugdunensis*, *Matthiolus*, and *Tabernamontanus* do all agree: Our Common Cotton, or Woolly Thistle. 2. *Acanthium Anglicum*, *Carduus Tomentosus Anglicus*, *Spina Arabica Dioscoridis*, *Plinij*, *Matthioli*, *& Cæsalpini Bauhino*; *Carduus Tomentosus Capitulo majore Bauhini*; Our English Cotton, or Woolly Thistle. 3. *Carduus Tomentosus minor*, *Carduus Sphærocephalus quintus Dodonæi*; *Carduus Tomentosus Capitulo minore Bauhini*, The Lesser Cotton, or Woolly Thistle. 4. *Carduus Tomentosus, Corona Fratrum dictus,*

distus, Carduus Sphærocephalus Spinosissimus Bauhini, rigidis aculeis armatus; Carduus Eriocephalus sive Tomentosus Gerardi, Our Cotton, Down, or Woolly Headed Thistle.

The Descriptions.

III. The first, or our Common Cotton, or Woolly Thistle. *Its Root is great and thick, spreading much, but usually dying after Seed time. It has many large Leaves lying upon the Ground, somewhat cut in, and as it were crumpled on the edges, of a green Color on the upperside, covered over*

Thistle Cotton or Woolly, Common.

with a long hairy Wooll, or Cottony Down; and not much more White or Hoary underneath, set with most sharp and cruel Prickles; from the middle of whose Heads of Flowers, come forth many Purplish Crimson Threads, (which are sometimes White, tho' very seldom.) The Seed which follows, lies in a great deal of fine white Down, being something large, long and round, resembling the Seed of Silibum, *or* Ladies-Thistle, *but something paler.*

IV. The second, or our English Cotton, or Woolly Thistle. *Its Root is great and thick, brownish on the outside, and white within, and not unpleasant to the Taste. It has divers large and long Leaves, covered all over with a Cotton, Down, or soft Wooll, cut very deeply in on the edges, at certain distances, into several parts or Leaves, even almost to the middle Rib, making each Leaf seem Winged, with small and long Leaves on each side, and set in divers places with long and sharp Prickles. The Woolly Stalk rises up to the height of three, four, or five Feet, with few Leaves set thereon, and with but few branches, bearing at their tops, a large round hoary Head something flat, covered over as it were with fine Woolly Threads like unto a Net, out of which Prickly, with many Purple Threads in the middle, like unto those of the Artichoke; after which come Purple flat Seeds, greater and rounder than those of the former.*

V. The third, or Lesser Cotton, or Woolly Thistle. *It has many white Woolly, or hoary long Leaves, much cut in on the edges into many parts, and each part also divided and set with small Prickles. The Stalk is not very great, nor much above two Feet high, but branched out towards the top, being white and Woolly also, bearing on them small roundish Prickly Heads, having many Purple Threads rising out of their middles, and small Thistle-like Seed after them.*

VI. The fourth, or Our Cotton, Down, or Woolly Headed Thistle. *It has a Stalk branched forth, on which grow Winged Prickly Leaves, which are large, long, and somewhat broad, thick set with sharp Prickles, but sparingly placed on the Stalks; at the tops of which, grow Spherical or round Heads, thick set, and strongly armed with long Prickles: out of the middle whereof, come forth*

Thistle Cotton, or Woolly Headed.

white Threads, which have a small sweet Smell. The Seed following, being envolved in Down, is long, and Crested or Cornered.

VII. *Gerard* thus describes this last. *It rises up with thick and long Stalks; the Leaves thereof are jagged, set with Prickles, and white on the under side. The Heads are round, and many in Number, covered with a soft Down and sharp Prickles standing out round about them. The Flowers come forth of their middle, being a bush of Purple Threads. The Seed is long and shining, like the Seed of some other Thistles.*

VIII. *The Places.* The first Grows on Ditch and Bankfides, and in Corn-Fields and High-ways, almoft every where throughout our Land, and is alfo often

often found growing in *Gardens*. The ſecond has been found growing in divers Barren Fields in *Somerſetſhire*, as *Lobel* ſays; as alſo in ſeveral other places of *England*. The third is ſometimes found growing in *Gardens*, as alſo in ſeveral other places, in dry and Sandy Ground. The fourth, *Johnſon* in *Gerard* ſays, he found by *Pocklington*, and in other places, in the Woods in *Yorkſhire*; and Mr. *Goodyer*, found it alſo in *Hampſhire*. *Bauhinus* ſays, it was ſent to him under the Name of *Cardaus Arabicus*; Some ſay it is called *Corona Fratrum*, becauſe it ſomewhat reſembles the Heads of Bald Pated Friars.

IX. *The Times.* They all Flower and bear their Seed in *July*, or about the latter end of Summer, when other Thiſtles Flower and Seed.

X. *The Qualities.* The Root and Leaves are according to *Galen*, hot, and dry, about the end of the iſtſt Degree: They are Aperitive, Anodyn, Digeſtive, and Analeptick.

XI. *The Specification.* Authors ſay they Cure Convulſions, Cramps, and the Rickets in Children.

XII. *The Preparations.* You may have from the Roots and Leaves, 1. *A Liquid Juice or Eſſence.* 2. *A Decoction in Wine or Water.* 3. *A Pouder of the ſame.*

The Virtues.

XIII. *The Liquid Juice or Eſſence.* Taken inwardly, from one Spoonful to three, in any proper Vehicle, Morning Noon and Night, it is ſaid to cure Cramps and Convulſions, eſpecially that in the Neck, called *Tetanos*, in which the Neck cannot be ſtirred or turned, without turning the whole Body. It is good alſo againſt Cramps and Convulſions in other parts of the Body, more eſpecially, if beſides taken inwardly, as now directed, the parts affected be alſo very well Fomented or Bathed with the Eſſence thereof very hot, or with the Juice mixt with an equal quantity of Spirit of Wine. And ſo alſo uſed (both inwardly and outwardly) it is ſaid to cure the *Rickets* in Children, which is a Diſeaſe that ſo vehemently conſtricts the Nerves and Ligaments of the Back and Joints, and indeed of the whole Body, that it hinders the Progreſſion of the Nutriment, and ſo fruſtrates the Growing of the Child, diminiſhing its Heighth, Strength and Vigor.

XIV. *The Decoction in Wine or Water, or Water mixt with Wine.* If made ſtrong, it has all the former Virtues, but as it is much weaker than thoſe Preparations, ſo it muſt be given in much greater quantities, *viz.* from a quarter to half a Pint, and that Morning, Noon and Night.

XV. *The Pouder.* It is given for all the ſame purpoſes, from half a Dram to a Dram, or Dram and half, in ſome proper *Syrup*, as *Syrup of Elderberries*, *Syrup of Elecampane Roots*, or the like, and that Morning and Night.

CHAP. DCXC.

Of THISTLE *Carline.*

I. *THE Names.* It is called in Greek, Ἰξίνη by *Theophraſtus*; and Λευκάκανθη by *Dodonæus*: in Latine *Carlina*, and in Engliſh, the *Carline Thiſtle.*

II. *The Kinds.* We ſhall here Deſcribe four Species of this Plant, *viz.* 1. *Carlina humilis Columnæ*, *Ixine Theophraſti*, *Carlina humilis acaulis*, *Carlina acaulis gummifera Bauhini*; *Cardopatium caule nullo*; *Carlina Seſpili flore*; alſo *Carolina*, (ſo called at firſt from *Charles* the Great, whole Army (as it is reported) being Infeſted with the Plague or Peſtilence, was by the uſe of this Plant, Cured and preſerved from the ſame:) and this is that Species which both *Bauhinus* and *Gerard* will have to be *Chamæleon albus Dioſcoridis*, but is indeed a manifeſt Error: in Engliſh, The Low, Dwarf, or Leſſer Carline. 2. *Carlina Cauleſcens Columnæ*; *Carlina Cauleſcens magno flore Gerardi*; *Carlina Leucacantha Dodonæi*; *Carlinæ alterum genus Cæſalpini*; *Carlina magna & elatior Cluſij*; *Carlina caulem habens Lugdunenſis*; *Carlina caule donatus*; *Cardopatium majus*; The Greater Carline Thiſtle, or Carline with a Stalk. This is *Chamæleon niger Vulgaris Tragi & Beſleri*, which is alſo a Miſtake. 3. *Carlina acaulis Septentrionalium*, *Carlina acaulis minor flore purpureo Bauhini*; *Carlina minor flore purpureo Cluſij*; *Carduus acaulis Septentrionalium Lobelij*; Our Low Wild Carline Thiſtle. This is *Chamæleon albus & exiguus Tragi & Lugdunenſis*, and *parvus Loniceri*, by the ſame Miſtake. 4. *Carlina Sylveſtris major Gerardi*, *Carlina Sylveſtris Vulgaris*; *Carlina Sylveſtris Dodonæi*; *Acarna, vel Criſium luteum Sequanorum Lobelij*: The great Wild Carline Thiſtle, or Wild Carline with a Stalk.

The Deſcriptions.

III. The firſt, or Low, Dwarf, or Leſſer Carline Thiſtle. *This is that which is principally uſed in Phyſick; and is by ſome accounted the* Chamæleon albus. *Its Root is ſomething Aromatick, ſmall, long, growing downwards into the Ground, and blackiſh on the outſide. This low* Thiſtle *has many long*

Thiſtle Carline Low, or Dwarf.

long and large Leaves lying on the Ground, jagged or cut in on both ſides, and ſet with white ſharp Prickles; from among which, riſes up a large Head without any Stalk, encompaſſed with ſeveral long, thin, and narrow Leaves, cut in on the edges, and as prickly as the undermoſt, and both of a whitiſh green Color: Theſe Leaves about the Head, though whitiſh above, yet are a little Purpliſh underneath, and ſtand about the Head like a Crown or Border, being thin, long, hard, and ſhining, encompaſs the Flower or Thrum in the middle, being yellow and flat, as the whole head it ſelf is; which being paſt away, there follows the Seed of a whitiſh or Silver Color. This Head before it Seeds, opens in the Day time, and cloſes again at Night. From the Root of this (in ſome places) as alſo from its Head, proceed a Viſcous or Glewiſh Gum, which being dryed or hardned, very much reſembles Maſtich.

IV. The ſecond, or Greater Carline Thiſtle, or Carline with a Stalk. *Its Root is blackiſh on the outſide, but whitiſh within, and as it were bitten off, and being cut or broken, yields ſuch a like white Viſcous Milk or Juice, which being hardned, becomes a Gum like the former, without Smell, but*

Thiſtle Carline *with a Stalk.*

a little ſweet in Taſte, from which Reaſon, the Plant is judg'd to be of the ſame Nature, Property, Qualities and kind with the former. This does not Flower as the former, without a Stalk to ſtand on, but there ſprings up a reddiſh Stalk of about a Foot or more high, on which grows narrower, greener, and more Prickly Leaves than on the firſt, or Low Kind; *the Head or Heads of Flowers are at the top or tops of the Stalk and Branches, each ſtanding on its own Footſtalk, compoſed of a Border, but of ſmaller Leaves, which are hard, thin, ſmooth and whitiſh like the former: The Thrum in the middle is yellowiſh, before the Flowers therein begin to open, but then are of a reddiſh Purple Color, which particular, unleſs one heed it well, the ſame Plant may be taken to be two ſeveral Kinds.*

V. The third, or Low Wild Carline Thiſtle. *Its Root is great, thick and fleſhy on the outſide, and whitiſh within, enlarging many ways. The* Low Thiſtle *does verily reſemble the former, but has long and narrow Leaves, very much cut in on the edges, into many parts, ſet with ſmall Prickles.*

Thiſtle Carline, Low Wild.

and of a duſky Green Color, not lying flat upon the Ground, but a little raiſed up from it; from among which at the latter end of Summer, comes forth a ſhort Stalk, ſcarcely two Inches long, bearing thereon a large round ſcaly and prickly head, with many bright purpliſh Threads riſing out of its middle, which keep their Color a long time; after which, (they being paſt) comes the Seed which is numerous, ſmall, whitiſh, or of a Silver color, envolved amongſt the Down in the Head.

VI. *Johnſon* in *Gerard* deſcribes it after this manner. *This Purple* Carline Thiſtle, *has a pretty large Root, divided many times at the top, into ſeveral Branches, from which riſe many green Leaves, lying ſpread upon the Ground, deeply cut in on the edges, and ſet with ſharp Prickles. In the midſt of theſe Leaves come up ſometimes but one, and ſometimes more ſcaly Heads, which carry a pretty large Flower, compoſed of many Purple Threads, like thoſe of* Knapweed, *but larger, and of a brighter Color. Theſe Heads grow uſually cloſe to the Leaves, yet ſometimes they ſtand upon Stalks 3 or 4 Inches high. When the Flower is paſt, comes the Seed which is ſmall and grayiſh, envolved in the Down, all which are carried away with the Wind.*

VII. The fourth, or the Greater Wild Carline Thiſtle; *or* Wild Carline with a Stalk. *Its Root is long and ſlender, with a twanging or ſharp and biting Taſte. It riſes up with a Stalk or Stalks, a Foot and half, or two Feet high, which are round and prickly, divided towards their tops into ſeveral Branches. From the bottom at the Root, come forth*

many Leaves, partly lying on the Ground, and partly ſtanding upright, which are long, not very broad, unevenly dented about the edges, and full of Prickles, not much unlike to the third or former Carline, *but leſſer; with many ſuch like Leaves, but ſmaller, growing about the Stalks up even to their tops, and to the tops of the Branches of each Flower. At the tops of the Stalks and Branches, grow the Flowers in a Prickly head, being ſet with bordering Leaves like a Pole round about it, of a yellowiſh color, encloſing a reddiſh Thrum, or great number of Threads of a reddiſh color.*

VIII *The Places.* The firſt and ſecond grows upon the Mountains in *Germany* and on the *Alps*; but the ſecond is ſometimes found growing by it ſelf in other places, but with us only in Gardens. *Parkinſon* ſays, that he had obſerved, that the Seed of the Low kind, Sown in our Gardens, has ſometimes grown up high, or with a Stalk, not retaining its former Dwarf State. The third is very frequent in our Country, eſpecially in *Kent*, almoſt every where, and is alſo to be found in *France* and *Germany*. It grows upon *Black-Heath*, and on the Chalky Hills about *Dartford*, and in many other ſuch like places. The fourth grows alſo with us in Untill'd and Deſart places, and oftentimes upon Hills, and is alſo found growing upon *Black-heath*, and on many other places in *Kent*.

IX. *The Times.* They all Flower late in the Year with us, but in the middle of Summer in their Native places. The third Flowers in *July* and *Auguſt*, and the fourth in *June* and *July*, the Seed ripening not long time after.

X. *The Qualities.* The Root is chiefly uſed, and that of the firſt or *Low Dwarf Carline.* It is hot and dry in the end of the ſecond Degree, but *Gerard* ſays, it is dry in the third Degree. It is Aperitive, Anodyn, Diuretick, Cardiack, Nephritick, Hyſterick, Emmenagogick, Sudorifick, and Alexipharmick.

XI. *The Specification.* It preſerves from, and cures the Plague or Peſtilence; kills Worms in the Belly and Stomach, eaſes the Strangury, provokes Urine, and the *Menſes:* reſiſts and expells all manner of Poiſons; eaſes pains of the Teeth; cures Dropſies, Cramps and Convulſions; eaſes pains in the Sides, Stitches, Pleuriſie, *&c.*

XII. *The Preparations.* There are uſed in Phyſick, 1. *The Crude or Raw Root.* 2. *The Liquid Juice.* 3. *The Decoction in Wine.*

The Virtues.

XIII. *The Crude or Raw Root.* Being chewed long in the Mouth, it attracts much cold Rheum, and ſo gives eaſe in the Tooth-ach, and pains in the parts adjacent.

XIV. *The Liquid Juice.* It is given from one Spoonful to two or more, Morning and Night, againſt the Plague, and all Peſtilential Diſeaſes, Meaſles, Small Pox, Spotted Fever, Poiſon, the Bitings of Mad Dogs and Serpents. It cures Cramps, Convulſions, Pleuriſies, Strangury, Dropſy; eaſes pains and Stitches in the Sides, and kills Worms in the Bowels. It may be given in Wine or ſome other convenient Vehicle: It potently provokes Sweat, as alſo the Terms in Women.

XV. *The Decoction in Wine.* It has all the former Virtues, but as it is weaker, ſo it muſt be given from a quarter to half a Pint or more, Morning and Night, and ſo to be continued for ſome conſiderable time.

CHAP. DCXCI.

Of THISTLE *Melancholy.*

I. *THE Names.* It is called in Greek, Κίρσιον (ἀ χίρσος, i. e. *Varices quos ſanet, ut refert Dioſcorides:*) in Latine, *Cirſium*, *Carduus Mollis*, and *Spina Mollis*; and in Engliſh, *The Soft Thiſtle*, and *Melancholy Thiſtle.*

II. *The Kinds.* Authors make a great many ſorts of this, but thoſe only growing with, and moſt known to us, ſhall be he here Deſcribed, which are the three following, *viz.* 1. *Cirſium Anglicum primum*; *Cirſium Pannonicum primum pratenſe Cluſij*; Our Firſt Engliſh Melancholy, *or* Soft Thiſtle. 2. *Cirſium Anglicum alterum*, *Cirſium aliud Anglicum*; *Cirſium Pannonicum alterum Cluſij*; *Cirſium Britannicum ſecundum*, Our other Engliſh Soft, *or* Melancholy Thiſtle. 3. *Cirſium majus latifolium*; *Cirſium primum Lugdunenſis*; *Cirſium Tertium Dodonæi*; *Cirſium Latiſſimum Bauhini:* The Great Broad Leav'd, Soft or Melancholy Thiſtle.

The Deſcriptions.

III. The firſt, or our firſt Engliſh Soft, or Melancholy Thiſtle. *Its Root has many long Strings coming from its Head or upper part, which is blackiſh, and periſhes not every Year. From which Root ſprings up a tender ſingle hoary green Stalk, having*

Thiſtle Melancholy Engliſh, *Firſt.*

thereon four or five green hoary Leaves, dented about the edges; the points whereof are little or nothing prickly; and at the top uſually but one head,

head, yet sometimes from the bosom of the uppermost Leaf, there comes forth another smaller head, which is scaly, and something prickly, with many reddish Purple Threads or Threans in the middle, which being gathered fresh, will keep their Color a long time; and standing on the Stalk, will not fade in a long Season, after which it perfects its Seed, which is of a mean Proportion for bigness, envolved in its Down.

IV. The second, or our other English soft, or Melancholy Thistle. *Its Root at its Head is somewhat Tuberous, and blackish on the out-side, shooting forth several long Fibres or Strings, which run under the Earth here and there, and send forth new*

Thistle Melancholy English, *Second.*

Heads for increase. From this Head spring up long, narrow hairy Leaves, set about the edges with slender Prickles, not much unlike to the former, but more hoary underneath, and more green above. From the midst of these Leaves grows up a Stalk, a Foot, or Foot and half, or two Feet high, which is tender, stiff and Downy; upon which grow Leaves lesser than those below, which are something broad at there setting on, and these also a little nickt, notcht, or cut in. This Stalk sometimes is single, without any Branches; and sometimes it has one or two, or three long slender ones. Out of each of the tops of which Stalk and Branches, grows one large scaly Head, with many Purple Threads in the middle, not much unlike the Common Knapweed, *which at length,* Thistle *like, turn into Down, in which the small shining* Thistle *like Seed is envolved.*

V. The third, or great broad Leav'd, Soft, or Melancholy Thistle. *Its Root is small and long, with several Fibres adjoined thereto. Its Leaves, are large and long, as large as those of* Bugloss, *dented and set about the edges with [illegible] a greenish Color, the middle Rib being [illegible] Stalk is tender and brittle, [illegible] ed or cornered, on which grow [illegible] are below, large as [illegible] lesser towards the tops, [illegible]*

Thistle Melancholy Great.

rent on the edges. The Stalk is also branched towards its top, each Branch bearing from among a Tuft of small Prickly Leaves, a small Prickly Thistle *like head, which sometimes stand upright, and sometimes lean a little down. Out of these Heads when fully blown, appear the Flowers, consisting of a great many elegant Purple Threads, which pass into Down, in which the Seed is wraft.*

VI. *The Places.* The first and second grow in moist Meadows in many places of *England*, both in the Southern and Northern parts of our Island. *Clusius* found them growing in *Hungary*, and in the Mountainous Medows a long the side of the *Danube* in *Austria*; our *Pena* found them growing in the Meadows at the foot of *Ingleborow-Hill* in *Yorkshire*; *Lobel* in the Meadows at *Alton*, in *Glocestershire*; and *Johnson* says, that he once found the second in a Meadow between *Highgate* and *London*. The third grows in the Fields on the Mountains in *Germany*; and *Johnson* says it grows Wild upon the Sea-Coasts of *Holland*, *Flanders* and *Zealand*; and an *English* Gentleman told me he had found it in some Meadows on the Feet of some Mountains in *North-Wales*, as also in some other parts of the Kingdom.

VII. *The Times.* They Flower in *June*, *July* and *August*, and their Seed is ripe in some short time after.

VIII. *The Qualities.* They are hot and dry in the end of the first Degree; Aperitive, Abstersive, a little Astringent, Splenetick, Nephritick, Hysterick, and Sudorifick.

IX. *The Specification.* It opens Obſtructions of the Spleen and other *Viſcera*, eaſes pains thereof, and is ſaid to Cure Hypochondriack Melancholy.

X. *The Preparations.* You may make therefrom, 1. *A Liquid Juice or Eſſence.* 2. *A Decoction in Wine.* 3. *A Spirituous Tincture.* 4. *An Acid Tincture.* 5. *An Oily Tincture.*

The Virtues.

XI. *The Juice or Eſſence.* They potently open Obſtructions of the Spleen, Liver, Reins and Womb, give eaſe in pains of the Spleen, Sides, Reins and Meſentery, allay Vapors, are good againſt Fits of the Mother, provoke Urine and the Terms, and potently repreſs Melancholy, carrying off the Morbifick matter by the Urinary parts. Doſe from two to four Spoonfuls, in a Glaſs of White Port or *Lisbon* Wine, or any other fit Vehicle, Morning and Night.

XII. *The Decoction in Wine.* It has all the former Virtues, but is not ſo ſtrong in Operation, and therefore is to be given from a quarter to half a Pint at the times aforeſaid. If a good Draught of it be given every Night at Bed-time, for ſome conſiderable Seaſon, it cures the *Incubus*, or Night-Mare, as has been ſeveral times proved by Experience.

XIII. *The Spirituous Tincture.* Taken from half a Spoonful to a Spoonful or more in a Glaſs of Wine, it is not only good againſt all the Diſeaſes before ſpecified, but is a good Cordial againſt Sickneſs at Heart, Fainting and Swooning Fits, Vapors, and withall makes the Patient Chearful and Merry, wonderfully exhilerating the Spirits.

XIV. *The Acid Tincture.* It opens Obſtructions, repreſſes Vapors, ſtrengthens a weak Stomach, and provokes Urine. Doſe ſo many Drops in a Glaſs of Ale or Wine, as to give it a pleaſing Acidity. It may be taken ſeveral times in the day, *viz.* as often as the Patient drinks.

XV. *The Oily Tincture.* It is ſingular againſt the Cholick, provokes Urine ſtrongly, eaſes the Strangury, and gives wonderful relief in the moſt profound Melancholy. It has all the Virtues of the Juice and Eſſence, but ought not to be given to ſuch as are of a very hot Conſtitution, unleſs by a Skilful Hand. It is good againſt Convulſions and Palſies in cold Habits of Body; potently provokes the Terms, cleanſes the Reins and Womb, cauſes Conception, and at time of Travel eaſie Delivery. Doſe from 10 to 20 or 30 Drops, which may be dropt into Sugar, and then mixt with a Glaſs of Canary, white *Lisbon*, or any other Vehicle the Phyſician ſhall moſt approve of, and ſo drunk up.

CHAP. DCXCII.

Of THISTLE *Milky:*
OR,
Ladies Thiſtle.

I. THE *Names.* It is ſuppoſed to be that which the *Arabians* call *Bedeguar*: called in Greek, Σιλυβον: and in Latine, *Silybum, Carduus lacteus, Carduus Mariæ, & Sanctæ Mariæ*; in Engliſh, The *Milky* Thiſtle, and *Ladies* Thiſtle.

II. *The Kinds.* We have but two ſpecial ſorts of this with us, *viz.* 1. *Carduus Lacteus vulgaris Lobelij*; *Carduus albus Brunfelſij*; *Carduus Argentatus*; *Carduus Mariæ Tragi, Loniceri, Fuchſij, Geſneri, & Camerarij*; *Carduus Marianus Cordi & Tabernæmontani*; *Carduus Leucographus Dodonæi*; who with *Lacuna, Matthiolus, Cornarius, Fuchſius and Lugdunenſis*, took it to be the *Leucographis Plinij*; *Silybum Anguilare & Lobelij*; *Cardui Sylveſtris aliud genus Cæſalpini*; Our Common Ladies Thiſtle, *or* Milky Thiſtle. 2. *Silybum majus, Carduus Spineus, vel Spinoſus, Spina alba, Leucacantha*, The white Thorn Thiſtle.

The Deſcriptions.

III. The firſt, or Our Common Ladies Thiſtle, or Milky Thiſtle. *Its Root is great, ſpreading in the Ground, with many Strings and ſmall Fibres faſtned to them; from whence riſe up many large and very broad Leaves lying on the Ground, cut in, and as it were crumpled, but ſomewhat hairy on the*

Thiſtle Milky:
OR,
Ladies Thiſtle.

edges, and of a white green ſhining color, wherein are many Lines, Strakes or Veins, of a Milky color, running all over the Leaf, ſome very ſmall, ſome larger, and other ſome very large: Theſe Leaves are ſet with many ſharp and ſtiff Prickles all about, among which riſes up one, and ſometimes more Stalk or Stalks, round and full of Prickles, ſet full of the like Leaves up to the Tops, where at the end of every Branch, comes forth a great prickly Thiſtle head, ſtrongly armed with Prickles, which contain in their middle bright Purple Thrums or Threads, which being paſt away, there follows the Seed, which

is

is large and brown, long, somewhat flattish and shining, lying enclosed in a great deal of fine, soft, white Down. All the whole Plant is bitter in Taste, which argues the excellency of its Virtues.

IV. The second, or white Thorn Thistle. *Its Root is long, with some Strings adjoining to it, and perishes always before Winter. From whence rise up some Leaves lying upon the Ground, very large and long, but nothing near so large and broad as the former, which are dented or gasht in with more or fewer large gashes; so great, as to reach almost to the middle Rib, armed sometimes in the middle spaces where there are no Dents; but especially at all the corners of each Leaf, with cruel long sharp Prickles, some longer, some shorter, which are of a hard Substance, and almost of a Milk white, or rather Cream color. The Leaf is not so green as the former, but rather of a dirty Green; nor so smooth*

Thistle White Thorn.

as that, but is overspread with a green hoariness or Down upon it, through which runs some whitish Veins, almost of a Cream color, but nothing so numerous, nor so large, nor yet so white as the first. From the middle of these Leaves rises up a pretty strong, hard, prickly Stalk, of about 2 or 3 Feet high, with some few Branches towards its top; at the tops of which grow pretty large, Thistle *like heads, with a purple Thrum in the middle, after which comes* Thistle *like Seed, enveloped in a great quantity of fine, white, soft Down.*

V. *The Places.* They both grow almost every where in *England*; the first on almost every Ditch and Bank-side, and in waste Fields almost every where. The other grows also in waste and untill'd Grounds, and in many places where the other grows, and sometimes in Fallow Fields, also among Corn, and many times by High-ways sides, and the Borders of Meadows.

VI. *The Times.* They Flower and Seed in *June*, *July* and *August*, when other *Thistles* do; and their Seed is generally ripe the next Month following, being their time of Flowering.

VII. *The Qualities.* The Milky Thistle is hot and dry in the first Degree, Aperitive, Astringent, Stomatick, Sudorifick and Alexipharmick:

VIII. *The Specification.* It is used for the Cure of Agues and Fevers, both Malign and Pestilential, to open Obstructions of the Stomach, Lungs, Liver and Spleen, and other Viscera, provoke Urine, help the Jaundice and Dropsie, and give ease in the Strangury, Dysurie, Stone, Gravel, and other Diseases of the Reins and Bladder: It is also good against Palpitation of the Heart, and other Passions of the same

IX. *The Preparations.* You may make therefrom, 1. *A Liquid Juice or Essence,* 2. *A Decoction of the Herb, Roots and Heads.* 3. *A Pouder of the Seed.* 4. *A Distilled Water.* 5. *A Sallet of the young Stalks.*

The Virtues.

X. *The Juice or Essence.* They are thought to be as effectual as *Carduus Benedictus*, for all the same purposes, *viz.* for Agues, Infectious Diseases, Malign and Pestilential Fevers, and the Infection of the Plague, both to prevent and cure it. They open Obstructions of Stomach, Liver, Spleen, Reins and Womb, are good against Hypochondriack Melancholy, Scurvy, Dropsy, Jaundice and Gout: They ease pains in the Sides, Stitches, and are profitable against the Colick and Gripings of the Guts. Dose from 2 to 4 Spoonfuls, Morning and Night, in a Glass of Mull'd Canary.

XI. *The Decoction in Water or Posset-Drink.* It has all the other Virtues before specified, but must be given to half a Pint or more, Morning and Night, mixed with a little Mull'd Canary, or White Port Wine.

XII. *The Pouder of the Seed.* It may be given to a Dram Morning and Night, in any convenient Vehicle. It is said to be as good, if not more powerful for the Cure or help of all the aforenamed Diseases.

XIII. *The Distilled Water.* It is good against all inward Fevers and the like; to allay the heat and inflamation of the Stomach, Liver, Spleen, Reins and Womb; and besides is often applyed outwardly with Cloths or Spunges, to the Regions of the Liver and Heart, to cool the hot Distempers of those parts, and to resist Fainting and Swooning Fits.

XIV. *The Sallet.* It is made of the young Stalks peeled and dressed, as the Stalks of other Chardons and Wild Artichokes are, which being eaten, are said to increase Milk in Nurses Breasts.

CHAP. DCXCIII.

Of THISTLE *Star.*

I. *THE Names.* It is without doubt the Μυακανθος *Theophrasti*, *lib. 6. cap. 4.* In Latine it is called *Carduus Stellatus*, and *Carduus Stellaris*, in English, *the Star Thistle.*

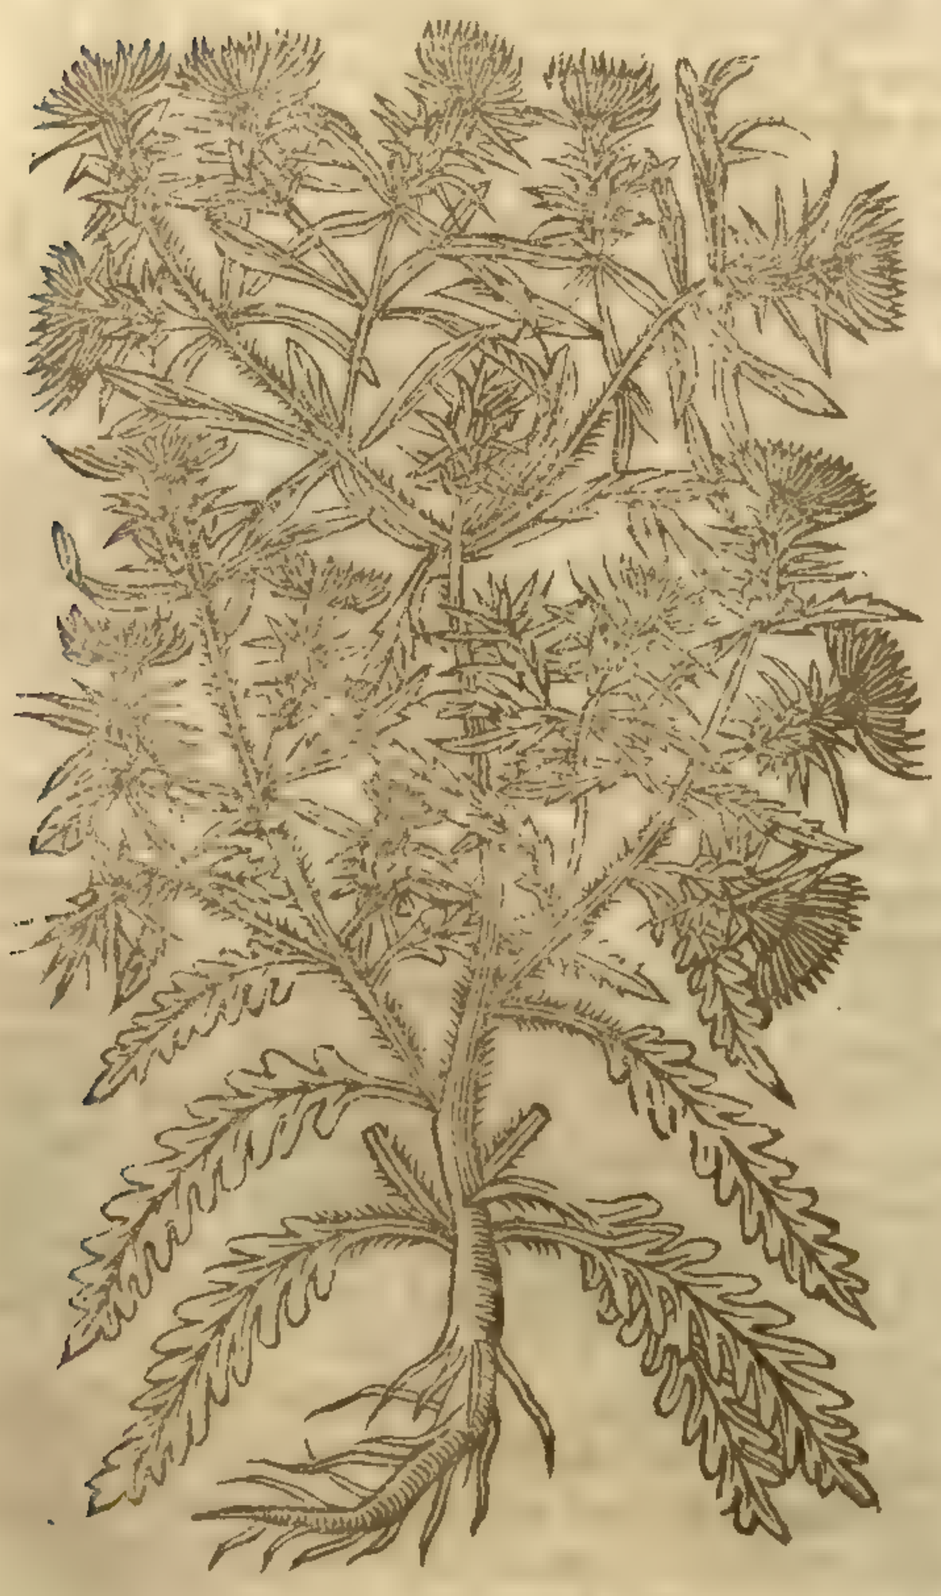
II. *The Kinds.* The most usual sorts of this Plant with us are only two, *viz.* 1. *Carduus Stellaris vulgaris*, *Carduus Stellatus Camerarij*, *Dodonæi & Lobelij*; *Carduus Stellatorius sive Stellaris Gesneri*; *Stellaria Augerij*; *Polycantha Cordi*; *Spino Stella Tabernæmontani*; *Myacanthos Theophrasti Dalechampio*; *Carduus Muricatus Clusij*; *Hypophæstum Columnæ*; *Carduus Stellatus Foliis papaveris*

papaveris erratici, Dioscoridis & Bauhini; Our Common Star Thistle. 2. *Carduus Stellaris flore albo, Carduus Stellatus flore albo*, The white Flowered Star Thistle.

The Descriptions.

III. The first, or our Common Star Thistle, *has a Root which is small, long, woody, and perishing every Year, the Plant raising it self every Spring from the Seed of its own Sowing. It has divers long and narrow Leaves lying next unto the Ground, cut or torn in on the edges very deeply, into many almost even parts, soft, or a little woolly all over the green, which is a little whitish; from among*

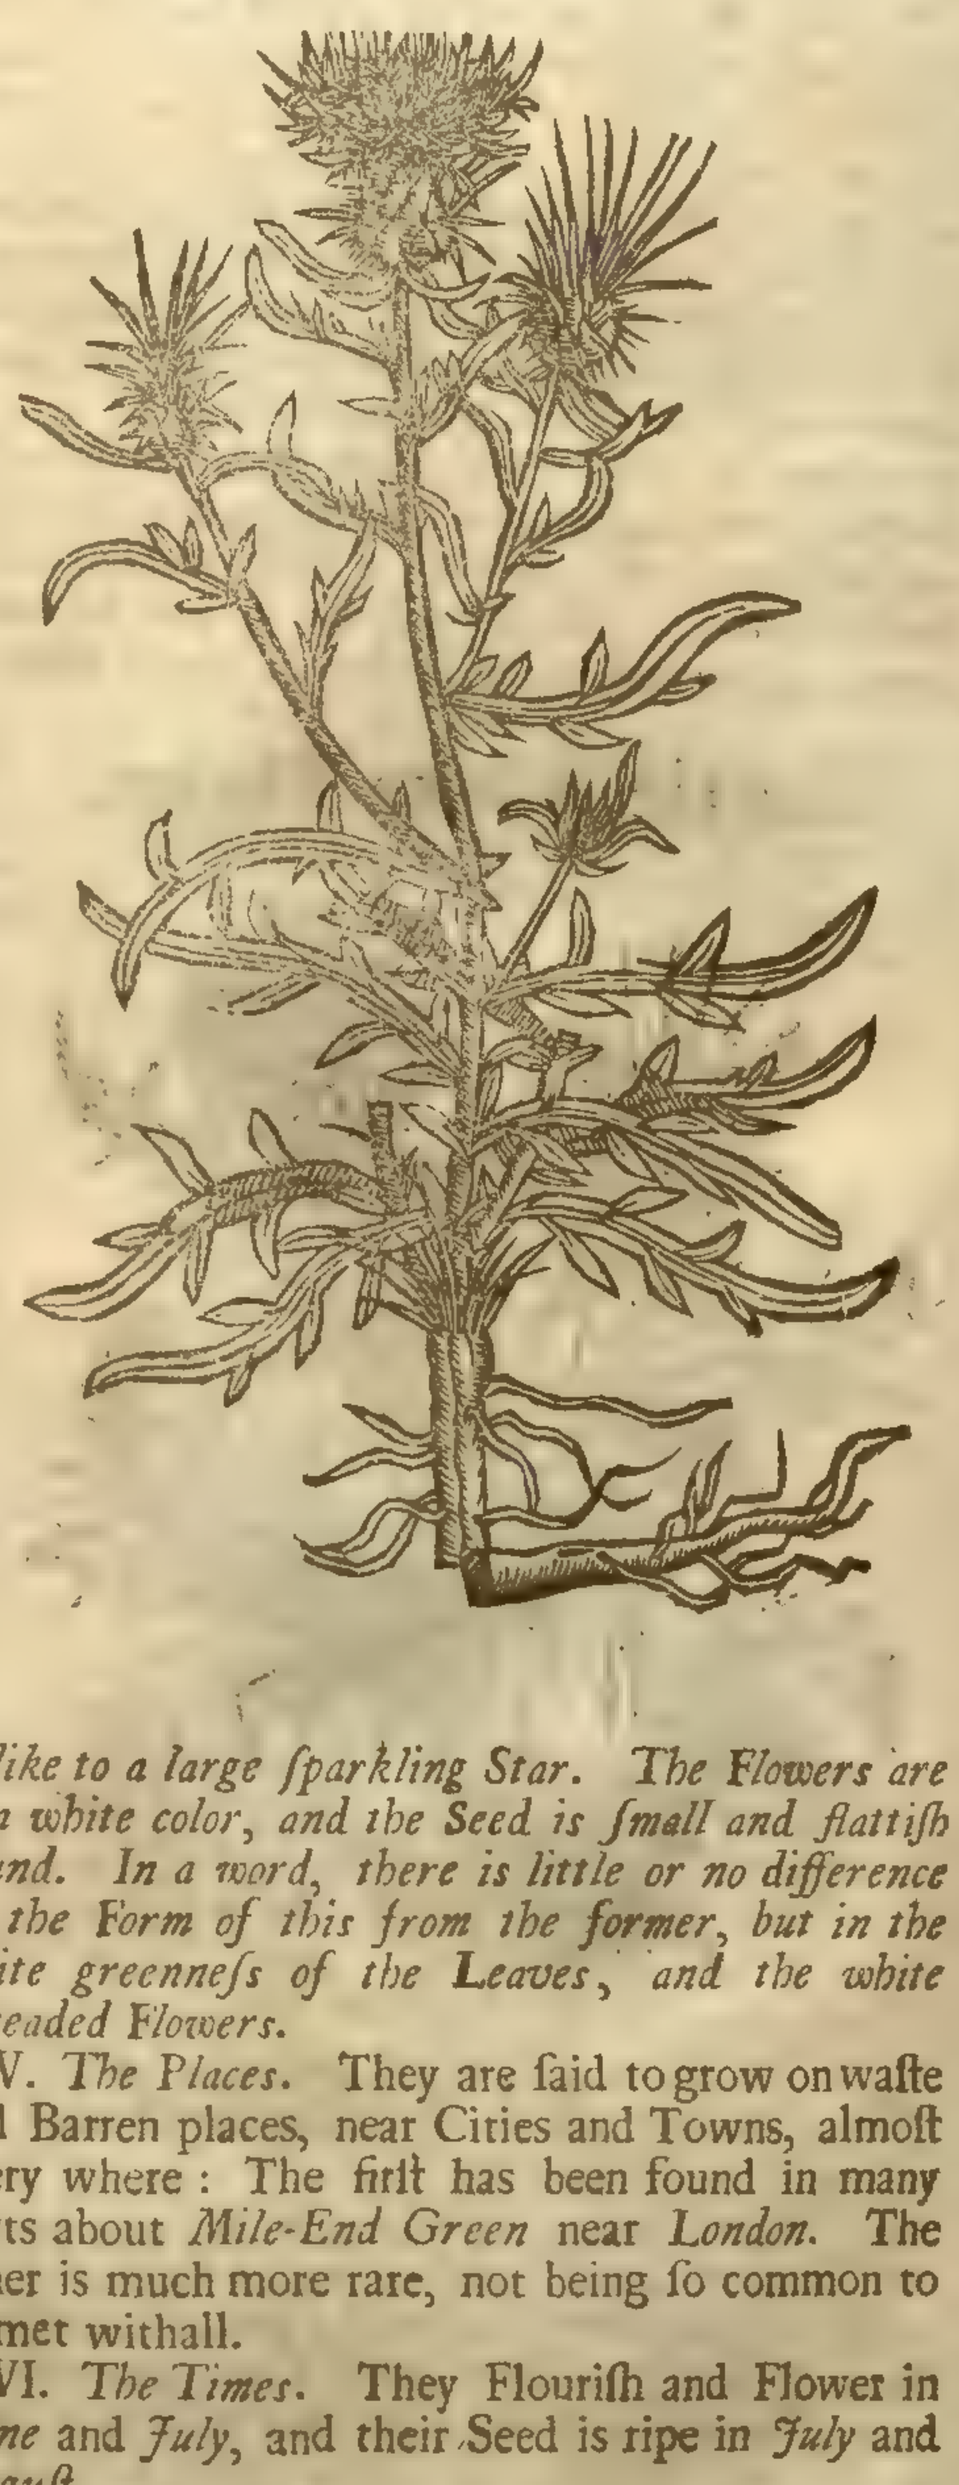
Thistle Star Common.



which rise up several weak Stalks, spread out into many Branches, all lying, or leaning down towards the Ground, rather than much raised up; so that it seems a pretty Bush set with divers the like divided Leaves up to their tops, on which do stand long and small whitish green Heads, set with very sharp and long whitish Prickles; no part of the Plant being in any part or place there prickly besides. These Prickles are of a whitish yellow, and as sharp as in any other Thistle. Out of the middle of the Head comes the Flower, composed of many small reddish Thrums or Threads, after which in the said Head lyes the Seed, which is small, whitish and round, enveloped in fine soft Down.

IV. The second, or white Flowered Star Thistle. *Its Root is long and brown without, from whence spring up many soft frizled Leaves, deeply cut or gasht on the edges, wholly without Prickles; among which rises up a Stalk dividing it self into many Branches, and growing about two Feet high, on the tops whereof are small* Thistle *like heads, armed round about with many sharp Prickles, not much*

Thistle Star white Flower'd.



unlike to a large sparkling Star. The Flowers are of a white color, and the Seed is small and flattish round. In a word, there is little or no difference in the Form of this from the former, but in the white greenness of the Leaves, and the white threaded Flowers.

V. *The Places.* They are said to grow on waste and Barren places, near Cities and Towns, almost every where: The first has been found in many parts about *Mile-End Green* near *London.* The other is much more rare, not being so common to be met withall.

VI. *The Times.* They Flourish and Flower in *June* and *July*, and their Seed is ripe in *July* and *August.*

VII. *The Qualities.* It is hot and dry in the first Degree, Aperitive, Diuretick, Stomatick, and Nephritick.

VIII. *The Specification.* It is used for the Cure of the Strangury, Gravel and Stone in Reins or Bladder, Fistula's, *French Pox*, Obstructions of the Stomach, Liver, Spleen, Reins and Womb, Agues, the Plague, and all sorts of Pestilential Diseases.

IX. *The Preparations.* You may make therefrom, 1. *A Liquid Juice or Essence of the whole Plant.* 2. *A Pouder of the Seed.* 3. *A Pouder of the Root.* 4. *A Distilled Water from the whole Plant.*

The Virtues.

X. *The Juice or Essence.* Drunk from 2 to 4 Spoonfuls in a Glass of white Port, or *Lisbon* Wine, it opens all Obstructions of the Viscera, cleanses the Stomach, Womb, Reins and Bladder, gives ease

eaſe in the Strangury, provokes Urine, helps to break gritty Stones, and to expel them. It prevails powerfully againſt the *French Pox*, induces the Cure of Fiſtula's, is profitable againſt the Plague, and all Peſtilential Diſeaſes, and Cures Quotidian and Tertian Agues.

XI. *The Pouder of the Seed.* Given to a Dram or Dram and half, Morning and Evening, in white Port, or *Lisbon*, or Sherry Wines, either raw or Mull'd, it gives eaſe in the Strangury, provokes Urine, and is profitable againſt Gravel, Stone and Tartarous Mucilage, whether in the Reins or Bladder.

XII. *The Pouder of the Root.* It may be given from one Dram to two in Mull'd Sack, Morning and Night, againſt the Plague or Peſtilence, and all ſorts of malign and Peſtilential Diſeaſes; and ſo taken alſo for ſome time, it is ſaid to induce the Cure of Fiſtula's in any part of the Body.

XIII. *The Diſtilled Water. Baptiſta Sardus* commends it (being drank) againſt the *French Pox*, to open Obſtructions of Liver and Spleen, cleanſe the Blood, and to cure Quotidian and Tertian Agues. If theſe are the Virtues of the *Diſtilled Water*, I am ſure the *Juice* or *Eſſence* aforementioned, will perform the ſame things much more powerfully.

CHAP. DCXCIV.

Of THISTLE *Hartichoak-like.*

I. *THE Names.* It is ſaid to be the Σκολύμος *Dioſcoridis*; in Latine *Scolymus*, *Carduus Cinareus*, *Carduus Cynareus aculeatus*: in Engliſh, *The Hartichoak-like Thiſtle.*

II. *The Kinds.* It is *Singularis ſui generis*, a true Thiſtle like Plant, its Leaves being armed with Prickles as moſt other Thiſtles are.

Thiſtle Hartichoak-like.

The Deſcription.

III. *As its Root is great, ſo it ſpreads much, and ſprings forth out of the Earth with ſeveral large hard narrow Leaves, which as they are variouſly and irregularly indented and gaſh'd in on the ſides, ſo are they at every corner of theſe doſhes, armed with ſtiff and ſharp prickles, as other* Thiſtles *generally are. Theſe Leaves where they cloſe upon the Stalk, encompaſs the ſame, and are of a dark green color. It ſends up ſometimes but one Stalk, and ſometimes two or more, at the top of which Stalk comes forth a* Thiſtle-*like ſcaly prickly Head, leſſer than thoſe of the* Chardons, *which are kept to be eaten, which is alſo armed with ſtiff ſharp prickles. From the middle of this Head comes forth a purpliſh Crimſon* Thrum, *or heap of Threads, which after ſome few days paſs away, and the Seed remains in the Heads being flat, and like other* Thiſtle-*Seed, enveloped in Down.*

IV. *The Places.* It grows wild in many Southern Countries, as about *Mompelier* in *France*, but with us it is only to be found in our Gardens.

V. *The Times.* It Flowers in the end of Summer, and the Seed is ripe in about 4 or 5 Weeks after.

VI. *The Qualities.* It is hot and dry in the firſt Degree, Aperitive, Aſtringent and Diuretick.

VII. *The Specification.* It has the general property of moſt other Thiſtles, *viz.* to remedy the ſtinking Savor of the Arm Pits, and indeed of the whole Body, and to expel ſtrong and ſtinking Urine, thereby cleanſing the Reins and Bladder of Filth, and mucilaginous Recrements lodg'd in thoſe parts.

VIII. *The Preparations. The Decoction of the Roots or Heads, or both in Water or Wine, is that which is chiefly uſed Medically.*

The Virtues.

IX. *The Decoction aforementioned.* Made with Water or Wine, or half Water half Wine, being taken Morning and Evening to half a Pint or more, ſweetned with double refin'd Sugar, provokes Urine after a ſingular manner; and by the Urinary paſſages carries off all the fœtid or ſtinking Recrements of the Blood and Humors, which cauſe the Arm-Pits and whole Body to have an ill Smell; and withal cleanſes the Reins and Bladder of Gravel, Sand, and Tartarous matter lodged in thoſe parts.

CHAP. DCXCV.

Of THROUGH-WAX: OR, *Through-Leaf.*

I. *THE Names.* Since no *Greek* nor Antient *Latin* Authors have wrote of this Plant, we can give you no Names from them. Our modern Authors do generally call it, *Perfoliata*, and *Perfoliatum*: In Engliſh, *Through-Leaf*, and *Through-Wax.*

II. *The*

II. *The Kinds.* We have an account of ten or twelve ſorts of this Plant, but moſt of them being Strangers to us, we ſhall only take notice of ſuch as are to be met with in *Great-Britain*, which are the three following, *viz.* 1. *Perfoliata vulgaris*, Our common Through-Leaf. 2. *Perfoliata flore multiplici, Perfoliata longifolia Dalechampij in Lugdunenſi*, Double Flowered Through-Wax, *or* Through-Leaf. 3. *Perfoliata ſiliquoſa vulgaris, Napifolia Anglorum ſiliquoſa Lobelij, Camerarij, Geſneri, Tabernæmontani, & Tragi*; *Perfoliata Napifolia Lobelij*, becauſe as he ſays, it partakes of the Navew; and therefore ſome have called it alſo *Braſſica campeſtris, Sylveſtris vel Agreſtis Siliquoſa*, or *Perfoliata:* Our Common Codded Through-Wax, *or* Through-Leaf.

The Deſcriptions.

III. The firſt, or our Common Through-Leaf, *has a Root which is ſmall, long and lignous, periſhing every Year after Seed time, and riſing plentifully of its own Sowing the Spring following. It ſends forth one ſtraight round Stalk, and ſometimes more, two Feet or more high, whoſe lower Leaves being of a blewiſh green Color, are ſmaller and narrower than thoſe up higher, and do ſtand cloſe thereto, not encompaſſing it, but as they grow higher, they do more and more encompaſs the Stalk they ſpring from, until it wholly (as it were) paſſes thro' them; branching towards the top into many*

Through-Leaf Common.

parts, where the Leaves grow ſmaller again, every one ſtanding ſingly, and never two at any Joint. The Flowers are very ſmall and yellow, ſtanding in Tufts at the heads of the Branches, where (the Flowers being paſs'd away) the Seed follows, which is ſmall and blackiſh, many thruſt thick together.

IV. The ſecond, or Double Flowered Through-Leaf. *This differs in nothing from the former, but in the Heads of Flowers, which are thicker ſet together, and larger, but give no Seed, being wholly a degenerate Species, riſing from the Seed of the former, ſpending its Strength and Increaſe in its plentiful Heads of Flowers.*

V. The third, or our Common Codded Through-Leaf. *Its Root is ſmall and woody, periſhing after Seed time, which ſends up weak Stalks, ſpreading themſelves out at every Joint, with Leaves ſet at them, encompaſſing them at the bottom, very like unto the firſt* Common Through-Wax, *but thicker, fatter, and longer pointed, and of a whiter green Color, moſt like unto* Cabbage *or* Colewort *Leaves, and uſually with an unevenneſs on the edges. The tops of the Branches are furniſhed with many ſmall white Flowers, ſtanding one above another, conſiſting of four Leaves a piece, which afterwards turn into ſmall long Cods, which are as it were ſquare, in which is contained round browniſh Seed.*

Through-Leaf Codded.

VI. *Gerard* deſcribes this Codded Plant thus. *Its Root is long and ſingle, dying when it has brought forth its Seed. It has ſmall tender brittle Stalks 2 Feet high, bearing Leaves which wrap and encloſe themſelves round about, altho' they are not run thro' as the others are; yet they grow in ſuch a manner, that upon the ſudden view thereof, they ſeem to be pierced or paſt thro' as the others are. Upon the ſmall Branches do grow ſmall white Flowers, which being paſt, there follow ſlender long Cods, like thoſe of* Turneps *or* Navews, *whoſe Leaves and Cods do ſomewhat reſemble the ſame, from whence came the Name* Napifolia. *There is a wild Kind hereof growing in* Kent, *in many places among the Corn, like this in each reſpect, but altogether leſs: which if it was brought into Gardens, would no doubt prove the very ſame.*

VII. The

VII. *The Places.* The first is found oftentimes in our Land, in Corn Fields, and Pasture Grounds. *Johnson* in *Gerard* says it grows plentifully in many places about *Kent*, and between *Farningham* and *Aimsford*, it grows in such quantities in the Corn-Fields, as one Mr. *Bowles* says, on the tops of the Hills, that it may well be termed a Nuisance. The second is Nurst up in Gardens, as indeed are all the three Kinds. The third grows also in our Corn-Fields, and Wild as *Lobel* affirms; but is for the most part Nurst up in our Gardens.

VIII. *The Times.* They all Flower thro' the Months of *June* and *July*; and their Seed is ripe in *July* and *August*.

IX. *The Qualities.* *Through-Leaf* is hot and dry in the first Degree; Abstersive, Astringent and Vulnerary.

X. *The Specification.* It is used for Bruises and Wounds whether inward or outward, and Ruptures of all kinds, whether in Old or Young.

XI. *The Preparations.* You may make therefrom, 1. *A Liquid Juice or Essence from the whole Plant.* 2. *A Decoction in Water or Wine.* 3. *A Pouder of the dryed Herb.* 4. *An Oil or Ointment.* 5. *A Cataplasm of the Leaves.* And these may be made of either of the Kinds: The *Golded Species* having (as *Tragus* says) the same Operation and Virtues with the other, and working the same Effects.

The Virtues.

XII. *The Liquid Juice or Essence.* Either of them may be given inwardly from 2 to 4 Spoonfuls in red Port Wine, or Barabar Wine Mull'd, Morning and Night, for inward Wounds or Bruises, or inward Ulcers in the Lungs, Reins, Bladder or Womb; as also for Ruptures whether of the Navel, Testicles or Groin, and the parts outwardly affected may be washed and fomented with the same, to induce a speedy Cure, whether in Old or Young.

XIII. *The Decoction in Water or Wine.* It has the same Effects, but is much weaker, and may be used in the same manner: When taken inwardly, it may be given to half a Pint or more at a time.

XIV. *The Pouder of the Leaves.* It has the force of the Juice or Essence, being given to a Dram or more at a time Morning and Evening, so long as need shall require. Outwardly strewed upon old, putrid and running Ulcers, it cleanses them, has an incarnate force, drys, and quickly heals them.

XV. *The Oil or Ointment, made of the green Herb.* It is good to ease Pain, repress a Flux of Humours to any part, to cleanse and dry old Ulcers, and speedily to heal up green Wounds, being Artfully applyed.

XVI. *The Cataplasm.* Applyed outwardly, it has the same Force and Virtues with the former Preparations; it discusses simple and recent Contusions, but is of principal use for the cure of Ruptures in Children, before they grow too old.

CHAP. DCXCVI.

Of THROAT-WORT: *OR, CANTERBURY-BELLS.*

I. *THE Names.* This Plant is called in Greek, Τραχηλιον: in Latine, *Trachelium, Cervicaria,* (for that it is good against the Strumous Kernels in the Neck and *Uvularia,* (because it helps the *Uvula,* or Palate of the Mouth as some call it,) in English *Throat Wort* or *Canterbury-Bells.*

II. *The Kinds.* Authors make Fifteen or Sixteen, or more Kinds of *Throat-Worts,* but most of them being Strangers with us, and scarcely to be seen in some Ages, unless by Travellers, we shall only take notice of those which grow in our Country either Wild, or in Gardens, which are the seven following, *viz.* 1. *Trachelium minus Dodonæi, Lobelij, aliorumque, Cervicaria minor Tabernamontani, Uvularia exigua Tragi,* The lesser Throat-Wort *or* Canterbury-Bells. 2. *Trachelium majus flore albido vel purpureo simplex,* The greater Throat-Wort *or* Canterbury-Bells. 3. *Trachelium majus flore duplici albo & Cæruleo,* The greater Throat-Wort *or* Canterbury-Bells double Flowered, white and blew. 4. *Trachelium majus Belgarum Lobelii,* The greater Dutch Throat-Wort. 5. *Trachelium Giganteum flore purpurante,* Giants Throat-Wort, *or* Canterbury-Bells with a pale purple Flower. 6. *Trachelium Serotinum,* Late Flowering Throat-Wort *or* Canterbury-Bells. 7. *Trachelium Americanum flore ruberrimo, Planta Cardinalis,* The rich Crimson American Throat-Wort *or* Cardinals Flower.

Throat-Wort small, *Common.*

The Descriptions.

III. The first, or lesser Throat-Wort *or* Canterbury-Bells. *The Root is lasting, shooting up a fresh every Year. It has smaller Leaves, and nothing so broad as the great Kind, but long, and little or nothing dented about the edges. The Stalks are square, and brownish if it bears purple Flowers, but green if it bears white Flowers, which in Form are alike, and grow in a Bush or Tuft thick set together, more than any of the others, and smaller also, being not much bigger than the Flowers of the Field or* Garden Rampions.

IV. The second, or greater Throat-Wort, or Canterbury-Bells. *Its Root is hard and white, spreading it self out into many Branches under Ground, not perishing every Year (tho' it looses all its Leaves in Winter) but abiding many Years, and increasing into several Heads or Knobs, from whence spring up new Leaves and Branches. It has many large and rough Leaves, something like unto* Nettle *Leaves, being broad and round at the bottom, and pointed at the end, and notched or dented on the edges, every one standing on a large Footstalk. From among these Leaves rise up divers square rough Stalks, divided at the top into several Branches, on which grow the like Leaves as at bottom, but lesser; towards the ends of the Branches stand the Flowers intermixed with some longer Heads, every one in its several Husk, which are hollow, long and round, like a Bell or Cup, wide open at the Mouth, and cut at the Brim into five Corners or Divisions, somewhat lesser than the* Coventry Bells, in *Chap.* LXIV. *Sect.* V. *aforegoing; which in some Plants are of a pure white, in some whitish, and in others of a fair, deep, Purple color, and in other some paler. After the Flowers are past, come smaller and rounder Heads than in the* Coventry-Bells, *containing flat Seed, but blacker, and not so red as those.*

V. The third, or greater Throat-Wort, *or* Canterbury-Bells. *Its Root is like the last beforegoing, nor does it differ in any thing therefrom, but in the duplicity of its Flower; and there is of both white and Purple Kinds, a double Flower'd Species, which have double white Flowers, and double Purple or Blew.*

VI. The fourth, or greater Dutch Throat-Wort. *Its Root is pretty large, spreading under Ground, and has many Fibres adjoining. It rises up with several Branches or Stalks, which are tall, great and hairy, with several Leaves set thereon at distances, sometimes singly, and sometimes two together upon short Footstalks, which are pretty long, broadish at bottom, and so growing gradually to a sharp Point, and are notched like a Saw on the edges, not much unlike those of the greater* Throat-Wort *at* Sect. IV. *above, saving that these are much greater both in the Leaves and Stalks. The Flowers are of a Purplish blew color, and almost as large as those of the* Coventry-Bells: *In all other particulars it agrees with the former greater Kind.*

VII. The fifth, or Giants Throat-Wort, *or* Canterbury-Bells. *Its Root is great, thick and white, not perishing Annually, but abiding many Years. This tho' it has a Gigantine Name, yet scarcely ever grows higher than the second sort aforegoing. Its Leaves are not so rough, but as large, and dented about the edges, somewhat larger pointed, and of a fresher green color. The Stalks bear such like Leaves on them, more thinly or dispersedly set, having a Flower at the bottom of every Leaf from the middle upwards, being somewhat like the great* Throat-Wort *in Form, but of a pale or bleak reddish purple color, turning their Brims or Corners a little backward, with a Forked Clapper in the middle, which is eminent and yellow. The Seed is white, and plentiful in the Heads, which will abide all the Winter upon the Stalks, until all the Seed being shed, the Heads remaining seem like torn Rags, or thin pieces of Skin eaten with Worms. There is another of this Species, but it differs in nothing from this now Described, but in its Flower, which is White.*

VIII. The sixth, or late Flowering Throat-Wort, *or* Canterbury Bells. *Its Root is thick and bushy, its lower Leaves are Downy, dark, green, and pretty soft in handling, broad at bottom and small, and sharp at the point, unevenly waved or notched about the edges. The Stalk rises up to be about 3 Feet high, being soft, and almost woolly like the Leaves, spread out into some Branches at the top, bearing many Bell-fashioned Flowers, like the first greater sort (at* Sect. IV.) *but smaller, and of a pale blewish or purplish Ash color, which by reason of their late Flowering, gave occasion for the Name.*

IX. The seventh, or rich Crimson Throat-Wort of America, or Cardinals Flower. *This brave Plant has a white Root, which spreads it self divers ways under Ground, and sends forth many green Leaves, which are spread round about the head thereof, each of which is something broad and long, pointed at the end, and finely snipt about the edges. From the midst of which rises up a round hollow Stalk, two Feet high at least, beset with divers such Leaves as grow below, but longer below than above, and spreading it self out at top abundantly, every Branch bearing divers green Leaves on them, and one at the Foot of every one of them also, the tops whereof do end in a very large Tuft of Flowers, with a small green Leaf at the foot of the Stalk of every Flower, each Footstalk being about an Inch long, bearing a round green husk, divided into five long Leaves or Points turned downwards; and in the midst of every one of them, a most Rich Crimson coloured Flower, ending in five long narrow Leaves, standing all of them fore-right, but 3 of them falling down, with a long Umbone or Pointle, set as it were at their back, bigger below, and smaller above, with a small Head at top, being of a little paler color than the Flower, but of no Smell at all; admirable only for the so great a Bush of Orient red Crimson Flowers. The Seed is inclosed in small Heads, within those green husks which held the Flowers, which is very like to the Seed Vessels of the* Coventry-Bells, *and is small, and of a brownish color.*

X. *The Places.* The first has been found growing in the Meadow next to *Ditton*'s *Ferry*, as you go to *Windsor*; upon the Chalky Hills near *Greenhith* in *Kent*; and in a Field by the Highway, going from thence to *Dartford*; in *Henningham-Park* in *Essex*; and in *Sion-Meadow* near *Brainford*, not far from *London*. The second grows plentifully in Woods and Hedge-rows in *Kent*, about *Canterbury*, *Sittingbourn*, *Gravesend*, *Southfleet* and *Greenhith*; especially under *Cobham Park-Hall*, leading from *Southfleet* to *Rochester*; at *Eltham*, about the Park not far from *Greenwich*, and in most Pastures about *Watford* and *Bushy*, and parts adjacent to them. The third grows in Gardens. The fourth grows in *Holland* and *Flanders*, and several parts of *England*. The fifth grows plentifully Wild upon the Banks of the River *Ouse* in *Yorkshire*, and other places. The sixth sometimes Wild, but mostly in Gardens. The seventh grows near the River *Canada*, and in some parts of *New-England* and other parts of *America*; but in a word, all these several Species are Nurst up in many of our Gardens here in *Great-Britain*.

XI. *The*

XI. *The Times.* They Flower from *May* to the end of *July* or *Auguſt*, the Seed ripening in the mean time.

XII. *The Qualities.* They are cold and dry in the firſt Degree, Abſterſive, Aſtringent, and Vulnerary.

XIII. *The Specification. Throat-Wort* cures Inflamations, Wounds and Ulcers in the Tonſils, Palate, Throat, Mouth, and Secret parts of Man or Woman.

XIV. *The Preparations.* You may make therefrom, 1. *A Liquid Juice or Eſſence.* 2. *A Decoction in Water or Wine.*

The Virtues.

XV. *The Liquid Juice or Eſſence.* They are Aſtringent, and found to be effectual to gargle and waſh the Mouth and Throat, where is any Tumor, or Inflamation of the *Tonſilla*, *Uvula*, Throat, Mouth, Gums; as alſo Wounds, Sores or Ulcers in thoſe parts, being gargled withal warm, or Syringed into the Throat: So in like manner it is appropriated to running Sores and Ulcers in the Neck, or Secret parts of Man or Woman, whether outward or inward, being often waſh'd therewith; if outward, or injected in with a proper Yard or Womb Syringe, they wonderfully cleanſe, dry, and heal them: But if the Sores or Ulcers are inveterate or ſtubborn, it will be good to add an 8th part of *Spirit of Wine* thereto, and ſweeten the ſame with Honey, and towards the concluſion, to every Pint of the Liquid, to add an Ounce or ſix Drams of *Roch Alum* in fine Pouder.

XVI. *The Decoction in Water or Wine, or in half Water half Wine.* If it is made ſtrong, it has all the ſame Virtues, being uſed in like manner with *Spirit of Wine*, Honey and Alum, and ſo applyed as a Gargariſm, or as a Lotion, or as an Injection with a proper Syring; and it performs the like in old running Sores or Ulcers in the Neck, or any other part of the Body; and by its Faculty of drying and binding, it reſtrains the Flux of ſharp humours to any Ulcer, Sore or part, which fretting the place, keeps it from healing: It heals alſo ſimple green Wounds, conglutinating their Lips after an excellent manner.

CHAP. DCXCVII.

Of THYME, *Vulgarly called* THYME-*Garden.*

I. *THE Names.* The Arabians call it *Haſce*: in Greek it is called Θύμος (ἀπὸ τῆ Θυμῆ,) *quod ijs qui animi deliquium patiuntur adhibiàtur*; in Latine, *Thymus* and *Thymum*: in Engliſh *Thyme*, and *Time*.

II. *The Kinds.* The cheif or principal Kinds are two, *viz.* 1. *Thymus Hortenſis*, Garden Thyme, of which in this Chapter. 2. *Thymus Sylveſtris*, *Serpillum*, Wild Thyme, *or* Mother Thyme, of which in *Chap.* 698. next following.

III. *The Species of the Garden Kind.* They are chiefly five, *viz.* 1. *Thymus Hortenſis*, *Thymum Hortenſe commune*, *Thymus durior*, *Thymus vulgaris noſtras*, *Thymum durius & nigrum*; *Pepolina Caſalpini*, Our Common Garden Thyme. 2. *Thymum Legitimum capitatum*, *Thymum verum Dioſcoridis*, *Thymum capitatum*, *Thymum creticum*, The true Thyme of the Antients. 3. *Thymus Hortus Candidus*, Hoary Garden Thyme. 4. *Thymum Citratum*, *Thymum Limonatum*, Lemon Thyme. 5. *Thymum Mathioli*, *Thymum Lobelianum*, *Thymum Serpyllum Matthioli*, Maſtich Thyme.

The Deſcriptions.

IV. The firſt, or our Garden Thyme, *has a ſcrubby, fibrous, woody Root, which will live three many Winters, if they be not too vehement or ſharp cold, and the Plant it ſelf be not grown too great or woody, which will alſo cauſe it to perish or dye. It is a ſmall low ſhrubby or woody Plant, with brittle*

Thyme Garden, common.

Branches, and ſmall hard green Leaves on them, with ſmall white purpliſh Flowers, and ſome Leaves among them, ſtanding in rundles round about the Stalks, after which comes the Seed, which is ſmall, and browner than that of Marjoram. *The whole Plant is of an exceeding Aromatick and ſweet Smell, very acute and pleaſing to the Senſes.*

There is a Defect in the Cut of this Species, for here it is repreſented like *Thyme* cut off or cropt, the *Graver* having cut off the Tops, or left out its rundles of Flowers and Seeds. This kind is for the moſt part propagated by Slips, ſet in the Spring-time, after the very cold Weather is paſt.

V. The ſecond, or true Thyme of the Antients. *Its Root is woody, pretty long, (reſpect being had to the Magnitude of the Plant) and ſlender, with many Fibres adjoining to it. It is a very tender Plant, having hard and hoary brittle Branches, ſpreading out from a ſmall woody Stem, nearly a Foot high, on which grew at ſeveral Joints, many ſmall, whitiſh or hoary green Leaves, of a quick Aromatick ſweet Smell and Taſte. At the tops of the Branches ſtand ſmall whitiſh green Heads, ſomewhat like unto the Heads of* Stœchas, *which are made up as it were of many Leaves or Scales; out of which come forth ſmall purpliſh Flowers, not having any manifeſt Seed,* as Theophraſtus, *and ſome of the other*

Thyme true of *Dioscorides.*

Antient Authors say; but the produce of those heads being Sown, give a new increase of the Plant, which is a perfect Demonstration that it is not without its proper Seed.

Thyme Hoary.

VI. The third, or Hoary Thyme. *Its Root is woody, brittle, small, fibrous, and perennial. It is in form almost like the first Described, saving that it grows not so high, its Leaves are longer or larger, and withal Whiter, or a little Hoary, and a little more thinly or dispersedly set: Its Branches are also smaller, but its Flowers and Seeds grow in rundles towards the tops like that, and not unlike them for Form; but more acute or quick in its Smell and Taste, than* Our Common Garden Thyme.

VII. The fourth, or Limon Thyme. *It is a tender but Noble Plant, not much differing in its Root, Stalks, Branches, Leaves, Form and manner of Growing, from our* Common Thyme, *saving that it grows more upright, bushing or spreading it self out thick with Branches. The Leaves are small, and of a green color, which with its Heads or Rundles of Flowers and Seed, have the perfect Smell of a* Citron *or* Limon, *but more acute and Aromatick; and the Flowers are also whiter than those of the Common sort.*

VIII. The fifth, or Mastich Thyme. *Its Root is woody, fibrous and perennial. It grows not so upright as the former kinds, but rather lyes or spreads upon the Ground with small Branches, but many more in number, and nothing near so woody; the Leaves also are not so hard, but softer and broader. The Flowers grow in rundles at the tops of the Stalks and Branches of a purplish white color, like those of the first and third sorts aforegoing. This better endures the Winter, and longer, but gives no Seed with us, and is therefore propagated by slipping. It has an Aromatick, Odoriferous pleasant Smell and Taste, yet scarcely so quick as the* Common Kind.

IX. *The Places.* The second grows plentifully about *Sevil* in *Spain*, (where they know no other *Thyme*) as also in *Italy*, *Syria*, *Candia*, and several parts of *Greece*; but that, with all the rest, are Nurst up with us in Gardens. The fourth Kind *Gerard* says, he found growing Wild in a Barren Field at *Southfleet* in *Kent*; but it is truly with us a Garden Plant; yet it is found in many places in *Kent*, between *Southfleet* and *Longfield-Downes*, and between *Rochester* and *Sittingbourn*, even in the High-way, where, by its very Smell, it may be known from the Common.

X. *The Times.* They Flower with us about the latter end of *June*, and thro' all *July*; but the second Species Flowers later, *viz.* scarcely till *August*.

XI. *The Qualities.* They are hot and dry in the third Degree at least; Aperitive, Absterstive, Astringent, Diuretick, Stomatick, Cephalick, Neurotick, Hysterick, Nephritick, Alexipharmick, and Emmenagogick.

XII. *The Specification. Thyme* is used chiefly for Diseases of the Head, Brain and Nerves, as Lethargies, Vertigo's, Palsies, Convulsions, Apoplexies; also for Sickness at Heart or Stomach, Faintings, Swoonings, Palpitation of the Heart, Obstructions of the Lungs, and the Strangury. It provokes the Terms in Women, expels both Birth and After-birth, and helps such as are dull Sighted, and have a bad Memory.

XIII. *The Preparations.* You may make therefrom, 1. *A Liquid Juice.* 2. *An Essence.* 3. *A Decoction in Water and Wine.* 4. *A Decocted Oil.* 5. *A Pouder.* 6. *A Cataplasm.* 7. *A Distilled Water.* 8. *A Spirit.* 9. *A Distilled Oil.* 10. Potestates *or Powers.* 11. *A Spirituous Tincture.* 12. *An Acid Tincture.* 13. *An Oily Tincture.*

The Virtues.

XIV. *The Liquid Juice.* Bathed upon Warts it takes them away; it discusses cold Tumors, and eases

eaſes Pains in any part proceeding from a cold Cauſe, by applying it to the Place: And ſnuff up the Noſtrils as an Errhine, it purges the Head and Brain of cold pituitous Humors which cauſe Apoplexies, Lethargies, Vertigo's, Palſies, dullneſs of Sight, weakneſs of the Memory, Head-achs, Megrim, *&c.*

XV. *The Eſſence.* Given from one Spoonful to two Spoonfuls or more, in the *Diſtilled Water*, or other proper Vehicle, it cauſes an expectoration of Flegm (ſo alſo if it is taken with Honey, Salt and Vinegar:) It is good for the Spleen, ſhortneſs of Breath, and difficulty of breathing; kills Worms in the Belly, provokes Urine and the Terms, facilitates both Birth and After-birth, expells the dead Child; and being bathed upon recent Tumors, it diſcuſſes them.

XVI. *The Decoction in Water or Wine, or in a mixture of both.* It has the Virtues of the *Eſſence* aforegoing, but as it has not the ſame ſtrength, ſo it ought to be given in a much larger quantity, as to half a Pint at a time, more or leſs; it helps ſuch as are dull Sighted, have a bad Memory, and an ill Digeſtion, becauſe it warms, comforts, and ſtrengthens the Tone thereof.

XVII. *The Decoted Oil.* It is Anodyne, eaſes all Aches and Pains in any part, as alſo painful Tumors, Gout, *&c.* ariſing from cold and moiſt Cauſes, being bathed Morning and Night upon the parts affected before the Fire: It eaſes Griping pains in the Belly, pains of the Spleen, and is very effectual in curing the Cramp.

XVIII. *The Powder of the Leaves and Heads.* Uſed as an Errhine, it cleanſes the Head and Brain of cold and moiſt Recrements, which are the cauſes of many Diſeaſes. It is of good uſe in Meats and Broths, to warm and comfort a cold and moiſt Stomach, to help Digeſtion, and expel Wind. It given to three Drams (I ſhould think two Drams to be enough) in *Oxymel* faſting, it is ſaid to purge Choler and other ſharp Humors, and help ſuch as have the Gout, and is profitable for ſuch as have an Apoplexy, Falling-Sickneſs or Lethargy. Given to a Dram, or Dram and half every Morning faſting in Mead, or Oxymel, it brings down a great Belly, and takes away the hardneſs thereof. It is good againſt the ſwelling and pain of the Spleen, pains in the Reins and Hips; eaſes pains in the Eyes, and helps ſuch as are Blear-Ey'd. Given to two Drams in White Port or *Lisbon* Wine, it provokes Urine, gives eaſe in the Strangury, and expels Sand, Gravel, and Tartarous Slime in the Reins and Bladder: Mixt with a double or treble quantity of Honey, and given in *Aniſeed Wine*, it is comfortable to the Head and Stomach, expells Wind, eaſes the Strangury, and helps a dry Cough.

XIX. *The Cataplaſm.* The Leaves beaten into a pulp in a Stone or Braſs Mortar, adding a ſufficient quantity of the *Liquid Juice*, and brought to a Conſiſtency with Bean or Wheat-Flower, or white Bread, eaſes the pain, and diſcuſſes the Tumor in the Cods which are much tumified or ſwoln: So alſo applyed to the Forehead and Temples, it eaſes the Megrim, Headach, and helps other Diſeaſes of thoſe parts.

XX. *The Diſtilled Water.* It has the Virtues of *Juice* and *Eſſence*, but much weaker: Mixed with *Vinegar of Roſes*, and applyed as an *Epithem* to the Forehead and Temples, it is ſaid to eaſe the raging pain of the Headach and Megrim; help againſt the Vertigo, and abate the raging in Frenzies and Deliriums. Given inwardly to 4 or 6 Ounces, with 40 or 60 Drops of *Oleum Tartari per deliquium*, it is ſaid to break the Stone in the Bladder; at leaſt it potently cleanſes the Urinary parts of Sand, Gravel, and Tartarous Matter ag'd in thoſe parts.

XXI. *The Spirit.* Given to a Spoonful or more, at a time, either alone well ſack'd with Sugar, or *Syrup of Cloves gilliflowers*, or in a Glaſs of generous Canary, it very much comforts the Stomach, warms and ſtrengthens it, is good againſt paſſion on of the Heart, Sickneſs at Heart, Fainting and Swooning Fits, and other Infirmities of the middle Ventricle.

XXII. *The Diſtilled Oil.* It is of excellent uſe for all cold and moiſt Diſeaſes of the Head, Brain and Nerves; and therefore is a moſt potent thing againſt Convulſions, Cramps, Apoplexies, Epilepſies, Vertigo's, Lethargies, Palſies and Agues. Doſe from 4 Drops to 10, according to Age and the exigency of the Diſeaſe, being dropt into fine Sugar, and then mixt with ſome proper Vehicle to ſwallow it down in.

XXIII. *The* Poteſtates *or Powers.* They have all the Virtues of the *Eſſence*, *Oil and Spirit*, are very ſubtil, and penetrate more than either of them; (and in my Opinion) are better to be given in Vertigo's, Lethargies, Convulſions, Apoplexies, Epilepſies, Palſies, Gout, *&c.* and much more effectual than the *Eſſence* or *Spirit*, and more ſafe than the *Oil* for outward application. Doſe from 30 to 60 Drops or more in Canary, or any other convenient Vehicle Morning and Night, to be uſed with a *Continuance*, ſo long as the neceſſity of the Diſeaſe ſhall require.

XXIV. *The Spirituous Tincture.* It is Cephalick, Neurotick, Stomatick and Hyſterick, good againſt all the cold and moiſt affections of thoſe parts; warming, comforting and ſtrengthening them, and reſtoring their Tone when profligated or hurt. Doſe from 20 to 50 Drops in Wine, or ſome other fit Vehicle, which may beſt agree with the Stomach of the Patient.

XXV. *The Acid Tincture.* It is an *Alexipharacon*, good againſt the Plague or Peſtilence, and all ſorts of Peſtilential Diſeaſes, by defending the Heart, and deſtroying the very Eſſence of the Malignity: It is alſo good againſt the bitings of Serpents or Mad Dogs, or any other Venomous Creature, by deſtroying the ferment of the Poiſon, and ſo putting a ſtop to its Carrere, that it may not infect the Blood, and contaminate the Vital and Animal Spirits. Doſe ſo many Drops as to make the Vehicle, as Canary or other Wine, pleaſantly ſharp, and to be repeated 3 or 4 times a day as neceſſity may require.

XXVI. *The Oily Tincture.* It is a Nephritick, and powerfully opens all Obſtructions of the Reins, Ureters and Bladder, as alſo of the Womb: It gives eaſe in the Strangury, provokes Urine, and cleanſes the Urinary paſſages of all ſorts of Hetrogene matters; and many times carries off by Urine, the Morbifick cauſe of Palſies, Lethargies, Apoplexies, Epilepſies, Rheumatiſms and Gouts: It opens Obſtructions of the Womb, provokes the Terms, facilitates the Birth, gives eaſe in the Collick, and ſuppreſſes Vapors, whether ariſing from the Stomach, Spleen or Womb. Doſe from 6 Drops to 10, 15, or 20, in any proper mixture, as the Age and Nature of the Diſeaſe may require.

CHAP.

CHAP. DCXCVIII.

Of THYME-WILD:

OR,

MOTHER-THYME.

I. *THE Names.* It is called by the Arabians *Hemen:* in Greek Ἑρπυλλος ἀπὸ τοῦ ἕρπειν, *a Serpendo dictum*) in Latine, *Serpillum*, and *Serpyllum*, *Thymum Sylveſtre:* and in Engliſh, *Wild Thyme*, *Mother Thyme*, or *Mother of Thyme.*

II. *The Kinds.* There are many Kinds of this Plant, but we ſhall treat only of the five following, *viz.* 1. *Serpillum majus flore purpureo, & flore albo, vel Candido*, The greater Wild Thyme, *or* Mother Thyme, both with a purple and white Flower. 2. *Serpyllum Sylveſtre Cluſij*; *Serpyllum Narbonenſe Lobelij*; *Cluſius* his Wild Thyme. 3. *Serpyllum vulgare minus*, Ἑρπυλλος ἀγρίος, *Serpyllum Sylveſtre minus*, Our Common Wild Thyme, *or* Mother Thyme. 4. *Serpyllum Moſchatum*, Musked Mother Thyme. 5. *Serpyllum aureum, ſive verſicolorum*, Gilded or changeable Coloured Wild Thyme.

The Deſcriptions.

III. The firſt, or greater Wild Thyme, *or* Mother Thyme. *Its Root is buſhy and fibrous, almoſt like that of* Our Common Garden Thyme. *It grows more upright than other Wild Thyme does, with two Leaves for the moſt part at a Joint like the other, but greater, and not of ſo dark a green color. The Flowers grow at the tops of the Stalks, not much unlike to the* Garden Thyme, *of a reddiſh purple color, but ſomewhat larger, as the whole Plant is: Its Smell is not vehemently ſtrong, but* Thyme-*like ſweet, and of a hot Taſte. There is another ſort of this Species, differing only in theſe things, that its Leaves are of a freſher green, and its Flowers of a white color.*

IV. The ſecond, or *Cluſius* his Wild Thyme. *Its Root is woody, and it ſprings up with many hard or woody Branches, ſtanding in a manner upright, or but a little inclining, ſet with many Leaves together at ſpaces, ſomewhat longer than in any other ſort of* Thyme. *The Flowers grow in Ruundles by ſpaces towards the tops of the Stalks, with ſome few Leaves at them, being of a purpliſh color, very like to* Garden Thyme; *which Leaves, as alſo the Stalks, are of a whitiſh hoarineſs, and abide all Winter. It is of a ſtrong heady Aromatick Smell, a little like to* Southernwood.

V. The third, or our common Wild Thyme, or Mother-Thyme. *Its Root runs ſeveral ways under the upper Surface of the Ground, with many ſmall Fibres ſpringing from it; which ſpreading Root*

Thyme Wild, Small

ſprings up in ſeveral places, ſo that the Plant ſeems to be a roundiſh buſh or heap of Thyme *laid and ſpread about the ſame. It ſprings up with many hard browniſh Branches round about the ſaid Root, all of them lying as it were upon the Ground, which alſo take Root again as they lye, and ſo ſpread themſelves every way. The Leaves are ſmall and of a ſad green color, ſmelling like unto* Thyme, *but not altogether ſo acute or quick, nor yet of altogether ſo hot or quick a Taſte. The Flowers grow at the tops of the Branches of a purple color. There is another ſort of this Species, differing nothing at all therefrom, but only in the color of the Flower, which is white.*

VI. The fourth, or Musked Mother - Thyme. *It has a running ſmall fibrous Root, which ſends forth Branches, growing as it were upright, but with fewer Stalks, and thinner ſet with Leaves, which are ſomewhat longer than thoſe of the* Com-

Mother of Thyme.

mon

mon Thyme, *and not of so sad a green color: Its Flowers grow in rundles towards the tops of the Stalks and Branches, and the Smell of the whole Plant is very near to that of Musk, from which it took its Name.*

VII. The fifth, or Gilded, or Changeable colored Wild Thyme. *The difference of this Species from the common Wild kind, consists chiefly in the variable mixture of Green and Yellow, in the Leaves of this* Thyme; *for the green Leaves thereof are in some striped, and in others edged with a Gold yellow color, which has given occasion to its Gilded or Changeable colored Name.*

VIII. *The Places.* In many Forreign Countries where the Climates are warm, as *Syria*, *Greece*, *Creet*, *Spain*, *Italy*, &c. they are said to grow Wild, whence they are called *Wild Thyme*; but with us in *England*, they are all Nurst up in Gardens: However the third Species I have found growing in many Counties of our Land; as in *Norfolk*, *Cambridgeshire*, *Essex*, *Kent*, *Surry*, &c. That with white Flowers which is the more rare, has been found growing on *Bushy Heath*, in *Digwel-Meadows* by *Hatfield*.

IX. *The Times.* They Flourish all the Summer long, but their Flowering time is chiefly in *June* and *July*.

X. *The Qualities, Specification, Preparations and Virtues* of these *Mother-Thyme* Plants, are altogether the same with those specified of *Garden-Thyme* in the former *Chapter*; nor is there any manifest difference between them as to their Force, Strength and Effects, so that we need say no more thereof in this place.

TOAD-FLAX, *see* Flaxweed, *Chap.* 269, 270.
TOAD-STOOL, *see* Mushroom, *Chap.* 507, 508.

CHAP. DCXCIX.

Of TOBACCO *English.*

I. *The Names.* It has no *Arabick* nor *Greek* Name that we know of, being a Plant unknown to the Antients; but our Moderns have called it in Latine *Petum* (which is said to be the proper *Indian* Name) and *Nicotiana*, (from one *Nicot* a *French*-Man, Resident in *Portugal*, who first sent it to the Queen of *France*, from whence it was also called *Herba Regina*:) It was also called *Tabacco*, as first coming to us from an Island of that Name in the *West-Indies*: *Lobel* accounts it a kind of *Hyoscyamus* or *Henbane*, and therefore called it *Hyoscyamus Luteus*, and *Hyoscyamus dubius*, as being a yellow or doubtful kind of *Henbane*. We in English call it *Tobacco*.

II. *The Kinds.* It is either 1. English, called *Petum Anglicum*, *Nicotiana Anglica*, English Tobacco, of which in this Chapter. 2. Or *Petum Indicum*, *Petum Americanum*, *Petum Hispanicum*, *Nicotiana Mexicana vel Peruviana*, *Nicotiana Virginiana*, Indian or American Tobacco, of which in the second Book of this Work.

The Descriptions.

III. *Its Root is neither so great nor woody as that of the* Indian *Kinds, and perishes every Year with the Frosts in Winter, but generally comes up again of the Seed, which is shed of its own accord. It rises up with a thick round Stalk, about two Feet high, on which do grow thick, fat, and fleshy green Leaves, nothing so large as the other Indian Kinds, neither for length nor breadth, a little roundish pointed, and smooth on the edges. The Stalk is branched out variously, bearing at the tops of each Branch several Flowers, set in green Husks like the others, but nothing so large, scarcely growing above*

Tobacco *English.*

the brims of the Husks, round pointed also, and of a greenish yellow color. The Seed which follows, is not so bright as the Spanish *or* Virginian, *but larger than it, and contained in the like large Heads.*

IV. *Gerard* describes it thus, *Its Root is small and thready, it grows to the height of two Cubits: the Stalk is thick, fat and great, full of a spongy Pith, and is spread out into several Branches, set with smooth and even Leaves, thick, and full of Juice. The Flowers grow at the tops of the Branches, orderly placed, of a pale yellow color, something lesser than those of the* Black Henbane. *The Cups in which the Flowers do stand, are like, but lesser, tenderer, and without sharp points, in which stands the Husk or Head, something round, full of very small* Seed, *not much unlike the Seed of* Marjoram.

V. *The Places.* This was brought into *Europe* in Seed by *Nicot*, with the Seed also of the *true Indian or American Tobacco*, of which this our present Plant is certainly a Species *Lobel* thought it to

to participate both of *Henbane* and *Tobacco*, from whence he was induced to give it thoſe particular Names; but it is uſed by many inſtead of *Tobacco*, and is alſo called by the ſame Name, being firſt brought (as it is thought) from ſome parts of *Braſil*, which is probable from *Nicots* Agency in *Portugal*, to whoſe King the whole *Braſilian* Country was ſubject. It is alſo ſaid to be brought from *Trinidada* (an Iſland in the *Weſt Indies*) and from *Virginia*, and ſeveral other places; and being taken in Pipes as other *Tobacco*, its fumes or ſmoak, work the ſame effects, of Drunkenneſs, ſatiating the Stomach, reviving the Spirits, and ſtrengthening the whole Man (in ſuch as be accuſtomed to *Tobacco*) as the *true Spaniſh* or *Virginian* do. It is planted in our Gardens in *England*, and is more familiar with us than the other *Indian Kinds* are. Being Sown here, it proſpers exceedingly, inſomuch that it is not eaſie to be deſtroyed where it once has Sown it ſelf.

VI. *The Times.* *Parkinſon* ſays it early gives ripe Seed, whereas the other *Indian Kinds* ſeldom do. It Flowers from the beginning of *June*, to the end of *Auguſt* or later, and oftentimes till the *Autumn* is far ſpent; the Seed ripening in the mean time.

VII. *The Qualities.* Tho' ſome thought this Plant to be cold, yet *Lobel* is of Opinion that it is hot, becauſe of its biting taſte, and it is probable to be hot and dry in the ſecond Degree: It is Aperitive, Abſterſive, Aſtringent, Vulnerary, Emetick, Cathartick and Salivatick.

VIII. *The Specification.* It cauſes an expectoration of tough Flegm out of the Stomach and Lungs; it kills Worms in the Stomach and Belly, and eaſes Griping pains in the Bowels, provokes Urine, cleanſes the Urinary paſſages; is good againſt Tumors, Apoſtems, Botches, Boils, Scabs, inveterate Ulcers, Kings-Evil-Sores and the like.

IX. *The Preparations.* You may make therefrom, 1. *A Liquid Juice of the Herb.* 2. *A Syrup of the ſame.* 3. *The Seed.* 4. *An Ointment.* 5. *A Pouder of the Leaves and Stalks.* 6. *The whole Leaves.* 7. *A Cataplaſm of the Leaves.* 8. *A Diſtilled Water.* 9. *A Liquor.* 10. *A Decoction of Leaves and Stalks.* 11. *The Aſhes.* 12. *The cut Leaves for Smoaking.*

The Virtues.

X. *The Liquid Juice.* *Parkinſon* ſays that it is effectual to cure the Dropſy, by taking 4 or 5 Ounces of the *Juice* faſting, which will ſtrongly purge the Body both upwards and downwards. I have had no experience of it, but 'tis very probable that it may cure the Dropſy, if given by a wiſe Hand and in a due Doſe. I ſhould be afraid to give 4 or 5 Ounces at a time, by reaſon of its Violence; but it is a continued uſe of it, beginning with a ſmall quantity, and gradually increaſing it, that muſt determine how much may be ſafely given at a time. *Monardus* ſays it is an *Alexipharmicon* againſt the Stinging or Biting of any Venomous Creature, being immediately applyed to the hurt place.

XI. *The Syrup of the ſame.* It is found by good Experience to expectorate rough Flegm out of the Stomach and Lungs. It kills Worms in the Stomach and Belly, eaſes the Head-ach and Megrim, as alſo the Cholick and Griping pains in the Bowels; tho' for ſome time it may ſeem to cauſe more trouble in them, and diſaffect the Stomach. It is profitable for thoſe who have the Stone or Gravel in the Reins or Bladder, to eaſe their pains, expel them, and provoke Urine.

XII. *The Seed.* It is ſaid to be more effectual to eaſe the Toothach, then any *Henbane* Seed.

XIII. *The Ointment.* *Take of the Green Herb 4 handfuls; bruiſe it, and add to it Oil Olive a Quart; boil them on a gentle Fire till the Herb grows criſp, and the Oil will bubble no longer; ſtrain out the Oil by preſſing, and add to it Bees-Wax, Beef-Suet, Roſin, of each a quarter of a pound, Turpentine two Ounces; melt them together, and then ſtrow in pouder of round Birthwort-roots an Ounce, putting it in when the Maſs is almoſt cold, and ſo ſtir them well together.* Gerard makes it thus. *Take of the Green Leaves three Pounds and a half well bruiſed in a Mortar, Oil Olive a Quart, mix, and boil gently to criſpneſs, and the bubling to ceaſe. Strain hard out by preſſing, and add thereto of Wax, 8 Ounces, Roſin 4 Ounces, Turpentine 2 Ounces; melt and mix them well together, and keep it for uſe.* If to this there be added *three Ounces of fine ſubtil Ponder of Virginia Tobacco, it will be ſo much the better.* It diſſolves ſtrumous Tumors, and cures Ulcers and Sores of the Kings-Evil; it alſo cleanſes and heals all ſorts of old Sores and running Ulcers in any part of the Body, being applyed; as alſo ſimple Burnings and Scaldings, cauſed by what means ſoever; and in healing ſimple green Wounds, Contuſions, *&c.* it has no ſecond.

XIV. *The Pouder of the Leaves and Stalks.* Uſed as a Sternutatory, it opens the Head, and cleanſes it of the Recrements of the Brain: Strewed upon old Ulcers, it diſpoſes them to a ſpeedy healing: It alſo kills Lice in the Head.

XV. *The whole Leaves.* Applyed to any Ulcer cleanſes it, and diſpoſes it to heal; applyed to recent Contuſions and Tumors, it diſcuſſes them: It eaſes alſo the Headach and Megrim.

XVI. *The Cataplaſm of the Leaves.* Applyed to the Belly in a dry Belly-ach, it gives relief and cure; and kills Worms in the Stomach and Belly. Made by ſimple bruiſing and applyed, it much prevails againſt the Evil in 12 or 14 days time. Applyed to any green Wound, it induces a ſpeedy healing.

XVII. *The Diſtilled Water.* It is often given dulcified with Sugar, before the Fit of an Ague, both to leſſen the Fits and to alter them, which in 5 or 6 times uſing it is ſaid to cure. This Water will taſte of the ſharpneſs of the Herb, which is not uſual in other Diſtilled Waters: It alſo expectorates Flegm out of the Stomach and Lungs.

XVIII. *The Liquor.* It is made of the Fæces not Diſtilled to dryneſs, (the Herb being bruiſed before Diſtillation) digeſted in Horſe-Dung for 14 days, and then hung up in a Bag in a Wine-Cellar; from whence this Liquor will diſtil or drop down. It is good for Cramps, Aches, Gouts, Sciatica, Itch, Scabs, foul Sores, running Ulcers, Cankers, *&c.*

XIX. *The Decoction of the Leaves.* It has all the Virtues of the *Juice* and *Syrup*, but weaker. It kills Lice, and cures running Sores in Childrens Heads.

XX. *The Aſhes of Leaves and Stalks.* They cleanſe the Gums and Teeth, and make them white. Their Infuſion in Water is ſaid to cure the Itch, Scabs, Leproſie, *&c.*

XXI. *The Cut Leaves for Smoaking.* It is held to be nearly as good as our *Common Virginia*, commonly Smoaked in Pipes; but becauſe of the plenty of that, is ſeldom uſed.

CHAP. DCC.

of TOOTH-WORT: *OR,* *TOOTH-RAPE.*

I. *THE Names.* It has no Greek Name that is known, being a Plant the Antients were ignorant of; our modern Authors have called it in Latine *Dentaria*, (from the likeneſs of its Roots to Teeth) alſo *Dentillaria*; by ſome *Squamaria* and *Squamatia*, alſo *Radix Squamata*, (from its likeneſs to Scales) in Engliſh *Tooth-Wort*, *Tooth-Rape*, or *Toothed-Lungwort*.

II. *The Kinds.* There are ſeveral ſorts of *Tooth-worts* which are nothing of Kin, or have no relation one to another, excepting in their Names; as the *Dentariæ*, commonly called *Coralworts*, of which we have already ſpoken at large, in *Chap.* 152. aforegoing, which are no Species of the Plant we here intend. The *Tooth-Worts* in this place are of another form and purport, and are chiefly two, *viz.* 1. *Dentaria*, *Dentaria major Matthioli*, *Anblatum Dodonæi*, *Arachidum Ceſalpini*; *Æglethros Plinij Geſnero*; *Squamaria*; *Squamatia*; *Radix Squamata*; *Orobanche radice Dentata major*, The greater Tooth-Wort, Tooth-Rape, *or* Toothed-Lungwort. 2. *Dentaria minor*, *Dentillaria*, *Dentaria* Ἄφυλλος, *Aphyllos Cluſij*, *Dentaria Coralloide radice*, The leſſer Tooth-Wort, Tooth-Rape, *or* Toothed Lungwort.

The Deſcriptions.

III. The firſt, or the greater Tooth-Wort, Tooth-Rape, *or* Toothed Lungwort. *It has for its Root ſmall Scales, (if they may be ſo called,) like as the Stalks or Branches have, which conſiſt likewiſe, wholly of blackiſh purple, ſhining thick Scales, lying pretty cloſe together, compaſſ one upon another. In the beginning of the Spring, there riſe out of the tops of theſe ſcaly Branches, tender and brittle ſappy Stalks, about a ſpan in length, without any Leaves, but bearing many whitiſh purple gaping Flowers, and blackiſh inward, ſtanding in Husks, in which afterwards grow up ſmall Veſſels, with ſmall Seed in them.*

IV. *Gerard* deſcribes it after this manner. *There is often found among the* Muſhrooms, *a certain kind of Excreſcence conſiſting of a Gelly, or ſoft ſubſtance like that of the* Muſhroom. *It riſes forth of the Ground, in form like unto* Orobanche *or* Broom-Rape, *and alſo in ſubſtance, having a tender, thick, tuberous, or miſhapen Body, conſiſting as it were of Scales like unto Teeth, (whence it took its Name) of a duſky ſhining color, tending to Purple. The Stalk riſes up in the middle, garniſhed with little gaping hollow Flowers, like thoſe of* Satyrion; *on their outſide of an overworn whitiſh color. The whole Plant reſembles a rude form of that Gelly or ſlimy Matter found in the Fields, which is called the* Falling of Stars, *or* Ignis Fatuus. *Its Root is ſmall and tender.*

V. The ſecond, *or* leſſer Tooth-Wort, Tooth-Rape, *or* Toothed-Lungwort. *Its Root is ſmaller, leſs ſcaly, and more white and tranſparent, diverſly divaricated like* Coral, *white of color, full of Juice, and without any Fibres annexed to it. The Stalk is in like manner without Leaves, having whitiſh purple Flowers at the top, ſometimes but two or three, and ſometimes many more, but varying in ſome places, as being of a more purpliſh color.* Gerard *ſays, that this differs not from the former, ſaving that it is altogether leſs, but in moſt other reſpects alike.*

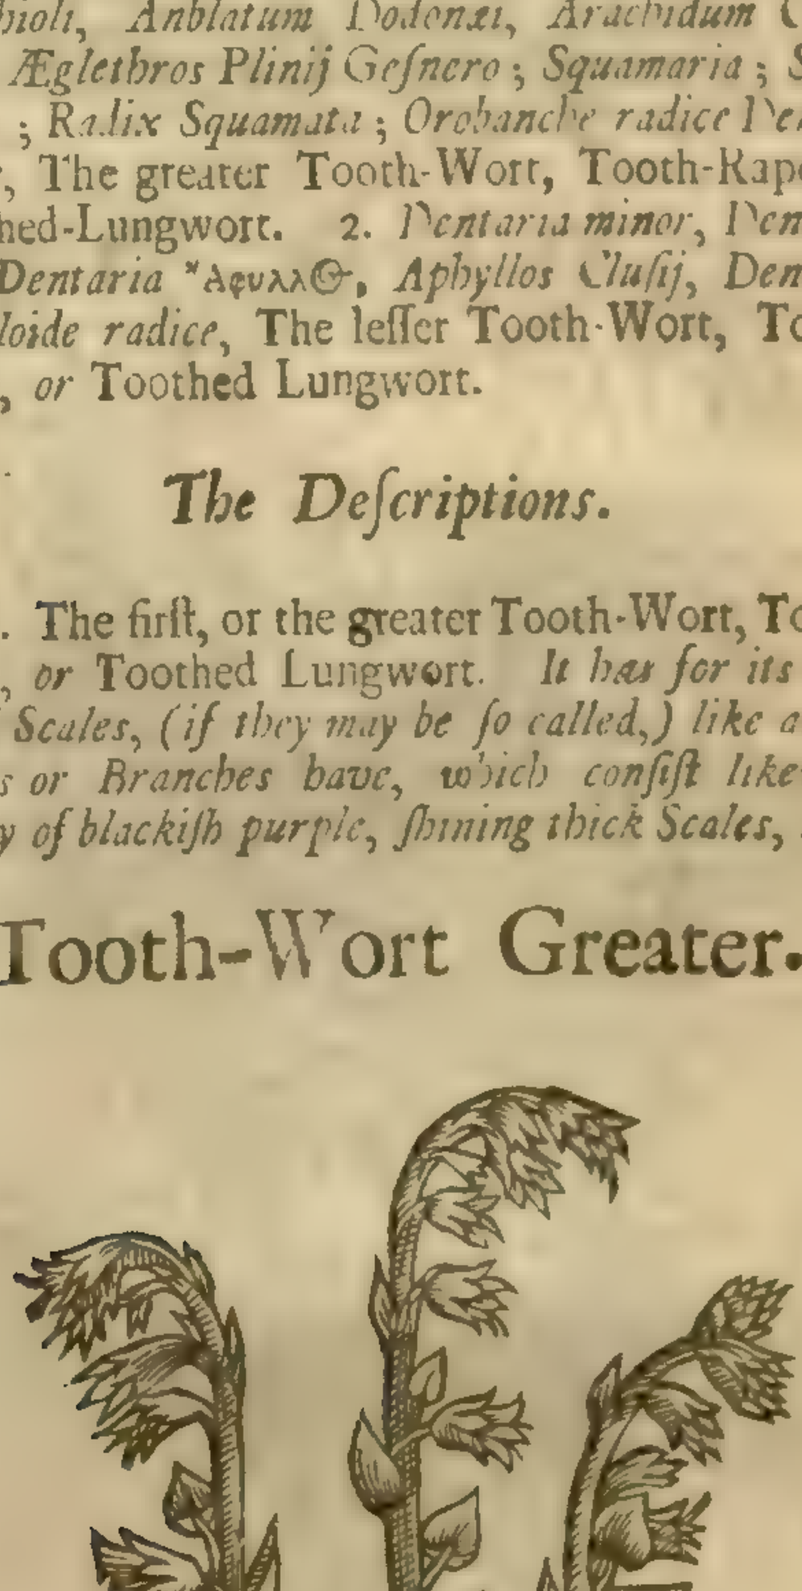
VI. *The Places.* They grow moſt commonly under Trees where they have much ſhadow. *Gerard* ſays they grow at the bottoms of Elme Trees, and ſuch like, in ſhadowy places. He found them growing in a Lane called *Eaſt-Lane*, going from *Maidſtone* in *Kent*, unto *Cocks-Heath*, half a Mile from the Town, and in other places thereabouts; as alſo in the Fields about *Croyden*, eſpecially about a place called *Groats*; and in a Wood in *Kent* called *Row*, or *Rough-Hill*, near *Crayford*; alſo near *Harwood* in *Lancaſhire*, in a Wood called *Talbot-Bank*, a Mile from *Whanley*.

VII. *The Times.* They ſpring up and grow thro' all the Summer Months, and Flower in *May* and *June*; and ſometimes they are found in Flower in *July* and *Auguſt*.

VIII. *As to their Qualities, Specification, Preparations and Virtues*, Authors have ſaid nothing; but from the uſe our Country People make of them, it is probable that they may be Cooling, Drying, Aperitive, Aſterſive, Aſtringent and Pulmonick, or appropriated to the Lungs, for which reaſon they have called it *Lungwort*, which Authors have diſtinguiſhed (as aforementioned) into the greater or leſſer kinds.

IX. *The Decoction in Wine or Water.* Being well ſweetned with Honey, it is good to open Obſtructions of the Lungs, to looſen and expectorate thick tough Flegm which ſtuffs them up, and cauſes Hoarſeneſs, Wheezing, ſhortneſs of Breath, and difficulty of Breathing; and therefore may be of good uſe in Aſthma's, Phthiſicks, and other like Diſeaſes of thoſe parts, proceeding from Repletion.

Tooth-Wort Greater.



CHAP. DCCI.

Of TORMENTIL

OR,

SETFOIL.

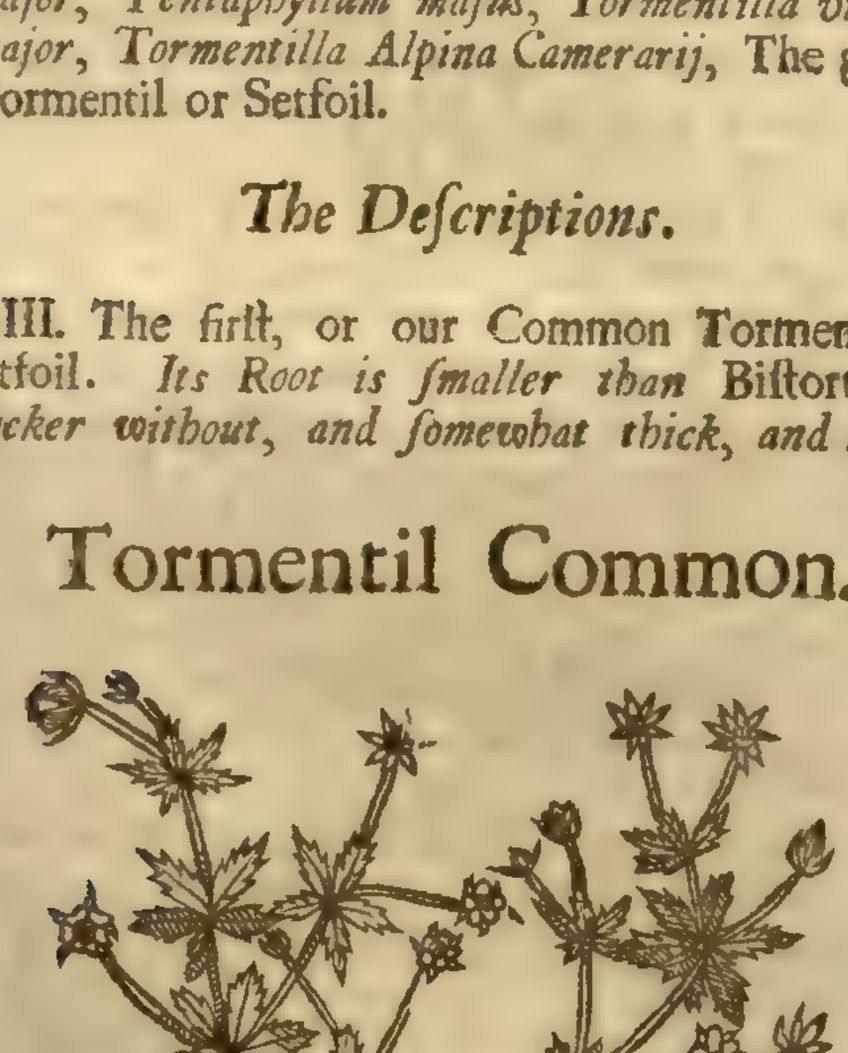
I. *THE Names.* It has not been writ of by any of the Antient *Greek* or *Latine* Authors, yet ſome of our Moderns have given it a Greek Name from its form, or number of Leaves, *viz.* Ἑπτάφυλλον, *Heptaphyllum*, from whence it has been called in Latine *Septiſolium*, in Engliſh *Setfoil*, or *Seven-Leav'd Graſs*; which is not properly ſo, for it has not ſeven Leaves, but each Leaf for the moſt part is divided into ſeven parts, or very eminent diviſions, ſo that each part looks as if it were a particular Leaf. It is alſo called in Latine *Tormentilla*, and by ſome *Stellaria*, from the Form of the Leaves; and by others *Conſolida rubra*, from the effects and color of the Roots, and in Engliſh *Tormentil.*

II. *The Kinds.* There are ſeveral Species of it, but we ſhall only treat of two, which are moſt common with us, *viz.* 1. *Tormentilla vulgaris*, *Pentaphyllum commune*; *Tormentilla minor*, Our Common Tormentil or Setfoil. 2. *Tormentilla major*, *Pentaphyllum majus*, *Tormentilla vulgaris major*, *Tormentilla Alpina Camerarij*, The greater Tormentil or Setfoil.

The Deſcriptions.

III. The firſt, or our Common Tormentil or Setfoil. *Its Root is ſmaller than* Biſtort, *but blacker without, and ſomewhat thick, and not ſo*

Tormentil Common.



red within, and ſometimes a little crooked, having many blackiſh Fibres adjoining. This Plant is ſo like to Cinkfoil, *that many miſtake it for the ſame. It has many reddiſh ſlender weak Branches riſing up from the Root, which lye upon the Ground, or rather leaning than ſtanding upright, with many ſhort Leaves which ſtand cloſer to the Stalks than thoſe of* Cinkfoil *do, with the* Pediolus *or Foot ſtalk encompaſſing the Branches at divers places; but thoſe which grow next to the Ground, are ſet upon long Footſtalks, each of whoſe Leaves are like unto the Leaves of* Cinkfoil, *but ſomething longer and leſſer, and dented about the edges, many of them divided into but five Leaves or parts, but moſt of them into ſeven, from whence it took its Name of* Setfoil. *And ſtanding round (as it were) in the diviſion like a* Star, *thereby obtain'd the Name alſo of* Stellaria; *yet ſome Stalks have ſix Leaves ſometimes, and ſome eight, as Nature and the Fertility of the Soil are pleas'd to form them. At the tops of the Branches, come forth ſeveral ſmall yellow Flowers, conſiſting each of five Leaves, exactly like thoſe of* Cinkfoil *but ſmaller.*

IV. The ſecond, or greater Tormentil or Setfoil. *Its Root is black without, reddiſh within, and thick, tuberous or knobby. As this (with the former) may be accounted among the Species of* Cinkfoil, *ſo it brings forth many Stalks ſlender and weak*

Tormentil Greater.

ſcarcely able to lift it ſelf up, or ſtand upright, but rather leaning aſide; the Leaves tho' ſomething leſſer than Cinkfoil, *yet are ſomething larger than the former; ſometimes they may chance to be but five in number, but for the moſt part ſeven (as the firſt above deſcribed) a little ſnipt about the edges; and the Flowers grow on the tops of the Stalks, very like to thoſe of* Cinkfoil. *This differs but very little*

little from the former, but only in the Magnitude of the Leaves and Roots, which are much greater and redder, and of a livelier Smell, but in all things elſe alike.

V. *The Places.* The firſt grows as well in Woods and ſhady places, as in open Champion Grounds, and about the Borders of Fields in many places of this Kingdom. The ſecond grows in ſuch like places, but delights chiefly in a richer, and ſometimes a more ſandy Soil: They are both Planted alſo in many Gardens.

VI. *The Times.* They Flower all the Summer Months, as from *May* to the end of *Auguſt*.

VII. *The Qualities.* It is very little hot, ſcarcely in the firſt Degree, but dry in the third; Aſtringent, Abſterſive, Vulnerary, Stomatick, Cardiack, Sudorifick, and Alexipharmick, of very thin and ſubtil parts.

VIII. *The Specification.* It prevails againſt the Plague, and all manner of Malign and Peſtilential Diſeaſes, expels Poiſon, and defends the Heart. It cures Agues, the Bloody-Flux, and all other Fluxes of the Bowels; alſo Spitting, Vomiting and Piſſing of Blood, and ſtops the overflowing of the Terms in Women, and the Defluxion of Humors to any Wound, Sore or Ulcer. Opens Obſtructions of the Lungs, Liver and Spleen, and is of excellent uſe in the Cure of the Jaundice, and to heal ſimple green Wounds in any part.

IX. *The Preparations.* You may make therefrom, 1. *A Liquid Juice of the whole Plant.* 2. *An Eſſence of the ſame.* 3. *A Decoction of the Root, or Root and Leaves.* 4. *A Pouder of the Root.* 5. *A Balſam.* 6. *A Cataplaſm.* 7. *A Diſtilled Water.* 8. *A Spirituous Tincture.*

The Virtues.

X. *The Liquid Juice of the whole Plant.* It ſtops all Fluxes of Blood or Humors in Man or Woman, whether at Noſe, Mouth, Belly, or any Wound in any part; reſiſts all Poiſon, and the Plague or Peſtilence it ſelf, and all Peſtilential Diſeaſes, and ſuch as are Infectious, as the Meaſles, Small Pox, Purples, Spotted Fever, by expelling thro' a gentle *Diaphoreſis*, the malignity from the Heart. Doſe 3 or 4 Spoonfuls Morning and Night, in a Glaſs of Mull'd Sack, or other Styptick or fit Wine.

XI. *The Eſſence.* It has all the former Virtues with advantage, as being the more efficacious Medicament. It cures Agues, being given ſome Hours before the coming of the Fit, and the Patient laid down to Sweat thereupon, being repeated for ſome conſiderable time. It is an effectual Antidote or Counter-Poiſon, Antipeſtilential, and a Cure for the yellow Jaundice. There is ſcarcely any more effectual Remedy againſt the Bloody-Flux, or any other Flux of the Belly; it ſtrengthens the Stomach, ſtops Cholerick Vomitings, helps the diſcraſy of the Blood, and opens Obſtructions of Stomach, Lungs, Liver and Spleen. It is good againſt Fumes, Vapors, and ſower or bitter Belchings, and loathing of the Stomach: It is profitable againſt the malignity of Venereal Diſeaſes, and cures the *Lues*, becauſe it ſo mightily reſiſts Putrefaction. It ſtrengthens the Womb, ſtops all its Fluxes, and prevents Miſcarriage. It is good againſt Ruptures or Burſtings, and to cure all ſorts of ſimple Wounds in what part ſoever, whether inward or outward. Dropt into the Eyes, it cures Sores and Ulcers there; ſtops Fluxions of hot and ſharp Rheums, eaſes the pain, and clears the Sight. It makes a good Injection for foul, corrupt, and rotten Sores and Ulcers in any part, chiefly in the Mouth, Throat, Jaws, and privy Parts of Man or Woman. And is of ſingular uſe for the Cure of the Kings-Evil, being inwardly taken and outwardly applyed: Mixed with Vinegar, and applyed to Sores, Ulcers and Scabs in the Head, and other parts, it quickly heals them. It is effectual againſt the Hemorrhoides or Piles, they being bathed and fomented therewith warm; and is profitable againſt the Whites or Reds being inwardly taken, and outwardly applyed, by injecting it up the Womb with a Womb Syringe. Doſe 3 or 4 Spoonfuls Morning, Noon and Night, in ſome proper Wine or Liquor.

XII. *The Decoction in Wine.* It has all the Virtues of the *Juice* and *Eſſence*, but not altogether ſo potent, and therefore muſt be taken in greater quantities, as to half a Pint at a time or more: Mixt with Honey and Alum, it makes a good Lotion to cleanſe, dry and heal, old filthy corrupt running Sores and Ulcers in any part: And *Andreas Valeſius* ſays, that the *Decoction of the Root* is no leſs effectual to Cure the *French*-Pox, than *Guajacum* or *China*, becauſe it ſo mightily reſiſts Putrefaction. Uſed as a Bath, it is an effectual remedy againſt Abortion, in Women who are apt to Miſcarry.

XIII. *The Pouder of the Root.* It is Styptick, and has the Virtues of the *Juice* and *Eſſence*, being given in any proper Styptick Wine, or other like Vehicle, from a Dram to a Dram and half, Morning and Evening for ſome time. Strewed upon moiſt running Sores and Ulcers, it drys them, and induces their healing; and ſo much the more, if mixed with a quarter part of *Scammony in Pouder*. *Lobel* ſays, that *Rondeletius* uſed it in the ſtead, or in the ſame manner, as he uſed *Hermodactils* for Joint-achs. Taken in *Juice of Plantane*, it is ſaid to kill Worms in Children, Cure Ruptures, and diſcuſs and heal Contuſions from Falls, *&c.* being inwardly taken, and outwardly applyed

XIV. *The Balſam. Take of the Pouder 4 Ounces, Oil Olive 2 Ounces, Balſam of* Peru 2 *Ounces, Bees Wax two Ounces and a half; melt, mix and make a Balſam.* Applyed to the Reins, it eaſes the pain thereof, and helps ſuch as cannot hold their Water; eaſes the Gout in any part, is profitable againſt the Piles, and diſſolves all Knots, Kernels and Tumors in the Neck, *&c.* from the Kings-Evil, and heals the Sores and Ulcers proceeding from the ſame.

XV. *The Cataplaſm made of the Roots and Leaves.* It diſcuſſes ſimple recent Contuſions, gives eaſe in the Gout, repreſſes the Flux of Humors to any part; and is profitable to diſſolve or diſcuſs Tumors, Swellings or Kernels in the Neck, cauſed by the Kings-Evil, or ſuper-abundance of Evil Humors.

XVI. *The Diſtilled Water. Take the Herb and Root, bruiſe them well, ſteep them in Wine for* 24 *Hours or more, and then draw off the Water in* Balneo. It has the Virtues of the Juice and Eſſence, but much weaker in its Effect, and may be given dulcified with fine Sugar, from a quarter to half a Pint. If it is given with 2 Drams of *Venice-Treacle* or *Mithridate* diſſolved in it, and the Patient (being in a Naked Bed) put to Sweat thereupon, it will potently provoke Sweat, and ſo expel the Poiſon, and defend the Heart and Vitals from the Malignity and Infection of the Plague or Peſtilence, and from the danger of any Peſtilential or Infectious Diſeaſe. It is good to give eaſe in the Piles or Hemorrhoids, by bathing them therewith; and if a little *Camphir* be diſſol-

ved in it, and *Lapis Tutiæ*, or *Caliminaris* in fine Pouder, be mixed therewith, it becomes a good Ophthalmick-Wash for Bleared, Sore, and running Eyes. But if the *Distilled Water* be mixed with Levigated *Pouder of Amber*, or *Catechu*, and so drank, it stops the overflowing of the Terms, and Whites in Women.

XVII. *The Spirituous Tincture.* It has the Virtues of the *Juice*, *Essence* and *Pouder*, is more Cordial, adds Life or Activity to the Spirits; warms and comforts the Stomach, Bowels, Womb and Blood; strengthens the *Viscera*, resists Poison, and the Infection and Malignity of Pestilential Diseases; fortifies the Heart, and is good against Convulsions, fainting and swooning Fits, Vapors, Fits of the Mother, *&c.* Dose from 50 to 100 Drops, in a Glass of Mull'd Sack, or some other generous Wine.

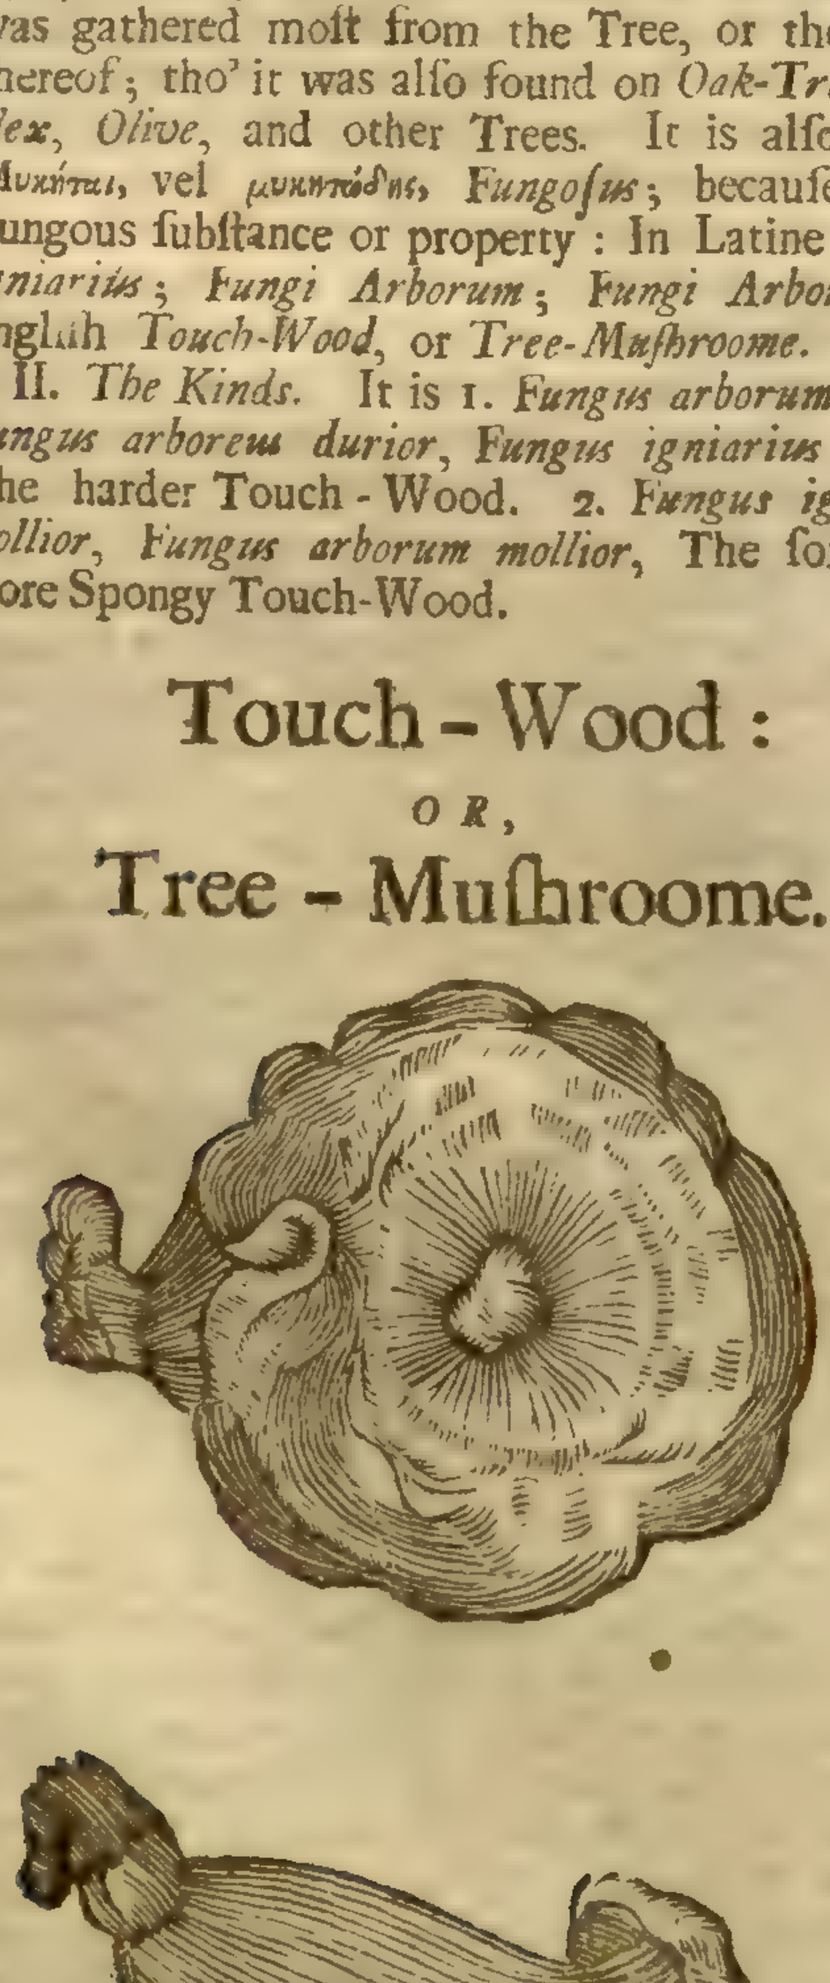
CHAP. DCCII.

Of TOUCH-WOOD: *OR,* TREE-MUSHROOME.

I. *THE Names.* It is called in Greek Ἀγαρικὸν (*ab ἄγαρος, Populus nigra,*) because in *Asia*, *Greece*, and those Southern Countries, it was gathered most from the Tree, or the Wood thereof; tho' it was also found on *Oak-Trees*, the *Ilex*, *Olive*, and other Trees. It is also called Μυκῆται, vel μυκητώδης, *Fungosus*; because of its Fungous substance or property: In Latine *Fungus Igniarius*; *Fungi Arborum*; *Fungi Arborei*; in English *Touch-Wood*, or *Tree-Mushroome.*

II. *The Kinds.* It is 1. *Fungus arborum durus*, *Fungus arboreus durior*, *Fungus igniarius durior*, The harder Touch-Wood. 2. *Fungus igniarius mollior*, *Fungus arborum mollior*, The softer, or more Spongy Touch-Wood.

Touch-Wood: *OR,* Tree-Mushroome.



The Descriptions.

III. The first, or harder Touchwood. *It is a kind of* Mushroome, *which grows harder than other* Mushrooms, *and is of a dry Fungous substance on the inside, which may be cut thin into slices, or into bits, or broken into several pieces, having a hard or woody Crust on the outside. It is of differing Forms and Colors, some being great and flat at the Head, and smaller and rounder underneath, of a brownish yellow color, which* Lobel *compares to* Agrick.

IV. The second, or softer, or more Spongy Touch-wood. *It very much resembles* Auricula Judæ, *or* Jews Ear, *and does in continuance of time, grow almost to the Substance of soft Wood, but more porous, softer, and gentler than the former, and more skinny; being for the most part half circuled, or half round, whose upper part is somewhat plain, and sometimes a little hollow, but the lower part is as it were, plaited or purst together. In short, it does not much differ from the former, but in its more soft, spongy and plyable property.*

V. *The Places.* They grow upon the old bodies of Trees, and other old Wood; as on the *Oak*, *Ilex*, *Olive*, *Poplar*, and many other kinds of Trees when they grow Aged, Diseased, or begin to decay.

VI. *The Times.* They may be gathered at any time after they are come to their Magnitude, and hardness or consistency.

VII. *The Qualities.* They are Deleterious or Poisonous as Authors say, and therefore never given inwardly.

VIII. And as to their *Specification* and *Virtues*, we have nothing to declare; as not knowing any thing of them either by our own Experience, or by relation from others.

IX. *The Preparations.* Of them there is made, 1. *Tents to enlarge narrow Orifices in Apostems when broken, or opened by Incision.* 2. Touch-wood, *which is used in place of Tinder.*

X. *The making of Tents.* The outward Skin being taken off, the *Fungus* is to be boiled in a *Lixivium* of Wood Ashes, then taken forth and pressed very dry; after which, it is to be well soaked in a strong Mucilage of *Gum Tragacanth*, or *Gum Arabick* scalding hot, for 12 Hours or more; then the Gum to be squeezed out, and to be pressed hard together in a wooden Press, letting it lye therein till it is dry, and so it is to be laid up and kept for use. This you may shape into *Tents* of what Form and Magnitude you please, which are used to widen the hole of a Tumor, Apostem, or Ulcer after it is broken, or to keep it wide and open after Incision, the better to let out the putrid or corrupt matter: And this it does by reason of its swelling, being moistned with the *Sanies* or *Humidities* of the Sore to which it is applyed.

XI. *The making of Touch-wood.* It is done two ways, *The first way is*, after the outward Skin is pared off, to boil it exceeding well once or twice, in a pretty strong *Lixivium* of Pot-Ashes, or Wood or Nettle-Ashes, letting them dry at leisure; which being cut or broken into pieces, will take Fire from the Steel and Flint like Tinder.

XII. *The second way.* Take Pot-Ashes or Wood-Ashes eight or nine Pounds, make thereof a strong *Lixivium* or Lye in Water, in which dissolve a Pound of pure *Salt Petre*; in this Liquor boil the prepared *Fungus*, till all, or most of

of the Lye be wasted; which if you please, you may repeat a second time; then dry it, and keep it for use. This is much better than the former.

TOUCH-ME-NOT, *see* Cress-Garden, *Chap.* 163.

TROY-WORT, *see* Shepherds-Purse, *Chap.* 631.

CHAP. DCCIII.

Of TRAVELLERS-JOY:

OR,

WILD CLIMER.

I. *THE Names.* It is called by *Theophrastus lib.* 5. *cap.* 10 in Greek, Ἀτερπέων, ἢ ἀθερπέων: in Latine, *Clematis Sylvestris*, & *Viorna Gerardi & Lobelij (quasi vias ornans:) Viburnum Gallorum Ruellij*; *Vitis nigra Fuschij*; *Vitalba Dodonæi*; *Artogene Theophrasti Anguillarâ & Clusio*; *Vitis Sylvestris Plinij* lib. 16. cap. 4. *Vitis Sylvestris caustica Gesneri in Hortis*; *Vitis Sylvestris Dioscoridis Anguillarâ*; in English, *Travellers-Joy*, or *Wild Climer.*

II. *The Kinds.* There are but two which are chiefly known to us, *viz.* 1. *Clematis Sylvestris Lobelij*; *Clematis Sylvestris latifolia*, five *Viorna Gerardi*; *Clematis altera prima Cordi*, *Clematis tertia Matthioli*; (known also by all the Names in the former Paragraph:) Our common great Wild Climer, *or* Travellers Joy, as *Gerard* calls it. 2. *Clematis Sylvestris altera*; *Clematis Sylvestris Bætica*; *Clematis altera Bætica Clusij*; *Clematis peregrina foliis Pyri incisis Bauhini*; The great Spanish Wild Climer, *or* Travellers Joy.

The Descriptions.

III. The first, or our common great Wild Climer, or Travellers Joy. *Its Root is great, tough, woody and thick, spreading it self out into several long Branches under Ground. It has in some places, (especially if has stood long in a place) a thick, strong, ragged, woody Stem, Stalk or Trunk, with several Chaps or Rifts in the Bark, of a grayish color; from whence shoot forth many long, pliant, grayish, green Branches, more strong and woody than any of the other* Climers, *(as the* Periwinkle, Virgins-Bower, Ladys-Bower, Virginian-Bower, *&c.) so that their Branches do in many places, serve as Withes, to bind about, or bind up any thing withal, or to bind about Garden or Field Gates. These Branches spread upon the Hedges or Trees, or whatsoever it stands next unto, dividing or spreading it self out into many other Twigs, on which are set at the several Joints, two long Stalks of winged Leaves, consisting of five Leaves, two and two together, and one at the end, each of them being dented on their sides; on each side for the most part with but two Notches, yet sometimes, tho' more rarely, with three: They are of a pale green color, tasting sharp and hot, biting upon the Tongue, but not so much as the* Burning Climer, or Virgins-Bower. *These Branches wind themselves about any thing standing near unto them, for a great way, length or height, rising up to the top of the tallest* Cypress-Tree *if Planted near it, on which it may clime; (and some of these Trees I have seen above* 150 *Feet high in America) Gerard says, that these Twigs or Branches are full of clasping Tendrels, by which it takes hold of Hedges, and climbs up every thing that stands near to it; but* Parkinson *says, it has no clasping Tendrels like the* Vine, *to take hold of, or wind it self thereby, so far as ever he could observe. At the Joints where the Leaves stand, come forth towards the tops of the Branches, divers Bunches or Tufts of white Flowers, set together upon small long Footstalks, with several yellow Threads in the middle, smelling very sweet: And after they are past, there come in their places several Heads of many long, hoary, Silver-like Plumes, as if they were Feathers set together, with a browniſh flat Seed at bottom of each of them, which continue a great while, even till Winter before they fall off, or are blown away with the Wind.* These says Gerard, *make in the Winter a goodly Show, covering the Hedges all over with its Feather-like tops. The Leaves fall away in Winter, and grow again a fresh in the Spring.*

Travellers Joy:

OR,

Wild Climer.

IV. The second, or great Spanish Wild Climer, or Travellers Joy. *This other Climer has such like running or climbing Branches, very full of Joints, admirably long, and spreading much farther. At the Joints round about it, grow several hard and somewhat broad Leaves, each by it self upon a small*

Footstalk,

Footſtalk, not much unlike to thoſe of the Pear-Tree, *indented about the edges, but ſtiffer and ſmaller, which are of as ſharp and hot a Taſte as the former; from whence come alſo two claſping* Tendrels *on each ſide, by which it catches hold of any thing which ſtands in its way, or near to it. From the Joints likewiſe, where the* Leaves *ſtand, come forth the* Flowers *with long* Tufts *or* Heads, *in the ſame or like manner as the former, with the like* Tufted Plumes *of* Feathers *of a hoary white color, with* Seed *like the other below them, but ſmaller.*

V. *The Places.* The firſt grows in many parts of *England*, in Hedges of Fields, and by the High-way ſide in *Bedfordſhire*, *Buckinghamſhire*, and *Eſſex*, but chiefly in *Kent*; where from beyond *Woolwich* to *Graveſend*, and from thence along to *Canterbury*, you may ſee it in many places; as alſo in moſt of the Southern parts about *London*. The ſecond is a Native of *Spain*, found by *Cluſius*, between *Medina Sidonia* and *Calpe*, and in other parts thereof: It is alſo ſaid to be a Native of our own Land, for *Gerard* ſays, that he had found it in the *Iſle of Wight*, and in a Wood by *Waltham-Abby*.

VI. *The Times.* They both Flower in *July*; and their Plumes appear in *November* and *December*, and in ſome places all the Winter.

VII. *As to their Qualities, Specification, Preparations and Virtues*, Authors have ſaid nothing at all; and therefore are not at all uſed in Phyſick that I know of, tho' they are both very hot and ſharp in Taſte. They are eſteemed for the Pleaſure which they give by their goodly Shade, which is cauſed by their buſhing out and climbing; as alſo for the Beauty of their Flowers and Plumes, accompanied with a ſweet and fragant Smell.

VIII. *Nota.* Theſe (as well as the other Climers) may ſerve very well to make Arbors in Gardens, Orchards, or other places for Pleaſure; for which purpoſe they are much more fit, than for many other things which are uſed on that account.

TREFOIL Spiked, *ſee* Hares-Foot, *Chap.* 337.

CHAP. DCCIV.

Of TREFOIL *Sweet:* *OR,* *Garden* CLAVER.

I. THE *Names.* *Trefoil* is called in Greek, Τρίφυλλον: in Latine *Trifolium*, (becauſe of its having three Leaves upon one Footſtalk) and in Engliſh, *Three-Leav'd Graſs*, *Claver*, *Clover*, and *Trefoil*.

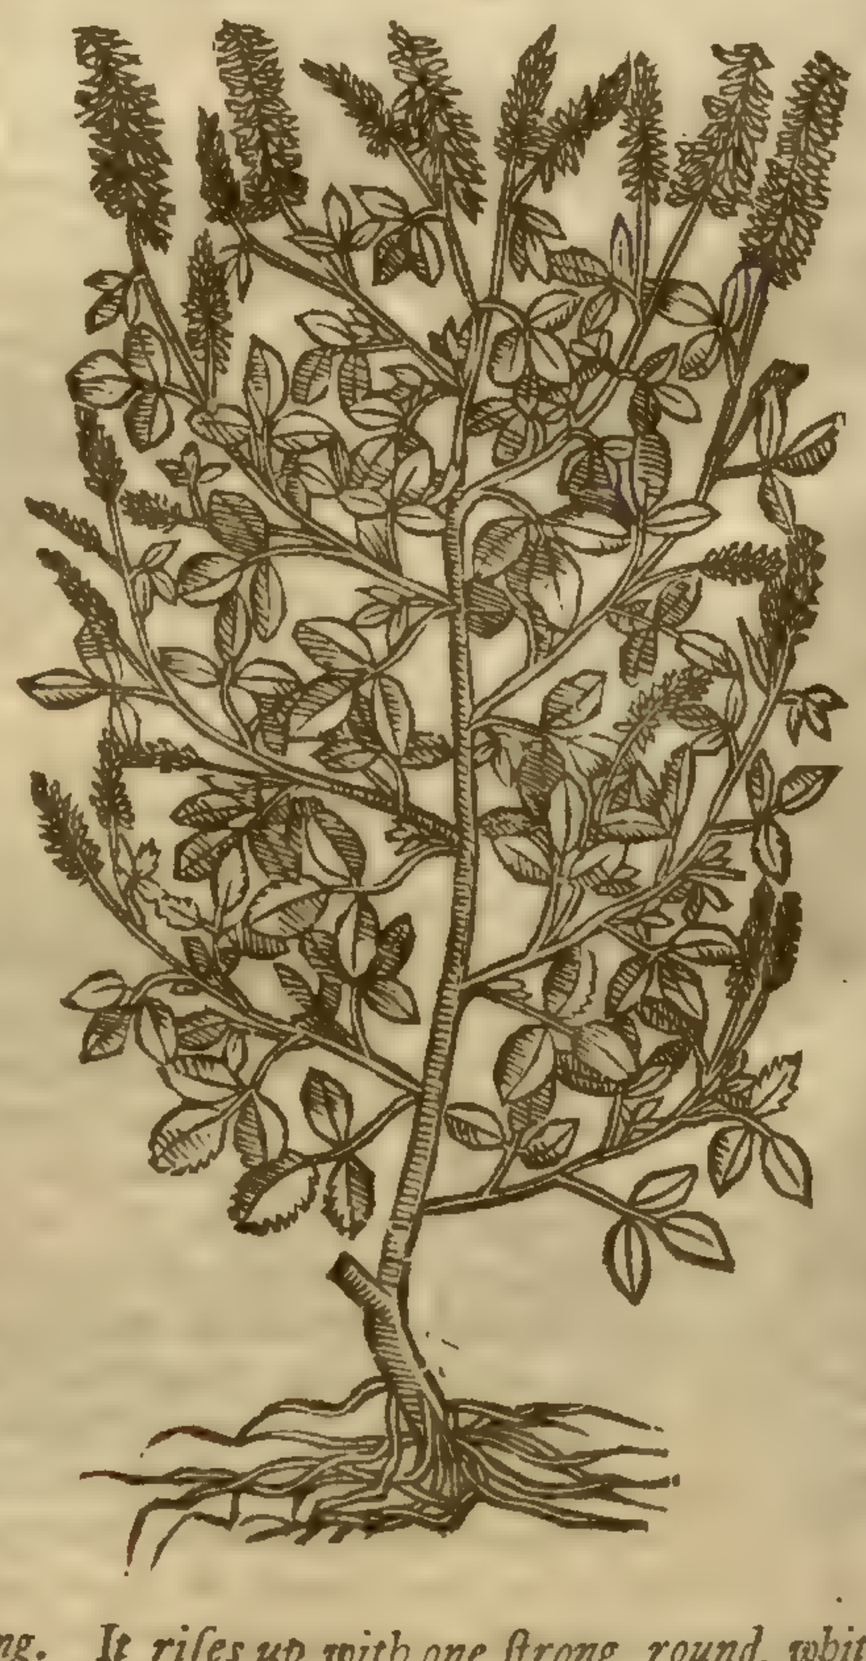
II. *The Kinds.* There are a great many Species of this Name, but we ſhall only take notice of thoſe which are to be found with us, which are, 1. *Trifolium Odoratum*, Sweet or Garden Trefoil, of which in this *Chapter*. 2. *Trifolium pratenſe*, Meadow Trefoil, of which in *Chap.* 705. 3. *Trifolium Siliquoſum*, Codded Trefoil, of which in *Chap.* 706. 4. *Trifolium Paludoſum*, Marſh Trefoil, of which in *Chap.* 707. 5. *Trifolium vel Lotus Siliquoſus*, Peaſe Trefoil, of which in *Chap.* 708. following. 6. *Trifolium fragiferum, & Stellatum*, Strawberry and Starry Trefoil, of which in *Chap.* 709. 7. *Trifolium Arboreum, Cytiſus*, Tree Trefoil, of which in *Chap.* 710. 8. *Trifolium Acetoſum*, Sower Trefoil, or Wood-Sorrel, which ſee in *Chap.* 641. aforegoing.

III. *The Garden Kinds.* There are but three ſorts of this Sweet Trefoil, which grow with us in our Gardens, *viz.* 1. Λωτὸς ἥμερος, *Dioſcoridis*: *Trifolium Odoratum*, *Lotus Urbana Lacunæ*; *Lotus Sativa Camerarij, Cordi, Dodonæi, Fuchſij, Geſneri*; *Trifolium Dioſcoridis Trago*; *Trifolium Odoratum alterum Dodonæi*, (becauſe he called Melilot *Trifolium Odoratum*;) *Lotus Hortorum Odora Lobelij*; *Lotus Hortenſis Odora Baubini*: (but *Tabernæmontanus* calls it *Melilotus vera*, which it is not.) Now moſt call it *Trifolium Odoratum*, which is our Sweet or Garden Trefoil, or Claver. 2. *Trifolium Aſphaltites*, vel *Aſphaltæum*, *Trifolium Bituminoſum*; *Oxytriphyllum Geſneri in Hortis*, The ſtronger ſcented Garden Trefoil or Claver. 3. *Trifolium Americanum*, American Trefoil.

The Deſcriptions.

IV. The firſt, or our ſweet Garden Trefoil, or Claver. *Its Root is ſmall, white and thready, periſhing every Year, and riſing again every Year by the Seed that it Sows it ſelf, or being Sown in the*

Trefoil Sweet: OR, *Garden Claver.*



Spring. It riſes up with one ſtrong, round, whitiſh Stalk, 3 or 4 Feet high, ſpreading out many Branches on all ſides, about which are ſet many Leaves upon long Footſtalks, *three always ſet together, of a whitiſh green color, very ſoft, and a little dented about the edges, ſmelling not much unlike to* Fænugreek. *At the tops of the Branches grow Flowers, cloſely ſet together, each of them like to thoſe of* Melilot, *but larger, and of a bleak or pale watchet blew color; after which, come round white heads, containing dark yellow colored Seed.*

V. *Gerard*

V. *Gerard* deſcribes it after this manner. *It has a Root conſiſting of divers Strings or Fibres, from which ſprings up an upright Stalk, hollow and about* 3 *Feet high, dividing it ſelf into divers Branches, on which do grow Leaves by three and three, (like to the other* Trefoils) *ſlightly and ſuperficiouſly nicked on the edges; from the bottom whereof come the Flowers, every one ſtanding on its own ſingle Footſtalk, conſiſting of little Chaffy Husks, of a light or pale blewiſh color: After which, comes up little Heads or Knobs, in which lyes the Seed, of a whitiſh yellow color, and leſſer than that of* Fænugreek. *The whole Plant is not only of a whitiſh green color, but alſo of a ſweet Smell, ſtrong, Aromatical or Spicy, and yet more ſweet when it is dryed; which Scent the gathered and dryed Plant, does continue in a long time. Alſo whilſt growing, it ſmells more in moiſt and rainy Weather, than in hot and dry Weather.*

VI. The ſecond, or ſtronger ſmelling Garden Trefoil, *or* Claver. *It has a Fibrous Root, which with us periſhes every Year, but abides all Winter in hotter Climates, where it is Natural. Its firſt Leaves are a little larger than thoſe which grow higher upon the Stalks, three always ſtanding together upon a long Footſtalk, of a dark green color, almoſt ſhining, ſet with ſome hairineſs thereon. The Stalk is ſtrong, round, and hairy alſo, riſing up to the height of two Feet or more, on which grow the Leaves, more long and pointed than the lower. It branches from the bottom uſually, to the top, where grow many large Flowers in a Buſh or Tuft, thick ſet together, of a blewiſh purple color, and ſomewhat hairy or hoary withal, eſpecially the Husks containing the Flowers, which afterwards turn into broad browniſh hairy Cods, each containing but one Seed, which is a little broad, rough and pointed at one end. The Smell of the Leaves and whole Plant is ſtrong, which whilſt it is young, ſome fancy to ſmell like* Rue; *but growing old, the ſaid Smell grows ſtronger, which they fancy then ſmells ſomething like* Bitumen. *With us this ſtrong Smell grows weaker every Year than other, and after the ſecond Years Sowing, has almoſt no Smell at all; tho' in its Native Countries, it always retains its Original Smell.*

VII. The third, or American Trefoil. *Its Root is ſmall and branched out, being Fibrous or ſtringy, and ſo ſpreading two ſeveral ways. From whence ſprings ſeveral round Stalks leaning to the Ground, and ſpreading themſelves out into many Branches, on which grow ſeveral Leaves, three Leaves upon one long Footſtalk, each of which is ſomewhat round, not much unlike the laſt Deſcribed; ſaving that they are larger or broader, and of a dark green color. The Form of the Leaves, and the manner and growing of this Plant, differs not much from our* Common Meadow Trefoil, *ſo much they are alike. The Smell of the Leaves, and whole Plant is ſtrong, and not much unlike the laſt Deſcribed. At the tops of the Stalks and Branches, grow long ſpiky Ears of whitiſh Flowers, being ſomething ſmaller than thoſe of the ſecond Kind before Deſcribed, after which, come in their places ſmall round and flattiſh Seed.*

VIII. *The Places.* The firſt and ſecond grows in *France*, *Germany*, *Italy* and *England*, but only in Gardens. And *Dioſcorides* ſays, that the firſt grew in Gardens in his time, and not Wild in *Greece*, or any other place that ever he heard of. The third grows in the more Northern parts of *America*, as *Canada*, *New-England*, *Virginia*, &c. for which reaſon I put it in this place, for that poſſibly ſome of our *Engliſh Planters* may at ſome time or other, find it in ſome of their Plantations.

IX. *The Times.* They Flower in *June* and *July*, and their Seed is ripe in ſome little time after; but the other two Flowering later with us, ſeldom perfect their Seed here.

X. *The Qualities.* The firſt (which is chiefly uſed) is according to *Galen*, temperate in reſpect to heat or cold, dryneſs or moiſture. They are Aperitive, Anodyn, Diuretick, Vulnerary, Hyſterick, and Alexipharmick.

XI. *The Specification.* It cures Diſeaſes of the Eyes, diſcuſſes Tumors and Contuſions, heals Wounds and Ulcers, eaſes the Gout and other pains; provokes the Terms, as alſo the *Loches* when ſtopt, and is prevalent againſt the bitings of Vipers and other Serpents, as alſo gives eaſe in the Strangury, and other ſtoppages of Urine.

XII. *The Preparations.* You may make therefrom, 1. *A Liquid Juice and Eſſence.* 2. *A Decoction in Wine or Water.* 3. *An Oxymel.* 4. *A Pouder of the Seed.* 5. *An Oil by Inſolation or Decoction.* 6. *A Balſam.* 7. *A Diſtilled Water.*

The Virtues.

XIII. *The Liquid Juice or Eſſence.* They may be given to 4 or 6 Spoonfuls alone, or in Wine, or other fit Vehicle; it eaſes the pains of the Spleen and Hypochonders, opens Obſtructions of the *Viſcera*, provokes Urine and the Terms, as alſo the *Loches* when ſtopt; gives eaſe in the Strangury, or heat and ſcalding of Urine, and is good againſt the bitings of Vipers and Serpents, or of other Venomous Creatures. Any ſimple Wound, Sore or Ulcer, being waſhed herewith, it cleanſes, drys, and induces the healing; diſcuſſes Tumors and recent Contuſions, and gives eaſe to external pains: Both *Dioſcorides* and *Galen*, commend this Plant in particular, againſt the bitings or ſtinging of any Serpent, or other Venomous Creature. The *Juice* is alſo good to waſh the breakings out with Scurf, or Scabs of Childrens Heads, or any other part; and to waſh places bitten or ſtung, *&c.* as *Pliny lib.* 21. *cap.* 21. adviſes.

XIV. *The Decoction in Wine or Water.* It has all the former Virtues, but becauſe weaker, may be given Morning, Noon and Night, to half a Pint or more; outwardly alſo, applying it by Bathing or Fomentation, to the parts affected.

XV. *The Oxymel. It is made of a Decoction of the Herb, Flowers and Seed in Vinegar, and then compleated with Honey.* This being drank, is a ſpecial remedy for ſuch as are bitten or ſtung with any Venomous Creature.

XVI. *The Pouder of the Seed.* This is of moſt force with *Galen*, who appoints it to be put into *Treacle* or *Mithridate*, againſt all Diſeaſes for which the Herb is good. It is indeed ſingular good againſt the Pleuriſie, heat, ſcalding, and ſtoppage of Urine, and the Strangury: It is profitable againſt the Epilepſy, Vapors, and Hyſterick Fits. Doſe two Drams or more, in ſome fit Vehicle.

XVII. *The Oil by Inſolation or Decoction of the Leaves, Heads and Flowers.* It is excellent to diſcuſs all hard Swellings, or Wen-like Tumors in any part of the Body; to allay Inflamations, digeſt Sores and Ulcers, bringing them to maturity; then cleanſing them from their putrid Matter, and healing them in ſuch a manner as is to be admired: It heals alſo green Wounds, as well as old Ulcers; helps Contuſions, and eaſes pains of the Gout; as alſo Pains and Aches in any part, Stitches, Cramps, Lameneſs of the Joints, *&c.*

XVIII. *The*

XVIII. *The Balſam. It is made of the former Oil, by adding to it a proportional quantity of Chio Turpentine and Bees Wax.* It has all the Virtues of the Oil aforeſaid to advantage, and is a more excellent Vulnerary and Arthritick, being applyed.

XIX. *The Diſtilled Water.* It is good to clear the Skin, and dry up Scabs and running Sores in Childrens Heads. If it is mixed with 3 or 4 times the quantity of the *Juice* or *Eſſence*, and taken to 4 Ounces at a time or more, it is good againſt the Dropſy; and taken and continued for ſome time, it leſſens, and at length cures the Fits of Tertian and Quartan Agues. It alſo ſtops all ſorts of Fluxes of Blood, as Vomiting, Spitting and Piſſing of Blood; and is good againſt inward Bruiſes, cauſed by Falls, *&c.*

XX. *Nota.* The firſt is moſt uſed becauſe moſt common; but the ſecond is the moſt effectual of them all. It is uſed alſo to be laid up in Cheſts and Preſſes, to keep Moths from Garments.

CHAP. DCCV.

Of TREFOIL *Meadow:*

OR,

Field Claver: *Or*, Clover-Graſs.

Called alſo,

Meadow Honey-Suckles.

I. *THE Names.* It is called in Greek Τείφυλλον λειμώνιον: in Latine, *Trifolium Pratenſe*, by all Authors, as being the moſt common belonging to it, becauſe of its three Leaves always growing together upon one Footſtalk; and in Engliſh, *Trefoil*, *Three-Leav'd Graſs*, *Meadow-Trefoil*, *Meadow-Claver*, or *Clover-Graſs*, and *Honey-Suckles*; becauſe Bees gather much Honey from their Flowers.

II. *The Kinds.* They are very many, but we ſhall here have reſpect chiefly to ſuch as grow with us in our Meadows, which are, 1. *Trifolium pratenſe vulgare purpureum*, Our Common Purple Meadow-Trefoil, *or* Meadow-Honey Suckles. 2. *Trifolium Pratenſe vulgare album*, Our common white Meadow-Trefoil. 3. *Trifolium purpureum magnum*, Great Purple Trefoil. 4. *Trifolium album magnum*, Great white Trefoil. 5. *Trifolium purpureum minus*, Small Purple Trefoil. 6. *Trifolium album minus*, Small white Trefoil. 7. *Trifolium Cordatum*, Heart-Trefoil. 8. *Trifolium parvum*, *Lagopus vulgaris*, *Lagopus minor*; Common Meadow Hares-Foot Trefoil, *or* ſmall Hares-Foot Trefoil. 9. *Trifolium parvum luteum*, Small Yellow Trefoil. 10. *Trifolium luteum minimum*, The Smalleſt Yellow Trefoil.

The Deſcriptions.

III. The firſt, or our Common Purple Meadow Trefoil, or Meadow Honey-Suckles. *It has a long ſlender and fibrous or ſtringy Root, which ſpreads much, and indures long. It has many Leaves riſing from the ſaid Root, three ſet together upon a pretty long Footſtalk, and each of them almoſt round; among which riſes up ſmall Stalks of Flowers, not much higher than the Leaves, bearing many deep Purpliſh Crimſon Flowers together in a Tuft, riſing ſmaller up to the top, which turn into little Cods*

Trefoil Purple Meadow, *Common.*

with ſmall Seed in them: Sometimes this is found with half round Spots of white in the Leaves.

IV. *Gerard* Deſcribes it thus. *Its Root is long, woody, and grows deep. It brings forth Stalks a Cubit long, round, and ſomething hairy, the greater part of which creeps upon the Ground; on which grow Leaves conſiſting of three joined together, one ſtanding a little from another; of which thoſe which are next the Ground and the Roots, are rounder; but thoſe growing on the upper part of the Stalks, having for the moſt part in their middle, a white Spot like a Half-Moon. The Flowers grow at the tops of the Stalks in a Tuft, or in a ſmall Fox-Tail Ear, of a purple Color, and ſweet Taſte; after which comes the Grain or Seed, round and blackiſh, in little Husks.*

V. The ſecond, or our common white Meadow Trefoil. *This differs little, or almoſt nothing from the former, ſaving in the colour of the Flowers; for as thoſe are of a bright Purple, contrariwiſe, theſe are very white.* The Leaves and Flowers, *and indeed the whole* Plant, *being ſomething leſs than that; yet this is ſometimes found with longer* Leaves, *tho' the Heads themſelves are leſs. There is alſo another ſort, whoſe Leaves are all longer than the firſt, and pretty ſharp pointed withal, whoſe Flowers are of a very pale Red or Purple; of which kind, the Leaves are ſometimes ſpotted with black Spots;*

Trefoil white Meadow, *Common.*

Spots; and it is sometimes found with a Tuft of green Leaves on the Stalks, which is thought to be only accidental, and rather Lusus Naturæ, *than any special Kind.*

Trefoil Purple Great.

VI. The third, or Great Purple Trefoil. *Its Root is woody, long, slender and fibrous. It seldom grows much above a Foot, or Foot and half high, having several Leaves thereon, which are large and long, three always set together on long Foot-stalks, and pretty sharp pointed: At the tops grow large and somewhat long Heads, of pleasing Purple Flowers, like to those of the first* Meadow Trefoil, *but greater. It is also found sometimes with longer and narrower Leaves, and a more spiked Head of Flowers.*

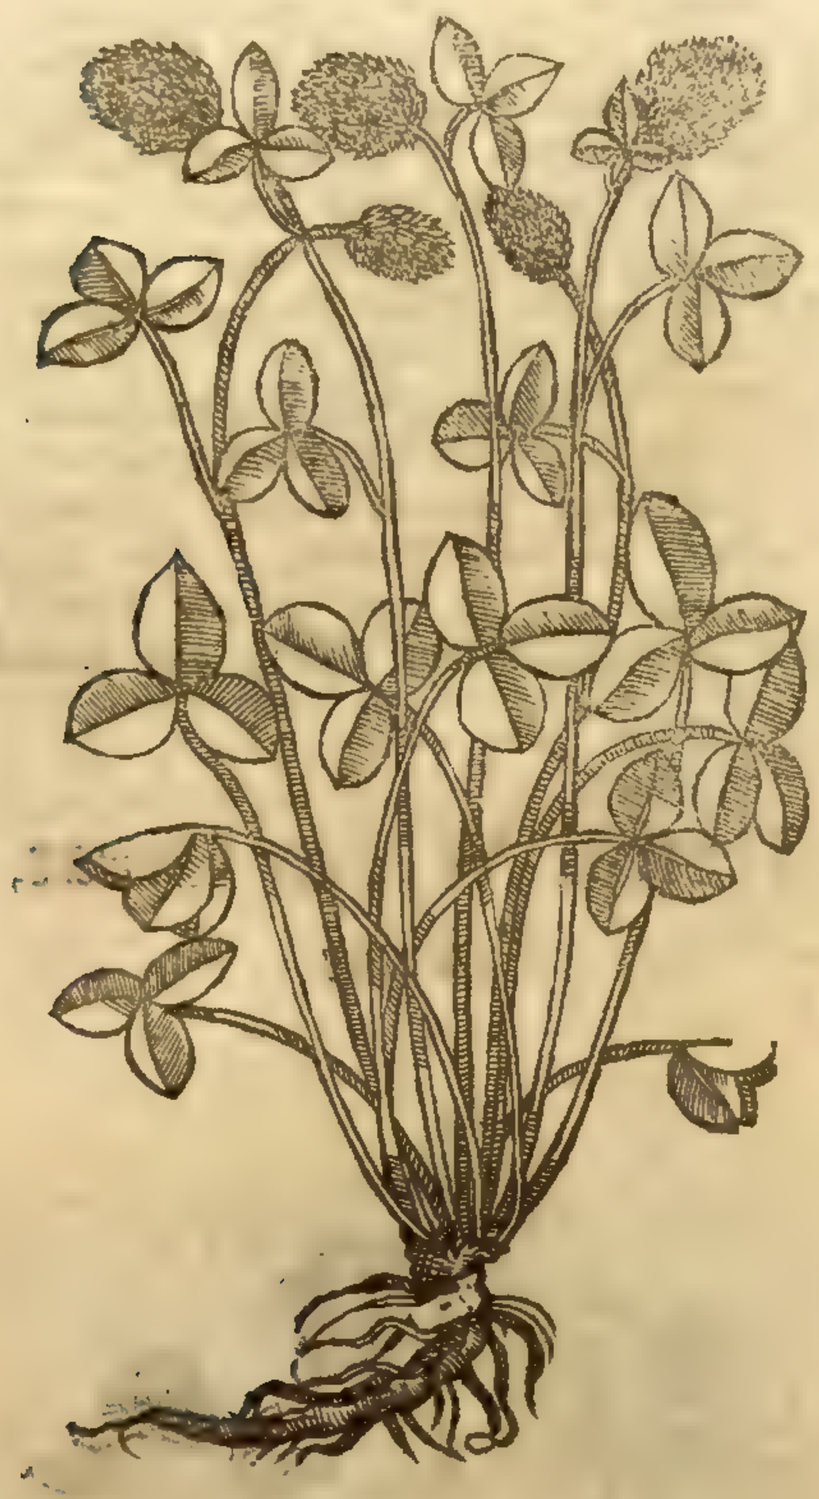
VII. The fourth, or Great White Trefoil. *Its Root is long, and about the thickness of ones little Finger, being fibrous withal, brownish on the outside, and whitish within. The Stalk is not so great, nor so high as the third: The Leaves are smaller and hoary, and something*

Trefoil White Great, *Common.*

long withal, growing many below, but fewer and smaller above on the Stalk; at the top whereof, grow one or two short Branches, each with a Head of small white Flowers, somewhat sweet, whereas the former are of an Elegant red color.

VIII. The fifth, or Small Purple Trefoil. *It has a Root which is long, fibrous, and stringy. Its Stalks are about a Foot in length: Its Leaves are like to the first* Common Trefoil, *saving that they are lesser, and of a brownish or dirty red color, always growing in threes together, whose Leaves, and also its Flowers,*

Trefoil Purple Meadow, *Small.*



are in form shape like the Common Meadow Trefoil, *but of a Purple color.*

IX. The fixth, or ſmall white Trefoil. *Its Root is ſmall and thready; and riſes up with many Stalks, ſpread out into ſeveral Branches*

Trefoil White Meadow, *Small.*

and Leaves, bearing ſmall Spikes or Heads of Flowers at their tops, of a white color: Of the Leaves, thoſe below are rounder, or almoſt quite round; thoſe above are longer and narrower, but all of them ſmaller than the firſt or ſecond common Kinds. They grow pretty cloſe together, and are many, the Plant being full of Branches, three for the moſt part growing together, and ſometimes four or more, as Nature is pleaſed to produce them.

X. The ſeventh, or Heart-Trefoil. *Its Root is ſmall, ſlender, fibrous or thready, and Annual; which ſends forth very ſlender and weak Stalks, ſpread out into many Branches, and full of Joints, repleat with round pointed greeniſh* Trefoil *Leaves, upon long Footſtalks; round and broad at their ends, and dented in, in the middle of the end, making the Leaf to be in form of a Heart, as it uſually*

Trefoil Heart.

grows with us in our Meadows, each Leaf having a kind of reddiſh, or ſome other like colored Spot in its middle. The Flowers grow at the end of a Stalk coming from the Joints, which are ſmall and yellowiſh, and after turn into prickly turning Heads, not much unlike to ſmall Medica's, *or* Clover-Graſs.

XI. The eighth, or common ſmall Haresfoot-Trefoil. *Its Root is ſlender and very fibrous, a ſmall but well known Plant, growing greater and higher in ſome places than it does in others, with whitiſh Woolly ſmall* Trefoil *Leaves, on ſhort Footſtalks. It ſpreads it ſelf out into many Branches, which have Heads at their tops, ſmall and ſomewhat long with the roundneſs, compoſed as it were all of a hairy hoary downineſs, whoſe Flowers are in ſome of a white, in others of a bluſh color. It is an Annual Plant as the* Harefoots *are, periſhing every Year, whereas the other* Trefoils *do not ſo.*

XII. *Gerard* deſcribes this Trefoil thus. *Its Root is ſmall and hard; it has a rough round and*

hairy

Trefoil Hares-Foot, *Small Common.*

hairy Stalk, ſpreading it ſelf out into ſeveral Branches, on which grow ſmall Leaves, three joined together, like thoſe of the ſmall Trefoils. *The Flowers grow at the very Points of the Stalks and Branches, conſiſting of a rough Knap, or Buſh of Hairs, or Down, like that of* Alopecuros *or* Fox-tail, *of a whitiſh color tending to a light Bluſh, with little white Flowers among the Downineſs.*

XIII. The ninth, or Small yellow Trefoil. *It has a ſmall ſlender and fibrous Root, from whence riſe up ſmooth, ſlender weak Stalks, about a Cubit high, ſet with few Leaves on them, which are ſmall and round pointed, and ſometimes dented-in in the middle of the end, almoſt in form of an Heart, (not much unlike to the* Common Meadow Trefoil,) *each ſtanding ſeverally on their own ſhort Footſtalks. The Flowers come forth at the tops of their Stalks and Branches, made as it were of browniſh yellow Scales, laid one upon another, well reſembling an Hop, of which it took one of its Names,* viz. Lupulus Sylvaticus. Johnſon *in* Gerard *ſays, that the Heads are pretty large and yellow, which afterwards become of a browniſh color, and ſomewhat reſemble an* Hop, *whence* Thalius *called it* Lupulus Sylvaticus, *or* Trifolium Luteum alterum Lupulinum; *but* Dodonæus, Trifolium agrarium, Field Trefoil. *The Flowers being paſt away, are followed by many little crooked cluſtering Seeds.*

XIV. The tenth, or ſmalleſt yellow Trefoil. *Its Root is ſmall and thready, which ſends forth a few weak ſlender Stalks, (but little bigger than ſmall* Ruſhes) *lying on the Ground, on which grow ſmall* Trefoil Leaves, *ſometimes more than three on a ſmall Footſtalk, and ſometimes a very little dented about the edges. The Flowers are ſmall*

Trefoil Yellow, *Small.*

and yellowiſh, ſet cloſe and round together, after which follow ſmall, blackiſh, flat, and crooked Seeds in Husks, almoſt like a Medica, *or* Claver. *It has two little Leaves cloſe at the bottom of the three-Leav'd Footſtalk; as its Leaves are much ſmaller than the former, ſo the yellow Heads are alſo much leſſer.*

XV. *The Places.* Theſe are all Meadow-Plants with us, but the third and fourth are Sown in Fields in *Italy*, and in *Flanders* and *Holland*, and ſeveral other parts beyond the Sea, of which they make an excellent Food for Cattel, as well to Fatten them, as to give good ſtore of Milk; where they are Manured, they come up ranker than they do in our Meadows where they grow Wild and of their own accord; as alſo on the Mountains and Hills of *Spain* and *Germany*. The ſeventh is ſaid to grow in *Arabia*, and is by *Camerarius* called *Medica Arabica*, but it is common with us in *England*. The eighth and ninth grows almoſt every where throughout our Land, in dry Grounds, as alſo among Corn, eſpecially among Barly, and likewiſe in Barren Paſtures in moſt places.

XVI. *The Times.* They are freſh and green pretty early in the Spring, and Flower in *June*, *July* and *Auguſt*, perfecting their Seed in the mean time.

XVII. *The Qualities.* They are temperate in reſpect to heat or cold; and dry in the firſt Degree: Aperitive, Digeſtive, Anodyn, Vulnerary, Diuretick and Alexipharmick.

XVIII. *The Specification.* They are uſed to clear the Eye-Sight, abate Inflammations, eaſe Pains, heal Wounds, help the Strangury, ſtop the Whites in Women, and reſiſt the Poiſon of Venomous Creatures, and cure all ſorts of Fluxes.

XIX. *The Preparations.* You may have therefrom, 1. *A Liquid Juice or Eſſence.* 2. *A Decoction in Wine or Water.* 3. *A Pouder of the Seed.* 4. *A Decocted Oil.* 5. *A Cataplaſm.* 6. *The Aſhes of the whole Plant.*

The Virtues.

XX. *The Liquid Juice or Eſſence.* Taken to 5 or 6 Spoonfuls, they open Obſtructions of the Viſcera, cleanſe the Bowels of ſlimy Humors which ſtick to them; help againſt the bitings of Vipers, and other Venomous Creatures; provoke Urine, give eaſe in the Strangury, ſtop the Whites in Women, as alſo Fluxes of the Belly, after it has cleanſed it. It heals Wounds by waſhing with it, cools Inflamations, and eaſes Pain. Dropt into the Eyes, it allays the heat, takes away the Blood-ſhot, and clears them of any Film which begins to grow over them.

XXI. *The Decoction in Wine or Water.* It has all the former Virtues, but as it is weaker, muſt be taken to half a Pint or more, Morning, Noon, and Night.

XXII. *The Pouder of the Seed.* *Pena* ſays it is of ſo powerful a drying and binding Faculty, that it will wonderfully ſtop the Running of the Reins: Doſe from a Dram to two Drams, Morning and Night. It is alſo profitably uſed in all foul and hollow Ulcers, (being firſt cleanſed) to incarnate, and then to cicatrize or heal them. It is alſo ſaid to be good againſt Ruptures, and cure ſpitting of Blood.

XXIII. *The Decocted Oil.* It is made of the whole Plant It is good againſt recent Contuſions, the bitings of Serpents, or of any other Venomous Creature; abate Inflammations, eaſe pain, and diſcuſs Tumors being applyed.

XXIV. *The Cataplaſm.* Applyed to the Share, it allays Inflamations thereof; and eaſes Pains in any part. The Herb being bruiſed, and heat between two Pewter-plates, and applyed hot to the Share, it is ſaid to cauſe them to make Water in a Strangury. It diſcuſſes Tumors and recent Contuſions, and cures them. Alſo applyed to the biting of a Viper, or other Serpent, Mad Dog, *&c.* it is ſaid draw out the Poiſon, and prevent farther miſchief.

XXV. *The Aſhes of the Heads.* They are good to apply to the Hemorrhoids or Piles, to ſtop their Bleeding, and eaſe the Pain: And have alſo been found profitable, being applyed to a *Procedentia Ani*, or falling out of the Fundament.

CHAP. DCCVI.

Of TREFOIL *Codded:*

OR,

Peaſe Claver.

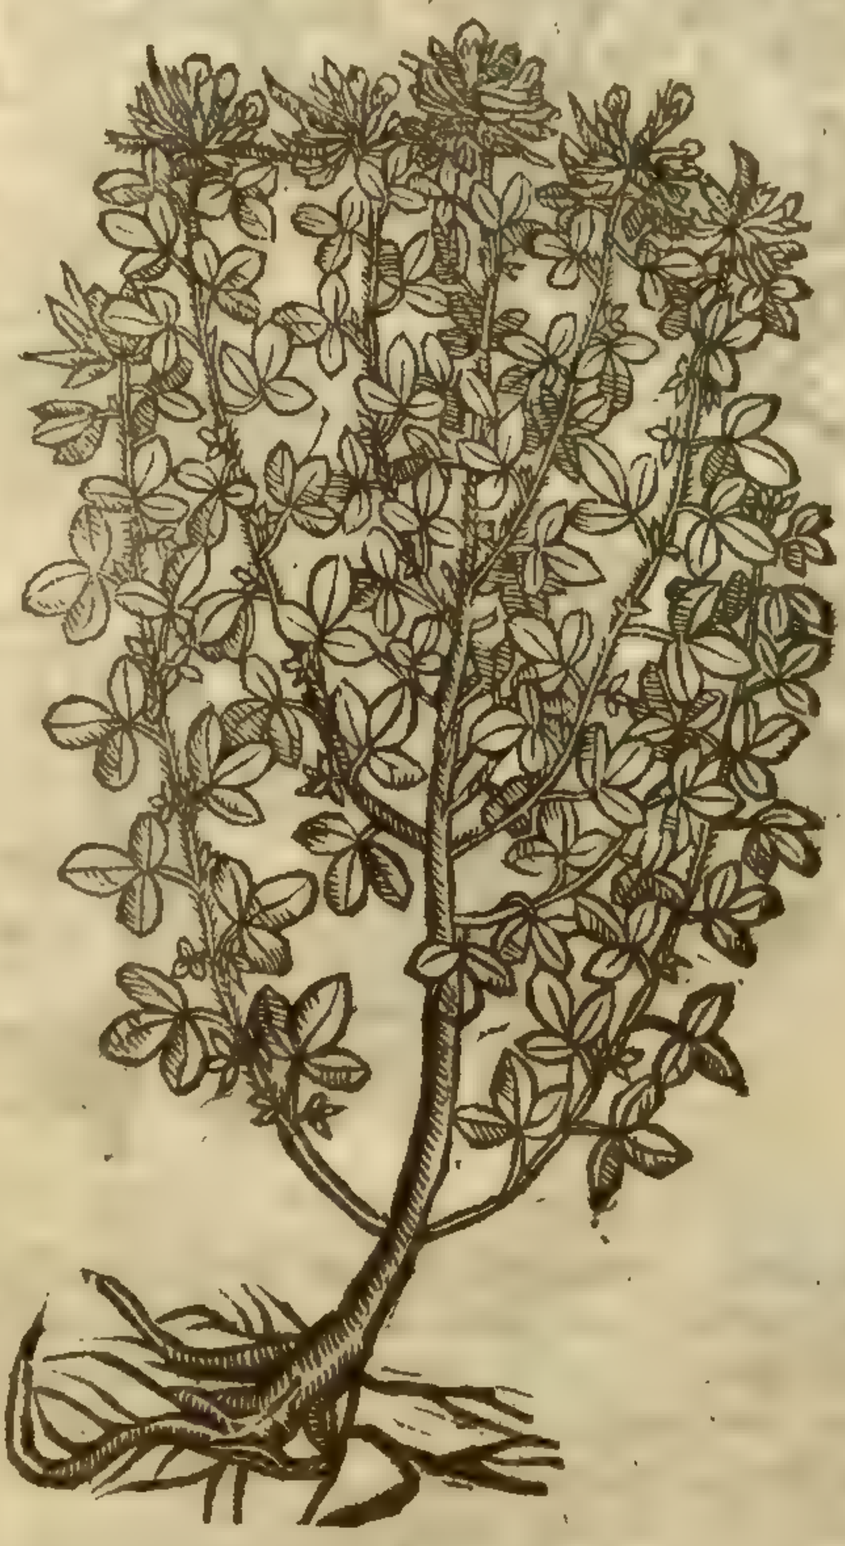
I. *THE Names.* It is called in Greek, Τεφυλλον, λόϛωδες: in Latine, *Trifolium Siliquoſum:* and in Engliſh, *Codded Trefoil*, *Peaſe Trefoil*, or *Peaſe Claver.*

II. *The Kinds.* Of this Plant we ſhall take notice only of theſe following, *viz.* 1. *Trifolium Siliquoſum majus*, The greater Codded Trefoil. 2. *Trifolium Siliquoſum minus*, The leſſer Codded Trefoil.

The Deſcriptions.

III. The firſt, or greater Codded Trefoil. *Its Root is long and reddiſh, branched and fibrous. It riſes up with a Stalk a Foot or two high, which is ſpread out into many Branches, thick ſet with* Trefoil *Leaves upon ſhort Footſtalks, ſmall and ſharp pointed, very little differing from the* Common

Trefoil Codded, Greater.



Meadow Trefoil, *(with leſſer Leaves growing at the bottom of the Footſtalk) but in their Magnitude, theſe being very much leſs, and of a grayiſh green color. The Flowers are in ſmall Tufts or Heads, of a fair yellow color, not much unlike to thoſe of* Broom, *but leſſer; after which come ſeveral Cods, four or five, more or leſs, in which is contained round Seed. Both the Stalk, Branches and Leaves, have a little ſoft Downineſs upon them, and the Flowers grow cluſtering together on the tops of the Stalks, which being paſt away, the Cods ſucceed.*

IV. The ſecond, or leſſer Codded Trefoil. *This in its Stalks, Branches, and manner of growing, is very much like to the laſt deſcribed; but the Leaves are much leſs, the former being four times larger than theſe. Theſe Leaves as they are ſo much leſs, being alſo ſharper pointed, ſo they grow alſo upon ſhorter Footſtalks, having two ſingle Leaves growing out below them, at the bottoms of their Footſtalks, they all of them having a little ſoft Downineſs upon them. Their Flowers come out of the tops of the Stalks and Branches in a Tuft or Cluſter, being of a yellow color, and almoſt like thoſe aforegoing, ſaving that they are leſſer, and fewer in number; having generally but* 2, 3, *or* 4 *Cods ſucceeding them, in which is contained the Grain or Seed, not much unlike the former.*

V. *The*

Trefoil Codded, Leſſer.

V. *The Places.* They are all of them found growing in our Fields and Paſtures, in ſuch as are Fertil and of good Soil, almoſt every where.

VI. *The Times.* They all Flower and Seed from *May*, to the end of Summer.

VII. *The Qualities, Specification, Preparations and Virtues*, are the ſame with thoſe declared in the laſt *Chapter*, to which you are referred; ſo that no more need to be ſaid of them in this place.

CHAP. DCCVII.

Of TREFOIL *Marſh:*

OR,

BUCK-BEANS.

I. *The Names.* It is ſaid to be the Μνιανθὲς θ῀, ἢ Μυρσινίτης *Theophraſti*; which the Latins call *Trifolium Paludoſum*; *Trifolium Paluſtre*; *Trifolium Hircinum*, alſo *Trifolium Fibrinum Tabernæmontani*; *Menianthes Paluſtre Theophraſti Lugdunenſi:* In Engliſh, *Marſh-Trefoil*, and *Buck-Beans.*

II. *The Kinds.* *Tabernæmontanus* makes two kinds hereof, *viz.* 1. *Trifolium Paludoſum vel Paluſtre majus*, The Greater Marſh-Trefoil, *or* Buck-Beans. 2. *Trifolium Paludoſum vel paluſtre minus*, The leſſer Marſh-Trefoil *or* Buck-Beans, whoſe Deſcriptions follow.

The Deſcriptions.

III. The firſt, or greater Marſh-Trefoil, *or* Buck-Beans. *Its Root is long and white, creeping in the Mud all about, and ſhooting up afreſh at its ſeveral Joints. It riſes up with a ſtrong flexible Stalk half a Yard high or more, with ſeveral ſmooth thick and ſomewhat broad dark green Leaves ſet thereon, at far diſtances, three always ſtanding together on a long Foot-ſtalk. From the middle of the Stalks up to the tops, comes forth a long Buſh or Spike, of five pale bluſh Flowers, each of them conſiſting of five round pointed Leaves, with a long thick pointed Umbone in the middle, which together*

Trefoil Marſh, Greater.

OR,

Buck-Beans.

with the Leaves thereof, are covered with a fine hairy Down or Frize, which adds a greater Beauty to it; which after they are paſt, ſmall round Heads come in their places, containing in them browniſh yellow bitter Seed.

IV. *Gerard* deſcribes it after this manner. *Its Roots creep divers ways in the Marſh miry Ground, being full of Joints, white within, full of Pores and ſpongy, ſending forth ſeveral by-Shoots, Stalks and Leaves, by which means it much increaſes, and largely multiplys its ſelf.* This *great* Marſh Trefoil *has thick fat Stalks, weak and tender, full of a ſpongy Pith, very ſmooth, and of about a Cubit long, on which grow Leaves much like to thoſe of the* Garden Bean, *ſet upon long Foot-ſtalks, three together, like in manner to the other* Trefoils, *ſmooth, ſhining, and of a deep green color: From among which, towards the top of the Stalk, grows*

out

out a Buſh of Feather-like Flowers, of a white color, daſht over ſlightly with a Waſh of light Carnation; after which follows the Seed, contained in ſmall Buttons, or knobby Husks, of a brown yellowiſh color, like unto Millet, *and of a bitter Taſte.*

V. The ſecond, *or* leſſer Marſh-Trefoil, *or* Buck-Beans. *It differs not in its Roots, Stalks, Leaves, Flowers, Seed, and manner of growing, from the former or greater kind, but only in its Magnitude, this ſmaller Species (if it be a different ſort) being only leſs: But ſome Authors think, and I am almoſt of the ſame Opinion, that they are both of them but one and the ſame Plant and Kind; and that the difference between them of greater and leſſer, ariſes chiefly from the Clime or Country, place of growing, and quality of the Soil.*

VI. *The Places.* Marſh Trefoil grows only in wet and mooriſh Grounds, and will not thrive out of them, but will quickly grow rank and wither; and therefore is to be ſought for in Marſh and Fenny places, and may be found in a boggy Soil, almoſt every where.

VII. *The Times.* It Flowers from *June* to the end of *July*, and ſometimes in *Auguſt*, the Seed ripening in the mean ſeaſon.

VIII. *The Qualities.* It is hot and dry in the firſt Degree, Aperitive, Abſterſive, Diuretick, Anodyn, Pectoral, Hepatick, Splenetick, Nephritick, Arthritick, and Hyſterick.

IX. *The Specification.* It is an experimental Preſervative, and Cure of the Gout and Rheumatiſm, whether in Old or Young; opens Obſtructions of Stomach, Lungs, Liver, Spleen and Womb; reſiſts Hypochondriack Melancholy, and is excellent againſt Aſthma's, Coughs, and other Diſtempers of the Lungs.

X. *The Preparations.* You may make therefrom, 1. *A Liquid Juice or Eſſence.* 2. *A Syrup of the ſame.* 3. *A Decoction, or rather Infuſion, in Wine or Water.* 4. *A Pouder of the Seed.*

The Virtues.

XI. *The Liquid Juice or Eſſence.* Taken inwardly from 3 Spoonfuls to 6, in any convenient Vehicle Morning and Night, for ſome conſiderable time, it deſtroys the very Eſſence of the Gout; it not only cures Gouts and Rheumatiſms, but is alſo a preſervative from the ſame, and prevents their return again; this Plant being found to be the greateſt of all Simple Vegetable Alterative Productions, for the rooting out thoſe Diſeaſes. The *Eſſence* cures Hypochondriack Melancholy in Men, and Vapors and Fits of the Mother in Women, and powerfully opens all Obſtructions of the Viſcera, chiefly of the Stomach, Lungs, Liver, Spleen, Meſentery, Reins and Womb; and therefore is a remedy againſt the Diſeaſes of thoſe parts cauſed thereby; for by removing the Obſtructive matter, and reſtoring the Tone of the Bowels, it quickly brings Health to ſuch Diſeaſed Bodies. Theſe Preparations have been found alſo experimentally good to ſtop a ſpitting of Blood.

XII. *The Syrup of the ſame.* It has the former Virtues, but is chiefly adapted to Obſtructions and Diſtempers of the Lungs, as Aſthma's, Coughs, Colds, Hoarſeneſs, Phthiſick, Wheezings, loſs of Voice, *&c.* being given for ſome conſiderable time, Morning and Night, as before directed.

XIII. *The Decoction, or rather Infuſion in Wine or Water.* It has all the Virtues of the Juice, Eſſence and Syrup; but if it is given againſt the Gout, Rheumatiſm, Melancholy, and ſuch like Diſeaſes, it ought to be made in Water; but if againſt Diſeaſes of the Stomach, Meſentery or Reins, in White Port or *Lisbon* Wine. It may be given half a Pint or more at a time, Morning, Noon and Night, either ſimply alone, or dulcified with Sugar, as the Patient likes beſt.

XIV. *The Pouder of the Seed.* It may be given from two Scruples to a Dram and half, or four Scruples, mixed with *Syrup of Clovegilliflowers*, or *Syrup of Hyſſop*, or for want of them with a little choice Honey, Morning, Noon, and Night, againſt Aſthma's, Coughs, Phthiſicks, ſhortneſs of Breath, difficulty of Breathing, and other Diſeaſes of the Breſt and Lungs; for it cuts tough Flegm and groſs Humors, and makes them eaſier to be expectorated; thereby cleanſing the Stomach, Lungs, Liver, Spleen and Meſentery, and ſtrengthening them withal againſt their Habitual Weakneſſes.

CHAP. DCCVIII.

Of TREFOIL *Peaſe.*

I. *THE Names.* It is called in Greek, Λώτος: in Latine, *Lotus*, and in Engliſh, *Peaſe Trefoil.*

II. *The Kinds.* *Dioſcorides* and *Galen* make two kinds of *Lotus*, viz, Λώτος ἡμέρος, *Lotus Urbana*, which is our Τριφύλλον ἡμέρον, *Trifolium Odoratum*, Sweet or Garden Trefoil, of which we have already diſcourſed largely in *Chap.* 704. The other to be Λώτος ἀγρία, *Lotus Sylveſtris*, *Trifolium Sylveſtre*, The Wild Lotus, or *Peaſe Trefoil*, of which we ſhall treat in this *Chapter.*

III. *The Kinds of the Peaſe Trefoil.* Authors make the beſt part of twenty Species of them, the moſt of which are perfect Strangers in our Country, and not to be ſeen of us (unleſs a great Traveller) in many Ages. We ſhall only take notice of ſuch as grow either in our Gardens, or Wild abroad in the Fields, which are the ſix following, *viz.* 1. *Lotus edulis Creticus, Lotopiſum Ponæ; Lotus Cretica Bauhini, Trifolium Piſi genus*, The common Candy Peaſe Trefoil. 2. *Lotus Piſatus major, Trifolium Hæmorrhoidale majus*, The greater Peaſe or Pile Trefoil. 3. *Lotus Piſatus minor, Trifolium Hæmorrhoidale minus.* The leſſer Peaſe or Pile Trefoil. 4. *Lotus corniculatus fruteſcens*, Buſhy horned Trefoil. 5. *Lotus corniculatus minor piloſus*, The leſſer hairy horned Trefoil. 6. *Lotus corniculatus incanus, Trifolium corniculatum vulgatiſſimum*, The common hoary horned Trefoil. 7. *Lotus Siliquadratis*, vel *Siliquis Quadripinnatis, Trifolium Siliquoſum flore rubro*, Crimſon, *or* ſquare Codded Trefoil.

The Deſcriptions.

IV. The firſt, *or* common Candy Peaſe Trefoil. *Its Root is ſmall, Fibrous and Annual, which ſhoots forth ſeveral ſlender Stalks, ſet with browniſh green Leaves at ſeveral diſtances, three always growing together on a Footſtalk, which are ſappy, a little thick, and pointed.* The *Flowers are yellow, but like unto ſmall* Peaſe Bloſſoms, *which are ſucceeded by roundiſh Cods a little crooked, and are great in reſpect to the ſmallneſs of the Plant, in which are contained round Peaſe of a ſweet Taſte, like*

like to our ordinary Peaſe, which whilſt they are young and green, are uſually ſold in their Markets, and as much deſired of them, as our Peaſe are by us. The whole plant with Stalks and Leaves, are a little hairy.

V. The ſecond, or greater Peaſe, *or* Pile Trefoil. *Its Root is long, ſtraight, and ſomething woody, with a few Fibres adjoining to it: From whence riſes up uſually but one Stalk, two or three Feet high, ſpread out into ſeveral hard, weak, flexible Twigs, and they again into other ſmaller, bearing at every Joint five Leaves, two of which ſtand cloſe to the Stalk, each upon a ſmall Footſtalk, and the other three riſe up between them higher than they, upon another Footſtalk like a* Trefoil; *the Leaves and Stalks being all hoary, yet in the younger Plants only the three Leaves ſtand together on a Footſtalk, without the other two at the bottom. The Flowers grow many together in a Tuft, of a bluſh or whitiſh red color, ſomewhat large, which turn into long round Cods, greater and thicker than the next following, and are of a blackiſh red color, ſomething ſwoln as it were, repreſenting in a manner the Hæmorrhoidal Vein, as it appears when it is ſwoln and fallen down, (whence came its latter Name,) as alſo from its ſingular Virtue which it has in curing the Piles; within theſe Cods are contained ſmall round blackiſh Peaſe or Seed.*

VI. The third, or leſſer Peaſe, *or* Pile Trefoil. *Its Root is a little thick and woody, full of Fibres or Strings; from whence riſes up a Stalk two or three Feet high, parted into long Branches, with two ſomething large Leaves, both ſet cloſe to the Foot of every Branch, and to the Joints where the Leaves grow; from whence come forth other Leaves as large as the ordinary* Trefoil *Leaves, three ſtanding together upon a long Footſtalk. The Flowers grow in Tufts at the ends of the Branches, of a light bluſh color, which are followed by ſmall, round, and ſhorter Cods than the former, and with ſuch like Peaſe or Seed in them. This Plant dyes yearly with us, but in a kind Year gives us ripe Seed.*

VII. The fourth, or Buſhy horned Trefoil. *It has ſmall ſmooth green Stalks a Foot or more high, ſpreading it ſelf out into many ſmall and ſhort Branches, almoſt like a Buſh, with* Trefoil *Leaves on not long Footſtalks, the Leaves being long and narrow. The Flowers are yellow, ſhooting forth at the tops 2 or 3 together, and ſometimes more. After which come thicker and ſhorter Cods than in the next following, ending in a long point, in which are contained ſmall Peaſe or Seed. Sometimes it has broader Cods, and end in ſhorter Points, as it generally does with us.*

VIII. The fifth, or the leſſer hairy horned Trefoil. *It has a ſlender woody fibrous Root, which ſends up ſlender Stalks covered with very ſmall reddiſh Hairs, which are ſet with ſmall hairy ſharp pointed Leaves, three on a Footſtalk, and two below at each Joint, from whence ſpring the Flowers, one or two at the moſt on a ſmall Stalk like an Hair, of a deep yellow, tending to a Saffron color; after which ſucceed very ſlender long Cods, containing very ſmall Seed.*

IX. The ſixth, or common hoary horned Trefoil. *This is but a low Plant, but has a little larger Leaves and Flowers than the laſt, and of as deep a Saffron yellow color, or rather with a ſhadow of Crimſon on them, growing three or four together; which being faded away, ſmall, long, crooked Cods ſucceed, containing within them round Peaſe or Grains.*

X. The ſeventh, *or* Crimſon Bloſſom, *or* ſquare Codded Trefoil. *Its Root which is ſmall, and ſcarſe every Year, ſends up three or four ſmall weak Stalks, divided into many Branches, having two Stalks of Leaves at every Joint, and three ſmall ſoft* Trefoil *Leaves ſtanding together on a very ſmall Footſtalk, coming from the Joint. The Flowers grow for the moſt part two together, of a perfect red or Crimſon color, almoſt like to a Peaſe bloſſom. After which come long, thick and round Cods, with two Skins or Films, running all along the Cod on the upperſide, and two other ſuch like Films all along on the Cod on its underſide, which makes it ſeem four ſquare; in which Cods are contained round diſcolored Peaſe, a little ſmaller and harder than our Common Peaſe.*

XI. *The Places.* The firſt is a Native of *Candy*, it growing among their Corn, and in the Borders of their Fields; but with us it is only Nurſt up in *Gardens*. The third is a Stranger, and only a *Garden* Plant with us. The ſeventh is a *Garden* Plant alſo, and we Cultivate it chiefly for the Beauty of its Flowers. The ſecond, fourth, fifth and ſixth, grow Wild, and are often found in many of our Fields or Meadows.

XII. *The Times.* They Flower in the Summer Months, in *June* and *July*, when the other *Trefoils* Flower, and their Seed is ripe in the Month following, or not long after the falling of the Flower.

XIII. *The Qualities.* They are all Temperate in reſpect to the firſt Qualities; Aperitive, Abſterſive, Diuretick, Nephritick, and Lithontriptick. The *Pile Trefoil* is Anodyn and Diſcuſſive.

XIV. *The Specification.* The firſt is Analeptick, and reſtorative in Conſumptions. The *Pile Trefoil* is approved for curing the Hemorrhoids or Piles; but all the Species open Obſtructions, cleanſe the Urinary paſſages, and are profitable againſt Sand, Gravel, and Stone in the Reins and Bladder.

XV. *The Preparations.* You may have from the firſt and ſeventh, 1. *A Pultage of the Pulſe, or kind of thick Pottage.* 2. *A Decoction of the ſame in Water.* 3. *A Decoction of the Grains of all the other kinds, as alſo of the whole Plants in Water.* 4. *A Pouder of the dryed Herb, of any of the kinds.* 5. *A Juice or Eſſence of the whole Plant.*

The *Virtues.*

XVI. *The Pultage made of the Peaſe of the firſt or ſeventh kind.* It is made with Water, in which the Peaſe are boiled till they break; then the Pottage is ſtrained thro' a hair wooden Sieve; after which it is mixed with Milk or Cream, or eaten without, being made ſavory with a little Pepper, Salt and Butter: Some weak Stomachs which cannot away with Milk, may put into it a proportional quantity of Wine, and then make it pleaſant with Sugar. Often eaten it nouriſhes, reſtores in Conſumptions, and makes Fat and Fleſhy: It alſo cleanſes the Reins, Ureters and Bladder, of Tartarous matter lodg'd in thoſe parts.

XVII. *The Decoction of the Pulſe of all the kinds, or of the whole Plants in Water.* Let it be made very ſtrong, and then mixt with a half part of White-Port Wine, and ſo drank. It opens Obſtructions of the Urinary parts, helps the Strangury, and cleanſes thoſe Veſſels from Slime, Sand, Gravel, Stones or Tartarous matter lodged in them, being often uſed.

XVIII. *The Pouder of the dryed Herb of any of the kinds.* It may be given from half a Dram to a Dram and half in White-Wine, for all the purpoſes aforenamed. The *Pouder of the Pile Trefoil* given

given to the ſame quantity in red Wine, is ſaid to be of good effect againſt the Hemorrhoids or Piles: But I ſuppoſe it ought to be taken for ſome conſiderable time; I have had no experience of it, but the Learned about *Montpelier* affirm it.

XIX. *The Liquid Juice or Eſſence of the whole Plant.* They are more effectual to all the intentions and purpoſes aforementioned, than any of the ſaid Preparations; and may be given from two to four Ounces, either alone, or mixt with ſome proper Wine, or a *Decoction of Parſly Roots*, and then ſweetned with Sugar, to be taken Morning and Night, ſo long as the *Prudent Phyſitian* ſhall order or direct. The *Juice* and *Eſſence*, beſides reſtoring in Conſumptions, giving relief in the Stone, *&c.* are of excellent uſe to breed plenty of Milk in Nurſes Breaſts.

CHAP. DCCIX.

Of TREFOILS *Strawberry*, and *Starry*.

I. *THE Names.* We know no Greek Names belonging to theſe Plants: The firſt is called in Latine, *Trifolium fragiferum*; and in Engliſh, *Strawberry Trefoil.* The ſecond tho' not mentioned by any Greek Authors, may be called Τείφυλλον ἀςεόες, ἢ Τείφυλλον ἀςεῖαν: in Latine, *Trifolium Stellatum*, *Trifolium Stellare*; in Engliſh, *Starry Trefoil*, and *Starry Headed Trefoil.*

II. *The Kinds.* Of the firſt or Strawberry Trefoil, we have but one Kind growing with us, *viz. Trifolium fragiferum Gerardi*; *Trifolium fragiferum Friſicum*, becauſe it alſo grows in *Friſeland*; and ſome call it *Trifolium Veſicarium.* The ſecond is called, *Trifolium Stellatum glabrum Gerardi*, *Trifolium capitulis Stellatis*; ſmooth Starry headed Trefoil.

The Deſcriptions.

III. The firſt, or Strawberry Trefoil. *Its Roots ſpread themſelves with many long* Fibres; *and it grows up with ſeveral Stalks and broad pointed* Trefoil *Leaves upon them, being dented in, in the middle of their broad ends, making each Leaf in form much like a* Heart, *or not much differing from the Leaves of the* Trifolium Cordatum, *or* Heart Trefoil, *growing upon long* Footſtalks; *which Stalks are bare towards the tops, where grow ſmall round Heads, with ſmall bluſh Flowers, riſing out of their Husks, which are like ſmall Bladders made of thin Skins; after the Flowers are paſt, theſe Bladders ſwell ſomewhat bigger, and turn down their Brims, forming a Head like a* Strawberry, *of many red Grains ſet together, but greater in each Husk, wherein is contained a few ſmall yellow Seeds.*

IV. *Johnſon* in *Gerard*, deſcribes it after this manner. *The Roots, Stalks and Leaves, of this pretty* Trefoil, *do not much differ from the* common white Meadow Trefoil; *but there is ſome difference in the Flowers and Seed: For the Flowers of this are ſmall, grow thick together, and are of a whitiſh bluſh color; after which follow Heads made of little Bladders or thin Skins, in ſuch like manner as they reſemble a* Strawberry *or* Raſpberry; *and they are of a grayiſh color, here and there marked with red: The Leaves are ſhaped in form of a* Heart, *and the Stalks ſeldom grow above a Hand breadth, or four Inches high.*

Trefoil Strawberry.

V. The ſecond, or ſmooth Starry Headed Trefoil, *(for there is a rough ſort of it growing in* Spain, *not much differing from this, but is an abſolute Stranger with us:) It has a ſmall long white Root, with ſeveral* Fibres *adjoining to it, from which riſe up Stalks ſometimes a* Foot *high, and ſometimes very much ſhorter, hairy, and divided but into few Branches: The Leaves which are of a* Trefoil *faſhion, ſtand upon long* Footſtalks, *and ſomewhat longiſh withall, (but thoſe which grow in* France, *are found to be in form of an* Heart;) *having no ſmall ſharp pointed Leaves growing at the bottom of the Footſtalks, next to the Stem of the Plant: The Leaves are green of color, and not ſnipt, but ſmooth about the edges. The Heads which grow on the tops of the Stalks are round, ſhort and green, with ſmall purple, or elſe whitiſh Flowers, like thoſe of the* Common Trefoil, *but leſſer; ſtanding in Cups divided into five parts,* viz. *into five long ſharp Leaves, which lying open, do very much reſemble the Form of a* Star. *The Flowers being fallen, the Heads grow ſomewhat bigger, harſher, and more prickly, opening themſelves a little, but not much. The Seed is like that of* Millet, *but ſomewhat rounder.*

VI. *The Places.* The firſt grows in *Friezland*, in the *Low Countries*, and other places adjacent to them, as well as with us. It grows here in moſt Salt-Marſhes, as in *Dartford* Salt Marſh in *Kent*, and in thoſe below *Purfleet*, and the like places. The ſecond *Johnſon* obſerved in *Dartford* Salt-Marſh;

Marſh; and I have ſeen them both in ſeveral other parts and places of this Kingdom.

VII. *The Times.* The firſt Flowers in *July* and *Auguſt*, and the Seed is ripe not long after. The ſecond Flowers in *June* and *July*, and the Seed is ripe in *July* and *Auguſt*.

VIII. *The Qualities, Specification, Preparations and Virtues*, are the ſame with the *Common Meadow Trefoils*, in *Chap.* 705. aforegoing, to which we refer you, ſo that no more need be ſaid of them here.

CHAP. DCCX.

Of TREFOIL *Tree:*

OR,

Cytiſus; *and* Bean Trefoil.

I. *THE Names.* It is called in Greek Κύτισος: in Latine *Cytiſus à Cythnio Inſula*, as *Pliny* ſays; and in Engliſh *Tree Trefoil.*

II. *The Kinds.* Authors make 15 or 16 ſeveral Species of this Plant, moſt of which are perfect Strangers to us, and not to be ſeen unleſs we Travel many Foreign Countries; we ſhall only deſcribe ſuch as are Nurſt up in our Gardens, which are the five following, *viz.* 1. *Cytiſus Dioſcoridis & Galeni, Cytiſus Maranthæ*, (ſo called becauſe it was firſt brought to light by one *Bartholomeus Maranta* of *Naples*;) *Cytiſus Cornutus, Cytiſus Lunatus & Cytiſus verus.* The true Tree Trefoil of *Dioſcorides* and *Galen*, or Horned Tree Trefoil. 2. *Cytiſus vulgaris, Cytiſus vulgatior, Cytiſus pinnatus Gerardi*, The common Tree Trefoil, as being the moſt common with us in *England.* 3. *Cytiſus incanus Germanicus, Cytiſus hirſutus Gerardi; Cytiſus albus Sylveſtris Cordi*; The German hoary Tree Trefoil. 4. *Cytiſus Hiſpanicus arboreus, Cytiſus quartus Hiſpanicus Cluſij*, The Spaniſh Tree Trefoil. 5. *Cytiſus Hiſpanicus incanus ſextus Cluſij*; *Cytiſus incanus Gerardi*, The low Spaniſh hoary Tree Trefoil.

III. And becauſe the *Bean-Trefoil* is a *Tree Trefoil*, tho' it be no *Cytiſus*, we ſhall add it to the reſt in this place, to avoid making a *New Title* or *Chapter.* It is called in Greek, Ἀνάγυρις ἑτέρα, ἢ ἀνάγυρος ἑτέρα, *Anagyris altera*, (becauſe there is another *Anagyris*, or *Bean-Trefoil*, which is Stinking;) in Latine *Laburnum*, and in Engliſh *Bean-Trefoil*, or *Tree Bean-Trefoil*; and this is twofold, *viz.* 1. *Anagyris non fœtida major*, ſive *Laburnum majus*, The greater Tree Bean-Trefoil. 2. *Anagyris non fœtida minor*, ſive *Laburnum minus*, the leſſer Tree Bean Trefoil. As for the *Anagyris fœtida*, we have nothing to ſay to it here, becauſe it grows only in very hot Countries, and ſo is a perfect Stranger in our Clime.

The Deſcriptions.

IV. The firſt, or True Tree Trefoil of *Dioſcorides* and *Galen*, or Horned Trefoil. *Its Root is hard and woody, running out ſeveral ways under Ground: It riſes up to be* 4 *or* 5 *Feet high or more, (according as it likes the Soil,) the Stalk being as thick as*

Trefoil Tree, *True.*

a Mans Thumb, covered with a whitiſh Bark, and ſpreading it ſelf forth very far into many whitiſh Branches, beſet in many places with ſmall Leaves, three always ſtanding together upon one ſmall ſhort footſtalk, which are rounder and whiter than the

Trefoil Tree, *True.*

Leaves of the Tree Bean-Trefoil. *At the ends of the Branches for the moſt part, come forth the Flowers, three or four together, of a fine Gold color, and of the faſhion of* Broom-Flowers, *but not ſo large. After the Flowers are paſt, in their places come crooked, flat, thin Cods, in form or ſhape of an* Half Moon, *or* Crooked Horn, *whitiſh when they are ripe, in which is contained blackiſh Seed; the whole Plant has a pretty hot Smell, but not ſtrong.* Gerard *ſays, That its Branches are tough and hairy; that the Leaves are like thoſe of the* Meadow-Trefoil; *that the Cods are crooked like a Sickle; that the Seed or Grains taſte like* Cicers *or* Chick Peaſe; *that the whole Plant is hoary like* Rhamnus *or* Buckthorn; *and that being broken or bruiſed, it ſmells like* Rocket.

V. The ſecond, or common Tree Trefoil. *Its Root diverſly ſpreads it ſelf under Ground; from whence ariſes a Stem or Stalk, larger both in height and thickneſs than the former, having a blackiſh coloured Bark, repleniſhed with* Trefoil *Leaves, but ſmaller and greener than the former. The Flowers are ſmaller, but of the ſame faſhion and color. The Cods are blackiſh and thin, not very long or great, but leſſer than* Broom Cods, *in which is contained ſmall blackiſh Seed.* Gerard *ſays, That it grows to the height of a tall Man, (but that is as the Soil is in goodneſs:) That the Leaves are like ſome of the* Common Trefoils, *but ſmaller, of which the middlemoſt of the three is always the longeſt; that the upper ſide of the Leaf being green, the underſide is ſomewhat reddiſh and hairy; that the Flowers grow on the Stalks almoſt from their bottoms to their tops, but greater than any of the reſt, of a Gold yellow color,* Broom *faſhion'd; and that the Seed has a* Cicer, *or* Chick-Peaſe *Taſte.*

VI. The third, or German hoary Tree Trefoil. *Its Root is woody, running it ſelf out under the Earth many ways; from which riſes up ſeveral ſlender hoary Stalks, which are but low, and more Woolly than ſome others, with long* Trefoil *Leaves, which in ſeveral places of them, are on the backſide ſomewhat more hoary than on the upperſide, the middle Rib being ſomewhat great, of a kind of ſweetiſh Taſte, and a little ſweet in Smell alſo. The Flowers are of a Gold yellow like the other ſorts, and like* Broom *Flowers, ſtanding many together, one above another at the end of the Branches. After which comes hoary, and ſomewhat hairy, little, long, narrow and flat Cods, containing therein ſmall Seed like that of* Broom, *taſting like* Tares. Gerard *ſays, that its Stalks and Branches grow not very high, but are plentifully ſpread out round about; that the Leaves are greater than the former, but leſſer than thoſe of* Meadow Trefoil: *That the Flowers grow cloſe together, as tho' they were bound up, or compact into one Head, or ſpoky Tuft, ſomewhat greater than the former; that the Cods are alſo greater and more hairy; that it falls out to be more hairy or woolly in one place than in another, and the more hairy and woolly it is, the whiter it grows; and that the Branches of this often lye upon the Ground.* Johnſon *alſo ſays, That the Leaves are ſmooth and green above, and hoary underneath; that the yellow Flowers when fading, become ſometimes* Orange *coloured, and that the Cods are round, and Seeds browniſh.*

VII. The fourth, or Spaniſh Tree Trefoil. *Its Root is woody and fibrous, ſpreading it ſelf abroad, which ſends up uſually but one Stalk, riſing to a Mans height, and covered with a dark grayiſh Bark, which ſpreads it ſelf out round into Branches, which are repleniſhed with ſmall pale greeniſh* Trefoil *Leaves on the upperſide, and a little reddiſh and hairy underneath. The Flowers are of a Gold yellow color, ſomewhat longer than others, and coming forth at the bottom of the Leaves in ſeveral places, commonly two or three at a place, which turn into ſmall, ſhort, and flat Cods, leſſer than* Broom Cods, *and ſomewhat blackiſh when they are ripe, containing within them ſmall, flat, and blackiſh Seed, as ſmall as that of* Broom.

VIII. The fifth, or low Spaniſh hoary Tree Trefoil. *Its Stalks and Branches are not above half a Yard high, long, ſlender and hoary, repleat with* Trefoil *Leaves, the two lower of which are ſmaller than the middle Leaf, which is of twice their length, but of a hoary Aſh color, ſtanding on ſhort Footſtalks, of an Aſtringent drying Taſte. The Flowers come forth with the Leaves at the Joints, all along the Branches two or three together, which are ſuſtained by ſoft hoary white Husks, wherein they ſtand.* Gerard *ſays, That it grows to the height of a Cubit or more; that it has many Branches which are ſlender and twiggy, like* Broom, *ſtreaked and very hard; that the Leaves are* Trefoil *like, or very like* Fœnugreek, *yet all hoary; that from the boſoms of which, or between the Leaves and Stalks, the yellow Flowers come forth, very like* Broom *or* Peaſe Flowers, *but ſmaller; that the Cods are like* Broom Cods, *of an Aſh color, but ſlenderer, rougher and flatter; that in their ſeveral Cells are contained bright ſhining Seed, like the black Seed of* Broom; *and that the whole Plant is hoary like* Rhamnus *or* Buckthorn.

IX. The firſt of the Greater Tree Bean-Trefoil. *Its Root is woody, runs deep into the Ground, and ſpreads far about, being of a yellowiſh color. It riſes up to more than the height of a Man, if it abides long in any place, and is covered with a ſmooth green Bark. The Branches are very long, pliant, and bending any way, on which grow here and there* Trefoil *Leaves upon long Footſtalks, being ſomething long, narrow, and pointed at the ends, green on the upper ſide, and of a ſhining Silver color underneath, without any Smell at all. At the Joints of theſe Branches where the Leaves ſtand, come forth many Flowers much like to thoſe of* Broom, *but not ſo large or open, growing about a very long Branch or Stalk, ſometimes a good Span or more in length, and of a fair yellow color, but not very deep; after which come flat thin Cods, not very long or broad, but as tough and hard as thoſe of* Broom, *in which is contained blackiſh Seed: Thoſe Twigs of Flowers hang down, and do not ſtand up, being almoſt a Foot long, as do alſo the Cods.* Gerard *ſays, that the Leaves are rather like to* Vitex, *or thoſe of* Cytiſus, *and that the Seed is like to that of* Galega, *or* Tree-Trefoil.

X. The ſecond, or leſſer Tree-Bean-Trefoil. *It is in moſt things like unto the laſt deſcribed; but it grows nothing near ſo great, nor are the Leaves ſo large by half, nor yet either the Flowers or Seed.*

XI. *The Places.* The firſt four of the *Tree-Trefoils* are found in the Kingdom of *Naples*, and ſeveral parts of *Greece*; as alſo the ſecond, third and fourth in *Hungary*, *Auſtria*, &c. but all the firſt five are Strangers in *England*, but as they are Nurſt up in Gardens; the ſecond of them being the moſt common with us. The *Tree-Bean-Trefoil* grows in *Spain* and *France*, alſo in *Candy*, as *Bellonius* ſays, but with us are Cultivated under a Gardiners Care.

XII. *The Times.* The firſt five Flower for the moſt part in *May*, *June* and *July*, and give ripe Seed in *Auguſt* and *September*. The latter two Flower in *May* and *June*, and their Seed is ripe in *September*.

XIII. *The Qualities.* The *Cytiſi* are temperate in reſpect to heat or cold, drineſs or moiſture, yet

ſome

some say they are cold and moist in the beginning of the first Degree; are Digestive, Discussive, Anodyn, Diuretick, Nephritick, and Lactogenetick. The *Laburna* are hot and dry as *Galen* says, Aperitive, Digestive, Discussive, Pectoral, Hysterick and Emmenagogick; and that their Seed is also Emetick.

XIV. *The Specification.* The *Cytisi* wonderfully increases Milk in Nurses, for which reason in Foreign Countries where they naturally grow, they are Planted for feeding Sheep, Goats and Cows, both to make them give more Milk, and also to Fatten them; and for Bees to gather Honey from their Flowers; and from whose Flowers they gathered more Honey than from the Flowers of any other Plant whatsoever: And abiding green for eight Months of the Year, it became excellent Pasturage for their Cattel, and might be kept dry the rest of the Year following as dry Fodder. It is said to be a remedy against the Sciatica, and all other kinds of Gouts. The *Laburna* discusses cold Swellings, eases the Head-ach, opens Obstructions of the Lungs, Reins and Womb, provoke the Terms, and bring away both Birth and After-birth.

XV. *The Preparations.* Of the *Cytisi* you may make 1. *A Liquid Juice.* 2. *An Infusion or Decoction in Water.* Of the *Laburna* you may make, 1. *A Liquid Juice of the Roots and Leaves.* 2. *A Decoction or Infusion in Water or Wine.* 3. *A Pouder of the Leaves.* 4. *A Cataplasm of the Leaves.*

The Virtues.

XVI. *The Juice of* Cytisus. Being drank from two Ounces to four, mixt with Canary or Sack-Whey, it increases Milk in Nurses admirably; and also restores in Consumptions, more especially if made into a Lohoch with Clarified Honey.

XVII. *The Infusion or Decoction of* Cytisus, *in Water.* It has the same Virtues: If three quarters of the *Infusion* or *Decoction*, be mixt with a quarter part of Wine for Nurses to drink, it will breed good store of Milk in their Breasts, and make their Children strong and lusty; and gives ease in the Sciatica or Gout.

XVIII. *The Liquid Juice of* Laburnum. It is a strong Vomit, and besides which it Purges also downwards pretty strongly, by which means it opens Obstructions of the Stomach, Lungs and Womb, eases the Gout and Rheumatism, provokes the Terms, and brings away both Birth and After-birth: Dose from an Ounce to two Ounces, in any convenient Vehicle.

XIX. *The Decoction in Water or Wine.* It has the Virtues of the *Juice*, and may be given from a quarter to half a Pint, according to Age and Strength.

XX. *The Pouder of the Leaves.* Taken to a Dram in Wine or Mead, provokes the Terms, expels both Birth and After-birth, and Dead Child, opens Obstructions of the Lungs, Mesentery and Womb; and helps such as are short Winded, and can hardly breath, or are vehemently troubled with the Head-ach: It purges strongly both upwards and downwards.

XXI. *The Cataplasm of the Leaves.* Laid upon cold Tumors it eases the Pain, discusses and wastes them, restoring the part to its Pristine Health.

CHAP. DCCXI.

Of TUFTS *Garden.*

I. *THE Names.* This Plant is called in Greek, Θλάσπι, ὁ ἥμερος *hortensis*, and θλάσπι κηπαῖον: in Latine, *Thlaspi Hortense*, & *Thlaspi Umbellatum*: in English, *Garden Tufts.*

II. *The Kinds.* We observe but two sorts of this Plant in our Gardens, viz. 1. *Thlaspi Creticum*, *Thlaspi Umbellatum*; *flore albo & Purpureo.* Candy Tufts white and purple, it is a Flower of the large kind, and serves for an Ornament to great Parterres. 2. *Thlaspi Baticum*, *Thlaspi Marinum*, Spanish Tufts, *or* Spanish Sea Tufts.

The Descriptions.

III. The first, or Candy Tufts, white and purple. *Its Root is small and thready, is like that of the* Treacle Mustard, *endures many years, which sends up Stalks about a foot or more high, divided or spread out into several Branches, each of which bears Leaves (about two Inches long, without footstalks, large at bottom, indented round the edges, and pointed at their tops. At the upper end of its Stalk grew very small Flowers, consisted of four Leaves, in the form of a Cross. In the middle of each Cuprises a Style, which becomes a Fruit, round at top, bordered with a Wing or little Leaf, and divided into two Chambers, which are filled with flat Seeds, that at first are red, but afterwards when they become ripe turn black.*

IV. The second, or Spanish Sea-Tufts, *are very much like the former, which sends forth some Leaves (before its Stalks.) which are a little notch'd or finely dented about the edges; but it divides or spreads not it self out into Branches as the former does, but has at its top an Umbel of purplish Flowers like unto the former, but with paler yellow Seed.*

V. *The Places.* The first grows in *Candia*; the second in *Spain*, not far from the Sea-side, but with us they both are Nurst up in Gardens,

VI. *The Times.* They Flower about the middle or end of *June*, or beginning of *July*; and the Seed is ripe not long after.

OBSERVATIONS.

VII. *Obs.* 1. This Plant (of which there are many sorts, but) two Kinds of which we Sow only in our Gardens, is propagated by its Seed which is Sown in *September*, in open Grounds, or in hot Beds: It is sown in Drills, on the edges of our Beds or Borders, or else in little Circles, at one, two, or three Feet distance, to make a show the first Year, after which the Plants produce their Seed and dye, and are accounted hardy Annuals.

VIII. *Obs.* 2. If you Sow the Seed in open Ground, it ought to be upon a Bed well dug, and set out by Lines, which should likewise be scatter'd over with Mould about an Inch thick, and laid afterwards very even. After having drawn Rills length-ways and cross-ways, you may Sow the Seed, yet but very thin to the end, that your Flowers may be the finer, and not subject to fade:

Theſe Plants when in Beds, have ſometimes occaſion for Watering, eſpecially when the Seaſon happens to be ſerene and dry, and therefore you muſt be ſure to do it, as oft as need requires it.

IX. *Obſ.* 3. If you Sow the Seed in hot Beds, you muſt wait till *February*, which is the time you ought to make them, obſerving in Sowing the method before preſcribed: When *March* is come, and you think the Plants have ſtrength enough to bear Tranſplanting, then take them out of the places where they are, and place them in thoſe where they may bear Flowers. The Plants which are Sown in *September*, are not to be ſooner Tranſplanted than thoſe Sown upon hot Beds; and ſo you reſerve places for other Flowers, much more valuable.

X. *Obſ.* 4. When you Tranſplant them, put them among Flowers of the large kind, and fill whole Beds with them, or at leaſt adorn the middle of the Borders, by which means they will be ſet off, ſo that being planted regularly, and intermixt with other Flowers in the ſame Row, few things can be more pleaſant to the Sight. As to any particular ſort of Earth in which they ſhould be Planted, nothing need be ſaid; for being put into Beds of good Mould, they will certainly thrive.

XI. *Obſ.* 5. As ſoon as you have Planted them, you muſt Water them, for that makes the Earth lye cloſer to their Roots, whereby they will the more aptly receive their *Pabulum*, ſo as to grow very fair: And as theſe Flowers are Enemies to Weeds, or Weeds Enemies to them, which are apt to choak them up, you muſt therefore take care to free them therefrom, and to Water them as yon ſee occaſion.

XII. *Obſ.* 6. When after Sowing they firſt begin to peep out of the Ground, Froſts many times happen, which would certainly much hurt them; therefore defend them, by covering them with large dry Dung or Straw, and ſo let it lye over them all the Winter, if Sown in open Grounds: But if in hot Beds, then cover them with Straw-Bells, and they will then do well: But if there happen only white Froſts, you need not to cover them but only a Nights, and uncover them the next Morning.

XIII. *The Qualities, Specification, Preparations and Virtues*, are the ſame with our *Common Muſtard*, in *Chap.* 511. ſaving that this Plant is not ſo vehemently acute, hot and ſharp; and therefore may be uſed with the more pleaſure.

CHAP. DCCXII.

Of the TUBEROSE.

I. *THE Names.* Tho' it has no known *Greek* Name, being an *Indian* Plant, yet being thought to be of the kindred of the *Jacinths*, it may properly enough be called ὑακίνθος ἰνδικὸς: in Greek; and in Latine, *Hyacinthus Indicus*, but our Modern Authors call it ſimply, *Tuberoſa*, *quaſi Radix Tuberoſa*, and *Flos Indicus radice Tuberoſa*: in Engliſh, *The Tuberoſe*, ſo called becauſe its Root is Tuberous.

II. *The Kinds.* It is the Opinion of almoſt all Authors, that it is a Species of the *Jacinths*, but whether it is the *American Jacinth*, of which we have diſcourſed before in *Chap.* 391. is very much to be doubted; becauſe of the diſcrepancy which ſeems to be in the Flower, as alſo in ſome other particulars: Beſides Authors deſcribe two Species of that Plant, whereas this ſeems to be a ſingular of its own kind.

The Deſcription.

III. *Its Root is thick and Tuberous, which gave occaſion to its Name, with ſome Fibres or Strings iſſuing from it: From this Root ſhoot forth ſeveral Leaves, about half a Foot long, ſtrait, ſmooth, and pointed at the end; in the middle of which riſes up a Stem, three or four Feet high, and about the thickneſs of ones little Finger. On the top of this Stem or Stalk, the Flowers come forth like* Lillys, *ſingle Leav'd, and ſhaped like a Pipe or Bell, pointed, or notch'd in ſix places, and looking almoſt like a Bell. At the bottom of the Flower riſes a Chive, which in time becomes a roundiſh Fruit, full of Seed of the ſame color.*

IV. *The Places.* It is ſaid to be Originally an *Indian* Plant, but now almoſt all *Europe* is ſtored with it. It is brought to us in the Roots, generally out of *Italy*, where they thrive and proſper exceedingly; which when we have them, we only Plant them in Pots, and ſo place them in our Gardens, that they may be houſed in Winter, or when the Seaſon grows cold.

V. *The Times.* If the Seaſon is warm and temperate, the Roots may be Planted in *February* or *March*, and then they will poſſibly Flower in *June*, *July*, or *Auguſt*; but if you Plant them in *May*, they will then Flower in *Autumn*, viz. in *Auguſt* or *September*.

OBSERVATIONS.

VI. *Obſ.* 1. The *Tuberoſe* delights wonderfully in heat, for which reaſon, it never bears ſo large Flowers in our cold Countries, as it does in its Native hotter Climates; wherefore we ought to repoſe it in ſuch places where the heat or Sun is more ſenſibly felt.

VII. *Obſ.* 2. Chuſe ſuch Roots as are hard and firm, which you may know by feeling them with your Thumb and Fore-finger, refuſing ſuch as are ſoft, and incline to be rotten, which is diſcerned by running your Nail into the ſide of the Root; if the Subſtance is not white, reject it, and chuſe others.

VIII. *Obſ.* 3. Then chuſe middle ſiz'd Pots, which fill (within 2 Inches of the tops) with Earth made of two thirds of Mould, and one third of Kitchen Garden Earth well mixt together; in which ſet the *Tuberoſe* Roots an Inch deep, leaving the other part, which cover with pure Mould, to receive the heat of the Sun, which will by this means the more eaſily penetrate to the Roots.

IX. *Obſ.* 4. If you would have early Flowers, plant them in the latter end of *February*, or beginning of *March*, and place their Pots in hot Beds up to their Rim, and cover them with Glaſſes; letting them enjoy (if the Weather is mild) the Beams of the Sun thro' the Glaſſes; but if Froſty or Cold, then cover the Glaſſes with Mats: And if it Freezes hard, cover the Mats alſo with Straw; for the leaſt Cold imaginable hinders their Growth, and may make them to fail, how well ſoever they are diſpoſed to bear Flowers.

X. *Obſ.* 5. Thus managed, their Shoots will ſhow what they will be, ſince Heat almoſt alone, it

it is that mkes them prosperous; but some Moisture will also be requisite, and therefore it will be necessary from time to time to Water them, (as your Prudence shall direct,) with Water newly drawn out of a Well.

XI. *Obs.* 6. The Glasses must be continued, till the Air is grown warm or mild; nor must the Pots be yet taken out of their Beds, which preserve a certain Warmth within them, which has an admirable influence upon them, in causing them to fructify.

XII. *Obs.* 7. If you have no Dung, and are loth to be at the charge thereof, you must not Plant your *Tuberose* Roots till the end of *March*, or beginning of *April*; for the great Colds being then over, many Inconveniencies of early Planting will be avoided. Then fill the Pots in the manner before prescribed, and Plant your Roots therein; which Pots expose in the most Sunny places, setting them upon Boards under a Wall, that they may have the reverberation of the Heat from the Wall also, which will make them the sooner come to their desired Perfection.

XIII. *Obs.* 8. If you Plant them in *May*, then your Plants will Flower in *Autumn*; but you must observe the same Method as you do in those which are more early Planted, always placing them where the Sun is hottest: And to forward them in their growth, you must Water every day at Noon, with Water warmed in the Sun.

XIV. *Obs.* 9. This Plant is not to be raised in open Grounds, because the Heat in our colder Climates is not sufficient to make them grow and thrive as they ought; but being Planted in Pots as before directed, they are to be exposed to the Solar heat; yet some do not only expose them to the strongest heat they can in the Day time, but also put some Glasses upon them to retain the Heat the longer.

XV. *Obs.* 10. If it happens that some Roots shoot not up their Stems so soon as others, you must remove the Pot out of the hot Bed it is in, and set it in another Hot Bed new made, (provided it has discharged its first heat;) or for want of such a Bed, to place it on a heap of Horse-Dung moderately warm, which expedient has been found very well to succeed.

XVI. *Obs.* 11. When the Stems grow high, and the Flowers begin to appear upon their tops, you must support them with a little Rod or Stick, of a Fingers thickness, which is to be stuck into the Earth, near the Foot of each Plant, to which the Stems are to be tyed; for otherwise the weight of the Flowers would make them exceedingly to bend, and possibly also to break: When they begin to blow, each Flower blows successively one after another, which keeps them a long time in Flowering; the Smell and Odour of which is very sweet and grateful, Perfuming the place or room in which they grow or are placed.

XVII. *Obs.* 12. This Plant is multiplyed by Suckers, but this is chiefly done in hot Climates; for tho' we look never so carefully after these Suckers, yet their Stems (in our cold Climates,) will never grow high as those which are Planted from their Original Roots, brought to us out of *Italy*, and other like Countries; nor will their Flowers be so numerous or so beautiful; wherefore it is a Folly to think of augmenting of their numbers this way.

XVIII. *Obs.* 13. *Lastly*, Authors have said nothing of their Virtues, but only suppose them to have the same *Qualities* and *Specification* with the other *Hyacinths*: But the great care and trouble in their Cultivation, is chiefly for the Beauty of their Flowers, and their Fragrant Odour, with which they replenish the places of their abode.

CHAP. DCCXIII.

Of the TULIP, *or* Turks-Cap.

I. *The Names.* It has no *Greek* nor *Latine* Name that we know of, but Authors have Latiniz'd a Name for it, and call it *Tulipa*, from the *Turkish* Word *Tulipan*, which is the Name the *Turks* give their *Head-Tyres*, or *Caps*; and we in *English*, in conformity to this Name, call it the *Tulip*, which is much like a *Turks-Cap*.

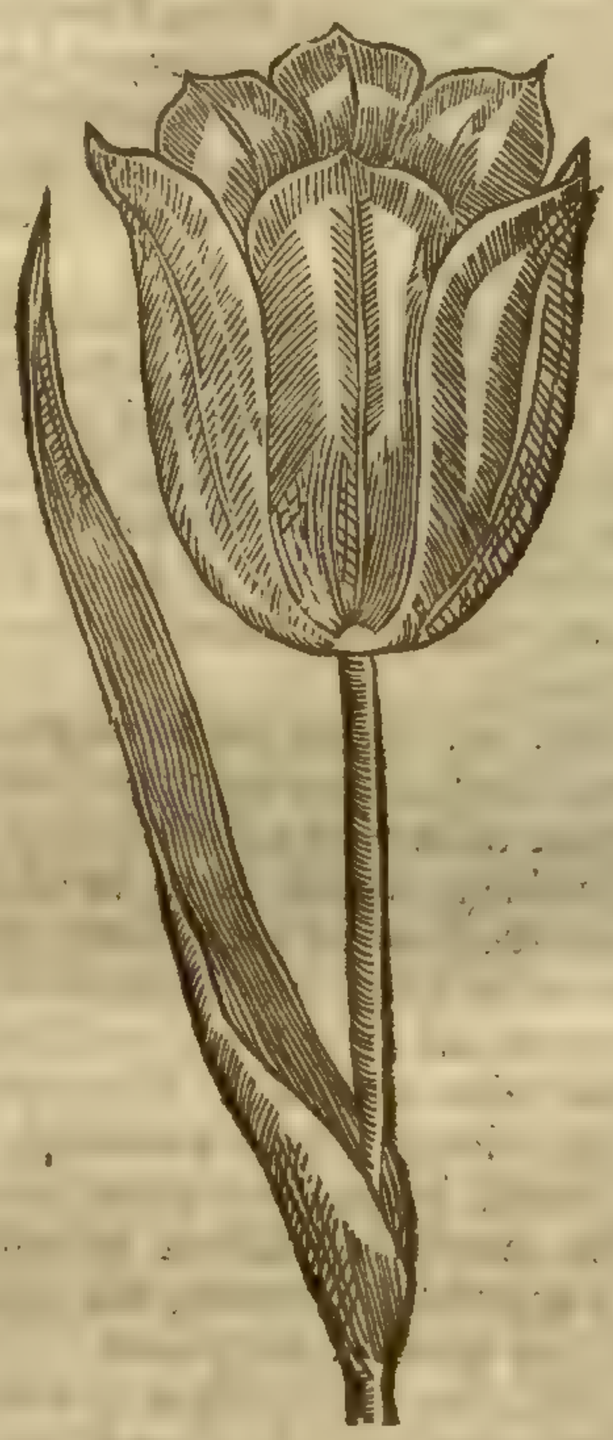
II. *The Kinds.* Some as *Dodonæus*, and *Matthiolus* upon *Dioscorides*, refer it to the κυνῶν, or κυνῶν *Theophrasti*, in *lib.* 7. *cap.* 13. as if it was a kind of *Wild Hyacinth*; but in the place cited, *Theophrastus* gives us neither its Form nor Qualities, but barely the Name; but I suppose they might attribute it to be a Species of some of those Plants, because of its Bulbous Root. *Gesner* first of all, and after him *Camerarius*, *Clusius* and *Lobel*, with many others since, refer it to the *Satyrion Dioscorides*, which seems to be the very truth it self, for these following Reasons. I. From its place of Growing; for that it grows frequently and plentifully in many parts of *Greece*, and the *Lesser Asia*, and so no doubt could not but be sufficiently known both to *Theophrastus* and *Dioscorides*. II. *From the Form of the Plant.* The *Satyrion Dioscoridis* commonly bore three Leaves on a Stalk, not much unlike to a *Lilly*; (ours has sometimes three, rarely four or five;) whereof some are oftentimes seen to be red in the first Springing, and also upon the Decaying, especially in a dry time, and a dry Ground. III. *From the form of the Root.* *Dioscorides*'s *Satyrion* has a round Root, and as white within as the white of an Egg, as the *Tulip* has, covered with a brown Coat, having a sweetish, but not unpleasant Taste. IV. *From the form of its Flower.* Those which have red Flowers, may very well agree with that Species called *Erythronium*, which see in *Matthiolus* upon *Dioscorides*, page 637. and *Bodæus* his Comment on *Theophrastus*, *lib.* 9. page 1171. which *Camerarius* in his Epitome, *Lobel* and others, call *Lilio-Narcissus*, because it has some resemblance of the *Lily* in the Leaf, Flower and Seed; and the *Narcissus* or *Daffodil* in its Root. V. *From the Qualities.* For that some very Learned Physitians have affirmed to me, and that from Experience (as they say,) that the *Tulip Roots* have the same Virtues which *Dioscorides*'s *Satyrion*, and *Theophrastus*'s *Herba quam Indus attulerat* have, and that not inferior to the same. The greatest difference with *Dioscorides*, is in the Seed, which yet I think, (considering the usual way of speaking) is none at all: For, as he says, it is something like to *Linseed*; so we often say of many other things, which are far from being exactly like the same. The Seed of the *Tulip* is flattish, hard and shining, and agrees well enough (generally speaking,) to *Flax* or *Linseed*; altho' of another Color, and larger as *Dioscorides* himself says: But if there should be a mistake in the Writing of λίνα, *Lini*, *Flax*, for κεῖνα vel λείνα, *Lilii*, *Lilly*, (as was easy in Coppying Manuscripts, before the Mystery of *Printing* was invented;) the slip of the Pen being both easy and likely,) then it is out of all doubt, that

that these two Plants, or Plant going by two Names, *viz.* *Satyrion* and *Tulipa*, are absolutely one and the same. VI. *Lastly*, if this *Our Tulip*, be not the true *Satyrion* of *Dioscorides*, we know nothing this Day in the World that can answer to it, which has but one single Bulb as this has; the *Testiculi* being in truth, nothing of kin to it. There are, (as Authors will have it) three remarkable Kinds of the *Tulip*, (which yet have only respect to the time of their Flowering;) *viz.* 1. The *Præcox*, or *Præcoces*, which the *Turks* call *Caffa Lale*. 2. The *Media*, or *Mediæ*, the middle Flowering Tulips. 3. The *Serotina*, or *Serotinæ*, the late Flowering *Tulips*, which the *Turks* call *Cava Lale*. All these *Dalechampius* calls by the name of *Oulada*, and we only *Tulips*. Of these three Seasons of *Tulips*, there are *many Varieties*, of all which, *one General Description* will be enough to give you the full of all those various Flowers; after which, we will give you the Principal of all those Varieties. 1. As they were more Antiently taken notice of, and the Names they were then known by, from Mr. *Parkinson*. 2. As they are now specified, and the modern Names they are called by, from Mr. *Rea*. These Varieties chiefly arise from their diversities of Colours, produced by their often Sowing of their Seed, Planting and Re-planting them, which various Colourings seem to be admirable in them, beyond what can be found in any other Flower in the World besides; every Year yielding a new mixture and variety, which possibly was never seen or observed before. The *Mediæ*, which Flower between the early and late Flowering, some will not have to be a Species by it self, because they nearer partake with the *Serotinæ* than with the *Præcoces*, as well in the color of its Leaf, being of the same Greenness, as in the bigness and height of its Stalk and Flower, being as high and large as the *Serotinæ*; as also because the Seed of a *Media Tulip*, never brings forth a *Præcox*, but many times a *Serotina*; as again, a *Serotina* Seed many times brings forth a *Media Tulip*, never a *Præcox*. But because the *Media Tulip* is taken as a Species by most Authors, we shall not here break the Order, but treat of them as they are generally received.

The General Descriptions.

III. *Its Root being well grown is round, and somewhat great, small and pointed at the top, and broader, yet rounder at the bottom; with a certain eminence, or bunching out on one side, as the Root of the* Colchium *has, but not so long or great; it has also an hollowness on the side, (if it has born a Flower) where the Stalk grew: For tho' in the time of its first Springing up, until it shews its Buds for Flowers, the Stalk which with the Leaves thereon, rise up out of the middle of the Root; yet when the Stalk is risen up, and shews the Bud for Flowers, it presses to one side, making an impression therein. This Root is covered over with a brownish thin Coat or Skin like an* Onion, *having a little woollyness at the bottom, but white and firm within; yet composed of many Coats, one closing in, or enfolding within another, like as the Root of a* Daffodil, *or* Narcissus, *of a reasonable good Taste, not very sweet, but not in the least unpleasant. From this Root comes a little Sprout out of the Ground, with its Leaves folded one within another. The first, or lowest Leaf rises up first, sharp pointed, and folded up round together, until it be an Inch or two above the Ground, which then opens it self, shewing another Leaf folded also in the Bosom or Belly of the first, which in time likewise opening it self, thrusts forth a third, and sometimes a fourth and fifth. The lower Leaves are larger than the upper, are fair, thick, broad, long, and hollow like a Gutter, and sometimes crumpled on the edges, which will hold Water falling thereon a long time; they are of a Willow, or pale whitish green color, (but the* Mediæ *and* Serotinæ, *more green) covered over as it were with a Mealiness, or hoariness, with an Eye or shew of redness towards the bottom of the Leaves, and the edges being more notably white, (which are two principal Notes in a* Precox, *and distinguish it from a* Media *or* Serotina.) *The Stalk with the Flower, rises up in the middle, as it were thro' these Leaves, which in time stand one above another, encompassing it at certain unequal distances, which is often observed to bend it self crookedly, so as to look towards the Ground, as if it would thrust its Head thereinto, but turning up its Head again, which then comes to be the Flower, stands afterwards upright: This Stalk is in the* Precox *sometimes but 3 or 4 Inches high, sometimes half a Foot, and sometimes a Foot high; but in the* Mediæ *and* Serotinæ, *much higher, carrying for the most part, but one Flower on the top thereof, not much unlike a* Lilly, *consisting of six Leaves, green at the first, and afterwards changing into divers and sundry colors, making manifold Varieties. The bottoms of the Leaves of the* Præcox, *sometimes, but most especially of the* Mediæ, *being as variable as the Flower,*

The TULIP.



which are in some yellow or green, or black; in others white, blew, purple, or tawney; and sometimes one color circling another. Some of these Flowers have little or no Smell at all, some smell better than others, and some smell Sweet. After it has been blown three or four Days or more, it will in the heat of the Sun spread it self open, and lay it self almost flat to the Stalk. In the midst of the Flower grows a long green Head or Pointle, (which will be the Seed Vessel,) compassed about with six Chives, *which vary very much, in being sometimes of one color, and sometimes of another, tipt with Pendents diversly varied likewise. This Head in*

the

the middle of the Flower, grows (after the Flower is fallen) to be long, round and edged, as it were with three Angles or Sides, the edges meeting at the top where it is ſmalleſt, and making as it were a Crown, (which is not ſeen in the Head of any Lilly; *) which when it is ripe, divides its ſelf on the inſide, into ſix rows of flat, thin, browniſh, griſtly Seed, very like unto the Seed of* Lillys, *but brighter, ſtiffer and more tranſparent. Something more is to be ſaid of the* Tulip, *which take in the following Obſervations.*

IV. *Obſ.* 1. All ſorts of *Tulips* uſually bear but one Stalk, and that without any Branches; but ſometimes Nature is ſo free in producing, that it has two or three Stalks, and ſometimes two or more Branches out of one Stalk, each Stalk or Branch bearing one Flower at the top, but this is very rarely ſeen; and when it does happen once, it is hardly ever ſeen again from the ſame Root; but is a great Sign, that ſuch a Root being now old, will in the ſame Year divide it ſelf into ſeveral Roots, each of which, being of a reaſonable greatneſs, will bear both its Stalk and Flower the next Year, agreeing with the Mother-Plant in color, as all the Off-ſets of *Tulips* do for the moſt part: For altho' the young Off-ſets of ſome do vary from the main Root, even whilſt it grows with them, yet being ſeparated, it will be of the ſame color with the Mother-Plant.

V. *Obſ.* 2. There grows oftentimes in the *Mediæ*, and ſometimes alſo in the *Præcoces*, tho' but ſeldom, a ſmall Bulb or Root, hard above Ground, at the bottom of the Stalk, and between it and the lower Leaf, which when the Stalk is dry, and is ripe, being put into the Ground, will bring forth in time, a Flower like unto the Mother-Plant, of which it came.

VI. *Obſ.* 3. The Flowers alſo of *Tulips* conſiſt commonly of ſix Leaves; but ſometimes they are ſeen to have 8 or 10, or more Leaves; but uſually thoſe Roots bear but their ordinary number of ſix Leaves the next Year. The Head for Seed, is then for the moſt part four ſquare or cornered, which at all other times is but three cornered; or when the Flower wants a Leaf or two, as ſometimes alſo it does, it is then flat, having but two corners or edges.

VII. *Obſ.* 4. The form of the Flower is alſo very variable, for the Leaves of ſome *Tulips* are all ſharp pointed, or all blunt and round pointed; and ſome, the three outermoſt, ſharp pointed, and the three inner round pointed, and ſome contrariwiſe. Again, ſome have all the Leaves of the Flowers, long and narrow; and ſome again have them broader and ſhorter. Some *Præcoces* have their Flowers very large and great, equal to thoſe of the *Mediæ* or *Serotinæ*, which moſt commonly are the largeſt; and others have them as ſmall as the *Bolonia Tulip*.

VIII. *Obſ.* 5. The bottoms of the Leaves of the Flowers are alſo variably diverſified, and ſo are both the Chives and Pendents which hang looſe on their tops within: And by the difference of the bottoms or Chives, many Flowers are diſtinguiſhed, which otherwiſe are very like in color, and alike alſo marked.

IX. *Obſ.* 6. In the Smell alſo there is ſome diverſity; for that the Flowers of ſome have no Smell at all, ſome a ſmall Scent, not offenſive; ſome a little ſweetiſh, and ſome very ſweet: And ſome again have a ſtrong ill Smell; which are not to be diſtinguiſhed by Writing, but by ones own ſmelling to them. The Seeds of ſweet ſmelling Plants, many times do not follow their Mother-Plants, no more in their ſmell, than they do in their color.

X. *Obſ.* 7. When the Flower has been for ſeveral Years of one intire color, yet afterwards has altered very much, as if it had not been the ſame Plant, as from a Purple or Scarlet it has been variably either parted or mixed, or ſtreaked with white, either in part, or thro the whole Flower, and ſo in a red or yellow, that it has had either red or yellow edges, or red or yellow Spots or Streaks, Veins, Lines or Flames, running thro' the red or yellow color; ſometimes three Leaves have been equally parted in the middle with red and yellow, the other three remaining of one color: In ſome the red has ſome yellow in it; and the yellow ſome red Spots in it alſo. Theſe Varieties proceeding from ſuch Roots as had been for ſeveral Years of one conſtant color, ſhew the weakneſs and decay of thoſe Roots; and that this extraordinary Beauty of the Flower, is but as the Blaze of a Light, or Candle juſt upon its going out; and by this means declares to them, that it is upon taking its *Farewell*, and can do no more ſervice.

XI. *Obſ.* 8. That the chief differences (ſetting aſide the Seaſons of Flowering) conſiſt in the Form and Magnitude of the Leaves, as ſome great and large, ſome ſmaller; ſome long and pointed, others broad and blunt. 2. In the colors, with their ſeveral mixtures, marks, and variableneſs of changing, as has been before declared. This large *Deſcription*, with the *Obſervations* appendent to it, may well ſerve for all the Seaſons of *Tulips*, whether *Præcoces*, *Mediæ* or *Serotinæ*, concerning their ſpringing up, form and bearing; there being no other great Varieties beſides worth the noting.

XII. Mr. *Rea* deſcribes the *Tulip* after this manner, in his *Flora*, pag. 47. *The Roots are ſome rounder and bigger than others, whoſe bottoms are large, round, with a woolly eminence on one ſide, whence the Fibres come forth; and on the other ſide of ſuch as have born Flowers, there is a hollow Channel where the Stalk grew, which yearly ſhifts from ſide to ſide, ariſing every Year a new from the aforeſaid eminence, which is in the bottom of every Root, but more in ſome than in others. Theſe Roots are ſharp at their upper end, and if they will bear Flowers the next Year are forked, and ſhew forth two Points to put forth two Leaves; but if they will not bear Flowers, then they appear but with one Point: Theſe Roots are alſo compoſed of ſeveral thick Skins, folded one upon another, and at laſt are covered with a brown Coat, which is every Year renewed, the old being caſt off. Theſe, whether they be the* Præcoces, Mediæ *or* Serotinæ, *ſpring out of the Ground with Leaves folded one within another, and opening by degrees become broad, thick, long and hollow, turning up their edges, and holding Water falling thereon; commonly three in number, but ſometimes in old Rooted Plants four or five, of a whitiſh green color, with whiter edges, chiefly in the* Præcoces, *by which they are known from the* Mediæ *or* Serotinæ, *whoſe Leaves are of a freſher green. The Stalk with the Flower, comes up in the middle of the Leaves, which riſe up with it, and encompaſs it at unequal diſtances, many of the* Præcoces *bending to the Ground, but before they Flower, are drawn upright by the Sun, as all the reſt are. They all bear (uſually) but one Flower on a Stalk, which Stalk in the* Præcoces *is not above a Foot high, and many of them lower, but in the* Mediæ *and* Serotinæ *much higher, ſtands upright, and at its top has a Flower compoſed of ſix Leaves, green at firſt and cloſed, which by the influence of the Sun Beams opens, changes into divers Glorious colors variouſly mixed, edged, ſtriped, feathered, guarded, agotted, marbled, flaked*

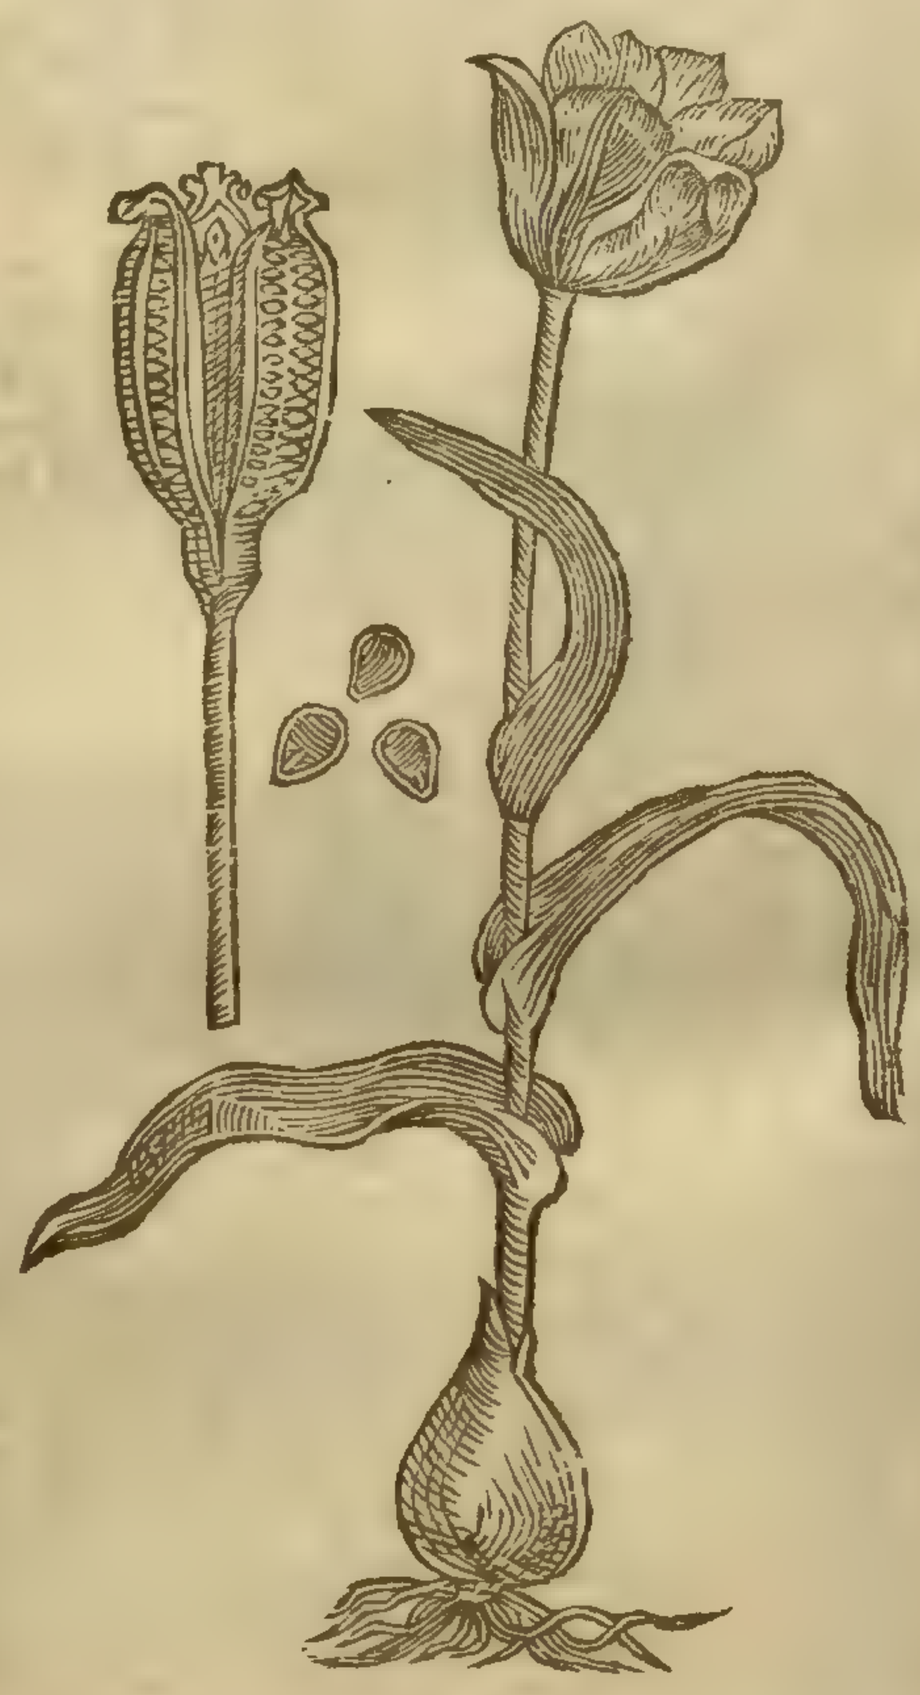
ked, ſpeckled even to admiration: the Leaves of ſome of them being round pointed, ſome ſharp pointed; and in ſome Flowers, the one half of the Leaves are round pointed, the other half ſharp pointed, three of one faſhion, three of another. The color of the bottoms and Chives, eſpecially in the Mediæ *and* Serotinæ, *do alſo notably differ one from another; for in ſome they will be white, yellow, Straw color; and in others blew, black, or purple, deeper or lighter. Some Flowers will be ſweeter than others, and many of them have little or no ſmell at all. In their middle is a long green Head, commonly three cornered, which is the Seed Veſſel, compaſſed about with 6 Chives, tipt with Pendents, in color anſwerable to the bottom, which often changes; for when a red or purple Flower, has a blew or dark colored bottom and Chives, marked well with white, the bottom will be white alſo, the ſaid bottom running up into the Leaves, which is a prime cauſe of their being well marked; but the Chives remain without alteration; by which the Flower may be known thro' all its various mutations, the rule holding certain in moſt of the beſt Flowers. After the Flower is fallen, the Seed Veſſel grows bigger, rounder, and longer, containing uſually ſix rows of flat, thin, brown griſtly Seed. The greateſt difference is in their Flowers, from the diverſity of their colors, order of marking, bottoms, Chives, bigneſs, faſhion, and manner of growing; the which in what follows, ſhall be particularly expreſt, whereby each Flower by its Name and Face, may be known and diſtinguiſhed. As the* Tulip *is a ſtately Flower, ſo it has been, and is much eſteemed; and one Root has been ſold with us at all Prices, from a Penny to five Pounds: But in other Countries where they are more affected with them, at much higher Rates; inſomuch that Thirty Pounds have been given for a Root; but that heat is now much abated, conſidering how great a Folly it was to dote upon a Flower, eſpecially one that was ſo apt to change, and ſubject to degenerate.*

XIII. *Obſervations.* 1. The *Tulip* is a Plant whoſe Bulb is of a whitiſh brown outwards, almoſt round, and compoſed of ſeveral ſmall white coverings, which are laid one upon another, from which Bulb comes forth pretty large Leaves, of about 6 Inches or more, long, waved on their edges, and ending in a Point; out of whoſe middle, comes forth a Stalk a Foot more or leſs, long, which at its top produces a Flower, in form of a Cup, ſometimes of one color, ſometimes of another, which has ſix Leaves, in whoſe middle riſes up a Pointel, (with ſix Chives about it,) which in time becomes an oblong Fruit, opening on three ſides, with ſix rows, fill'd with flat Seeds, of a roundiſh Figure, and reddiſh color. 2. Of the ſix Leaves of the Flowers, the three innermoſt are generally larger than the three outward ones, and their form if it is flat, is more Beautiful than when ſharp, and their bottoms ought alſo to be proportion'd to their tops; where alſo the Cup is leaſt Convex, it is preferrable to that which is very much ſo. 3. If its form and green are of a middling bigneſs it is good, as well as when they have a requiſite largeneſs; ſo alſo if its green is a little frizled, or accompanied with ſmall ſtreaks. Its bottom is alſo much taken notice of, becauſe the Stripes which ariſe from thence, are generally the fineſt colors. And therefore a *Tulip* is not to be judg'd of at its firſt opening; you ought to wait 2 or 3 Days, before you can judge rightly of it. 4. If it opens with its Leaves turned either inwards or outwards, 'tis not to be valued, no more than when its Leaves are too ſmall or too thin: And of the better ſorts of *Tulips*, thoſe are moſt to be eſteemed, whoſe color is Luſtrous, and looks like Sattin; or of a flame colour'd Red upon a white Ground; of divers colors with Shadings, and yellow ſtriped with gray. 5. Thoſe *Tulips* look only agreeable to the Eye, whoſe Stripes are not confuſedly blended, but are well or manifeſtly ſeparated one from another; and to add to their perfection, it is neceſſary their Thrums ſhould be of a brown color, but 'tis no matter how their Chives are. Theſe Flowers are ſometimes incommoded with Diſeaſes, but 'tis only for want of Care, for if they are well managed or lookt after, they are never ſubject to any defect.

I. *Of the* PRÆCOCES: *OR,* Early TULIPS.

XIV. Having thus done with the *General Deſcriptions*, we will now proceed to a more particular relation of the ſeveral Varieties, under their *ſeveral Seaſons, or times of Flowering:* And firſt of the *Præcoces*, or *Early Flowering Tulips*, which are either white, purple, red or yellow; of which

The Early Tulip.



thoſe of the firſt or more common ſort, are called *Edgers*, and are either *Red*, *Carnation*, *Crimſon* or *Scarlet*, deeper or paler, with yellow, Straw color, or white edges; or elſe ſadder or paler Violet, Graydeline, or Murry Purple, with greater or leſſer white edges, of which there are multitudes of diverſities, many of them now not much eſteemed; of which we will give you ſome of the beſt, and then a plentiful Variety of thoſe of the other and better

better ſorts, which tho' they may be of the ſame or like colors, yet notably differing in their *Marking*, being either ſtriped, feathered, or variably marbled, with two or more colors in each Flower; and this we ſhall (God willing) perform, thro' all their *Seaſons of Flowering*. I. From *Parkinſon*, that you may know their more Ancient Appellations and Varieties. II. From Mr. *Rea*, that you may know their preſent Appellations, and the Varieties which are now moſt eſteemed with our *Floriſts*; and are as follows.

Tulipa Præcox alba: White Early Tulips.

XV. 1. *Nivea tota interdum purpureis Flaminibus*, vel *Saltem luteis, fundo puro luteo.* The pure Snow white, ſometimes with Purple, or at leaſt with yellow Chives, without any yellow bottom.

XVI. 2. *Alba ſive nivea fundo luteo.* The pure White with a yellow bottom.

XVII. 3. *Albida.* The Milk white, (which is not a pure white.)

XVIII. 4. *Alba, Cæruleis in dorſo.* White, with blew Veins on the outſide.

XIX. 5. *Alba, purpureis oris, conſtans* vel *diſpergens.* White, either conſtant or ſpreading, with Purple edges.

XX. 6. *Alba conſtans*, vel *diſpergens, Carneis oris.* Conſtant, or ſpreading White, with bluſh edges.

XXI. 7. *Alba conſtans*, vel *diſpergens ſanguineis oris.* A Conſtant or ſpreading White, with red edges.

XXII. 8. *Alba oris magnis carneis, & venis intro reſpicientibus.* White, with great bluſh edges, and ſome Streaks running from the edge inwards.

XXIII. 9. *Alba extra, carnei vero coloris intus, oras habens carneas ſaturatiores.* White without, and ſomewhat Bluſh within, with edges of a deep bluſh.

XXIV. 10. *Albida, oris rubris*, vel *oris purpureis.* Whitiſh, or pale white, with red or purple edges.

XXV. 11. *Albida, purpuraſcentibus maculis extra, intus vero carnei vivaciſſimi.* Whitiſh without, with ſome purpliſh Veins and Spots, and of a lively bluſh within.

XXVI. 12. *Alba purpureis maculis aſperſa extra, intus vero alba purpurantibus oris.* White without, ſpotted with ſmall purple Spots, and white within with purple edges.

XXVII. 13. *Dux alba, coccineis & albis variata Flaminis, à medio ad oras intercurſantibus.* A white Duke, parted with white and crimſon Flames, from the middle of each Leaf to the edge.

XXVIII. 14. *Princeſſa, Argenteis coloris maculis purpuraſcentibus.* The Princeſs of a Silver color, with fine deep bluſh Spots.

XXIX. 15. *Regina Pulcherrima, albis & ſanguineis aſperſa radiis & punctis.* The moſt Beautiful Queen Flower, ſprinkled with Blood red Spots and Strakes.

Tulipa Præcox Purpurea; Purple Early Tulips.

XXX. 16. *Purpurea ſatura rubeſcens*, vel *Violacea.* A deep reddiſh Purple, or more Violet coloured.

XXXI. 17. *Purpurea Pallida, Columbina dicta.* Pale purple, called a Dove color.

XXXII. 18. *Perſici coloris Saturi.* A deep Peach bloom color.

XXXIII. 19. *Perſici coloris ſaundioris.* A more pale Peach bloom color.

XXXIV. 20. *Paoniæ floris coloris.* A Peony Flower color.

XXXV. 21. *Roſea.* The Roſe coloured Tulip.

XXXVI. 22. *Chermeſina peramana.* A Crimſon very bright.

XXXVII. 23. *Chermeſina parum ſtriata.* A Crimſon ſtriped with a little white.

XXXVIII. 24. *Princeps, purpurea ſaturatior*, vel *dilutior, oris albis magnis* vel *parvis, fundo luteo*, vel *albo Orbe, quæ multum variantur, & colore & oris, ita ut purpurea eſt elegans oris magnis albis, dicta eſt, Princeps excellens.* Prince, or moſt excellent Prince, having a deep or pale Purple with white edges, greater or ſmaller, and a yellow bottom, or circled with white, varying much both in the Purple and Edges; ſo that it is a fair deep Purple, with great white edges.

XXXIX. 25. *Princeps Columbina, purpurea dilutior.* The Dove colored Prince, paler purpled, with white edges.

XL. 26. *Purpurea Chermeſina, rubicundioris coloris, albidis*, vel *albis oris.* The Purple Crimſon colored Prince of a rubicund color, with white, or whitiſh edges.

XLI. 27. *Purpurea*, vel *Obſoleta albidis oris Princeps Brancion.* The Obſolet Brancion Prince, purpled with white edges.

XLII. 28. *Purpurea dilata, oris dilutioris purpurei coloris.* A dilated or pale Purple, with paler Purple edges.

XLIII. 29. *Purpurea in exterioribus, carnei vero ad medium intus, oris albis, fundo luteo.* Purple without, and Bluſh half way within, with white edges and a yellow bottom.

XLIV. 30. *Purpurea albo plumata extra, oris albis, intus purpuraſcens, fundo luteo*, vel *orbe albo.* Purple feather'd with white on the outſide, with white edges, and pale Purple within, the bottom a little yellow, or circled with white.

XLV. 31. *Purpurea alia, minus elegans plumata, minoribuſque oris albidis.* Another Purple feather'd, but not ſo elegantly or fairly plumed, being more obſcure, with leſſer white edges.

Tulipa Præcox Rubra; The Early Red Tulip.

XLVI. 32. *Rubra vulgaris fundo luteo, & aliquando Nigro.* The common or ordinary red Tulip, with a yellow bottom, and ſometimes with a black.

XLVII. 33. *Rubra ſatura oris luteis parvis, dicta* Roan. The *Roan*, being a deep red, with a ſmall yellow edge.

XLVIII. 34. Baro, *rubra magis intenſa, oris luteis parvis.* The *Baron*, which is a fair Red, with a ſmall edge of yellow.

XLIX. 35. *Dux major & minor, rubra magis aut minus elegans ſatura, oris luteis maximis* vel *minoribus, & fundo luteo magno.* A Duke, greater and leſſer, having a more or leſs fair deep red, greater or leſſer edges, and a great yellow bottom.

L. 36. *Alia alijs eſt magis amæna, in alijs etiam fundo Nigro,* vel *obſcuro viridi.* Some others of this ſort, which are much more or leſs fair than others, and ſome which have alſo a black, or dark green bottom.

LI. 37. *Duciſſa, quæ duci ſimilis, at plus lutei quàm rubri, oris magnis luteis, & rubore magis at minus, intus in gyrum acto, fundo item luteo magno.* The Dutcheſs, which is like unto the Duke, but more yellow than red, with greater yellow edges, and the red more or leſs circling the middle of the Flower on the inſide, with a large yellow bottom.

LII. 38. *Dux Briancion, quæ rubra Sanguinea ſatura, aut minus rubra, oris Palladis, magnis* vel *parvis, alia aliis magis aut minus elegans diverſimodo.* A Briancion Duke, which is a fair deep red, or leſs red, with a paler yellow, or Butter colored edge, ſome larger, others ſmaller. Some alſo more pleaſing than others, in a very variable manner.

LIII. 39. *Flambans ex rubore & Flavedine radiata ſtriata fundo luteo.* A Flambant, differing from the Dutcheſs, this having no ſuch great yellow edge, but ſtreaks of yellow thro' the Leaf, unto the very edge.

LIV. 40. *Mali Aurantij coloris, ex rubore, & Flavedine integre, non ſeparatim mixta, oris luteis parvis,* vel *abſque oris.* The Orange colored, which is a reddiſh yellow, or red and yellow equally mixed, with ſmall yellow edges, and ſometimes without yellow edging.

LV. 41. *Minij, ſive Cinnabaris coloris, quæ ex purpurea rubedine, & Flavedine radiata, unguibus luteis, & aliquando oris.* A Minium, Cinnabar, *or* Vermilion colored Flower, which is a purpliſh red ſtreamed with yellow, the bottom yellow, and ſometimes the edges.

LVI. 42. *Rex Tuliparum, quæ ex Sanguineo & Aureo radiatim mixta, à Flammea diverſa, fundo luteo, orbe rubro.* The King Flower, which is a Crimſon, *or* Blood-red, ſtreamed with a Gold yellow, differing from the *Flambant*; the bottom yellow circled with red.

LVII. 43. *Tunica Morionis, quæ ex rubore & aureo ſeparatim diviſa.* The Fools Coat, which is parted with red and yellow Guards.

Tulipa Præcox Lutea; The Early Yellow Tulip.

LVIII. 44. *Lutea Aurea ſive Flava Aurea intenſa.* A fair Gold Yellow without mixture.

LIX. 45. *Pallida Lutea, ſive Straminea.* A pale yellow, *or* Cream color, *or* Straw color.

LX. 46. *Aurea, oris rubicundis.* A fair Gold yellow, with Rubicund, or reddiſh edges.

LXI. 47. *Straminea oris rubris.* A Straw color with red edges.

LXII. 48. *Aurea, rubore perfuſa extra.* A fair Gold color, being reddiſh on the outſide only.

LXIII. 49. *Aurea,* vel *magis pallida, rubore in Gyrum acta ſimillima Duciſſæ, niſi minus rubedinis habet.* A paler Gold yellow, circled on the inſide with a little red, very like the *Dutcheſs*, but that it has leſs red therein.

LXIV. 50. *Aurea, rubris extremitatibus dici poteſt, Morionis Pilæus Præcox.* A Gold yellow with red Tops, and may be called the early *Fools Cap.*

Tulipæ Præcoces: OR, Early Tulips, according to Mr. *R E A.*

LXV. 1. *Admiral Crinki.* It is in all reſpects like the *Corn Heart*, but more conſtantly well marked with white.

LXVI. 2. *Admiral Encuſen.* It has a weak Stalk and ſmall Flower, with ſharp pointed Leaves, tipt with Crimſon, and Feather'd with white; the bottom white, with pale yellow Nails and Chives.

LXVII. 3. *Aurora*, or *Grenſeg.* This is another good Flower, of a rich Carnation color; well ſtriped and marked with white; the bottom and Chives of a pale yellow.

LXVIII. 4. *Aurora van Bart.* It is a well formed early Flower, variably marked with red and white, and much eſteemed; the bottom and Chives of a pale yellow.

LXIX. 5. *Alcetus.* It is one of the laſt of the early Tulips, and well eſteemed; the Leaves are narrow, of a very good purple color, well ſtriped with Snow white; the bottom and Chives of a blew Purple.

LXX. 6. *Bonaventura.* It is a very good early Tulip.

LXXI. 7. *Brandenburgh.* It is a middle ſiz'd Flower, the tops of the Leaves of a Peaſe Bloſſom color, and the ſides from the middle to the bottom, white with yellow Chives.

LXXII. 8. *Brun Moreſco.* It is a pretty pleaſing early Tulip, and by ſome much eſteemed.

LXXIII. 9. *Citus Præcox.* It is another early Tulip, of good account.

LXXIV. 10. *Corn Heart.* It is a ſmall low Flower, Carnation ſtriped, and marked with white, but ſeldom enough white; the bottom and Chives of a pale yellow, as in moſt of the early Tulips.

LXXV. 11. *Cleremont.* In the manner of its growing, it is like the *Religious*, the Stalk ſtrong, and the Flower large; ſometimes prettily marked with deep Carnation and white, the bottom and Chives both yellow.

LXXVI. 12. *Cleremont Paragon.* In the manner of its growing, it is like the laſt, but much a better Flower, more conſtantly marked with white, upon a bright blewiſh Carnation; this is more eſteemed than the former, by all that have both Kinds; for tho' the firſt be in many Hands, this is not truly ſo; for it is a Trick much uſed by thoſe that Sell Flowers about *London*, to add *Paragon* to the Name of any common Flower, when it comes well marked, and then impoſe a treble Price.

LXXVII. 13. *Climene.* It is a pretty pleaſing early Tulip.

LXXVIII. 14. *Doſs de Chamoy.* Another good early Tulip, well marked.

LXXIX. 15. *Dorade.* It is an early Tulip, and by ſome much eſteemed.

LXXX. 16. *Dutcheſs Brancion.* It is a fair large Flower, with long, round pointed Leaves, of a deep ſhining Scarlet color, with deep Butter colored edges; the bottom large, round, and pale yellow, with chives of the ſame color.

LXXXI. 17. *Everſwind.* It is both Purple and white, a very pleaſing early Flower.

LXXXII. 18. *Early Perfect.* It grows ſomething taller than the *Aurora*, or *Grenſeg*; the Flower fine Crimſon and white.

LXXXIII 19. *Fair*

LXXXIII. 19. *Fair Anne.* It is an upright Flower, in ſhape like the *Clerimont*, with round pointed Leaves, marked with great Flakes of white, and Claret-Wine color; the bottom white, with pale yellow Chives.

LXXXIV. 20. *Floriſante.* It is a low Flower, moſt of a pale Horſe-Fleſh color, finely variegated and marked, with ſome Crimſon, and at firſt pale yellow, which after turns white. It is a little apt to run, that is, in one or two hot Days to ſlubber its Colors, and run one into the other, which takes away the Beauty of the Flower. The bottom and Chives are both blew.

LXXXV. 21. *General Briancion.* It is a ſtrong upright Flower, of a bright Scarlet color, with even and well parted Butter colored edges, which, before the Leaves fall, turn white; the bottom is of the color of the edges, and the Chives purple.

LXXXVI. 22. *General Duke.* It Flowers later than the *Winter Duke*, and is a fairer and better Flower, of a bright red, or Cherry color, with large and well divided yellow edges; the bottom and Chives like thoſe of the *Winter Duke*. There are ſeveral ſorts of *Dukes*, ſome deeper, others paler, but they are all red with yellow edges; of which this and the *Winter Duke* are eſteemed the beſt.

LXXXVII. 23. *General Molſwick.* It is of the ſame Family with the *Admiral Crinki*, or *Corn Heart*, and of the ſame colors, but much better marked than either of them.

LXXXVIII. 24. *Galatea.* It is a fine Flower, of a bright Gredeline color, ſtriped with white; the bottom and Chives of a pale yellow.

LXXXIX. 25. *Gilden Bicom Brentel*, and *Gilden Bloom Sconic.* They may for Variety be entertained, being both large Flowers of pale red colors, with ſome large Stripes of a Gold color thro' the Leaves; the bottoms and Chives of both are yellow.

XC. 26 *Lac Verine.* It is an early Flower, and accounted amongſt the beſt edgers; of a fine blewiſh red color, with large and well parted pure white edges; the bottom and Chives a pale yellow.

XCI. 27. *Maria.* It is a pretty pleaſing Flower, of a pale Gredeline color, well ſtriped and marked with white, the bottom and Chives of a pale yellow.

XCII. 28. *Marqueſs.* It is a Flower of ſmall Beauty, reſpected only for the ſtrangeneſs of its colors, which in this are ſad Horſe-Fleſh, dark yellow, and ſome ſmall Veins of red, confuſedly placed; the bottom and Chives are both yellow.

XCIII. 29. *Morillion Cramoſine.* It is an excellent Flower, much more eſteemed than many others, of a fine bright Crimſon, and pure White; finely ſtriped, ſpotted, and well parted; the bottom and Chives of a pale yellow.

XCIV. 30. *The Noble.* It has Flowers much better marked with Crimſon and White, in bearing off Sets and young Roots, than in the old; whoſe Flowers (tho larger,) are little marked with white, ſcarce appearing to be the Parents of ſuch Beautiful Children; the bottom and Chives are both of a pale yellow.

XCV. 31. *Nonſuch Petits.* It is of the Size and Faſhion of the *Brandenburgh.* The Flower is of a pale bluſh almoſt white, prettily marked with many ſmall Stripes, and Specks of *Orange Tawney*; the bottom and Chives of a pale yellow.

XCVI. 32. *The Omen.* It is the laſt Flower of any of the *Præcoces*; has a ſtrong upright Stalk, a fair Flower, large and well formed, of a pale *Roſe* color, with many Veins and marks of Crimſon, circling and guarding, and great Stripes of white. The bottom and Chives are both blew, which is ſeldom found in a *Præcox*.

XCVII. 33. *Paragon Incarn.* It is a pretty pleaſing early *Tulip*.

XCVIII. 34. *Paragon Grebberi.* It is a fine early Flower, very well ſhaped upon Carnation with white; the bottom and Chives are of a pale yellow.

XCIX. 35. *Pale van Leyden.* It ought to be the firſt of the feathered and variegated kinds, in reſpect of Antiquity and Colors, which are red and yellow. In the younger Roots well placed, feathered and ſtriped; but commonly the Flowers of the older Roots are more yellow than red, and often all yellow, as the bottoms and Chives are.

C. 36. *Periſlet.* It is a ſtrong Flower, of a fair ſhining blewiſh red color, ſometimes well marked, with greater and leſſer Stripes of white throughout every Leaf: But if the red has the Maſtery, it will quickly run all over the Flower. The bottom is white, and the Chives are yellow.

CI. 37 *Pretty Betty.* It is a good *Edger*; the Flower is of a bright Crimſon, with pale Butter colored edges, which ſoon turn white. It has a Star-pointed bottom, of the color of the edges, and blew Chives.

CII. 38. *Princeſs.* It is ſomething like the *Periſlet*, but of a more blewiſh red color; ſometimes well ſtriped and feathered with white. The bottom and Chives are of a pale yellow.

CIII. 39. *Religious.* It is a ſtrong healthy Flower, of a dark red color, with many ſmall Stripes of white, but commonly the red has the Maſtery; and if the Seaſon be hot, will ſoon run over the white. The bottom is of a pale yellow, and the Chives of a dulky brown.

CIV. 40. *Retrocede.* It is an early *Tulip*, but of no extraordinary account.

CV. 41. *Superintendent.* It is a Flower of good account, riſes higher than ordinarily others do; the Flower is fair and large, excellently marked with Violet, Purple and good White: the bottom and Chives being of a pale yellow.

CVI. 42. *Ugenia.* It is a good, but common early *Tulip*.

CVII. 43. *Venetian.* It is another early *Tulip*, but more eſteemed than the former.

CVIII. 44. *Vice-Roy.* It is an old Flower, of a Violet Purple color, edged, feathered, and ſtriped with white: the bottom and Chives of a greeniſh yellow. They often add *Paragon* to the Name of this Flower, as if it were a diſtinct Kind; when it is but the ſame better marked than uſual.

CIX. 45. *Violet Ratgans.* It is a reaſonable tall Flower, with a woolly Stalk, and ſharp pointed Leaves, of a Violet Purple color, with large Snow white edges. The bottom and Chives both yellow.

CX. 46. *Violet de Remeu.* It grows taller than the laſt, with a ſmooth Stalk, and a fair large Flower, of a Rich Violet Purple color, with large and well divided Snow white edges, a white bottom, and black Chives.

CXI. 47. *Unique of Delf.* It is a pretty pleaſing early *Tulip*.

CXII. 48. *Witten-Root Hodie.* It is another good ſort of early *Tulip*.

CXIII. 49. *Winter-Duke.* It is ſo called, in reſpect that it Flowers commonly in Winter, that is in *February*, or before the Tenth of *March*; at which time the Spring begins. It has a very low Stalk, and bears a ſhort Leav'd Flower, of a deep red color, with large yellow edges, a round yellow bottom, and brown Chives.

II. TULIPÆ MEDIÆ, *Middle Flowering* Tulips.

First from Mr. *PARKINSON*.

CXIV. *Tulipæ Mediæ*, the *Middle Flowering Tulips*. These begin to Flower about a Month after the *Early Tulips*; yet some longer after, and some sooner: And in the variety of the colors of the *Mediæ*, such Mixtures and Varieties are to be observed, which can never be seen in the *Præcoces*; as there are some in the *Præcoces*, which are not in the *Mediæ*. But the Varieties in the *Mediæ* are far greater, which chiefly happens from the Sowing of the Seed; for which Reason, it is very difficult for any one to come to the Knowledge of all their Distinctions; but the most remarkable are these following.

Tulipæ Mediæ albæ: The mean Flowering White Tulips.

CXV. 1. *Nivea, fundo albo vel luteo.* The Snow white *Tulip*, with a white or yellow bottom.

CXVI. 2. *Argentea, quasi alba cineracea fundo lutescente, purpureis Staminibus.* Silver colored, which is a very pale or whitish Ash color, with a yellowish bottom, and purple Chives.

CXVII. 3. *Margaritina alba, carneo dilutissima.* Pearl colored with a diluted blush.

CXVIII. 4. *Alba, fundo cæruleo* vel *nigro.* A white with a blew *or* black bottom.

CXIX. 5. *Albida.* Cream colored, or light Straw colored.

CXX. 6. *Alba oris Rubris.* A white with Red edges.

CXXI. 7. *Alba oris Purpureis.* A white with Purple edges.

CXXII. 8. *Alba oris Coccineis.* A white with Crimson edges. These three last sorts do hold their Edges constant in some, but well spread in others.

CXXIII. 9. *Albida primum, deinde abidior, oris Purpureis, & venis intrò respicientibus: nobis dicta Hackquenay.* A pale or whitish yellow, which after a few Days grows more white, with Purplish red edges, and some Streaks running inwards from the edges, which we call an *Hackney-Tulip*.

CXXIV. 10. *Alba, colore Sanguineo variata, fundo albissimo vel alio.* White, mixed with a Blood-red color very variably; the bottom either of a pure white, or some other color.

CXXV. 11. *Alba, radiatim disposita Flammis, & Maculis Coccineis.* A White streamed with Crimson Flames and Spots, throughout the whole Flower.

CXXVI. 12. *Alba, Purpurea rubedine plumata, diversarum specierum, quæ cum superiore, vel albo, vel luteo, vel parvo cæruleo constant fundo*, &c. A White plumed or speckled with a reddish Purple, more or less, of divers sorts, with white, yellow, or blew bottoms; all which do hold their Marks constant, and do not spread their colors, but shew fairer after they have stood Blown three or four Days.

CXXVII. 13. *Panni Argentei coloris, quæ alba plumata, punctata, striata, vel diversimodè variata, rubedine dilutiore, vel saturatiore purpurea, interius vel exterius, vel utrinque diversarum specierum.* Cloth of Silver color of divers sorts, that is a white feathered, spotted, striped, or otherwise marked with red or purple, in some paler, in some deeper, either on the inside, or on the outside, or on both.

CXXVIII. 14. *Tunica Morionis alba varia, quæ ex albo & purpureo striata diversimodè, fundo albo vel alio.* A white Fools Coat of divers sorts, that is of Purple, or pale Crimson and White, as it were empaled together, either with a white bottom, or some other color, of which there is great variety.

CXXIX. 15. *Holias alba vel albida, absque fundo, vel fundo Purpureo cæruleo, vel cæruleo albo circundato, diversè signata, vel variata intus ad medietatem foliorum, sursum in orbem at plurimum, vel ad oras pertingens amplas & albas.* A white Holias, that is a fair white or paler white, either without a bottom, or with a blewish purple bottom, or blew and white circling the bottom, and from the middle upwards speckled, and straked on the inside for the most part with Blood-red, or purplish Spots and Lines, unto the very edges, which abide large and white. Of this Kind there are found very great Varieties, not easily to be expressed.

Tulipæ Mediæ Purpureæ; Mean Flowering Purple Tulips.

CXXX. 16. *Purpurea Satura.* A fair deep *Purple Tulip*,

CXXXI. 17. *Purpurea dilutior, diversarum specierum, quarum Rosea una, Carnea sit altera.* A paler Purple of many sorts, of which a Rose color is one, a Blush color another.

CXXXII. 18. *Persici coloris, duarum aut trium specierum.* A Peach colored, which is of two or three sorts.

CXXXIII. 19. *Chermesina, obscura aut pallida.* A Crimson colored, which is either deep, dull and obscure, or pale colored.

CXXXIV. 20. *Stamela, intensior aut remissior.* A Stamel colored, which is either more dark or deep, or else more cheerful and light.

CXXXV. 21. *Xerampelina.* A Murrey, which is a dark brown or Dun red color.

CXXXVI. 22. *Purpurea Striata.* Purple colored, Striped and Spotted.

CXXXVII. 23. *Persici Saturi, vel diluti coloris, undulata, vel radiata.* Peach colored, deeper or paler, waved, and radiated or striped.

CXXXVIII. 24. *Columbina, oris & radijs albis.* Dove colored, edged and radiated, or straked with white.

CXXXIX. 25. *Purpurea rubra, oris albis, similis Præcoci, Princeps dicta.* A fair red Purple colored with white edges, like to the *Early Tulip*, called the *Prince*.

CXL. 26. *Chermesina, vel Helvola, Lineis albis in Medio, & versus oras, fundo cæruleo, vel albo, itemque albo orbe.* A fair Crimson, or Claret-Wine color with white Lines, both in the middle and towards the edges; most have a blew bottom, yet some are white, or circled with white.

CXLI. 27. *Purpurea remissior aut intensior, oris albis, parvis aut magnis, ut in Principe Præcoci; fundo vel cæruleo, orbe alba, vel orbe alba cæruleoamplo.* Purpled light or deep, with white edges,

edges, greater or ſmaller, like the *Early Prince*, the bottom either blew, circled with white; or White circled with a large blew.

CXLII. 28. *Holias vel Helvola, Sanguineis guttis intus à medio ſurſum in orbem, fundo cæruleo.* A Purple Holias, of a pale Claret-color, marked and ſpotted with Blood-red Spots, round about the middle of each Leaf, upwards on the inſide only, the bottom being blew.

CXLIII. 29. *Tunica Morionis purpurea rubra ſatura, albido ſtriata, quam in alba ſaturatior, fundo ex cæruleo & albo.* A Fools Coat, dark Crimſon and pale White, empaled together differing from the white *Fools Coat*, the bottom blew and white.

CXLIV. 30. *Purpurea rubra ſatura vel dilutа, albo, vel albedine, punctata vel ſtriata diverſimodè; Caryophyllata dicta.* A Purple colored deeper or paler, ſpotted or ſtriped with a purer or paler white, of divers ſorts, called the *Gilliflower-Tulip.*

Tulipæ Mediæ Rubræ: Mean Flowering Red Tulips.

CXLV. 31. *Rubra communis, fundo luteo vel nigro.* The common fair red colored, with a yellow or black bottom.

CXLVI. 32. *Mali Aurantii coloris,* A *Tulip* of a deep Orange color.

CXLVII. 33. *Cinnabaris coloris.* A Cinnabar or Vermillion colored *Tulip.*

CXLVIII. 34. *Lateritii coloris.* A *Tulip* of a pale dull red, or of a Brick color.

CXLIX. 35. *Rubra luteo aſperſa.* A Grede-line, or red ſprinkled and mixed with yellow.

CL. 36. *Teſtamentum Brancion, rubra ſatura, oris palladis, diverſarum ſpecierum, rubore variantium, & orarum amplitudine.* Brancion Teſtament of divers ſorts, differing both in the deepneſs of the red, and largeneſs of the pale colored edges.

CLI. 37. *Rubra oris luteis.* A red *Tulip* with ſmall yellow edges.

CLII. 38. *Cinnabaris radiata, magis aut minus Serotina.* A Vermilion irradiated or flamed, later or earlier Flowering.

CLIII. 39. *Rubra purpuraſcens obſoleta, foliis exterioribus, perfuſa luteo intus, oris pallidis luteis.* A dead Purpliſh red without, or on the outward Leaves, and of a yellowiſh red within, with pale yellow edges.

CLIV. 40. *Rubra purpuraſcens elegans extra, & intus luteſcens, oris pallidis luteis, fundo luteo vel viridi.* A bright Crimſon red on the outſide, more yellowiſh on the inſide, with pale yellow edges, and a yellow or green bottom.

CLV. 41. *Rubra flambans coccinea, crebris maculis, abſque fundo.* A red flambant, ſpotted thick with yellow Spots, without any bottom.

CLVI. 42. *Rubra flambans elegantior, quæ radiis luteis, intercurſantibus ruborem.* A more excellent red Flambant, with Flames of yellow running through the red.

CLVII. 43. *Flambans remiſſior, utroque colore.* A more pale colored Flambant in each color.

CLVIII. 44. *Panni Aurei coloris.* A Cloth of Gold colored *Tulip.*

CLIX. 45. *Tunica Morionis verior, ſeu Palto du ſol; optima teniis amplis amœnis & crebris, ex rubro & flavo ſeparatim diviſis & excurrentibus, Flos conſtans.* A true Fools Coat; the beſt of which is a fair red, and a fair yellow, parted into Guards, every one a part; varied through every Leaf to the very edge, yet in moſt abiding conſtant.

CLX. 46. *Tunica Morionis altera, tenuibus rubris & minus frequentibus, magis aut minus a aliis inconſtans.* Another Fools Coat, not ſo fairly marked, nor ſo much, ſome of which are more or leſs conſtant in their Marks, and ſome more variable than others

CLXI. 47. *Tunica Morionis pallida, quæ tenuibus vel ſtriis frequentibus in alt[illegible] pallidis, Flos eſt conſtans & elegans.* A pale Fools Coat, which has many Guards or Stripes with red and yellow, which are both pale, and is a conſtant and fair Flower

CLXII. 48. *Pileus Morionis, radiis latis, in medio foliorum latis, per ruborem excurrentibus, fundo luteo, apicibus luteis, extrubris, vel abſque oris.* Fools Cap with yellow Stripes, which are broad in the middle of the Leaves, the red running quite through the Leaf, with a yellow bottom and yellow Chives; the three outward Leaves being yellow, with red edges or without.

CLXIII. 49. *Le Suiſe, tenuis radiata magnis, ex rubore & pallore.* A Swiſs radiated with a fair red, and pale white, or Straw color.

CLXIV. 50. *Suiſe Goliah, dicta à Floris magnitudine, tenuis radiata, ſimillima Le Suiſſe, niſi rubor & albedo ſint elegantiores.* The Swiſs Goliah, ſo called from the bigneſs of the Flower, moſt like to the former *Swiſs*, in the ſtreaming or radiated Guards, but that the red and white is more lively.

CLXV. 51. *Holias rubra, quæ Sanguinea Argenteis radiis & guttis in orbem diſpoſitis, præſertim interiùs, fundo viridi ſaturo.* A red Holias, which is a Blood-red, ſtriped with Silver white Veins and Spots, with a dark green bottom.

CLXVI. 52. *Holias Coccinea, rubra Coccinea, albo radiata in orbem, Circa medium foliorum interiùs, fundo albo.* A crimſon Holias, which is a fair Purpliſh red, ſpotted with white circle-wiſe about the middle of the inner Leaves, with a white bottom.

CLXVII. 53. *Alia huic ſimilis, fundo albo & Cæruleo.* Another like thereunto, with a blew and white bottom.

Tulipæ Mediæ Luteæ: Mean Flowering Yellow Tulips.

CLXVIII. 54. *Lutea, ſive Aurea vulgaris.* The common yellow, or Gold colored *Tulip.*

CLXIX. 55. *Straminea.* The Straw-like, or Cream colored.

CLXX. 56. *Sulphurea.* Sulphur colored, or pale yellowiſh green.

CLXXI. 57. *Mali Aurantij pallidi coloris.* Pale Orange colored.

CLXXII. 58. *Lutea dilutè Purpurea Striata, Aurei Panni pallidi inſtar.* A yellow, palely purple ſtreaked, or pale Cloth of Gold color.

CLXXIII. 59. *Lutea pallidè Fuſcedine Adumbrata.* A Cream or Cuſtard colored pale yellow, ſhadowed over with a brown.

CLXXIV. 60. *Flava oris rubris magnis, aut parvis.* A gold yellow with red edges, greater or leſſer.

CLXXV. 61. *Straminea oris rubris magnis intenſis, vel parvis remiſſis.* A Straw color, with deeper or paler red edges, great or ſmall.

CLXXVI. 62. *Obſcura & Fuliginoſa lutea, inſtar*

ſtar folij decidui, ideoque folium Mortuum appellatur. A Sullen or Smoaky yellow, like a dead fallen Leaf, and therefore called the *Dead Leaf.*

CLXXVII. 63. *Flava, rubore perfuſa, etiamque Striata per totum dorſo Coccineo, oris palladis.* A yellow ſhaded with red, and ſtriped alſo thro' all the Leaves, the back-ſides of them being of a Crimſon, and the edges pale.

CLXXVIII. 64. *Lutea pallidè perfuſa, magisque aut minus rubore ſtriata, fundo vel luteo vel viridi.* A pale yellow, ſhaded and ſtriped with red, in ſome more, in ſome leſs, the bottom being either yellow or green.

CLXXIX. 65. *Teſtamentum* Cluſij; *quæ lutea pallida fuligine obfuſca, exteriùs & interiùs, ad oras uſque pallidas, per totum vero Floris Medium, maculis interiùs aſperſa.* Cluſius's Teſtament, which is a ſhadowed pale yellow, both within and without, with pale yellow edges, and ſpotted round about the middle on the inſide, as all other *Holia*'s are; the back of the Leaves being more obſcure, or ſhaded with pale yellow, with a green bottom.

CLXXX. 66. *Flambans lutea, diverſimodè intus magis aut minus ſtriata, vel in aliis extra maculate rubore, fundo at plurimum nigro, vel in aliis luteo.* A yellow Flambant of divers ſorts, in which the whole Flower more or leſs, is ſtreamed or ſpotted on the inſide; and in ſome, on the outſide with red, the bottom in moſt being black, yet in ſome yellow.

CLXXXI. 67. *Flambans pallidior & elegantior.* A paler yellow Flambant, but more fair or Beautiful.

CLXXXII. 68. *Holias lutea intenſior & remiſſior diverſimodè, in orbem radiata interiùs, rubris maculis ad ſupremas uſque oras, aliquoties crebrè alias parce, fundo viridi, vel tanetto obſcuro.* A yellow Holias, paler or deeper yellow, very variable, ſpotted on the inſide round about the middle with red, ſometimes more plentifully, ſometimes more ſparingly, with a green or dark tawny bottom.

CLXXXIII. 69. *Holias Straminea, rubore ſtriata & punctata, inſtar Holias alba.* An Holias Straw colored, ſtreamed and ſpotted with red, like as in the *White Holias.*

CLXXXIV. 70. *Tunica Morionis lutea, aliis dicta Flammea, in qua color, Flavus magis & conſpicuus rubore, diverſimodè radiata.* The yellow Fools Coat, of ſome called a Flame color, in which the yellow is more than the red, diverſly ſtreamed.

Tulipæ Mediæ Virides: Mean Flowering Green Tulips.

CLXXXV. 71. *Prima Viridis intenſior, cujus Flos ſemper ferè, Semiclauſus manet Staminibus fimbriatis.* The firſt of a deep Green, having a great Flower, yet ſeldom opening it ſelf, but abiding always almoſt half ſhut up and cloſed, the chives being as it were feathered.

CLXXXVI. 72. *Altera remiſſior, inſtar Pſittaci pennarum Viridium, luteo variata oris albis.* Another of a paler or yellowiſh Green, feathered with yellow, and is called the *Parrot* with white edges.

CLXXXVII. 73. *Tertia ad huc dilutiori viridate oris purpureis.* The third of a more yellowiſh green, with red or purpliſh edges.

CLXXXVIII. 74. *Quarta cujus folia æqualiter Purpurea diluta, & Viridate diverſa ſunt.* A fourth, which has the Leaves of the Flower equally almoſt parted, with green and a light Purple color, which abiding a long time in Flower, grows in time to be much fairer marked; ſome call it a *Green Swiſſer.*

CLXXXIX. 75. *Quinta, foliis longiſſimis Stellæmodo expanſis, ex rubore & Viridate coalta.* A Fifth, which has the longeſt Leaves, ſtanding like a Star, conſiſting of a mixed Green and Purple color.

Tulipæ Mediæ: Mean Flowering Tulips,

ACCORDING TO

Mr. *JOHN REA.*

CXC. 1. *Agat Marine.* When it comes well, it is a pretty Flower, of a dark reddiſh color, variably marked with ſad *Iſabella* and Straw color; the bottom and chives a dark Purple.

CXCI. 2. *Agat Robine.* It is a long Leav'd old Flower, of a ſullen reddiſh color, with ſome Flakes and Marks of an over-worn Dove color, with a whitiſh bottom and black chives.

CXCII. 3. *Agat de Gorier.* A pleaſant good Flower, of a Purple color, mixed with white.

CXCIII. 4. *Agat Bizar.* It is a deep Orange, light Fleſh color, and pale yellow, with a greeniſh bottom and black chives.

CXCIV. 5. *Agat Picot.* It is a large Flower, well marked with a pale Roſe color, ſome crimſon and white; the bottom and chives blew.

CXCV. 6. *Agat Robine Paragon*, or *Robinet.* It is like the *Agat Robine*, but much better, of the ſame ſad red color; often well marked with Dove color, crimſon and white; the bottom white, and chives black.

CXCVI. 7. *Agat White.* It is like the laſt, but a leſſer Flower, Dove color, well marked with deep red, inclining to murry and white; the bottom and chives blew.

CXCVII. 8. *Agat Rampard.* It is a fine Flower, of a heavy ſad *Iſabella* color, with ſome marks of Rich crimſon, and great Stripes of yellow, a dark bottom, with large black chives.

CXCVIII. 9. *Agat Gekeire.* It is a low Flower, with long, narrow, ſharp pointed Leaves, of a color between Horſe-Fleſh and *Iſabella*, a little ſtriped with white, blew bottom, and large Purple chives.

CXCIX. 10. *Agat Royal.* It is a beautiful Flower, ſtriped, agatted, and variouſly marked with Roſe color, deep crimſon, and fine white; the bottom and chives Purple.

CC. 11. *Agat Oriental.* It is a good Flower, finely marked with Roſe color, Gredeline, ſome crimſon and white, the bottom and chives Purple.

CCI. 12. *Agat Port Vin*, or *Paſs Cittadel.* It is an old Flower, with narrow ſharp pointed Leaves, of a pale Gredeline, and Murry purple, ſometimes Agatted, Veined and marked with white, the bottom and chives blew.

CCII. 13. *Agat Hammer.* It is a beautiful Flower of three good colors, pale Gredeline, deep Scarlet, and pure White; commonly well parted, ſtriped, agatted, and exceedingly well placed, abiding conſtant to the laſt, with the bottom and chives blew.

blew. This *Gallant Tulip* has its Name from Sir *Thomas Hanmer*, who firſt brought it into *England*.

CCIII. 14. *Agat Dennis*, or *Argus*. It is of the ſame color with the laſt, and like it in the manner of marking. The chiefeſt difference is, that the Leaves of this are ſharper pointed, and not ſo broad as thoſe; the Gredeline a little redder, and the Scarlet paler; the bottom and chives blew, but much inferior to the former.

CCIV. 15. *Admiral Vander Pooie*. It is of a dark red, inclining to Liver color, feathered and marked with pale yellow, which one hot Day turns white; the bottom and chives white. This is a pleaſing Flower, but runs a little at laſt.

CCV. 16. *Admiral Cataline*. It is an old Flower, of a bright carnation, ſome crimſon, and conſtantly well marked with white.

CCVI. 17. *Admiral of France*. It is like the *Paragon Francoiſe*, in color and manner of marking; but the Leaves of this twine, and do not ſtand round as thoſe of other Flowers. The bottom and chives are blew.

CCVII. 18. *Admiral Heart*. It is a fine Flower, of a good carnation color, deep crimſon, and deep white; the bottom blew, and chives black.

CCVIII. 19. *Admiral de Mans*. It is an old Flower, of a deep red, ſtriped with white, but ſlubbered, and not well parted; beſides it is apt to run: the bottom and chives yellow.

CCIX. 20. *Altes Royal*. It is ſometimes a pretty Flower, of a deep blewiſh red color, marked with ſome light crimſon and white; but when the Red has the Maſtery, it will quickly run over the other colors; the bottom and chives are a dark blew.

CCX. 21. *Ariana*. It was raiſed from the Seed of the *Turgiana*, from which it differs, in that the Leaves are thicker, a purer white from the firſt opening, and very well marked with bigger and leſſer broken Streaks, and Drops of bright crimſon: The chives are Purple.

CCXI. 22. *Anvers Brown*. It is a fair well formed Flower, of a ſad brown purple color, ſtriped and marked with ſome brighter Purple, and more or leſs white; the bottom blew, with dark purple chives.

CCXII. 23. *Anvers Blew*. It is like the laſt, only the colors are brighter, and the Flower commonly better marked.

CCXIII. 24. *Althea*. It is a very good Flower, compoſed of purple and white.

CCXIV. 25. *Amidore*. It is a fine *Tulip*, pale yellow, well marked with dark cinnamon color, and the chives purple.

CCXV. 26. *Amazon*. It is a ſpecious Flower, with many good colors.

CCXVI. 27. *Arch-Duke Imperial*. It is an excellent Flower, compoſed of ſeveral purples and white.

CCXVII. 28. *Arch de Anckre*. It is almoſt like the former, but not ſo noble a Flower.

CCXVIII. 29. *Aurora*. It is of the color of a bright clear Morning, a pale yellow, with ſome very ſmall Streaks of Red, and brown chives.

CCXIX. 30. *Amphitrio*. A fine *Tulip*, compoſed of purple and white.

CCXX. 31. *Auguſtina*. A delicate Flower compoſed of a Violet color and white, variouſly mixed.

CCXXI. 32. *Armiante*. It is a good Flower, flamed with purple and white.

CCXXII. 33. *Bel la Bar*. It is an old Flower, almoſt like the *Blew Turnier*, of the ſame color, but more conſtantly marked with white.

CCXXIII. 34. *Blew Turnier*. It has a Flower in form like *Bess*, the colors are Gredeline, crimſon and white, but very unconſtant, and often little or no white.

CCXXIV. 35. *La Belle*. It is a fine Flower, with variety of colors.

CCXXV. 36. *Brown de Marris*. It is a dull ſad purple, but by ſome much eſteemed.

CCXXVI. 37. *Brown Purple black*. It is a fine Flower, compoſed of ſeveral Purples, but the brown moſt predominant, and marked with white.

CCXXVII. 38. *Bel Brune*. It has a weak Stalk and ſmall Flower, of a good crimſon color, well guarded and ſtriped with pale yellow, which one hot Day turns white; the bottom and chives are a pale yellow.

CXXVIII. 39. *Bel Brune*. It is a fair Flower, of a dark brown crimſon color, well marked, feathered and ſtriped with white. The bottom pale yellow, with large duſty brown chives.

CCXXIX. 40. *Brown George*. It is a large round Flower, thick ſtriped, and powdered with a ſadder and a brighter Cinnamon color, upon a pale yellow with black chives.

CCXXX. 41. *Bien Venu*. It is like the *Pearl* in the faſhion of the Flower, but much better: It is of a pale carnation color, ſtriped and variouſly marked with white; the tops of the Leaves are of a pale fleſh color, and the bottom and chives blew.

CCXXXI. 42. *Bellino*. It is a ſmall weak Stalked Flower, of a blewiſh carnation color, a little marked with white, the bottom and chives blew.

CCXXXII. 43. *Benedictine*. It is a pretty Flower, of a bright carnation color, well marked with white; the bottom and chives are of a dark purple.

CCXXXIII. 44. *Bel Pallas of Paris*. It is a better Flower than the ordinary *Pallas*, is commonly well marked, and ſtriped upon a blewiſh red, with ſome crimſon and more white; the bottom and chives blew.

CCXXXIV. 45. *Brown Purple de Marris*. It is an excellent fair Flower, of a rich ſhining Purple color, and pure white, marked with great Stripes up the middle of the Leaves; the bottom blew, with Purple chives.

CCXXXV. 46. *Brabaſon*. It is of ſeveral ſorts, and all of them fine Flowers, and of ſeveral Purple colors, as *Brabaſon Adrian*, *Brabaſon Hugon*, *Brabaſon Pore*, *Brabaſon Puke*, *Brabaſon Swallins*, & *Brabaſon Petit*; all of them of ſeveral Purples and Whites, much differing from each other in colors, and manner of marking. But the *Petit* as it is the moſt common of them, ſo it is the ſmalleſt, well marked with two Purples and White.

CCXXXVI. 47. *Conſiergi*. It is a *Tulip* adorned with ſeveral Purples, mixed with White variouſly.

CCXXXVII. 48. *Cleomedon*. It is a *Tulip* ariſing from a ſelf color, produced from Seed.

CCXXXVIII. 49. *Clytus*. It is a fine Flower, of a dark yellow color, finely marked with ſmall Lines of Hair color, and dark crimſon, having Purple chives.

CCXXXIX. 50. *The Curle*. It differs from all others in the form of the Flower; for this has the Leaves thick, and curiouſly plaited and curled about the edges; the color is dark yellow, finely marked all over with ſmall Lines of ſad red, or Liver color; the bottom and chives are a Violet Purple.

CCXL. 51. *Charamante*. It is a fine ſort of *Tulip*, variouſly marked, not much unlike to the *Cleomedon*.

CCXLI 52. *Car-*

CCXLI. 52. *Cardinal Flambant.* It is of a pale Scarlet color, well marked with white; the Flower is ſhort and handſom, and its bottom and chives are blew.

CCXLII. 53. *Cardinal.* It is a low Flower, of a deep dark red color, ſometimes feathered with white, and often all red. Some of them are rectified, and come much better marked, the bottom and chives blew.

CCXLIII. 54. *Clelia.* It is a fine Flower, variouſly colored, ariſing from Seed.

CCXLIV. 55. *Cardinal Prince.* It is a large long Leav'd Flower, well marked with Fleſh color, crimſon and white, the bottom and chives blew

CCXLV. 56. *Camusetta.* It is a fair large Flower, apt to be known by the green Leaves, which are large, and full of whitiſh Spots. It has large Leaves, well Veined, ſtriped and marked, eſpecially on the inſides, with carnation, ſome gredeline, and much white; the bottom (by the well marking of the Flower,) is commonly white, and the chives blew.

CCXLVI. 57. *Chimney-Sweeper.* It is a low ſhort Leav'd round Flower, of a blackiſh dark red color, with a large round whitiſh bottom, and pale yellow chives. Some of theſe will happen to be Striped, with more or leſs white, and then they are called the *Striped Chimney-Sweeper.*

CCXLVII. 58. *Cedo Nulli.* It is of near Affinity with the *Zeabloom Royal*, but much a better Flower, of a good blewiſh carnation color, well marked and variegated with crimſon, ſome gredeline and good white. Of this there are two or three ſorts, but the beſt has more white, and is not apt to run as the others are; the bottom and chives are blew.

CCXLVIII. 59. *Carthago.* It is ſomething like the *Dorile*, but much a better Flower, of the ſame bright blewiſh carnation color, varied and ſtriped with good white; the bottom and chives blew.

CCXLIX. 60. *Carolus.* It is an excellent Flower, elegantly marked and ſtriped with ſhades of Murry, Purple, and pure White, through every Leaf thereof; the bottom blew, and the chives purple.

CCL. 61. *Cataline Brown Purple.* It is like to the *Otter* in the faſhion of the Flower, but of a better brown purple color, feather'd, and ſtriped up the ſides and middle of the Leaves, with large Liſts of white; the bottom and chives purple.

CCLI. 62. *Dantile de Flure.* It is of a pale Roſe color, prettily Leaved, marked and ſpotted with white; the bottom and chives yellow: This is a pleaſant Flower, but runs a little at laſt.

CCLII. 63. *Dorile.* It is a handſom Flower, of a blewiſh bright carnation, varied and ſtriped with good white; the bottom blew, and the chives purple.

CCLIII. 64. *Diana.* It is of ſeveral ſorts, the beſt is called *Bella Diana*, which is a good Flower of a bright blewiſh carnation, varied, ſtriped, and well marked with deep Red and pure White, throughout every Leaf, with a blewiſh bottom and purple chives.

CCLIV. 65. *Dianea.* A *Tulip* raiſed from the Seed of the *Diana*, from which it differs, in that the Leaves are edged, and finely whipped about with a deep brown Purple, and feather'd in the middle, with the ſame color upon Snow white; the chives dark blew.

CCLV. 66. *Doria Diſpute.* It is a kind of *Diana*, the Flower is like the *Dorile*, but commonly better marked, and ſtriped with ſmall Lines of deep Red and Snow white; the bottom and chives like thoſe of the *Diana.*

CCLVI. 67. *Deeſſe.* It is of the Family of the *Widows*, and formerly eſteemed. Of this we have two ſorts, the beſt is a good deep Purple, well ſtriped and feathered, thro' every Leaf thereof with white. The other is a leſſer Flower, the Leaves narrow and ſharp pointed, not ſo well marked as the former: the bottom and chives of both like thoſe of the *Widows.*

CCLVII. 68. *Dorothy of Holland.* It is a good Flower of a deep brown Purple color, finely whipt about the edges, and well ſtriped and marked with a redder and lighter Purple, and pure White: the bottom and chives Purple. Of this there are two ſorts, but the beſt is called *The North Dorothy.*

CCLVIII. 69. *Envy.* It is a good Flower, of an excellent crimſon color, well marked with good White, eſpecially on the inſide of the Leaves, the bottom and chives both blew.

CCLIX. 70. *Eſtoile.* It is a pretty Flower, compoſed of Purple and White.

CCLX. 71. *Eagle.* It is a fair Flower, Peach color, pale gredeline, ſome deep crimſon and pure White; the bottom and chives Purple.

CCLXI. 72. *Eminentiſſime.* It is at firſt a fine Flower, with long ſharp pointed Leaves, well ſtriped with Peach color, carnation and white; the bottom and chives a dark Purple.

CCLXII. 73. *Finette.* It is a delicate crimſon and white.

CCLXIII. 74. *La Fine.* It is an excellent Flower, of a very fine color, from Self-colors, raiſed by Seed.

CCLXIV. 75. *Flanders Widow.* It is a common Flower of a ſad Purple color, and marked towards the bottom with a ſadder Purple and ſome White: Its bottom, (as alſo the bottoms of all the other *Widows*,) is ſmall, and of a greeniſh blew color, with Purple chives.

CCLXV. 76. *Fair Widow.* It differs from the *Good Widow* next following, in that the Flower is ſhorter, more and better ſtriped, and marked with two ſad Purples and a White.

CCLXVI. 77. *Good Widow.* It is in all things like the *Flanders Widow*, but more and better marked with White.

CCLXVII. 78 *Gracious Widow.* It is of the ſame faſhion and color with the other *Widows*, but commonly marked and ſtriped with more White.

CCLXVIII. 79. *General Eſſex.* It is of the ſame colors with the *Prince of Orange*, but not ſo deep an *Orange*, the yellow paler, and more conſtantly well marked. The bottom and chives dark Purple, almoſt black.

CCLXIX. 80. *General Gouda.* It is a large Flower of a bright crimſon color, ſometimes well marked with White, but commonly the Red has the Maſtery: The bottom and chives are both a pale yellow.

CCLXX. 81. *General Sweman.* It is a fair Flower, bright carnation gredeline and white, variably placed, and parted at the tops of the Leaves; the bottom white and chives blew.

CCLXXI. 82. *General of Holland.* It is an old Flower, of a deep blewiſh red color, with great Marks, and ſmall Stripes of White: The bottom and chives blew.

CCLXXII. 83.

CCLXXII. 82. *General Bolefon.* It is a fine Flower, of a blewiſh bright Carnation, purled about the edges, well ſtriped and marked with Crimſon and pure White, which commonly has the Maſtery; the bottom blew, with ſmall black chives.

CCLXXIII. 84. *General Anvers*, or *Brown Duke of Brabant.* It is like the *Blew Anvers*, but better marked with a brown and lighter Purple, and often well ſtriped with White; the bottom blew, with dark Purple chives.

CCLXXIV. 85. *General Bole.* It is a good Flower, of near Affinity with the *Brown Anvers*, the Flower is agatted, ſtriped, and variably marked, with a darker and lighter reddiſh Purple and White, with a blew bottom and Purple chives. It is a tender Flower, and its Root apt to periſh in a hot or over dunged Soil. There are two or three ſorts of it, but the beſt is that called *General Bole Talbon.*

CCLXXV. 86. *Grand Purpur de Book*, or *Paſs Heron.* It is an old Flower, with 3 Leaves ſtanding up like a Herns top, and three turning down, of a Sullen, yet ſhining Purple color, with many ſmall lines of Milk-white; the bottom and chives a pale yellow.

CCLXXVI. 87. *General Richard*, or *Emperor*, or *Sattine.* It is an old Flower, with a tall upright Stalk, and ſhort Leaves, of a pale Carnation color, ſtaked and marked with White, a little apt to run; the bottom and chives yellow.

CCLXXVII. 88. *Hiſpaniolet.* It is a very good Flower, made up of a mixture of ſeveral Purples and White, the Purples deeper, redder, blewer, and very fine.

CCLXXVIII. 89. *Harvey.* It is a large variable Flower, but will ſometimes be of a dark Purpliſh red color, with great Flames of deep ſhining Crimſon, and ſmall ſtripes of White; the bottom and chives of a dark purple.

CCLXXIX. 90. *Holofernes*, or *Goliah.* It is a very tall Flower, marked all over with Shadows of Roſe color and pale yellow; the bottom and chives yellow.

CCLXXX. 91. *Hercules.* It is a Noble fine *Tulip*, large, with variety of good colors, well marked, and embelliſhed with white.

CCLXXXI. 92. *Jacobine.* It is a very good and fine Flower, compoſed of Carnation, Crimſon and White.

CCLXXXII. 93. *Jeronymus Royal*, or *Paragon Jerom.* It is a good Flower, ſtriped and marked with Shades of Purple and good White; the bottom and chives of a dark blew.

CCLXXXIII. 94. *Jaſper Marble.* It is like the *Paſs Bel Tew*, but a fairer and more conſtant Flower, of a brighter Gredeline, agatted and marbled upon white; the bottom blew, with brown duſty chives.

CCLXXXIV. 95. *Jacobea rectified.* It is in colors like the *Admiral de Mans*, but much a better Flower, commonly marked up the middle of the Leaves with a great feathered ſtripe of deep red, the reſt white, the bottom and chives are yellow.

CCLXXXV. 96. *Jaſper Tudart.* It is a larger Flower than the *Tudart*, and of a brighter Red, ſome Dove color and much white; the bottom and chives black.

CCLXXXVI. 97. *King-brown Purple.* It is a fine Flower, of a brown Purple and White, well marked and ſtreaked.

CCLXXXVII. 98. *Lanſcot Bole.* It is a fine Flower, of a bright Carnation color, finely agated and ſtriped with gredeline and white, the bottom and chives blew.

CCLXXXVIII. 99. *La Jeune, or Lady rectified.* It is a pretty low Flower, of a pleaſant Carnation, well marked with White, the bottom and chives of a dark blew.

CCLXXXIX. 100. *La Tanner.* It is a weak Stalked Flower, which when it comes well, has one or two large broken Stripes of a blewiſh red color, through the middle of every Leaf, the reſt white, the bottom blew, and the chives black.

CCXC. 101. *Memorable.* It has a long Leav'd Flower, of a pale Tann'd Leather color, prettily marked with ſad purple, and bright yellow with purple chives.

CCXCI. 102. *Manera.* It is a Flower of a middle ſize, the Leaves ſharp pointed, of a bright Crimſon color, finely ſpotted, and marked with ſmall Stripes, and drops of pale yellow: The bottom and chives Straw color.

CCXCII. 103. *Morillion Navarr.* It is an old Flower, of a light Scarlet color, and Milk-white, ſometimes well marked, but the Leaves are hollow, and at laſt run: the bottom blew, with black chives.

CCXCIII. 104. *Morillion de Anvers.* It is an ordinary low Flower, pale Scarlet, and marked with pale yellow, and runs at laſt.

CCXCIV. 105. *Macarine.* It has long, narrow, ſharp pointed Leaves, of a pale Scarlet color, marked with deeper red, and a white, but unconſtant: the bottom blew, and the chives black.

CCXCV. 106. *Morillion de Argiers.* It is an ordinary Flower, of a blewiſh red color, marked ſomewhat like *General Richard* with white: the bottom and chives pale yellow.

CCXCVI. 107. *Marvel de Quade.* It is of a pale Iſabella color, with many red Spots ſtanding together on the inſide of the Leaves, like unto a Sprig of *Barberries*, and ſometimes a little ſtriped with White: the bottom and chives a dark blew.

CCXCVII. 108. *Morillion Curtus.* It is a large ſtrong thriving Flower, moſt of a Carnation color, a little Crimſon about the edges, and well feathered with White: the bottom and chives of a pale yellow.

CCXCVIII. 109. *Noſte.* It is a valuable Flower, the Leaves are ſharp pointed, and a little twine, finely marked with bright freſh color, deep Scarlet and pale yellow: the bottom and chives black. It uſually puts forth a Bulb or young Root, between the bottom of the Stalk and lower Leaf, by which it is eaſily increaſed.

CCXCIX. 110. *Nonſuch.* It is a fair well colored and marked *Tulip*, both ſpotted and ſtriped with ſome White.

CCC. 111. *Otter*, or *Otho de Mans.* It is a large, tall, old Flower, often containing eight or more Leaves, of a dull heavy Purple color, lifted up on the ſides, and ſometimes feathered through the Leaves with White: the bottom and chives are yellow.

CCCI. 112. *Orient Virgin.* It is a good Flower, pale Scarlet and pure White, well divided in ſmall Marks and Stripes: the bottom and chives both blew.

CCCII. 113. *Paragon Brown Purple.* It is a fine Flower, and well marked and differenced, with brown purple and white.

CCCIII. 114. *Paragon Oudinard.* It is almoſt in all things like the *Paſs Oudinard*, only the colors are brighter, more conſtantly well placed, and in ſome Years will come ſo well marked, that few rich Flowers excel it; the bottom and chives both blew.

CCCIV. 115. *Paragon Francoiſe.* It is a pretty Flower, of a good deep carnation color, well marked with long Stripes of white; the bottom and chives blew.

CCCV. 116. *Paragon Blackburn.* It has a tall Stalk and fair Flower, with broad Leaves, yet ſharp pointed, of a light carnation color, with ſome Marks of deeper red, Flamed and Striped with white; the bottom and chives both blew. It was raiſed from the Seed of the *Paſs Oudinard.*

CCCVI. 117. *Paragon de Gilden.* It is a good Flower, of a fine carnation color, deep crimſon and pure white, well placed and broken. The bottom and chives are blew.

CCCVII. 118. *Paragon Lifgin.* It is an ordinary Flower, a little marbled and ſtriped about the edges, with an *Iſabella* color, and pale yellow, and ſometimes over all the Flower; it has a greeniſh dark bottom, and ſad blew chives.

CCCVIII. 119. *Paragon Floriſon.* It is a good Flower, Leaves ſharp pointed, variably Veined, ſtriped and marked with *Iſabella*, Peach color, and Milk white: bottom blew, chives dark Violet Purple.

CCCIX. 120. *Paragon de Coſta.* It is like the *Jacobea rectified*, but a better Flower, well ſtriped and marked with the ſame deep red color, and good white: the bottom and chives yellow.

CCCX. 121. *Parot.* It is of ſeveral ſorts, ſome all green, unleſs a little whitiſh towards the ſides of the Leaves; others have the Leaves half folded, green in the middle, and the ſides almoſt white: But there is one Noble kind hereof, which is called

CCCXI. 122. *Parot-Noble.* It grows tall and ſtrong, the green Leaves rent in the ſides, the Flower large, and formed ſomething like the laſt, only it has Spurs on the ſides of the Leaves, which are of a dark brown color, and lighter by degrees to the middle, which is of a whitiſh green color, very ſtrange in Faſhion and colors from all others. The bottoms and chives of all the *Parots*, are of a pale greeniſh yellow color.

CCCXII. 123. *Paſs Oudinard.* It is an old Flower of a ſad reddiſh color, ſometimes well marked with brighter Red and Straw color. It is common and unconſtant: the bottom and chives both blew.

CCCXIII. 124. *Paſs Belline.* It differs from the *Belline* chiefly in its colors, which in this are ſome gredeline, ſome carnation, and much white, well placed and parted: the bottom and chives both blew.

CCCXIV. 125. *Paſs Roſie.* It is a fine round Flower, variably marked upon a pale Roſe color, with crimſon, and ſome Veins of Straw color, reſembling a well Water'd *Tabby:* the bottom and chives pale yellow.

CCCXV 126. *Paſs Bell Tew*, or *Numero une.* It is an old Flower, agated and marbled with gredeline and white, but unconſtant: the bottom and chives of a dark blew, duſted with yellow.

CCCXVI. 127. *Paſs Cittadel White.* It is in all things like the *Agat Point Vin*, or *Paſs Cittadel*, but that the white in this Flower has the Maſtery, and therefore much more eſteemed than that.

CCCXVII. 128. *Paſs Zeablom of Paris.* It is the beſt of all the *Zeabloms.* The Flower is fair, of a deep Purple color, very well marked with white: the bottom blew, with dark Purple chives.

CCCXVIII. 129. *Pearl.* It is an old Flower, of a bright carnation color, marked and ſtriped with more or leſs white. The Leaves of the Flower twine, and ſtand different from others. The bottom and chives a pale yellow.

CCCXIX. 130. *Pellican.* When it comes right it is a pretty Flower, of a good carnation color, marked thick with ſmaller and greater Stripes of white: the bottom and chives of a greeniſh dark blew color.

CCCXX. 131. *Pompeza.* It is a fair large Flower, conſtantly well marked with fine light carnation and pure white: the bottom and chives blew.

CCCXXI. 132. *Preſident.* It is a round Glob'd form'd Flower, marked with purpliſh red, lighter and ſadder yellow: the bottom and chives Violet.

CCCXXII. 133. *Preſident Royal.* It is much a better Flower than the former, finely marked with crimſon and white.

CCCXXIII. 134. *Prince of Orange.* It is of a good Orange color, ſtriped with yellow, of which color the bottom and chives are.

CCCXXIV. 135. *Princeſs Royal.* It is a production from the *Flanders Widow*, and differs from it only, in that the Leaves of the ſad Purple Flower are liſted about the ſides with white.

CCCXXV. 136. *Princeſs Turgiana* It is the beſt of all the Species of the *Widows.* It has thin Leaves well marked with two purples, and much white, which commonly has the Maſtery: the bottom and chives are like thoſe of the *Flanders-Widow.*

CCCXXVI. 137. *Pluto.* It is a dark ſullen Flower, of a Sooty Orange color, variably marked with darker and lighter yellow, a ſad greeniſh bottom and blewiſh chives.

CCCXXVII. 138. *Paragon Bembrig*; *Rundelo*; or *Angelica.* It is a large long Leav'd Flower, of a deep reddiſh purple color, flaked and marked with white: the bottom and chives of a dark purple color.

CCCXXVIII. 139. *Paragon Alette.* It is a ſingular good Flower, compoſed with crimſon and white.

CCCXXIX. 140. *Prelate Brown-Purple.* It is a fine Flower, of a brown purple color, well marked with white, and notably differing from others.

CCCXXX. 141. *Portugal Noble.* It is but a ſmall, yet a Noble Flower, finely marked with ſmall Lines of cinnamon color, and pale ſtraw color, with a dark bottom and black chives.

CCCXXXI. 142. *Proteus.* It is a pretty ſmall Flower, well markt with deeper and lighter crimſon and pale yellow: a dark bottom, and Violet purple chives.

CCCXXXII. 143. *Proſerpine.* The tops of its Leaves are of the color of the *Memorable*, yellow towards the ſides, marked and whipt about with a very brown dark Purple. The bottom is yellowiſh, the chives purple.

CCCXXXIII. 144. *Phenix.* It is a fine Flower, ſelf colored, raiſed from Seed, and is of good eſteem.

CCCXXXIV. 145. *Roſilliante.* It is a large Flower, Roſe colored, variably ſpotted and ſtriped with white, which commonly has the Maſtery; the bottom and chives are blew.

CCCXXXV. 146. *Swiſs of Portugal.* It is a tall large long Leav'd Flower, of a Rich crimſon color, with ſome Marks about the edges of the Leaves, of a deep red, ſtriped with great Guards and Liſts of Straw color through every Leaf thereof; with a large round yellow bottom, and Straw colored chives. There are ſeveral ſorts of

Swiſſers,

Swissers, but this is the best, the others being lesser, and not so well colored.

CCCXXXVI. 147. *Semper Augustus.* It was formerly of much esteem, but its Flower is not very large, but well Veined and Striped with deep crimson, and pale yellow. The bottom and chives a dark Violet Purple.

CCCXXXVII. 148. *Susanna.* It is a pleasing delightful Flower, of a comely Form; the colors bright carnation and Snow white, from its first opening, well parted and divided. The bottom white, with pale greenish chives.

CCCXXXVIII. 149. *Star de Mans.* It is a small Flower, with long and very narrow sharp pointed Leaves, at first opening twisted at the ends, which after open and spread flat, is like a Star, with six Points, of a reddish *Isabella* color, striped towards the bottom with white. The bottom and chives are both pale yellow.

CCCXXXIX. 150. *Sigismund.* It is a good Flower, of a crimson color, interspersed with white.

CCCXL. 151. *Tudart*, or *Toundart.* It is like the *Agat Robine*, of a heavy dull reddish color, the Leaves edged with a Smoaky Dove color, and sometimes a little marked with white: the bottom and chives black.

CCCXLI. 152. *Tudart Royal* It is better than the former, the Flower is of a sad red color, whipt about the edges with crimson, and striped with pale yellow. The bottom and chives are black.

CCCXLII. 153. *Triumphant.* It is a smaller Flower than *General Gouda*; the Stalk is weak, and the colors good crimson and white, but very unconstant. The bottom and chives blew.

CCCXLIII. 154. *Turbant.* It is a large round hollow Leav'd Flower, often with eight or more Leaves, of a reddish Peach color, Flamed up the middle and sides with crimson. The bottom blew, with dark brown chives.

CCCXLIV. 155. *Trencontane.* It is Flesh colored, pale yellow, and *Isabella*; the bottom and chives are also a pale yellow.

CCCXLV. 156. *Unick la Croy.* It is a fine Flower, made up with a various Mixture, or interposition of carnation and white.

CCCXLVI. 157. *Vesta.* It has a handsome round Flower, of a deep shining crimson color, variably spread with white; but if the red has the Mastery, it soon runs over the white; the bottom and chives are blew.

CCCXLVII. 158. *Vesta Royal*, or *Nompare.* It is a better and more constant Flower than the last, being carnation, crimson and white. When the Flower marks well, the bottom is white, and the chives blew.

CCCXLVIII. 159. *Violetta.* It is one of the first Blown of the *Mediæ*, and is of a Violet Purple color, sometimes well marked with white. The bottom and chives are a pale yellow.

CCCXLIX. 160. *Velvette*, or *Velvet Tulip.* It is a good Flower, of a deep dark Velvet Purple color, marked with some lighter Purple and white Stripes, especially in the tops of the Leaves. The bottom and chives are black.

CCCL. 161. *Zeablom.* It is of divers sorts, the most ordinary is of a sad blewish red color; sometimes a little marked with white, very unconstant, and apt to run, as most of the *Zeabloms* are; the bottom and chives are a sad purple.

CCCLI. 162. *Zeablom Royal.* It is at first opening a fine Flower, Striped and Veined through every Leaf thereof, with blewish carnation, gredeline and white; but if the Season is hot, it will run, and be flubber'd all over The bottom and chives are both blew.

CCCLII. 163. *Zelinda.* It is a fine pleasing Flower, risen from a Selt-color, and by some much esteemed.

CCCLIII. 164. *Zueeman Garet*, or *Chancier* It is an old Flower of a deep Peach color, chameleted, and striped with red and white. The bottom is blew, and the chives purple.

III. *Of the* SEROTINÆ: OR, *Late Flowering* Tulips.

CCCLIV. These are declared in the *General Description*, so that there is no need of repeating the same things again: and they begin to Flower much about the time when the *Mediæ* are past: The greatest thing in these, is the Mixture of their colors, in which there are no such plentiful Varieties as in the two former sorts. The chief of which, (Flowering from the middle of *May* to the middle of *June*, and sometimes longer,) are these few following.

First from Mr. *PARKINSON.*

CCCLV. 1. *Rosea intensior, aut remissior.* A Rose-colored, deeper or paler.

CCCLVI. 2. *Rubra vulgaris, aut Saturatior, & quasi nigricans fundo luteo vel nigro, vel nigro Orbe, aureo incluso: Oculus Solis dicta.* An ordinary red, or more deep, like black Blood, with a black or yellow bottom, or black circled with yellow, called the *Suns Eye.*

CCCLVII. 3. *Lutea communis.* The common or ordinary yellow *Tulip.*

CCCLVIII. 4. *Lutea oris rubris.* A yellow *Tulip* with red edges.

CCCLIX. 5. *Lutea guttis Sanguineis, fundo nigro, vel vario.* A yellow with red Spots and Veins, the bottom black, or various colored.

Secondly, from Mr. *REA.*

CCCLX. 1. *Agat Romine.* It is an old Flower, most pale Rose colored, sometimes well marked about the edges with crimson, and striped with white.

CCCLXI. 2. *Gresound.* It is a low small Flower, of a dark red color, striped and feathered with pale yellow at first, which after turns white: the bottom and chives both blew.

CCCLXII. 3. *Marbre Harlus.* It is an ordinary Flower, most a Flesh color, marked with *Isabella*, and sometimes a little white: the bottom and chives a dark blew.

CCCLXIII. 4. *Paragon Mullen.* It is a bright carnation, and sometimes well striped with white: the bottom and chives blew.

CCCLXIV. 5. *Pato Madam, yellow Crown, and Crown of France.* It is now a common Flower, of a good full red color, marked and crowned on the tops of the Leaves with good yellow: the bottom and chives are yellow.

CCCLXV. 6. *Prince de la More.* It is a fine Flower, as rare as the former is common, well marked with a deeper and lighter cinnamon color, and pale yellow; with a blew bottom and black chives.

CCCLXVI. 7. *Star of Venus.* It is a large Flower, of a good carnation color, marked and veined with pale yellow at firſt, which after turns white: the bottom and chives both blew.

CCCLXVII. 8. *Tenebris.* It is a large ſtrong Flower, of a dark, deep red color, like that called *De Roy*, with ſmall Veins of Peach color, a ſmall pale yellow bottom, and dark brown chives.

CCCLXVIII. 9. *Tunica Morionis.* It is an inferior kind of the *Pato Madam*, or *yellow Crown.* The Flower is more yellow than red, for which reaſon ſome call it the *Fools Coat*; the bottom and chives are yellow.

CCCLXIX. 10. *Zeablom Serotinæ.* It is a weak Stalked low Flower, of a deep red color, feathered and marked with ſome gredeline at firſt, a pale yellow, which after turns white: the bottom and chives are a dark blew.

CCCLXX. *The Places.* The *Tulip* is an *Aſiatick* or *Turkiſh* Flower, firſt ſent to us from *Dalmatia*, *Conſtantinople*, and other parts of *Turky*, and therefore called alſo *Dalmatian Cap*, and *Turks Cap*: In the Woods and Fields of *Dalmatia*, *Cappadocia*, *Bithynia*, *Alcppo*, alſo in *Macedonia*, *Thracia* and *Tripolis*, they are ſaid to grow naturally Wild, but with us only in Gardens.

CCCLXXI. *The Times.* The *Præcoces* Flower with us in *February*, (if the Winter is mild,) and all *March*, and ſometimes in a warm Winter in *January*. The *Mediæ* Flower all *April*, and ſome part of the beginning of *May*. The *Serotinæ* Flower from the middle of *May*, ſometimes to the middle of *June*; but if the Seaſons are cold, they ſometimes Flower a Month longer. However, they are an Ornament to our Gardens for more than three complete Months.

The CULTURE.

CCCLXXII. *For the choice of Seed to Sow.* *Cluſius* ſays the *White Præcox* gives the greateſt Variety of colors, (ſcarcely ſo from the Red:) but if the White has any mixture of Red or Purple in it, the Variety is more eminent. Next to the White, the Purple is ſaid to be the beſt, and the next thereto is the Purple with white edges; and ſo likewiſe the Red with yellow edges; each of them will bring moſt of their own colors.

CCCLXXIII. The Seed of the beſt *Mediæ* is to be taken from thoſe which are light colored, rather White than Yellow; and rather Purple than Red; yea White not Yellow; and Purple not Red: But of theſe again, the Spotted are the beſt, and the more Spotted the better. But withal, and in all theſe, reſpect the ground or bottom of the Flower, (which in a *Præcox* cannot be, for they ſeldom have any other ground than yellow; which if the Flower be white, or whitiſh ſpotted or edged, and ſtraked, and the bottom blew or purple, (as in the *Holia*'s, and *Cloth of Silver*,) is beyond all other the moſt excellent, and yields the greateſt, choiceſt, and moſt pleaſant Variety. The Seed of meaner Beauties, will yield you a meaner Variety. The Seed of the red or yellow *Tulip*, or their divers Mixtures, are not worth the Sowing.

CCCLXXIV. The Seed of the *Serotinæ*, (which are ſeldom ſeen with any ſpecial Beautiful Variety of colors) can bring forth no rarities; and for the Reaſons before ſpecified, little or no diverſity at all.

CCCLXXV. Therefore to have *Tulip* Seed, from whence you may reaſonably expect Beautiful Flowers; your beſt way will be to leave ſome for Seed, which are very fine and large, to the end, that being of a Noble Kind, you may rationally hope for ſomething excellent from them; and yet in this matter, Nature ſome times deceives our greateſt expectations.

CCCLXXVI. *For Seeds*, be ſure to make choice of ſuch Flowers as have the ſtrongeſt Stalks, and the Seed Veſſel three cornered, of ſuch kinds as are moſt conſtantly well marked, and ſuch as have the bottoms and chives either blew or purple, (which is rarely to be found in the *Præcoces*,) whoſe bottoms are commonly either white or yellow; yet there is one excellent kind, *viz.* the *Omen*, deſcribed in *Sect.* XCVI. aforegoing, which aptly marks with three colors, and has the bottom and chives both blew, from the Seed of which, many fine Varieties may be raiſed; and next to this, are the *Florizantine*, *Marillion*, *Cremoſine*, *Admiral Encuſen*, and *Periſhot*; the reſt of the *well Marked Præcoces*, may produce tollerable Varieties, tho not like the *Omen*: But Seeds from the *Vice-Roy*, and Varieties of *Edgers*, ſeldom produce better than their Originals.

CCCLXXVII. The Seed of the *Mediæ* afford many more excellent Varieties, as that taken from the *Angelica*, *Anvers Blew*, all the *Brabaſons*, *Carthago*, *Cedo Nulli*, *Diana*, *Dorothy of Holland*, *Floriſon Paragon*, *General Bolſon*, *Jeron Paragon*, *Tudart-Royal*, *Turgiana Princeſs*, *Virgin Orient*, and ſeveral others; theſe here named, being well marked with different colors, with blew or purple bottoms and chives, are not apt to run, but will abide conſtant to the laſt.

CCCLXXVIII. But tho' we make choice of the beſt Flowers for Seed, yet often times we fail of our purpoſe, becauſe ſome times the Roots looſe their Fibres, and the Stalks dry before the Seed comes to be half ripe. To prevent which, make choice of the ſtrongeſt Roots you have, of ſuch Flowers you deſign for Seed, and ſet them in that part of the Garden moſt expoſed to the Sun, ſix or ſeven Inches in the Ground, by which means you will gain good ripe Seed, from almoſt any Flower.

CCCLXXIX. About the middle of *July*, ſooner or later, as the Seaſon is hotter or colder, the Seed will be ready for gathering, which may be known by the drineſs of the Stalks, and opening of the Seed Veſſels, which gather, (and take up the Roots,) letting the Seed remain in the Pods, until the end of *September*, and then they may be taken out, which being cleanſed from the Chaff, and Sowed in Beds of fine Sifted Earth, eſpecially the more ordinary ſorts.

CCCLXXX. The time and manner of Sowing the Seed is next to be conſidered. Sow them not in the Spring, if you hope for any good Flowers, but in the Autumn, or preſently after they be through ripe and dry; yet if you Sow them not till the end of *October*, they will come forward never the worſe, but the better. For it is often ſeen, that our early Sowing cauſes them to ſpring out of the Ground too early, ſo that if a ſharp cold Spring chances to follow, it may hazard their ſpoiling, if not of all, yet of moſt part of the Seed.

CCCLXXXI. The ſame Years Seed is that which we commonly Sow, but if the Seed is two Years old, and that it was at firſt good Seed, and well kept, being then Sow'd, it will thrive and do well enough, eſpecially if it was perfectly ripe and well gathered; and in Sowing it, you muſt obſerve not to Sow it too thick, for if the Seed lyes one upon another, that it has not room upon its

its ſprouting, to enter and take Root in the Earth, it will preſently periſh.

CCCLXXXII. Some preſs down the Ground in which they intend to Sow the Seed, then put the Seed thereon, and ſo cover it an Inch over with Sifted Earth; becauſe they ſay the Nature of *Young Tulip* Roots, is to run deep into the Earth every Year more than other, which this faſtneſs of the Ground at bottom prevents, by which they think the Root increaſes the better; but doubtleſs it is not the beſt way, for this ſtiffneſs of the Earth does cauſe theſe young Roots to be long before they grow great, and hinders their thriving: For in a looſe Earth they grow faſter and greater, and thrive much better: And altho' the Roots may run deeper in ſuch a looſe Earth, yet that Fault may eaſily be help'd by Tranſplanting, and ſo they may be raiſed high enough.

CCCLXXXIII. The Ground therefore muſt be reſpected, for the finer, ſofter, and richer the Mould is, the greater will be the increaſe and Variety. It is to be Sifted from all Stones and Rubbiſh, and it ought to be either of it ſelf a fat Earth, or elſe made ſo good thro' rotten Dung.

CCCLXXXIV. Thoſe of the choiceſt Flowers, ought to be Sow'd in Boxes, fill'd with the fineſt Earth that can be gotten, in reſpect that the young Roots are apt to run deep into the Earth, ſo that in Beds many of them will be loſt: Sow them not too thick, nor cover them above a Fingers thickneſs with Mould, (as is before noted.) In *March* following, they will come up with ſmall Leaves like Graſs; in *April* Weed and Water them, as often as need requires.

CCCLXXXV. Some remove not their *Tulips* once, from Sowing the Seed to their Flowering; but this rule is not to be followed. About the end of June, two Years after their Sowing, they are to be taken up, and the ſmall Roots cleanſed, and ſet again in Rows at a wider diſtance, and ſo every other Year, till they bear Flowers, ſtill altering the Ground with freſh Earth, and Sifted compoſt, before you ſet them again. And to avoid looſeing them, you muſt take them up whilſt their Leaf and Stalk are freſh, and not withered.

CCCLXXXVI. And tho' the Leaves in the firſt Year are but like to the ordinary Graſs Blades, yet the ſecond Year they will be bigger, and ſo by degrees every Year larger and larger. The Leaves of the *Præcoces* while they are young, may be diſcerned from the *Mediæ*, for that they wholly ſtand up above Ground, ſhewing their ſmall Footſtalks; whereas the Leaves of the *Mediæ* and *Serotinæ*, do never wholly appear out of the Ground, but the lower part which is broad, abides under the upper face of the Earth. Thus by Tranſplanting theſe Seedling Roots every other Year, (and ſome of them every Year, as you may ſee cauſe for the ſame) in their due Seaſon, *viz.* about *Midſummer*, or latter part of *July*, or beginning of *Auguſt*, you will (according to your Seed and Soil,) have them in a due time come to bearing. It will be 6 or 7 Years before the *Præcoces* will bear Flowers; but the *Mediæ* will bear in the fifth or ſixth Year after Sowing, (rarely in the fourth Year, unleſs the Earth be very Rich, and then they are none of the beſt Flowers:) Again, ſome of the *Mediæ* will not Flower till the ſeventh or eighth Year after, and ſome weakly Roots not to the tenth Year, which I think are not worth the preſerving. This you are alſo to Note, That as your Roots grow bigger in Re-planting them, you muſt give them more room and diſtance one from another, leſt they ſhould rot, and by that means hinder each others Growth.

CCCLXXXVII. As many fine Flowers may be raiſed from the Seed of thoſe well marked, before mentioned; ſo ſuch as have a good Collection of *Medes*, or Self-colors, obſerving what colors are apteſt to change, and by the bottoms running up into the Leaves, become well marked with ſeveral colors: I ſay by Sowing the Seeds of ſuch, the Product may poſſibly be anſwerable to expectation: And tho' at firſt they may come wholly of one color, yet if they be *Orange*, *Sulphur*, *Hair*, *Dove*, *Gredelins*, *Iſabella*, *Shammy*, or any other light or ſtrange color, they are to be eſteemed; for in a Year or two, many ſuch have changed into good marked Flowers, and ſo continued in all their increaſe.

CCCLXXXVIII. To haſten which change, let ſuch of your colors as are Strong and Luxuriant, be ſet in lean and hungry, but freſh Earth, and the next Year after, in that which is Fat and well Manured; and ſo yearly removed to contrary Soils, till you obtain the end deſired

CCCLXXXIX. The like courſe is to be taken with Off-ſets, to cauſe them to alter from the Original, as is daily done. For the *General Bess* came from the *Brown Amors*, the *Cedo Nulli* from the *Zeablem*; and many fine Flowers from the *Drabaſon*, *Tourben*, and *Widows*.

CCCXC. The Seed of the *Præcoces* does not thrive and come forward ſo faſt as that of the *Media* and *Serotina*; nor does it give any Off-ſets in its running down, as that of the *Mediæ* does, which uſually leaves a ſmall Root at the head of the other (which is run down) every Year; and beſides as they are more tender, ſo they require more care and attendance than the *Mediæ*, and therefore are the more to be valued.

CCCXCI. And this is a certain and general rule in all *Tulips*, that all the while they bear but one Leaf, they will not bear Flowers, whether they be Seedlings, or the Off-ſets of elder Roots, or the Roots themſelves, which have already born Flowers. But when they ſhew a ſecond Leaf, breaking out of the firſt, it is a certain Sign that it will then bear a Flower, unleſs ſome Caſualty or Accident hinder it; as Froſt or Rain, to nip or ſpoil the Bud, or ſome other untimely chance befall it. The time of 5, 6, 7, or more Years, to wait in expectation of Flowers, is a little long indeed; but if you take care to have good Seed from the better ſorts of *Tulips*, you will be ſufficiently recompenced for your Patience, from the great abundance of choice Flowers, which they will then produce.

Of the Roots.

CCCXCII. When you Set or Plant the Roots of your beſt bearing *Tulips*, if the Ground is either cold, or lyes too open to the cold Northern Air, it will be well to Plant them ſomewhat deeper in the Earth, by which they will be the better defended, and not be ſo liable to be pierced by Colds or Froſts; for deep Snows and hard Froſts are apt to pierce the *Præcoces*; and them chiefly, if they be too near the upper Cruſt of the Ground; and therefore many cover their Ground before Winter, with either freſh, or old rotten Dung, which will admirably preſerve them. The like you may do with *Seedlings*, to cauſe them to come on the forwarder, ſo it be after the firſt Years Sowing, but not till then.

CCCXCIII. If you remove the Roots after they have ſhot out their Fibres, or ſmall Strings, which grow

grow under the great round Roots, (which is from *September*, till they be in Flower) it will be very dangerous to them: for by removing them when they have taken faſt hold in the Earth, you hinder them for Flowering that Year, and it may be the next Year too, and hazard their periſhing withal. But after they are riſen to Flower, you may ſafely take them up if you pleaſe, and remove them without danger, unleſs it be a Young bearing Root, which in ſo doing, you will much hinder, by reaſon, (bearing now its firſt Flower,) it is yet very tender.

CCCXCIV. But all *Tulip* Roots, when their Stalks and Leaves are dry, may ſafely be taken out of the Ground, and be ſo kept, (ſo they lye in a dry, and not in a moiſt place) for ſix Months, without any great harm: And ſometimes they have been kept out of the Ground for nine Months, and yet have proved reaſonably well; but then you muſt know, that they have not been Young, but the Older Roots, and have been orderly taken up and preſerved. The dryer you keep a *Tulip* Root the better, ſo you let it not lye in the Sun or Wind, which may pierce and ſpoil it.

CCCXCV. When the Roots are ready to be taken up, do it in a fair calm Day, and if the Ground is hard or ſtiff, do it with a long hollow Trowel fit for the purpoſe; but in light or ſoft Grounds, it may be done with the Hands only.

CCCXCVI. Being taken up, lay them on Papers on which the Names are written, and place them open upon ſome Boarded Floor, where they muſt ſo remain to dry, about twenty Days. Then take away the dead Fibres, and looſe outward Skins, and ſuch Off-ſets or young Roots, as will eaſily part from the old; which done, it will be neceſſary to wrap up your beſt Roots eſpecially, in freſh, well dryed Papers, and on the outſide to write the Name of the Flower, which may be kept with its Off-ſet with it, until the middle of *Auguſt*; at which time, the Off-ſets are to be ſet in a good Bed prepared for that purpoſe. But the old bearing Roots muſt be left in the Papers, till the proper time is come for Planting them.

CCCXCVII. When you have ſecured your Roots in Boxes, it will be neceſſary often to look over them, leſt any ſhould be mouldy, or grow moiſt, as it often happens. Then the Mouldineſs or Moiſture, is gently to be wiped off, with a dry woollen Cloth, and the Root gently dryed before the Fire, and ſo put up again into freſh Papers.

CCCXCVIII. Your Roots being thus carefully diſpoſed, it will be time to prepare a place to Plant them in; which for the beſt bearing Roots, will be in a Bed, or Beds (according to your Store) which let be about a Yard in breadth, and in length according to your own liking, and as your Ground will permit; which let be Border'd with Rails or Bords, and fill'd two Feet deep, with the lighteſt, freſheſt, and fineſt Sifted Earth you can get.

CCCXCIX. Theſe Beds may contain 5 or 6 Roots in every Row, croſs the breadth of the Bed, which with a Line drawn, may be exactly divided, and the Roots placed accordingly: But before they be Set, the Roots are to be numbred from 1, to 50, 100, 200, *&c*, more or leſs, in a Book, with their proper Names to the Numbers; and then to be Planted according to the order of the Numbers in your Book; by which they will be known what they are, both before, and after the time of their bearing.

CCCC. In placing theſe Roots, ſome ſet the ſaddeſt colors towards the ſides, and the lighteſt in the middle, but a variable mixture is moſt pleaſing, not ſetting too many dark, or light colors together, tho' different from each other; nor to mingle the *Præcoces* with the *Mediæ*, but placing each ſort in a particular Bed by it ſelf.

CCCCI. When theſe *Noble Tulips* begin to riſe up to Flower, it would be well to cover the Bed with a thin Canvas Tilt, (ſupported with a ſmall kind of Frame) ſo as not to touch the Flowers; which may be put over them in cold Nights, to prevent the North, or North-Eaſt Winds or Froſts, from nipping and hurting the Buds, by which the Beauty of the Flower may be ſpoiled; as alſo to defend them in the Day-time from Hail, great Rains, and ſcorching heat of the Sun, by which means they will continue the longer in Flower. This Tilt or Canvas, may be taken off before the time of Flowering in fair Days, that they may now and then be refreſhed with the Sun Beams, and alſo with gentle Showers, and then be covered again in the Night: But when fully blown, let them not have above an Hours Sun in the Morning, and as much in the Evening, if the Seaſon be hot; if the Weather is cold, you may permit them a longer Sunning.

CCCCII. The more ordinary ſorts may be ſet in Borders, or in ſpaces in Knots, without taking any account of their Numbers, Names and Places, unleſs you ſo pleaſe: And if the Ground is good in which they are ſet, they may ſtand two Years without taking up, but not longer, in reſpect to their Off-ſets, which adhere to them; which if not removed, will make their Flowers to be ſmall and weak, and withal exhauſt very much the Nouriſhment of the Plant. And before they are ſet again in the ſame place, the Earth muſt be changed for that which is new and freſh.

CCCCIII. After the Flowers are fallen, break off the Heads or Seed Veſſels of every Flower, (except of ſuch as you reſerve for Seed;) ſo will the Stalks dry down the ſooner, and the Roots will preſerve their Strength the better, and be even Fortified thereby.

CCCCIV. Some of the beſt *Tulips* will ſometimes be infected with Diſeaſes, notwithſtanding our greateſt Care and Diligence in their Preſervation; which happens to ſome Roots while out of the Ground, and to others after they are Planted: If the defect is before it is Planted, the Root will appear ſhrivelled or crumpled on the outſide, and feel ſoft and ſpongy, which is a ſign that it is in a Conſumption, or waſting condition; which to prevent, you muſt wrap it up in Wooll, dipt in *Oil Olive*, and place it where it may receive ſome little warmth from the Fire: then about the beginning of *September*, or ſome little time before, ſet it in the Ground, putting ſome Wood Soot, mixed with Sand about it, covering the place with an Earthen Pot, the bottom turn'd upwards, to keep it from Wet, till the Fibres are come forth, which will be by the end of *September*, or beginning of *October*, or not at all. Theſe decaying Roots thus managed, (tho' ſome of the outward Folds rot and conſume, the middle and Heart remaining ſound) will revive again, and in two or three Years bear Flowers as formerly.

CCCCV. If the defect happens after they are Planted, and have put forth green Leaves; if any of them begin to fade and wither, you muſt open the Earth to the bottom of the Root, to find out the cauſe, and if the Root is moiſt and ſoft, it is paſt Cure or help: But if it be any thing hard, it may be recovered, by putting to it Wood Soot mixt with dry Sand, and covering it as in the former, leaving the place ſomewhat open, that it may dry downwards the ſooner. In hot Days, take off the Pot, and take up the Root as ſoon as the Fibres

are

are gone, and keep it in Wooll wet in *Oil Olive*, near the Fire: Afterwards fet it again, according to the directions in the former *Paragraph* or *Section*. By this means many choice Flowers or Roots have been faved, which otherwife had been undoubtedly loft.

CCCCVI. Contrariwife, we purpofely make fome Roots Sick, by taking them up a little before they begin to Flower, and laying them in the Sun, to abate their Luxury, and caufe them to be better marked the next Year following. This has been often done with the *Agat Rebine*, *Pafs Cittadel*, *Pafs Heron*, *Pafs Ordinard*, *Turbon*, *Willows*, and fuch like ordinary Flowers, by which means fome of them will come to be very well marked, fo as that they might be taken to be much better Flowers than indeed they are.

CCCCVII. When you Plant your beft *Tulips*, you muft Yearly make a provifion of Manured, freth, light, fandy Earth, to make new Beds for them; or by taking away that in which they grow, and fupplying the place with this new provifion: For if *Tulips* be fet twice in the fame Earth, they will languifh and decay for want of agreeable Nourifhment. But if you have ftore of *Neats-Dung mixed with Sand, which has lain on an heap two or three Years:* If this I fay be Sifted, and in *Auguft* well mixed with the Earth of your Bed, and the Air be any thing good and temperate, it will be fufficient. By this very means, Mr. *Rea* fays, that he had fet his beft *Tulips*, for twenty Years fucceffively in one Bed, and that they profpered to his Wifh, and oftentimes beyond his Expectation.

CCCCVIII. Some Gardeners give us another kind of Compoft, which they make after this manner. *Take an hundred Bufhels of yellow Sand*; *Fourfcore Bufhels of red Mould well mellowed*; *Threefcore Bufhels of Kitchin-Garden Earth, which mix altogether with a Shovel*; *and after a Months lying together, pafs it thro' a Skreen, that the Mixtion may be well made*; *and thus Skreen it once a Month, for* 12 *or* 14 *Months together, which then keep for ufe.* The more this Earth paffes thro' the Skreen, the lighter and better it will become, and the more agreeable to your Flowers

CCCCIX. Before this *Compoft*, or *Compound Earth*, is laid on the Natural Soil of your Beds, you are to confider, that if the Soil be wet or moift, (both which are Enemies to the *Tulip*,) you muft make it dry, or dig the Bed you defign, taking out a Foot and half of the Earth, and then filling it up again with this *Compound Earth, mixed with an equal quantity of Sand*; but if the Soil of the Garden be naturally dry, light and fandy, then you may fave the former trouble of digging up and removing the Earth, and only cover it with the faid prepared Earth, about half a Foot thick.

Of the BULBS, *nad young* BULB-*Roots.*

CCCCX. Your Beds or Parterries defigned, being thus prepared, you may then Plant upon them your *Bulbs* or *Young Roots*, as before directed, taking care, that each *Bulb* or *Young Root*, be well covered about three Inches deep, with Earth on all fides, which may be done from the middle of *October*, to the end of *December*.

CCCCXI. As foon as ever they are put into the Ground, you muft not neglect to cover them with large Straw, or dryed Dung as is before hinted, to fecure them from Frofts, and fweet cold Weather; but then they muft be uncovered again, as foon as the Froft and Cold is gone.

CCCCXII. When *March* is come, and you perceive that they begin to fhoot, take care to Water them if the Seafon is dry, and you fee that they require it: but how much, or how long you muft Water them, is wholly to be left to your own difcretion And if Weeds grow, let them be continually pluckt up, becaufe they will infenfibly draw the Nourifhment from the Roots of your Flowers.

CCCCXIII. Thefe *Bulbs* of the *Lilly* Roots, are to remain in the Earth for one Year only, during which time, they muft be carefully Cultivated, but at a Years end they muft be removed in the following manner.

CCCCXIV. Take a Dif-planting Scoop, which thruft into the Ground at a convenient diftance from the *Bulbs*, and a little below their Fibres, by which means, you will be able to take them up fafe without Wounding; then feparate the Earth from them, and continue fo to do, till they are all dif-planted.

CCCCXV. The *bulbs* being out of the Earth, and made clean from the Earth fticking to them, carry them into an open place in the fhade. (for thefe Roots are fo tender, that they will not endure the Sun, the leaft heat being apt to dry them too much:) and be fure that they be not heaped up one upon another; for thereby it may happen, that thofe underneath may be heated, which would certainly do them harm, becaufe it might give motion to the Sprout.

CCCCXVI. When the Seafon for Planting the *Bulb*, or *Young Root* is come, you muft manage it as is before directed, after having feparated the Suckers, which you are to Plant in a Nurfery made of the fame Earth, as we have ordered for the *Bulb* it felf, at *Sect.* 408, 409, and 410, aforegoing.

Of the Suckers *of a* Tulip-BULB.

CCCCXVII. Tho' the Suckers of *Tulip-Bulbs* are Planted chiefly for the increafe of the kind, and not fo much for Ornament, fo that there need not be fo much care to fit particular Beds for them, as for their *Bulbs*; yet they ought to be Planted orderly and in Rows, and at 5 or 6 Inches diftance one from another, and two Inches deep in the Ground, covering them fmoothly with your Hand; after which, you are to take the fame care of them as you do of your *Bulbs*.

CCCCXVIII. How long they are to continue in the Ground, is the next Confideration: Some fay, two Years, for that fay they, the firft Year they only fprout, and the fecond Year they multiply: Others fay three Years, for that the third Year they come to fuch a Perfection as to produce Flowers, which feems to be moft Conftentaneous to the Nature and Property of thefe Plants.

CCCCXIX. *To prevent thefe* Suckers *growing dry*. From the time of feparating them from their *Bulbs*, to the time of their Re-planting, you muft put them into Mofs, in fome open place, till you Plant them again; and fo ufed, they will thrive admirably.

Obfer-

Of the Flowers.

CCCCXX. The *Tulip* whoſe Cup is leaſt Convex, is preferrable to that which is very much Convex; a flat Form is ſaid to be more Beautiful than a ſharp, the bottom being alſo proportion'd to the top; for the bottom is much taken notice of, becauſe the Stripes or Strakes which ariſe from it, are generally of the fineſt colors.

CCCCXXI. If its Form and Green is of a midling bigneſs, has a requiſite largeneſs, and the green appears a little frizzled, or accompanied with ſmall Streaks; if its color or colors are Luſtrous, and appear like Sattin, or of a Flame colored Red upon a White Ground; or is of divers colors with Shadings, or yellow ſtriped with grey; ſuch as theſe are eſteemed, and accounted of the better kinds; and ſo much the more, if the color is not confuſedly blended, but its Stripes are well ſeparated, looking agreeable to the Eye.

CCCCXXII. The color of the chives are not much material, in reſpect to its Beauty; but a good *Tulip* ought to have its Thrums of a brown color, and not yellow: And tho' it may appear fine at its firſt opening, you ought to ſuſpend your Judgment concerning the ſame, as to its Goodneſs and Value, till 2 or 3 days be paſt, before you can rightly make an Eſtimation: But this is certain, that in a well-form'd *Tulip*, the three inner Leaves ought to be larger than the three outward: And that when it opens, if it be with its Leaves turn'd either inwards or outwards, or that its Leaves are too ſmall or thin, it is of no account or value at all.

CCCCXXIII. *The Qualities.* They are temperate in reſpect to heat or cold, drineſs or moiſture; but at moſt are only moiſt in the beginning of the firſt degree, Aperitive, Stomatick, Chylifick, Analeptick, and Spermatogenetick.

CCCCXXIV. *The Specification.* Of the *Satyrion*, *Dioſcorides*, lib. 3. cap. 143. and 144. ſays, Ταύτῳ δεῖ πίνειν ἐν οἴνῳ μέλανι αὐστηρῷ πρὸς ὀπισθότονον. *Hanc in Vino nigro noſtro bibere oportet, contra Opiſthotonon.* 2. Καὶ εἰ βάλει γυναικὶ συνουσίαν χρῆσαι. *Ipſa quoque utere, ſi cum muliere rem habere volueris.* 3. Φασὶ γὰρ αὐτὴν καὶ ὀρμωίνειν πρὸς ἀφροδίσια. *Eam enim etiam ad venereos impetus concitatricem vim habere affirmant. De Satyrio erythronio ille dixit.* 4. Ἱστοροῦνται δὲ ὅτι καὶ εἰς τὴν χεῖρα λαφθεῖσα ἡ ῥίζα, ἐρεθίζει πρὸς ἀφροδίσια, οὐ μόνον δὲ πωθεῖσα, μᾶλλον. *Proditur & radix, ſi modo manu teneatur, venerem ſtimulare, eoque magis, ſi bibatur in Vino.* And it *Theophraſtus* herba *ab Indo quodam allata*, in lib. 9. cap. 20. be the ſame with *Satyrion*, as the moſt Learned ſeem to affirm, he aſcribes much the ſame Virtues to it which *Dioſcorides* does. Θαυμασιώτατον δὲ ἦν ὃ Ἰνδὸς εἶχεν. Οὐ γὰρ προσενεγκαμένοις, ἀλλ' ἁπτομένοις ἔφασαν ἂν τὸ αἰδοῖον τείνεσθαι, &c. *Ad rem autem veneream, mirum in modum herba pollebat, quam Indus attulerat. Non enim ſolum edentibus, ſed etiam tangentibus tantum, genitalibus vim vehementum adeo inſpirare, ut quoties vellent coire poſſent. Et quidem qui uſi fuerunt, duodecies potuiſſe dixerunt. Mulieris verò vehementius etiam citari libidinem, cum eo Medicamine uſæ fuerint, dicebatur. Hæc igitur vis, ſi vere narratur, mirifica eſt.* The Subſtance of all this is, that *Satyrion* (the Root which is only uſed,) is good againſt that ſort of Convulſion called the *Opiſthotonos*, (*ſupinus raptus*, in which all the parts of the Body are Contracted, Bended, or Convulſed backwards; ſee my *Praxis Medica*, *lib.* 2. *cap.* 3. *ſect.* 2.) to increaſe Seed, and powerfully to provoke Luſt, and that both in Men and Women: And if ſo, it follows of conſequence, that it muſt reſtore in Conſumptions; for that the Seed is made of the beſt and moſt Spirituous, and Saline parts of the Blood, and Blood being the Progenerator of Fleſh, it is reaſonable to conclude, that ſince it largely produces Seed, it muſt as largely generate Blood, which is that only by which pined and waſted Bodies are again Nouriſhed, and reſtored to their Priſtine State of Health. *Bodæus* in his Comment upon that place of *Theophraſtus*, ſays, *Tacitè (ille Theophraſtus) ridet illos, qui plantis tantas adſcribunt vires, ut ſi manu tantum teneantur venereas libidines immoderatas movere poſſint.*

CCCCXXV. *The Preparations.* As the Root is the only part of the *Tulip*, which is of any approved Phyſical uſe, ſo therefrom you may have, 1. *A Liquid Juice.* 2. *A Decoction in Milk, Canary, or Water.* 3. *A Conſerve.* 4. Sanguis Satyrionis, *or the Blood thereof, according to* Quercetan, *ab* Heers *and* Schroder. 5. *The Compound Extract.*

The Virtues.

CCCCXXVI. *The Liquid Juice.* It may be clarified with Whites of Eggs, or uſed ſimply of it ſelf, being immediately extracted; Doſe from one Ounce to three, mixt with a Glaſs of Canary every Morning faſting, and every Night going to Bed. It corrobrates the Womb, and Inſtruments of Generation, increaſes Seed, provokes Luſt, and is ſaid to cauſe Fruitfulneſs in both Sexes, and cure Impotency in Men.

CCCCXXVII. *The Decoction in Milk, or Canary, or in Water.* It has all the former Virtues, but is much weaker; if it is made in Water, it ought to be given mixed with an equal quantity of generous Wine, and ſo taken Morning and Night, to half a Pint of the Decoction or more.

CCCCXXVIII. *The Conſerve.* The Root is boiled or baked ſoft, then beaten up with Sugar. It is of the ſame purport, Nouriſhes much, is Reſtorative, and is profitable for the Cure of a *Phthiſis*, or Ulceration of the Lungs, and a Pining Conſumption. Doſe as much as a large Walnut, Morning, Noon and Night, drinking after it to waſh it down, a Glaſs of Palm-Wine, or Old Malaga, and ſometimes for change, a draught of Milk warm from the Cow.

CCCCXXIX. *Sanguis Satyrionis*, the Blood of Satyrion. *Quercetan* makes it after this manner. ℞ *Radicem Satyrionis optimè mundatam, quam in Mortario marmoreo probè contunde, donec formam pulpæ ſortiatur. Ad libras quatuor hujus pulpæ, adjice medullæ panis Secalini, & panis Triticei, ana, libram unam. Omnia invicem probè mixta, & tantillo vini albi irrigata, injiciantur in Matracium Vitreum cum collo longo, ſubere vel cera Hiſpanica optimè obturatum, ut nihil tranſpiret. Hoc Matracium collocetur in fimo calido, ſive in Balneo Vaporoſo; donec Materia in Chyli Sanguinei, ac rubicundi colorem convertatur. Tunc illam fortiter prælo exprime, & expreſſionem hanc Chyloſam, & Sanguineam pone in Balneo Vaporoſo, illud in hac ſecunda digeſtione, majorem acquiret rubedinem; & fæces aliquot in fundo relinquit, quas ſeparabis. Continuando hanc digeſtionem, & depurationem, donec materia clariſſima & rubicundiſſima apparuerit. Separa ab illa tunc liquorem clariorem per Alembicum ad Ignem Balnei Vaporoſi, & remanebit in fundo extractum rubicundiſſimum, quod nominant Sanguineum Satyrionis.* 2. *Ab* Heers, *lib.* 1. Obſervat. 8. makes it after this manner.

ner. ℞ *Radicem Satyrionis, contunde ac adde jensim micas panis albi, propter lenteris dilutionem Spir. Vini è Malvatio, ut irroretur. Dein digere in Balneo Mariæ vase clauso Septim. Tum exprime, expressum iterum per Mensem digere. Innatabit Liquor rubicundus, hunc inclinando Colligе objectis facibus.* Take *Satyrion* Roots, beat them in a Mortar with Crumbs of white Bread, adding them gradually, or by little and little; then add Spirit of Malaga Wine, sprinkling it on, for the more easie diluting of the Glutinous or clammy Substance; digest it in a close Vessel in *Balneo* for a Week; then strain, and the strained forth Liquor digest again for a Month, so will a red Liquor supernate, which decant, or pour off by inclination. 3. From *Schroder: Fit ex Radice conquassata, & cum Pane atque Vino (Spiritu Vini) digesta.* It is made of the Root bruised, and beaten up with a sufficient quantity of Crumbs of Bread, and then digested with Wine, or Spirit of Wine. The Virtues of this Preparation, we will give you from *Quercetan* in his own Words. *Sanguis ex Satyrione singulare Matricis corroborans, & specificum est Remedium ad Conceptionem: prolisque Generationem juvandum, Steriliumisque quantum libet Mulieribus fœcunditatis donum impertit viriique Impotentiam ad Pristinum Vigorem reducit.* It causes Fruitfulness in both Sexes, strengthens the Instruments of Generation, and so comforts the Womb, as to induce Conception: It provokes Lust, and cures Impotency in Men, restoring their Virility. Dose two Drams or more, Morning, Noon and Night, in a Glass of Generous Wine.

CCCCXXX. *Extractum Satyrionis Compositum.* Extract of Satyrion Compound. *Take of the* Sanguis Satyrionis *simple, according to the former prescription, a Pound; Salt of Pearl one Ounce, Chymical Oil of Nutmegs, of Cinnamon and of Aniseeds, of each a Dram; mix them, and keep it for use.* It has all the Virtues of the *Sanguis Satyrionis* aforegoing, and very much exceeds it in its Effects: It cures Weakness and Faintings, and restores in Consumptions. Dose 20 Drops, Morning, Noon and Night, in a Glass of Generous Wine.

CCCCXXXI. Nota. *Verus Philosophus ulterius adhuc progredietur, & per eandem Viam tum ex frumento, tum ex Vino, educet substantiam quandam Sanguineam; alendi & vivificandi facultate potentem; quâ causam Generationis Carnis, in corpore nostro indagabit.* Quercetanus.

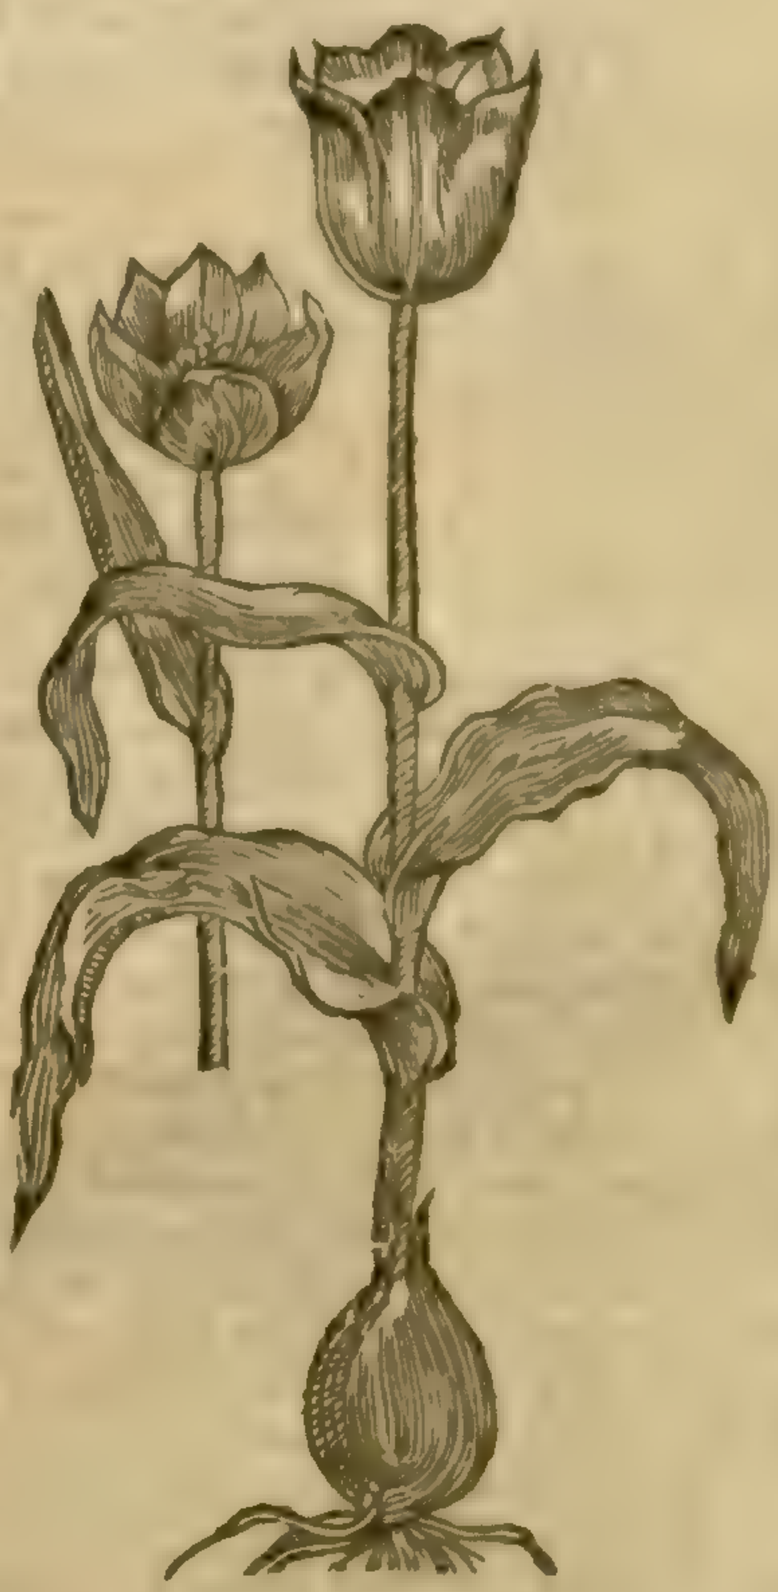
CHAP. DCCXIV.

Of TULIP *Bastard.*

I. *The Names.* It may be called in Latine, *Tulipa Notha, Tulipa Spuria*, the Bastard Tulip.

II. *The Kinds.* These *Bastard Tulips* are all of them (so far as I have seen) *Præcoces*, or of the Early sorts; of which we have found growing in our Gardens these Species following, denominated for the most part, from the Places or Countries from whence they were first brought to us. 1. *Tulipa Armenica*, The Armenian Tulip. 2. *Tulipa Bolonienſis ſive Bombycina flore rubro major.* The greater red Bolonian Tulip. 3. *Tulipa Bergomenſis, rubra media & minor, ſive Tulipa pumilio rubra*; The dwarf red Bergomo Tulip, greater and lesser. 4. *Tulipa Bononenſis flore luteo* the yellow Bolonian Tulip. 5. *Tulipa [illegible] Italica*, The Italian small party coloured Tulip. 6. *Tulipa Byzantina duobus Floribus [illegible]*: The small Tulip of Constantinople. 7. *Tulipa [illegible] ſa*, The Turky Cassa Tulip. 8. *Tulipa [illegible]*, The Candy Tulip. 9. *Tulipa Italica, major & minor.* The Italian Tulip greater and lesser. 10. *Tulipa Lusitanica, ſive Tulipa pumilio serotior*, The Portugueze Tulip, or dwarf Stript Tulip. 11. *Tulipa Narbonenſis, vel Pumilio lutea*, The Narbone, or dwarf yellow Tulip. 12. *Tulipa Pumilio alba*, The white dwarf Tulip. 13. *Tulipa Perſica*, The Persian Tulip.

Tulip Bastard.



The Descriptions.

III. The first, or Armenian Tulip, *much differing from these in the former* Chapter, *its Root is Bulbous (as other* Tulip-Roots *are,) and something larger than the Root of the fourth Kind, or yellow* Bolonian *following. It bears three, (sometimes four) small, long, and somewhat narrow green Leaves, altogether at one Joint or place, the Stalk being Naked without Leaves, and not high. At its top it bears one Flower, which is small, and like to an ordinary* Tulip, *but something more yellow, tending to an Orange color, with a black bottom.*

IV. The second, or greater red Bolonian Tulip. *Its Root is plainly seen to be differing from all others; for it is longer, and has not so plain an Eminence at the bottom thereof, as the former* Tulips *have, but more especially, because the top is plentifully stored with a yellowish Silk-like Woolliness; its outside, or Skin of it also, is of a brighter or paler red, not so easie to be peeled off, and it runs under Ground both down-right and sideways, (more especially in a Country Soil and Air,*

where it will increaſe abundantly, tho' not ſo in our London *Air, and Forc't Grounds.) ſomething like to the yellow* Bolonian Tulip, (*at* Sect. VI.) *following. It ſhoots out of the Earth with broad and long Leaves, but neither ſo broad, nor of ſo white or Mealy a green color, as other* Tulips, *but more dark than the* Serotinæ, *or* late Flowering Tulips; *ſo that this may eaſily be diſcerned by its Leaf, from any other* Tulip *above Ground, by ſuch as are skill'd in theſe Flowers. It bears three Leaves upon its Stalk, (very rarely four) and at the top of the Stalk (which is not long) a Flower, like to the* Tulips, *but that its Leaves are always long, and ſomething narrow, having a large black bottom, made like unto a* Chevern, *whoſe point riſes up to the middle of the Leaf, higher than in any other* Tulip. *The Flower is of a pale red color, nothing ſo lively as in the former* Early *or* Late Red Tulips, *yet ſweeter (for the moſt part) than any of them, and neareſt to the yellow* Bolonian Tulip *following, which has much the ſame Smell.*

V. The third, or Dwarf red Bergomo Tulip, greater and leſſer. *Theſe differ very little from the laſt deſcribed, ſaving that they are much leſs, and ſmaller in all their parts, and therefore are called* Dwarfs, *in reſpect of them, of which there is a greater and a leſſer: They take their Denomination or Name, from the place from whence they came to us.*

VI. The fourth, or yellow Bolonian Tulip. *The Root of this* Tulip *may be eaſily known from the former Red, (or any other kind,) that it ſeldom comes to be ſo large or big, is not ſo Woolly at the top, and the Skin or outſide is ſomething paler, harder, and ſharper pointed; but its bottom is like the former Red, and not ſo eminent as the* Early or Late Tulips. *It bears much longer and narrower Leaves than any (except the* Narbone *and* Perſian, *at* Sect. XIII. *and* XV. *following,) and of a whitiſh green color: It bears ſometimes but one Flower on a Stalk, ſometimes two, and ſometimes, tho' rarely, three, but ſmaller; which are wholly yellow, more open than the other kinds, and ſmelling ſweet. The Head for Seed is ſmaller than in others, and has not that Crown at the Head thereof, for which reaſon the Seed is alſo ſmaller, but like to the Seed of other ſorts.*

VII. The fifth, or ſmall Italian Party colored Tulip. *From its ſmall Bulbous Root, it ſends forth Leaves, which are ſmall, long, and narrow, of a dark green color, ſomething like to the Leaves of an* Hyacinth. *Its Flower is ſmall alſo, conſiſting of ſix Leaves, three of which are wholly of a red color, and three wholly of a yellow.*

VIII. The ſixth, or ſmall Tulip of Conſtantinople. *The Root is very like to that of the yellow* Bolonian Tulip, (*at* Sect. VI.) *It is a ſmall Plant, bearing for the moſt part two Leaves on the Stalk, which are fair and broad, almoſt like to the* Candy-Tulip, (*at* Sect. X.) *The Stalk riſes to be about a Foot high, bearing ſometimes but one ſmall Flower, but moſt commonly two, one below another, and are no bigger than the Flowers of the* yellow Bolonian Tulip, *but differing in color; for this is on the outſide of a Purpliſh color, mixed with white and green; and on the inſide of a fair bluſh color, the bottom and chives being yellow, and the Pendents or Tips blackiſh.*

IX. The ſeventh, or Turky-Caffa Tulip. *Its Root is like to others of the* Præcoces, *or* Early Tulips, *but differ from them in ſome other things or particulars. Its Leaves are a pale green, being as broad and large as thoſe of a* Præcox; *ſometimes they are crumpled or waved on the edges, and ſome have their edges for a good breadth, of a whitiſh, or whitiſh yellow color; and in others the Leaves are liſted or parted with whitiſh yellow and green. The Stalk riſes up ſcarcely to the height of a* Præcox, *and bears a Flower, not unlike to the* Early Tulips, *in ſome of a reddiſh yellow color, with a Ruſſet-color'd ground or bottom; and in others of ſeveral other colors. The Seed is ſo like to that of the* Præcoces, *that it is not to be diſtinguiſhed from it.*

X. The eighth, or Candy Tulip. *Its Root is ſmall, and ſomething like to the* Narbone, *or* Dwarf yellow Tulip, *at* Sect. XIII. *but a little bigger. It bears fair broad Leaves, of a greeniſh color, and not very whitiſh. The Stalk bears one Flower, which is larger, and more open than in ſome other kinds; and is either wholly white, or of a deep red color, or elſe variably mixt, of white, with a fine reddiſh Purple; the bottoms being yellow with Purpliſh chives, tipt with blackiſh* Pendents. *It does difficultly thrive in this our cold Climate, and proſpers not well, unleſs a great care be taken of it.*

XI. The ninth, or Italian Tulip, greater and leſſer. *Their Roots are like to the* yellow Bolonian Tulip, *but the Stalks riſe not up ſo high as in that. The Leaves of both ſorts are writhed in and out at the edges, or made like a Wave of the Sea, lying nearer the Ground. The Flower is yellow within, browniſh or reddiſh on the back, and in the middle of the three outward Leaves, the edges appear yellow. Both theſe Kinds do much reſemble the* Narbone Tulip, *and they differ one from another in nothing, but that the one is greater and the other leſſer.*

XII. The tenth, or Portugueze Tulip, or Dwarf ſtrip'd Tulip. *This Dwarf Tulip is of the ſame kindred with the greater and leſſer* Italian *juſt before deſcribed, and the* Narbonenſe, *or* Dwarf yellow Tulip *following; there being no other difference in this from them, but that the Flower of this has ſome red Veins running in the Leaves thereof.*

XIII. The eleventh, or Narbone, or Dwarf yellow Tulip. *This is very like to the* yellow Bolonian (*at* Sect. VI. *above,*) *as well in its Root, as in its Leaf and Flower; as alſo in the color thereof, being yellow. The only difference is, that it is in all reſpects leſſer and lower, and not ſo apt to bear, nor ſo eaſie to increaſe by the Root.*

XIV. The twelfth, or white Dwarf Tulip. *Its Root is like the others, its Stalk is longer than other* Dwarfs, *and the Flower is alſo larger, (being of a white color,) than other ſorts of* white Tulips; *but the Leaves thereof are narrower.*

XV. The thirteenth, or Perſian Tulip. *Its Root is ſmall, covered with a thick, hard, blackiſh Shell or Skin, with a yellowiſh Woolline's both at the top and under the Shell. It is a rare Plant, but is thought nearly to agree with the* Bolonian *and* Indian Tulips, *in its Root, Leaf and Flower. It riſes out of the Ground at firſt, with one very long and ſmall round Leaf, which when it is three or four Inches high, does open it ſelf, and ſhews forth another ſmall Leaf (as long almoſt as the former) breaking out of the one ſide thereof, and after it a third; and ſometimes, tho' rarely, a fourth and a fifth, but each ſhorter than other, which afterwards become of the breadth of the* Dwarf yellow Tulip, *at* Sect. XIII. *aforegoing, or ſomething broader; but much longer than any other, and abiding more hollow, and of the color of the* Early Tulips *on its inſide. The Stalk riſes to be a Foot and a half high ſometimes, bearing one Flower of ſix long and pointed Leaves, of the Form of other ſmall* Tulips, *not much bigger than the yellow* Italian Tulip; *but it is wholly white on the inſide and outſide of all its Leaves, ſaving that on the backs of the three outermoſt, from the middle*

middle towards the edges, there is a ſhew of a browniſh bluſh, or pale red color, yet deeper in the midſt, the edges remaining wholly white. The bottoms of all theſe Leaves, are of a dark, or Dun Tawney, and the Chives and Tips of a darkiſh purple Tawney. It ſeldom bears Seed with us, but when it does, it is ſmall like to the Bolonian *or* Narbone Tulips; *nor is it ſo plentiful in parting or ſetting off by the Root as they, and ſeldom Flowers after the firſt Year.*

XVI. *The Places.* Their Names ſhew their Native Countries, being Nurſt up with us only in Gardens.

XVII. *The Times.* They are all *Præcoces*, and Flower here in *England*, thro' all the time of the Flowering of the *Early Tulips*.

XVIII. *The Qualities, Specification, Preparations and Virtues* of theſe, are the ſame with thoſe declared at large, in the laſt aforegoing *Chapter*, to which you are referred.

CHAP. DCCXV.

Of TURNEP *Garden.*

I. *THE Names.* It is called in Greek ῥαφυλις: of the *Lacedemonians*, ῥαπις: of the *Boetians*, ζειλαπις: in Latine, *Rapum*, pl. *Rapa*; and in Engliſh, *Turnep*, and *Turneps*.

II. *The Kinds.* There are 1. *The Garden Kinds*, of which in this *Chapter*. 2. *The Wild Kinds*, of which in *Chap.* 716. next following. Of the Garden Kinds there is 1. *Rapum rotundum album commune*, The common white round Turnep. 2. *Rapum rotundum rubrum commune*, The common red round Turnep. 3. *Rapum longum vulgare*, The common long Turnep. 4. *Rapum luteum*, The yellow Turnep.

Turnep Garden round.

The Deſcriptions.

III. The firſt, or common white round Turnep. *Its Root is round, (ſometimes of a Cheſnut, and ſometimes of a Tawny and Horn,) and of a white color both without and within, with a long Pigs-Tail like Root at its bottom, as appears in the Figure. The Leaves, Stalks, Flowers and Seed, is exactly like to the firſt deſcribed, but its Root is larger. This Matthiolus ſays, grows in the Country of Austria, where he had ſeen an infinite number of them in ſuch abigneſs, as to have weighed Fifty Pounds weight a piece, and ſome an Hundred Pounds weight, (which is almoſt incredible) but we ſee this Kind is apt to grow very big with us in our cold Climate, and therefore poſſibly it may grow or extend it ſelf to a far greater Magnitude in thoſe warmer Climates, the Soil being alſo agreeable to its Nature, and facilitating ſuch an extraordinary Production.*

IV. The ſecond, or common red round Turnep. *Its Root is of a fair red color on ſome parts of the outſide, the other parts being white like the former, but of a pure white color throughout within, as the firſt alſo is. This in its Leaves, Stalks, Flowers and Seed, is exactly like the firſt deſcribed, but its Root is larger. This Matthiolus ſays, grows in the Country of Austria, where he had ſeen an infinite number of them in ſuch abigneſs, as to have weighed Fifty Pounds weight a piece, and ſome an Hundred Pounds weight, (which is almoſt incredible) but we ſee this Kind is apt to grow very big with us in our cold Climate; and therefore poſſibly it may grow or extend it ſelf to a far greater Magnitude in thoſe warmer Climates, the Soil being alſo agreeable to its Nature, and facilitating ſuch an extraordinary Production.*

V. The third, or common long Turnep. *Its Root is round, but not Globular, and long, almoſt in ſome like a Cylinder, and in others more peaked or Spear like, being of a white color both on the outſide and inſide. The Leaves, Stalks, Flowers and Seed, are like to thoſe of the firſt deſcribed.*

VI. The fourth, or yellow Turnep. *Its Root is like to the firſt common kind, but longeſt, be more yellow, and in ſome comes near to the color of a* yellow Carrot; *otherwiſe whilſt it is growing, in reſpect to its Leaves, Stalks, Flowers, and Seed, it is hard to be diſcerned from the firſt common Garden Kind.*

VII. *The Places.* The *Turnep* is a Manured Plant, and grows with us only in Gardens, or Fields kept on purpoſe for the ſame. Thoſe which grow at *Hackney*, near *London*, are leſſer than many others, and are thought to be ſweeter than any of the other Kinds which grow in *England*. They delight in a fat and ſandy, light, looſe Earth, and there grow well.

VIII. *The Times.* They are Sown in the Spring, as alſo in the end of *Auguſt*. They Flower and Seed the ſecond Year after they are Sown. *Gerard* ſays, that thoſe which Flower the firſt Year are a degenerate Kind, which the People about *Namptwich* in *Cheſhire*, call *Mad-neps*, from their evil Qualities, in cauſing a Vertigo and Frenzie, or kind of Madneſs for ſome little while. But *Parkinſon* ſays, that theſe *Mad neps* are a Species of the *Parſnep*, as we have declared in *Chap.* 544. *Sect.* 7. aforegoing of this Book.

IX. *The Qualities.* The Roots are hot and moiſt in the firſt degree, Aperitive, Digeſtive, Anodyn, Diſcuſſive, Suppurative, Pectoral, Nephritick, Chylifick and Analeptick. The Seed is hot and dry in the third degree, Aperitive, Attractive, Digeſtive, Diuretick, Stomatick, Pectoral,

ral, Nephritick and Alexipharmick; having much the ſame *Qualities*, *Specification*, *Preparations and Virtues* of *Muſtard-Seed*, to which we ſhall refer you.

X. *The Specification.* It, *viz.* the *Root*, removes Obſtructions of the Lungs and other Viſcera, breeds a laudable Chyle and good Juices, and cures Rheumatiſms, Gouts, and Conſumptions.

XI. *The Preparations.* You may have, 1. *The Vinous Juice of the Root.* 2. *A Spirit from the ſame.* 2. *A Liquid Juice or* Sapa. 4. *A Liquid Juice by expreſſion from the Baked Roots.* 5. *A Decoction of the Roots.* 6. *The Simple Pulp of the Roots, made by Baking or Boiling.* 7. *The Expreſſed Oil of the Seed.*

The Virtues.

XII. *The Vinous Juice. It is made of the Expreſſed Juice of the raw Root, by being firſt beaten to a Pulp in a Mill, or otherwiſe, and then expreſſed out; after which, it is Fermented in wooden Vatts or Veſſels, as Juices of* Grapes, Apples, Pears, *&c.* It is a pleaſing Liquor, and may be drank as Ale, Beer, Cyder, Perry, Wine, *&c.* at Meals and other times to quench Thirſt. It is Diuretick, Cordial, and ſtrengthens the Stomach and Bowels.

XIII. *Spiritus Raporum*; The Spirit of Turneps. *It is drawn from the aforementioned Liquor, as you draw Spirit of Wine from Wine.* It has much the ſame Virtues with Spirit of Wine, and may be drank alone, or with Sugar, as you drink Brandy to warm the Stomach, cheriſh the Bowels, and revive the Spirits. With it you may make Punch with Water, Lime-Juice and Sugar, as you do with Brandy, which being drank, will have the ſame Effects; and if taken plentifully or freely, *viz.* about half a Pint at a time, 1. In the Morning faſting. 2. Half an Hour before Dinner. 3. At four in the Afternoon; and 4. At Bed time, and be continued in the ſame manner for 10 or 12 Weeks together, it will Cure a Pining Conſumption. And may be uſed in Chymical Operations, for making *Tinctures*, *Extracts*, *Cordial Waters*, *Spirits*, &c.

XIV. *The Liquid Juice or* Sapa. It is done by Expreſſion out of either raw Turneps, or after they are Baked, or Boiled ſoft in their Skins; and this *Juice* may be taken *Simply* as it is expreſſed out; or otherwiſe made into an *Eſſence*, or *Sapa*, and ſo kept for farther uſe. Theſe Preparations are all Pectoral, Chylifick, Nutritive, and reſtore in deep Conſumptions.

XV. *The Decoction of the Roots.* It is good againſt the Rickets in Children, Gouts, Rheumatiſms, Quartan Agues, Aſthma's, Coughs, Wheezings, Shortneſs of Breath, Conſumptions; increaſes Seed, expels Sand, Gravel, and Tartarous matter in the Reins and Bladder, and provokes Urine, being drank daily as the uſual Drink.

XVI. *The Simple Pulp of the Root, made by Baking or Boiling.* If it is eaten without Vinegar or Salt, only of it ſelf, or mixed with a little new Cream, or Milk, and ſome pure fine white Bread, and the Patient confines himſelf to Live of it for 6, 7, or 8 Weeks, eating no other Food, neither Fleſh nor Fiſh, Pickles, Sawces, or Sweet-Meats, during that ſpace of time, and drinking in the mean ſeaſon only a ſtrong *Decoction of Turneps*, it effectually cures a Rheumatiſm and Gout, as alſo the Scurvy and Conſumption, altho' the Patient is in a very Deplorable Condition; it is alſo a very good Diet to be obſerved of ſuch, as have come out of a Salivation, or other Courſe for the Cure of the foul Diſeaſe; doing truly much more than could be reaſonably expected, in compleating the Cures of thoſe Diſeaſes, beyond many other things of much greater Name.

XVII. *The Expreſſed Oil from the Seed.* Being mixed with *Venice Treacle* or *Mithridate*, it is ſingular good againſt Poiſon, and malign and infectious Diſeaſes. *Gerard* ſays, that in the Low Countries, as *Holland*, *Zealand*, *Flanders*, &c. it is given to eaſe the After-pains of Women in Child-Bed; and they give it both to kill and expel Worms in Children: And being waſhed with Water, and then anointed upon the Skin, it takes away its ruggedneſs, and makes it ſoft and ſmooth.

CHAP. DCCXVI.

Of TURNEP *Wild:*

OR,

Wild *RAPE.*

I. *THE Names.* It is called in Greek Λαμψάνη *Dioſcoridis:* and in Latine *Lampſane Matthioli*, alſo *Rapum Sylveſtre*, and *Rapiſtrum*, (*à Similitudine Rapi foliorum*, and in Engliſh *Wild Turnep.*

II. *The Kinds.* We have two ſorts pretty common with us, *viz.* 1. *Rapum non Bulboſum, Rapum majus Sylveſtre*, The greater Wild Rape or Turnep; and this is that *Rape* which yields the *Rape-Seed*, or *Cole-Seed*, out of which *Oil* is drawn in Mills by Expreſſion, for many Mechanick uſes. 2. *Rapiſtrum Sylveſtre*, and *Rapiſtrum minus*, The leſſer wild Rape or Turnep.

Turnep Wild.

The

The Descriptions.

III. The first, or greater Wild Turnep. *Its Root is long and slender, with some few Fibres adjoining to it. Its Leaves and Stalk are very like to those of the* Garden long Turnep; *but they grow thicker and more plentifully from the Root, and more crumpled and gasht in on the sides, and more rough in handling; and in the Flowers, Pods and Seed, it is much alike, and in the whole in its appearance, differs not much from it: The Seed is called* Rape-Seed *and* Cole-Seed.

IV. The second, or lesser wild Rape, or Turnep. *Its Root is also long, and much lesser or slenderer than the former, with some few Fibres issuing from it. Its Leaves are smaller at bottom, and not jagged, but a little waved. It is not so plenteous in Leaves as the former, but growing fewer, they are more sparsed upon the Stalks and Branches. grow upon not very long Footstalks, and the higher they grow, are more deeply waved on the edges, and sometimes as it were a little jagged. The Flowers are yellow, after which come pretty long, but small, and sharp pointed Pods, in which are contained small flat Seed, of a whitish yellow color.*

V. *The Places.* The first is found wild in many Countries, but for the profit which is made of the Seed, we here in *England*, as also in *Flanders*, and other the Low Countries, Manure it, and Sow it in Fields, and fill therewith vast Tracts of Land. The second grows wild also in our Country. *Parkinson* says, he fonnd it going from *Shoreditch* by *Bednal-Green*, to *Hackney*.

VI. *The Times.* They Flower in *May* and *June*, and the Seed is ripe in *July* or *August*, at what time they reap their Fields Sown with it, as they reap Wheat and other Corn.

VII. *The Qualities.* The Seed, which is that which is only used, is hot and dry in the beginning of the second Degree; but the Seed of the lesser sort is bitter, and almost as hot as *Mustard-Seed*, and of which some make *Mustard*, or mix it with *Mustard-Seed*, and then use it for that purpose. It is Absterstive, Digestive, Diuretick, and strongly provokes Urine.

VIII. *The Specification.* It helps the Discrasy of the Stomach, (I mean the Seed of the lesser kind) provokes Urine, opens Obstructions of the Reins and Bladder, and gives ease in the Strangury.

IX. *The Preparations.* Of the Rape-Seed, or Cole-Seed, is made, *An Oil by Expression in a Mill.* Of the lesser kind, *An Infusion in Wine.* And, *a kind of Mustard or Sawce for Meat.*

The Virtues.

X. *The Expressed Oil of the Rape-Seed or Cole-Seed.* It is used in Lamps, and therefore called *Lamp-Oil*, for which purpose, it is much better than *Train-Oil*, which is made out of *Whales*, because it stinks not like that. It also serves to make *Soap* withal, instead of *Oil Olive*: And in divers places in *Germany*, *Flanders*, and the *Low-Countries*, they use it to Fry their Fish in, *&c.* It is scarcely at all used in Physick, yet given in Quantities, it opens Obstructions of the Lungs, and makes the Belly soluble, giving ease in the extream pains of the Cholick.

XI. *The Infusion of the Seed bruised, of the lesser kind, in White Port Wine.* It powerfully provokes Urine, opens Obstructions of the Urinary Vessels, and expels Sand, Gravel, and Tartarous matter lodged in the Reins Ureters and Bladder, and for that reason gives ease in the Strangury: You may infuse 4 Ounces in a Quart of Port-Wine, and after 3 or 4 days Digestion, drink twice or thrice a day, a quarter of a Pint of the clear Wine: If it be sweetned with *Syrup of Marsh Mallows*, 'twill be so much the more effectual.

XII. *The Mustard or Sawce made of the Seed.* It is made as you make *Mustard* of *Mustard Seed*. It strengthens and warms the Stomach, excites a good Appetite and Digestion, and pretty strongly provokes Urine: But it is not altogether so pleasant as the *Mustard* made of *Mustard Seed*, because of its bitterness, which it looses not in a long time.

TUN-HOOF, *see* Alchoof, *Chap.* 6.
TURBITH. *see it in* Lib. II. *Chap.*
TURMERICK, *see it in* Lib. II. *Chap.*

CHAP. DCCXVII.

Of TURNSOLE.

I. *The Names.* It is called in Greek, Ἡλιοτρόπιον (*quoniam Flores cum sole circumaguntur*; or as *Theophrastus* will have it, because it Flowers in the Summer Solstice;) as also Σκορπιοειδὲς, *Scorpiuron*, (*quia spica Florum Scorpionis caudæ est Effigie:*) in Latine, *Heliotropium*, *Scorpioides album Gesneri*, *Solisequium*, *Verrucaria* (*à tollendis verrucis*) and *Herba Cancri*: in English, *Turnsole*.

II. *The Kinds.* There are several sorts of this Plant, as 1. *Heliotropium*, *Heliotropium majus*, *Scorpioides album Gesneri*, *Herba Cancri major Lonicери*, but most properly *Verrucaria*, Our common greater Turnsole, or Wart-Wort. 2. *Heliotropium majus supinum Clusij*, *Dodonæi & Gesneri*; *Heliotropium humi sparsum Clusij Lugdunensi*; *Heliotropium minus supinum Bauhini*, The greater creeping Turnsole. 3. *Heliotropium minus repens Lobelij*; *Heliotropium minus folio Ocimi Gesneri*; *Verrucaria altera minor Lugdunensis*, Small Turnsole. 4. *Heliotropium Tricoccum Plinij*, (but some add unto it *minus*:) *Herba Citia Camerarij*, The Dying Turnsole. 5. *Heliotropium Indicum Tuberosum*, *Flos Solis Farnesianus*, Jerusalem Hartichoak, of which we have already treated, in *Chap.* 340. aforegoing.

The Descriptions.

III. The first, or our common greater Turnsole. *Its Root is small and thready, perishing every Year. It rises up with one upright Stalk, about a Foot or more high, dividing or spreading it self out almost from the bottom, into several smaller Branches, of a hoary color. At each Joint of the Stalk and Branches, grow two small broad Leaves, something like to those of* Calamint, *or* Basil, *but greater than them of* Calamint, *and lesser than the greater* Basil; *something white or hoary also. At the tops of the Stalks and Branches, stand many small white Flowers, consisting of four, and sometimes of five very small*

ſmall Leaves, ſet in order one above another, upon a ſmall crooked Spike; they grow pretty thick together in rows, upon one ſide of the Stalk, which Stalk does bend or turn backwards, almoſt like a Scorpions Tail *(whence came that other Name* Scorpioides,*) which opens by degrees, or grows more ſtraight, as the Flowers blow open. After which, in their places come ſmall corner'd Seed, four for the moſt part ſtanding together, which ſhedding it ſelf, riſes again the next Spring.*

IV. The ſecond, or greater creeping Turnſole. *Its Root is ſmall and fibrous, periſhing every Winter as the former does. This in the Judgement of* Cluſius, *is in a manner the ſame with the former*

Turnſole Great.

or greater common Turnſole, *becauſe it is ſo like it in moſt particulars; but herein it differs, that it has many more, and ſlenderer Stalks, not ſtanding upright as the former, but a little leaning down to the* Ground *as it were. The Stalks and Leaves are leſſer, but hoary in like manner. The Flowers are white, and grow upon crooked ſpiked Stalks, bending like a* Scorpions Tail, *as the other; and the Seed is ſmaller, ſtanding ſingly, or but two together.*

V. The third, or ſmall Turnſole. *It has a ſlender, fibrous, periſhing* Root, *which ſends up weak, ſmall, ſlender* Twigs *or Branches, growing very low, and lying almoſt upon the* Ground; *having thereon many ſmall* Leaves *like the other in Form, but three times leſs in Magnitude, neither are the Stalks or Leaves white or hoary as the former, but of a dark green color. The* Flowers *are much ſmaller, and yellowiſh, not growing in long, crooked, or bending Heads like the others, nor at the tops of the Branches, but coming forth at the Joints, upon very ſmall* Footſtalks, *ſome above the* Leaves, *and ſome under them; which afterwards turn into ſmall round Heads or bot-*

Turnſole Small.

toms, like unto Warts, in which is contained ſuch like Seed as the laſt, but ſmaller, and a little rounder.

VI. The fourth, or Dying Turnſole. *Its Root is ſmall, ſlender, fibrous or threddy, and periſhes every Year after it has born Seed. It riſes up with an upright Stalk, ſpreading it ſelf out diverſly, into many Branches, and grows to the height of half a Yard, or thereabouts, on which grow broader and ſofter Leaves than any of the former, much like to thoſe of the* Sleepy Nightſhade, *and whitiſh withal, ſet without order at the Joints, up to their tops, yet growing ſmaller than below. At the ends of the Branches, come forth ſmall Moſſy yellowiſh*

Turnſole Dying.

Flowers, which quickly periſh, and fall away without giving any Seed; like herein to the Ricinus, *or* Palma Chriſti, *called the* Great Spurge; *for in the ſame manner alſo, at the Joints with the Leaves, come forth the Fruit or Berries, three always, or for the moſt part, ſet or joined together upon a Footſtalk,*

ſtalk, which is ſometimes longer, ſometimes ſhorter, as it may happen; which Berries are of a blackiſh green color, and rough or rugged on the outſide, within which is contained Aſh colored Seed; which if the Head is ſuffered to grow to be over-ripe, and be dryed in the Sun, will fall out of themſelves upon the Ground, and Spring again in their Natural places the next Year, by which means it conſtantly renews it ſelf. Theſe Berries when they are at their full Maturity, have within them, that is, between the outward Skin, and inner Kernel or Seed, a certain Juice, which being rubbed upon Paper or Cloth, at firſt appears of a freſh and lively Green color; but preſently after changes into a kind of bleuiſh Purple.

VII. *The Places.* Theſe all grow in *Spain*, *Italy*, *France*, and other hot Countries; but the firſt and ſecond thrive very well with us: The third with Care, is Manured in ſome of our Gardens: The laſt I had growing in one of my Plantations in *Carolina*, where I found it would grow and thrive as well as in *Spain* or *Italy*.

VIII. *The Times.* They all of them Flower about the Summer Solſtice, or when the Sun enters into *Cancer* in their Native Places, and the two firſt with us; but the two latter ſcarcely bear any Seed here in *England*, by reaſon of the coldneſs of our Clime.

IX. *The Qualities.* Theſe *Turnſoles* are all of them hot and dry in the firſt degree; Abſterſive, Aſtringent, Cardiack, and Alexipharmick.

X. *The Specification.* They are ſaid to be Specificks againſt Fluxes of Blood, and of the Belly, Stinging of Scorpions, Bitings of the *Phalangium*, Poiſon, Stone or Gravel in the Reins or Bladder; Strangury, provoke the Courſes, cauſe ſpeedy and eaſie Delivery to Women in Travel; kill Worms, cure Agues and Fevers, give eaſe in the Gout, Inflamation of the Brain, the Bitings of Serpents, and all other Venomous Creatures; and being rubbed upon Warts, or other like hard Excreſcences or Kernels, it is ſaid to conſume them by little and little, and to take them away, by often uſing the ſame.

XI. *The Preparations.* You may have therefrom, 1. *The Juice of the Green Herb or Plant.* 2. *The Simple Decoction in Wine.* 3. *The Compound Decoction.* 4. *The Seed.* 5. *The Cataplaſm.* 6. *The* Turnſole *Clouts.*

The Virtues.

XII. *The Juice of the Green Herb or Plant.* It is ſaid to purge Choler and Flegm; and given to one or two Spoonfuls in Wine, it is good againſt the Stinging of Scorpions, the bruiſed Herb being alſo applyed to the part hurt. It kills Worms in the Belly, both long and round; and is good, being mixed with a little Salt, againſt Warts, Wens, and hard Kernels, they being often Bathed therewith, and the Green Leaves being bruiſed, being applyed thereto.

XIII. *The Simple Decoction in Wine.* It has all the former Virtues, being given to half a Pint, and it may be given either alone, or mixt with an equal quantity of White Wine.

XIV. *The Compound Decoction.* It is made by boiling the Herb with *Cummin-Seed*, *Hyſſop*, *Creſſes*, and *Sal Nitre in White-Wine.* It is good againſt the Stone in the Reins and Bladder, as alſo againſt Sand, Gravel, and Tartarous matter in thoſe parts; kills Worms of all kinds in the Bowels, and cures Tertian and Quartan Agues; Doſe half a Pint as aforeſaid; beſides which, it has all the Virtues of the *Juice* aforementioned. If the *Decoction* is made of the *Dying Turnſole*, it is ſaid to be good againſt all Venomous Creatures, but chiefly againſt the Biting of the Spider *Phalangium*, as alſo the Stinging of Scorpions; the bruiſed Herb being alſo applyed thereto.

XV. *The Seed reduced into Powder.* It may be given from a Scruple to two Scruples or more, in any convenient Vehicle at Night going to Bed. It kills Worms in the Stomach and other Bowels; and being taken alſo every Night conſtantly, and alſo 2 Hours before the coming of the Fits of Tertian and Quartan Agues, it is ſaid to cure them.

XVI. *The Cataſpaſm of the Green Leaves.* It is good againſt the Stinging of Waſps, Hornets, and Scorpions, the bitings of the *Phalangium*, Viper, and other Serpents; and prevails againſt the Gout in any part, or any place much pained; as alſo the Diſeaſe called *Syriaſis*, which is an Inflamation of the Head, or parts about the Brain; in all theſe caſes it gives eaſe after a ſingular and admirable manner; and being often and continually applyed for ſome time, it perfectly cures them.

XVII. *The Turnſole Clouts.* Theſe are they which are Sold in our *Druggiſts Shops* for *Turnſole*, being nothing elſe but old Rags dipt into the Juice of the full ripe *Turnſole Berries*, of the fourth Species, that which is commonly called the *Dying Turnſole*. The Juice of theſe Berries without doubt is Cordial, and cheers all the Spirits Natural, Vital, and Animal; but no other uſe is made of it, or of theſe *Turnſole Clouts*, but only to turn White Wines into Claret, or a Claret color, and to color Tarts, Sweet-Meats, Gellies, and ſuch other like things into a Glorious red color. But when one conſiders, that theſe *Turnſole Clouts* are old Shifts, Shirts, Smocks, Drawers, old naſty Stockings, coming off from Poor, Mangy, Leperous, and Scabby Creatures, who have worn them ſeveral Weeks, yea Months, and ſometimes till they have rotted off from thoſe Wretched, Diſeaſed Creatures Backs; and that unwaſht, or ſo foul and filthy as they are, they are dipt into this Glorious and Precious *Turnſole Juice*, which is ſo dryed upon them; it would make not a Nice, but even an Ordinary and Ruſtick Stomach, loath to touch them, much more to abominate the Wine, Tarts, Gellies, *&c.* which are colored with them: However I leave the matter to every ones Appetite, to diſpenſe with it according to their ſeveral likings. As for my own part, I could never yet bring my Mind to the leaſt uſing thereof, ſcarcely to the touching of thoſe Filthy Rags or Clouts, without a deteſtation and abhorrence of them in the laſt degree: But as I find them, ſo I leave them, and remit their uſe to every ones Diſcretion, and to gratifie the Stomachs and Appetites of thoſe who make no ſcruple of ſuch a kind of Naſtineſs.

CHAP. DCCXVIII.

Of TUTSAN; *Or* Park-Leaves.

I. *THE Names.* It is called in Greek, Ἀνδροσαιμον: (*à Sanguine Humano cui come ſuccus aſſimilatur.*) *Galen* ſays it is of two ſorts, the one called *Dionyſias* by ſome; the other *Aſcyrum*, or *Aſcyroides*, i. e. *Peters-Wort*, of which we have already diſcourſed in its proper place, *viz.* *Chap.*

Chap. 500. aforegoing. The firſt, which is that we treat of in this *Chapter*, is called in *Greek* as aforeſaid; and in Latine *Androſæmon*, or *Androſæmum* from the Greek; and in Engliſh, *Tutſan*, or *Park-Leaves*; becauſe it is ſo common or familiar in Groves, Woods and Parks, that it grows almoſt no where elſe.

II. *The Kinds.* The moſt uſual with us are, 1. *Anaroſæmum vulgare*, *Androſæmum Camerarij*, *Dodonæi*, *Geſneri*, & *Lugdunenſis*; *Androſæmum Dioſcoridis*, *Galeni*, & *Plinij*, *Cæſalpino*; & *Centeria Theophraſti*, tho' *Lobel in Adverſaria* denys it, and ſays it is the *Clymenum Italorum*, as *Anguillara*, and *Caſtor Durantes* alſo ſay; and that it is alſo called, *Herba Siciliana*, becauſe they thought it grew naturally no where but in *Sicily*. *Androſæmum maximum fruteſcens Bauhini*; *Androſæmum majus Camerarij*; Our common Tutſan or Park-Leaves. 2. *Androſæmum Matthioli*; *Fuſchij*, *Lacunæ*, *Cordi*, *Geſneri*; *Androſæmum minus Camerarij*; *magnum Lobelij*, & *excellentius ejuſdem*, (becauſe that he thought that the former or firſt, was not worthy of the Name of *Androſæmum*:) *Dodonæus* will have it to be *Ruta Sylveſtris Dioſcoridis*, and therefore calls it *Ruta Sylveſtris Hypericoides*, becauſe *Dioſcorides* ſays, that *Ruta Sylveſtris* was called *Hypericon*, by ſome in his time: *Parkinſon* takes it to be *Hypericon ſecundum Tragi*, and the *Androſæmum Campoclarenſe Columnæ*: *Androſæmum alterum folijs Hyperici Bauhini*, *quod aliquibus Hypericoides*, The Tutſan or Park-Leaves of *Matthiolus*, alſo Johns-wort Tutſan. 3. *Androſæmum alterum Apulum Columnæ*; *Androſæmum perfoliatum & perforatum Bauhini*, the Tutſan of Naples.

The Deſcriptions.

III. The firſt, or our common Tutſan, or Park-Leaves. *Its Root is browniſh, ſomething great, hard and woody, ſpreading it ſelf well in the Ground. It riſes up with Stalks which are browniſh, ſhining and round, (not ſquare, like thoſe of* Aſcyrum *or* Peters-Wort,) *treſted all their whole length, riſing to be two, and ſometimes* 3 *Feet high, and ſpreading out into Branches, even from the bottom; but more thinly ſet, each being farther aſunder, having divers Joints, and at each of them two fair large Leaves, ſtanding but more thinly ſet than of the other ſorts, of a dark blewiſh green color on the upper ſide, and of a yellower green underneath, turning reddiſh towards* Autumn, *but abiding on the Branches all the Winter. At the tops of the Stalks and Branches, ſtand larger yellow Flowers than in* Hypericon *or* Aſcyrum, *and Heads or Berries with Seed, which is likewiſe larger; which being green at firſt, and afterwards reddiſh, turn to be of a blackiſh Purple color when they are through ripe, with ſmall browniſh Seed within them; and then yield a reddiſh Juice, of a reaſonable good Smell, ſomething* Reſinous, *and of an harſh or Styptick Taſte, as the Leaves and Flowers alſo be, tho' much leſs in that Qualification:* Gerard *ſays, that the Juice preſſed out of the Leaves is like* Claret-Wine; *but* Parkinſon *denys it to yield a Liquor of ſuch a high pure redneſs.*

IV. The ſecond, or the Tutſan, or Park-Leaves of *Matthiolus*, or Johns-wort Tutſan, unleſs you would call it *Aſcyrum magnum*, Great Peters-Wort, becauſe this is ſo like it. *It has a browniſh, long, ſlender, fibrous Root, which is Perennual, and ſends up round browniſh Stalks, (whereas the Stalks of* Peters-wort *are ſquare, tho' accidentally they are ſometimes found to be round,) which have two Leaves at every Joint,*

Tutſan, or Park-Leaves.

Tutſan of *Matthiolus*: OR, Tutſan *Johns-Wort.*

Joint, fuller of Branches, but otherwise very like to Hypericon *or* Johns-Wort; *but the Branches are thinner set with Leaves, much smaller and greener than those of the former* Tutsan, *but greater than those of* Hypericon, *without any perforations or holes at all in them. The Flowers are yellow, and greater than they, and so are the Heads or Berries with Seed, but spotted with black Streaks on them: The Leaves and Flowers both, do give a red Juice, like to that of* Hypericon *or* Johns-wort, *by which it may be plainly known, as also distinguished from our common* Tutsan *before described. The Stalks dye and perish upon the coming on of Winter.*

V. The third, or Tutsan of Naples *Its Root is fibrous and reddish, which sends forth reddish or browniſh round Stalks, not much above a foot high, with two crested Strakes like Films all their whole length; it is full of Branches, and more bushy than the last, but grows not so tall as it, having two Leaves growing at every Joint, so closely joined thereto at the bottom, that the said Stalks or Branches, seem to run through them; yet are lesser than the last described of* Matthiolus, *are sharp pointed, of a fresher green color, and smooth on the upper side, but white underneath, and having many small holes therein, so small as scarcely to be perceived; and for the most part are greater and broader towards the tops, than they are below: The Flowers at the tops of the Branches, are of a paler yellow color, and many more set together than in the other; whose green Husks wherein they stand, have blackish Spots on them, which so abide when the Heads are full of Seed. Both Leaves and Flowers yield a reddish or bloody Juice (as the others do,) being bruised between ones Fingers.*

VI. *The Places.* The first grows in many Groves, Woods, Forrests, Parks, and Woody-places, and by Hedge-sides in many parts of *England*; as by *Raily* in *Essex*, in the Woalds of *Kent*, *Hampstead-Wood*, and many other places. The second is found growing about *Bristol* and *Bath*, and several other parts of the *West-Country*. The third is a Native of the Kingdom of *Naples*, but with us is only Nurst up in Gardens.

VII. *The Times.* They all Flower later than *Hypericon* or *Ascyrum*: They all Flower in *July* or *August*, the Seed or Berries, in the mean time growing ripe. The Leaves become red in *Autumn*, at which time their red Winey Juice may be prest forth.

VIII. *The Qualities.* *Tutsan* is hot and dry in the first Degree, Abstersive, Astringent, Vulnerary, and Cathartick.

IX. *The Specification.* It seems to have all the Virtues of *Hypericon* and *Ascyrum*, viz. *Johns* and *Peters-Worts*; is good against the Gout and Sciatica, heals Burnings by Fire, stops the Bleeding of Wounds, heals speedily all simple Wounds, also Ulcers and Fistula's.

X. *The Preparations.* You may have therefrom, 1. *A Liquid Juice or Essence from the Leaves, Flowers and Berries.* 2. *An Infusion of the same in Water or Wine, done as* Thea *is made, and to be drank in the same manner.* 3. *A Pouder of the Seed.* 4. *A Wound Drink.* 5. *A Balsam or Oil.* 6. *A Cataplasm of the fresh Herb.*

The Virtues.

XI. *The Liquid Juice or Essence.* Two or three Spoonfuls of it given in *Barabar*, or other Styptick red Wine, stops all sorts of inward Bleeding in the *Viscera*, whether proceeding from inward Wounds, or opening of the Mouths of the Vessels, or any other cause whatsoever; as Spitting and Vomiting of Blood, the Bloody-Flux, Piles, of Blood, and the Overflowing of the Terms in Women, or of the Lochies in Child Bed. It has many other good Properties also, and is profitable against Agues and Fevers, and stops all sorts of Fluxes of the Bowels; and is of excellent use in curing a *Gonorrhœa*, Universals being premised.

XII. *The Infusion in Water, &c.* It is made as *Thea*, and drunk with a little double refined Sugar, in the same manner. It has all the former Virtues, (but weaker) pleases and gratifies the Stomach, and also strengthens it and all the other Bowels; besides which, it is of good use in stopping Catarrhs.

XIII. *The Pouder of the Seed.* It is very abstersive, and purges Cholerick Humors as *Dioscorides* says: And being taken to two Drams in Honey'd Water, Mead, or New White-Port Wine, it is a singular Remedy against the Sciatica and Gout, and other like Rheumatick pains; being also applyed to green Wounds, it presently stops their Bleeding.

XIV. *The Wound-Drink.* *Take of the Infusion of the Leaves, Flowers and Berries, some of them, or all of them, in Wine, or in half Water half Wine, a quart: Of the Liquid Juice or Essence a Pint, of Spirit of Wine 3 Ounces; Honey, enough to give it a pleasing Sweetness; mix and dissolve.* It is a good Wound Drink, being taken inwardly, (to half a Pint at a time) Morning, Noon, and Night. Outwardly used also as a Lotion, it cleanses Wounds, Ulcers and Fistula's, and induces their speedy Healing

XV. *The Balsam or Oil.* The Oil is made exactly as *Oil of Hypericon*, in *Chap.* 405 *Sect.* 14. 15. *The Balsam*, as that at *Sect.* 16. of the same *Chapter.* Or thus: *Take of the Simple Oil two Pounds; Balsam of* Peru *a Pound*; Chio *Turpentine half a Pound: melt, and mix all very well together, and then add Chymical Oil of Oranges six Ounces: mix them; and continue to stir them till nearly cold.* It has all the Virtues of the *Simple* and *Compound Oils*, and is excellent for any Pain or Grief proceeding from cold and moisture, Overstraining of the Joints, Weakness of any other parts, Contusions, Burnings, Punctures of the Muscles, Nerves and Tendons; or any Wound, Hurt, or Ulcer, whether inward or outward, few other Medicaments being superior to it. Dose inwardly from a Dram to two Drams, drinking a Glass of Styptick red Wine after it.

XVI. *The Cataplasm of the fresh Leaves.* It cures Burnings and Scaldings, and applyed upon fresh made Wounds, it stops their Bleeding, more especially if the Pouder of the dryed Herb or Seed be first plentifully strewed upon them, and then it quickly heals them. *Gerard* says, that being laid upon Broken Shins, and Scabby Legs, it heals them; as also many other Griefs of like kind.

TWA-BLADE, *see* Bifoil, *Chap.* 67.
TWO-PENNY-GRASS, *see* Money-Wort, *Chap.* 496.

CHAP. DCCXIX.

Of VALERIAN *Garden:*

OR,

SETWALL.

I. *THE Names.* It is called in Arabick, *Fu:* in Greek Φῦ, ἡ Ναρδὸς ἀγρία: in Latine, *Phu, Nardus agreſtis vel Sylveſtris*; alſo *Valeriana (à multis quibus valet facultatibus.)* Some call it *Thericaria*, becauſe it is a great Ingredient in *Treacle* and *Mithridate*:) alſo *Herba Benedicta*; and by *Paracelſus*, *Terdina:* in Engliſh, *Valerian*, or *Setwall*

II. *The Kinds.* Authors make many Species of this Plant; we divide it into 1. *Valeriana Hortenſis*, Garden, of which in this *Chapter.* 2. *Valeriana Sylveſtris*, Wild, of which in the next. Of *the Garden Kinds*, theſe following are the chief which grow with us, *viz.* 1. *Phu majus Hortenſe*, *Valeriana major Hortenſis*, Our great Garden Valerian or Setwall. *Setwall* is alſo a Name given to *Zedoary*, an Exotick never known to grow in our cold Climates, of which we ſhall (God willing, particularly diſcourſe in the ſecond Book of this *Herbal.* 2. *Phu minus*, *Valeriana minor Hortenſis*, The leſſer Garden Valerian, or Setwall. 3. *Valeriana rubra Dodonæi*, *Camerarij*, *Phu Peregrinum Camerarij*; *Ocimaſtrum Lobelij*; *Valerianthon*, *Polemonij altera ſpecies Geſneri*; Red Valerian. 4. *Valeriana Græca Dodonei*; *Valeriana Peregrina Camerarij & Lobelij*; *Valeriana Cærulea Bauhini*, Greek Valerian. 5. *Valeriana minor Annua*, *Valeriana Petrea*, Small Rock, or Annual Valerian. 6. *Valeriana Cretica Tuberoſa*; *Nardus Cretica Belli*, (becauſe the Roots have the Smell of *Nard*, tho' the whole Form of the Herb is moſt like a *Valerian:*) Tuberous Valerian of *Candy.* 7. *Valeriana Indica*, *Valeriana Mexicana*; *Tripolium Dioſcoridis Cortuſo*, Indian Valerian.

The Deſcriptions.

III. The firſt, or our Great Garden Valerian, or Setwall. *It has a Root about an Inch thick, ſhort and grayiſh, lying for the moſt part above Ground, (in which particular, our Figure here is defective) ſhooting forth a Sloop under the upper part of the Earth, and ſhooting forth on all ſides ſuch ſmall pieces of Roots, which have all of them many long and great Strings and Fibres under them, by which it is faſtned to the Earth, and by which it draws its Nouriſhment:* This Root *is of a pleaſant ſweet Smell when it is broken, and ſmells ſweeter and more ſtrong than either Leaf or Flower, and is of more uſe in Medicine. From the Heads of theſe Roots, ſpring up many green Leaves, which at firſt are ſomething broad and long, without any diviſion at all in them, or denting on the edges: But they that riſe up afterwards, are more and more divided on each ſide, ſome to the middle Rib, being in a manner Winged, as if many Leaves were growing together on a middle part; and thoſe growing alſo in the Stalk it ſelf, are more divided, but ſmaller towards the top than thoſe which grow below. The Stalk riſes to be about a Yard high or more, ſometimes Branched at the top, repleat with ſmall*

Valerian Garden, Great.

whitiſh Flowers, which are ſometimes daſht over at the edges with a pale purpliſh color, having but a weak Smell; they being paſt away, there follows ſmall brownish white Seed, that is eaſily carried away with the Wind. Camerarius *ſays, there is a Mountain Kind of this Species, found in* Savoy, *which is more ſweet than this, ſmelling not much unlike to a full ripe* Citron, *and is more ſoft or gentle in feeling than this is.*

Valerian Garden, Small.

IV. The

VI. The second, or lesser Garden Valerian. *The Roots of this are long and small, and very full of Fibres or white Threds, smelling like to the small* Wild Valerian. *It is in its Growth and Leaves very like unto the last, but much smaller, having its Leaves divided much in the same manner; the lowermost at bottom of the Stalk being without any division at all in them. The Stalks are not above half the height of the other, bearing small Tufts of whitish purplish Flowers.*

V. The third, or red Valerian. *Its Root is great, thick, and white, continuing long, and shooting out new Branches every Year. It has several hard, whitish, brittle green Stalks, full of Tuberous or Swelling Joints, at which stand two Leaves one on each side, and now and then some small Leaves from between them, which are somewhat long and narrow, broadest in the middle, small at the Lower end, and sharp pointed, of a pale green color, and without any Division or Dent on the edges. The Stalks are 3 or 4 Feet high, branched at their tops; at the ends of which, come forth many Flowers together, something like to the Flowers of the first, or our great* Garden Valerian, *but with longer Necks, of a fine red color, without any of the* Valerian *Smell. After the Flowers have stood blown a good while, they suddenly fall away; and the Seed which is small and naked, with a little Tuft of Down at the top thereof, (whereby it is easily carried away with the Wind,) ripens quickly after.*

VI. The fourth, or Greek Valerian. *Its Root consists of a number of small, long, blackish Fibres or Threads, without any of the* Valerian *Scent. It*

Valerian Greek.

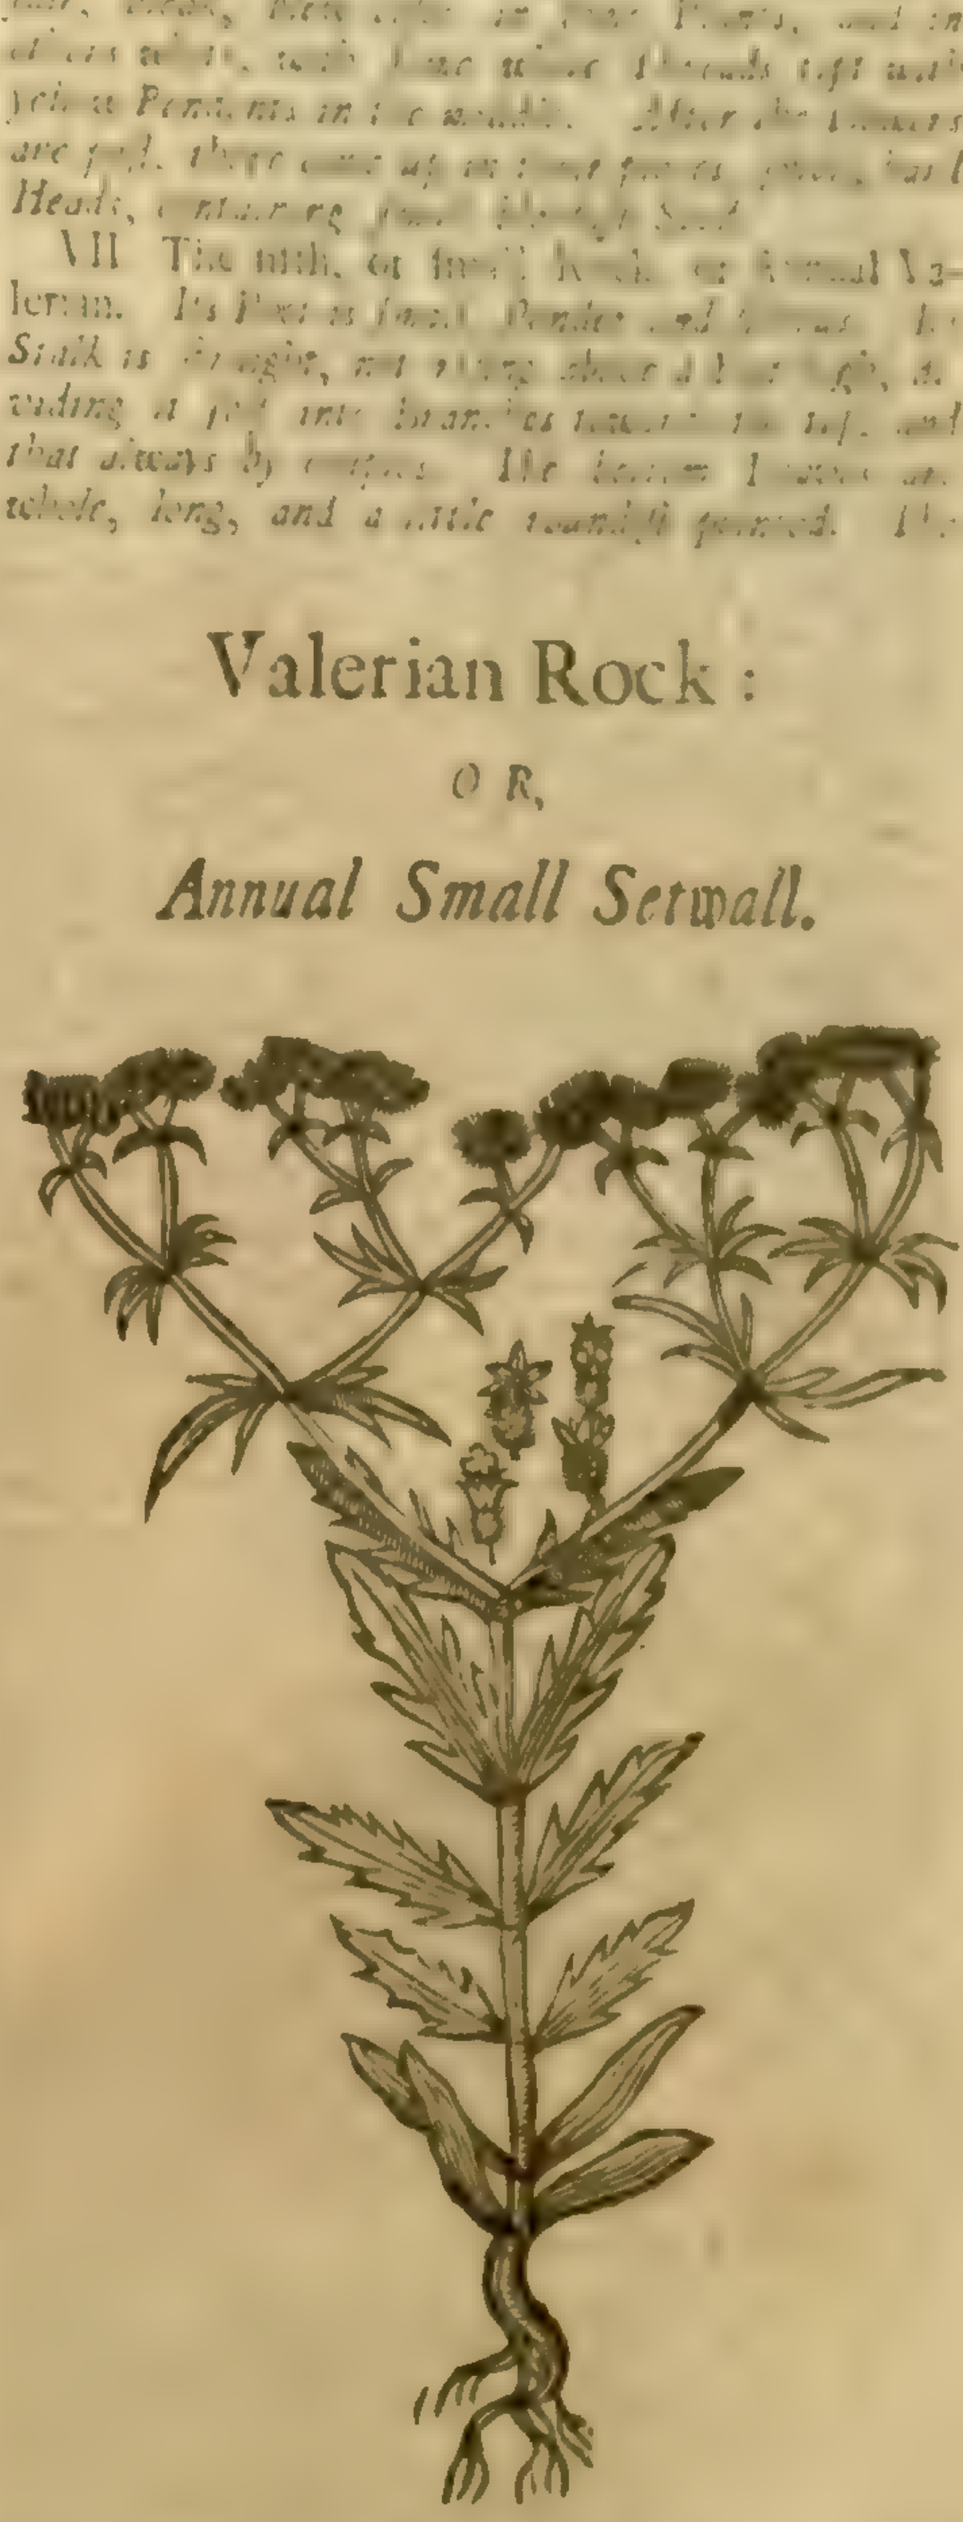
has many Winged Leaves lying on the Ground, something like to the Wild Valerian, *which grows by Ditch sides, but more tender and small; from among which, rise up two or three round, hollow, brittle Stalks, two or three Feet high, on which are set at the Joints, such like Leaves as grow below, but smaller: The tops of the Stalks are divided into many small branches full of Flowers, each consisting of five small round pointed Leaves, of a fair, clear, blew color in their Flowers, and in others white, with blue veins. Threads left with yellow Pendents in the middle. After the Flowers are fall, there come up in their places small Heads, containing small blackish Seed.*

VII. The ninth, or small herb or Annual Valerian. *Its Root is small, slender and fibrous. Its Stalk is straight, not rising above half a foot high, dividing at first into branches towards the top, and that always by couples. The lowest Leaves are whole, long, and a little roundish pointed. The higher Leaves are deeply notched or dented on both edges. The Flowers are small, of a whitish purple color, consisting of five round pointed Leaves, upon round rough Heads, which when the Flowers are fallen, become Star fashion'd, divided into five parts.*

Valerian Rock:

OR,

Annual Small Setwall.



VIII. The sixth, or Tuberous Valerian of Candy. *The Root in its upper part is roundish, short and Tuberous; from whence shoot forth round about it small long Strings, each of which having at its end, a small longish round Tuberous Root, fastned to the same, not much unlike to the manner of* Filipendula *Roots, whose Smell is very much like to that of our first great* Garden Valerian, *before described. The first Leaves which Spring up from the uppermost great Tuber, lye upon the Ground round about the same, and are green, thick and round, like to the Leaves of Asarabacca, and sometimes greater. The next which come after them are longer, and much divided or cut in on the edges; and those which yet follow, are more and more divided; so that those which grow upon the Stalk, are very like the*

the divided Leaves of our firſt, or great Garden Valerian. *The Stalk is hollow, and riſes up to be about two Feet high or more, having here and there two ſmaller Leaves ſet at a Joint. At the top whereof, which is divided into ſome ſmaller Branches, ſtand many white Flowers in an Umbel, thick ſet together, ſomewhat larger than thoſe of our firſt Garden kind, which turn afterwards into ſmall flat Seed, with a little Down at the Head thereof.*

IX. The ſeventh, or Indian Valerian. *Its Root is ſmall and ſtringy, periſhing every Year, with the firſt Froſt. It quickly grows up into a Stalk; from the firſt Leaves which ſpring up, which are but few, next the Ground, ſomething long and broad, and ſomewhat like unto the firſt Leaves of the* Mountain Spicknard, *of a pale green color. The Stalk is weak and hollow, not ſtanding upright, but leaning or bending downwards, ſet with ſome Joints, at which ſtand two long Leaves, like to thoſe below, but a little more waved on the edges: And at the Joints ſhoot forth alſo two Branches ſometimes, on each ſide one; and ſometimes but one Branch on one ſide, which are divided, and at the tops do ſend forth many Flowers, ſet thick together, in an Umbel or Tuft, each of which is ſomewhat long, and ends in five diviſions, two of the uppermoſt whereof are broader and ſhorter than the reſt; the other two hanging down as Labels or Lips, and the fifth Leaf which is the greateſt, ſtanding in the middle: In ſome Plants, this Flower whilſt in its Bud, is of a deep red or purple, and of a pale purple color being open; whilſt in ſome others, it is of a Milk white. Each of them ſtand in a ſmall green Husk, in which after the Flower is fallen, is a Head which contains the Seed, which opening of it ſelf, ſheds its Seed on the Ground, if not (when it is ripe) carefully tended and gathered; which is ſpongy, rounder, bigger, and blacker than any of the other* Valerians, *and without any Down at its end. The whole Plant is utterly without any Smell, and almoſt without any Taſte.*

X. *The Places.* The firſt is ſaid by *Dioſcorides* to grow in *Pontus*, and is found growing in the wet Grounds of Mountains, and other moiſt places, and is a common Herb in our Gardens, as alſo the ſecond. The third and fourth, as alſo the fifth, are Garden Plants with us, nor do we know any other Natural places of their Growth. The ſeventh is ſaid to come from *Mexico* in the *Weſt-Indies*; but it was firſt brought to us from *Italy*; and as *Bauhinus* ſays, that which bears the Purple Flowers, grows in that part of *Italy* called *Latium*, or the *Country of the Latines*; and in a place called *Siculus*, for which reaſon ſome have called it, *Valeriana Sicula*; but that with the white Flower in the Country of the *Sabines*, and is now with us a Garden Plant, being Nurſt up by the more Curious. The ſixth, tho' growing with us, is a Native of *Candy*.

XI. *The Times.* They all Flower in the Summer Months of *June* and *July*; and the *Indian* kind, if it is Planted early, will Flower early, and continue Flowering, till the Froſts put a check to it.

XII. *The Qualities.* As the Roots are chiefly uſed, ſo the green or freſh Roots, are ſaid to be temperate in reſpect of heat or cold; but being dryed, are hot and dry in the firſt degree, Aperitive, Diuretick, Abſterſive, Vulnerary, Nephritick, Cardiack, Alexipharmick, and Emmenagogick.

XIII. *The Specification. Valerian* is good againſt the Stone, Sand, Gravel and Strangury, Poiſon, Plague, yellow Jaundice, Wounds, Ulcers, and the like.

XIV. *The Prepartions.* You may make therefrom, 1. *A Liquid Juice or Eſſence of the Herb and Root.* 2. *A Decoction Simple.* 3. *A Decoction Compound.* 4. *A Pouder of the Root.* 5. *A Balſam.* 6. *A Cataplaſm.* 7. *A Diſtilled Water.* 8. *A Spirituous Tincture of the Root.* 9. *An Acid Tincture of the ſame.* Where note, that the firſt Garden kind is moſt uſed; and ſome ſay that the leſſer kind is ſtrongeſt, and moſt efficacious.

The Virtues.

XV. *The Liquid Juice or Eſſence.* They warm and comfort the Stomach and Bowels, provoke Urine, and are profitable againſt the Strangury; are good againſt Pleuritick pains, and pains of the Hypochonders; reſiſt Poiſon, and provoke the Terms in Women. Doſe 2, 4, or 6 Spoonfuls, taken Morning and Night in a Glaſs of Generous Wine: It kills Worms in the Stomach and Belly.

XVI. *The Simple Decoction.* It provokes Urine plentifully, helps Obſtructions of the Stomach and Lungs; is good againſt the Stinging or Bitings of Poiſonous or Venomous Creatures, as alſo the Malignity of any Peſtilential Diſeaſe, yea, of the Plague it ſelf. *Matthiolus* ſays, that the Decoction of the Root of the *Leſſer Valerian*, is more potent in reſiſting Poiſons, or Infections of the Plague, than the greater. In caſes of Poiſon and Infection, it is beſt made in Wine. This is generally called in *England*, the *Poor Man's Remedy*, after taking a great Cold to drink it, and Sweating after it; as alſo to diſpel Wind, and eaſe the Cholick: dropt into the Eyes, it clears the Eye-ſight.

XVII. *The Decoction Compound. Take Roots of Valerian* 8 *Ounces, Raiſons ſtoned* 6 *Ounces, Liquorice bruiſed or ſcraped,* 2 *Ounces, Aniſeeds bruiſed one Ounce, Wine two Quarts; boil till a Pint is conſumed, ſtrain out and keep it for uſe.* It is good againſt Aſthma's, Coughs, Cold, difficulty of Breathing, Hoarſeneſs, Wheezings, and other Diſtempers of the Lungs, opening the Paſſages, and cauſing an Expectoration of the Morbifick matter.

XVIII. *The Pouder of the Root. Galen* ſays, that it is like to *Nardus*, or *Spicknard* in quality, and for all the ſame purpoſes, but much weaker; yet it provokes Urine more plentifully than either the *Indian* or *Syrian Nardus*; and therein is like unto the *Celtick Nardus. Pliny* ſays, that the Pouder given in Drink, or in the former *Simple Decoction* in Wine, does help all Obſtructions of the Stomach and Lungs, or of any other part; as alſo pains of the *Pleura*, Hypochonders and the like; and it is given in the Colick and Stone, or Strangury, or Obſtructions of the Terms; againſt the Plague, and all ſorts of Peſtilential Fevers, Poiſon, and the Stinging or Bitings of Venomous Creatures; and has all the Virtues of the *Juice, Eſſence*, and *Simple Decoction* aforegoing. Doſe to one Dram in Wine, or ſome proper Vehicle.

XIX. *The Balſam.* It is good to cure green Wounds, as alſo old Ulcers, the Sores being firſt waſhed either in the aforenamed *Simple Decoction*, or the *Spirituous Tincture* following. It alſo cures Fiſtula's, if *Pouder of Tobacco Leaves* be mixed with it.

XX. *The Cataplaſm. It is made of the Green Herb with the Root, by beating in a Mortar.* Being applyed to the Head, it eaſes the Head-ach, and the vehement Shooting therein; ſtops Catarrhs and Rheums, or thin Defluxions of Humors. It is good to heal Cuts, Wounds or Sores, as alſo ſimple

Contu-

Contuſions, and to draw Splinters or Thorns out of the Fleſh. And is profitably applyed to the Swellings of the Cods from Cold or Wind, being applyed to them, after fomenting with the *Simple Decoction.*

XXI. *The Diſtilled Water from Herb and Root, of the greater Valerian in* May. It has all the Virtues of the *Juice*, *Eſſence*, and *Simple Decoction.* Mixt with the Juice or Effence, and ſo taken, it is more effectual, and is a preſervative againſt the Peſtilence or Plague when that Diſeaſe reigns; ſo alſo taken, it kills Worms in the Belly, and the ſame mixture dropt into the Eyes, it takes away the dimneſs of Sight, or any Pearl, Haw, Web, or Film therein. And if therewith green Wounds or old Ulcers be waſht, it induces their ſpeedy healing.

XXII. *The Spirituous Tincture.* It ſtrengthens and fortifies the Stomach, and prevails againſt the Colick, Palpitation of the Heart, Fainting Fits, Sickneſs at Stomach, and the like. Doſe halt a Spoonful to one Spoonful, in a Glaſs of Wine.

XXIII. *The Acid Tincture.* It is a Specifick againſt the Plague or Peſtilence, and all other malign Fevers and Diſeaſes; ſtrengthens and fortifies the Stomach, cauſe a good Appetite and Digeſtion, and reſiſts Poiſon. Doſe 50 drops or more, in a Glaſs of Wine, or Wine and Water.

CHAP. DCCXX.

Of VALERIAN *Wild.*

I. *THE Names.* It is called in Greek, φῦ ἄγριον: in Latine, *Phu Sylveſtre*, *Valeriana Sylveſtris*; *Valeriana Paluſtris*; in Engliſh, *Wild Valerian.*

II. *The Kinds.* There are two ſorts thereof, *viz.* 1. *Valeriana Sylveſtris major*, The greater Wild Valerian. 2. *Valeriana Sylveſtris minor*, The leſſer Wild Valerian.

Valerian Wild, Greater.

The Deſcriptions.

III. The firſt, or greater Wild Valerian. *Its Root is ſlender, with a tuſh of blackiſh Threads or Strings, which ſend forth other Fibres or Threads of increaſe; beſides which, the lower Branches do ſhoot forth fibrous Roots alſo. It riſes with a Stalk and ſeveral Winged Leaves, of which, the end Leaf is the largeſt, of a ſad green color, with few or almoſt no dents in the edges; the Stalk has two ſuch like winged Leaves at every Joint, as grow below, but ſmaller; and at the top branched into Heads or Umbels of ſmall reddiſh Purple Flowers, but deeper than thoſe of the firſt, or* Great Garden Valerian.

IV. The ſecond, or leſſer Wild Valerian. *Its Roots are ſlender, growing a long, creeping, and full of fine ſmall Threads, having but little Smell. It much reſembles the former in its Stalk, winged Leaves, Flowers, and manner and form of growing, but far leſs. Beſides, the firſt Leaves there-*

Valerian Wild, Small.

of are ſingle, whole and undivided; whilſt the others which come forth after upon the Stalks, are winged, and exactly like the former, yet much leſs. The Stalks are not much above a Foot high, on whoſe tops grow ſpoky rundles of Flowers, like the firſt, of a light whitiſh purple color.

V. *The Places.* They both grow in Marſhes and wet Meadows, by Rivers and Waters ſides, Watery Ditches and Ponds, in many parts of *England*; but the greater kind for its uſefulneſs, is now brought into Gardens, and Nurſt up there, where it flouriſhes very well; whilſt the leſſer will ſcarcely

ſcarcely admit of ſuch a Tranſplantation, nor thrive at all there, unleſs it be a very moiſt or watery Ground.

VI. *The Times.* They both Flower in *June*, *July* and *Auguſt*, viz. when the Garden kinds alſo do.

VII. *The Qualities, Specification, Preparations and Virtues* of theſe, are by Authors accounted to be the ſame with thoſe of the Garden kinds in the former *Chapter.*

VIII. *Nota* 1. *The Juice of the Wild Valerian* is held by later Herbariſts, to be good for ſuch as are troubled with Ruptures, or broken Bellies, and ſuch as are afflicted with Cramps and Convulſions; and to cure ſimple Contuſions occaſioned by Falls, Bruiſes and the like. Doſe 3 or 4 Ounces, Morning and Evening, in a Glaſs of Wine.

IX. *Nota* 2. *The Pouder of the Roots of either the greater or leſſer kinds.* If it is given to a Dram at a time in any convenient Vehicle, eſpecially in White Port Wine, it is ſaid to cleanſe the Stomach and Bowels of Slimy, Acrimonious, and Filthy Humors, by Purging them away both upwards and downwards.

CHAP. DCCXXI.

Of VERVAIN.

I. *THE Names.* It is called in Greek, Ἱερὰ Βοτάνη, i. e. *Herba Sacra*; and Περιστερεών, *Periſtereon:* in Latine, *Sagminalis Herba, Matricalis, Columbaria, Columbaris, Columbana, Exupera, Martialis, Herculania, Ferraria* and *Verbenaca*; but the moſt uſual Latine Name for it is, *Verbena*, quaſi *Herbena*, i. e. *Herba bona:* in Engliſh, *Vervain.*

II. *The Kinds.* We ſhall treat of but three ſorts, viz. 1. *Verbena vulgaris, Verbena mas, Verbena recta*, Common Male, or upright Vervain. 2. *Verbena peregrina, Verbena Fœmina, Verbena ſupina*; Foreign, Female, or bending down Vervain; and this ſort all Authors call the Female kind. 3. *Verbena Peruana, Verbena Americana, Verbena Caroliniana*, (which I ſo call, becauſe I found it thrice in ſome parts of the *South Carolina*) American, or Peruvian Vervain.

The Deſcriptions.

III. The firſt, or our Common Male, or upright Vervain. *Its Root is ſmall, long and ſtringy, and of little or no uſe. It has divers ſomewhat long and broad Leaves next the Ground, deeply gaſht towards their bottoms; the other parts being deeply dented about the edges; and ſome of them only deeply dented, or cut all alike, of a blackiſh green color on the upperſide, and grayiſh underneath. The Stalk is ſquare, and ſpread out into divers Branches, riſing up about* 2 *Feet high, (eſpecially*

VERVAIN.

if you account therewith, the long Spikes of Flowers at the tops,) which are ſet on all ſides thereof, one above another, and ſometimes two or three together, being ſmall and gaping, of a purpliſh blew color, with white intermixt; after which, come ſmall round Seed; in ſmall and ſomewhat long Heads.

IV. The ſecond, or Foreign Female, or bending down Vervain. *The Root is altogether like the former, periſhing after Seed time: It has divers ſmaller and weaker ſquare Stalks, leaning or bending down towards the Ground, and ſome of them almoſt lying thereon, not ſtanding ſo upright as the former; ſpread out into many more ſmaller Branches, and having ſuch like Leaves growing on them at the ſeveral Joints, but much ſmaller, and more divided or cut in, making them ſeem to be ſo many Leaves ſet on both ſides the middle Ribs, of a grayiſh green above, and more gray underneath. The Flowers grow in the ſame manner which the others do, in ſmall long Spikes, being of a deeper blew color than the other, otherwiſe in Form not unlike. The Seed which follows is like it alſo, and falling of its own accord, raiſes it ſelf of its own Sowing.*

V. The third, or American, or Peruvian Vervain. *This in its Roots, Stalks, Leaves, Flowers, and manner of growing, is much like unto the laſt, but grows greater, and abides green in Winter, as well as Summer, in its own Native Place of Growth; but with us, it will not abide our cold Winters, but periſhes by the Unnaturalneſs and Frigidity of our Climates.*

VI. *The Places.* The firſt grows Wild generally throughout all *England*, by Hedges and High-ways ſides, in Borders of Fields and other waſte Grounds. The ſecond is no wild Plant with us, but is Nurſt up in Gardens. The laſt is a Native of *America*, as in *Peru* and *Carolina*, in the South of which, I found it in three ſeveral parts.

VII. *The*

VII. *The Times.* The first Flowers about *July*. and the Seed is ripe in some small time after. The second will not endure a Winters Blast before it Seeds with us; and therefore seldom Flowering before Winter, it scarcely brings its Seed to perfection here. The third Flowers in *America* in *July* and *August*.

VIII. *The Qualities.* *Vervain* is hot in the first degree, and dry in the second: Aperitive, Abstersive, Anodyn, Diuretick and Vulnerary; Pulmonick, Nephritick, Arthritick, and Alexipharmick.

IX. *The Specification.* It is good against Asthma's, Coughs, Colds, Wheezings, Hoarseness, Biting and Stinging of Serpents, mad Dogs, Hornets, Scorpions, and other Venomous Creatures: It prevails against the yellow Jaundice, Dropsy, Gout, Strangury, Obstructions of the Reins and Bladder, the Colick, and all other inward Pains and Torments of the Bowels. It kills Worms in Stomach and Belly, prevails against Tertian and Quartan Agues, all sorts of malign Diseases, and the Plague or Pestilence it self. It stops Bleeding whether inward or outward, consolidates and heals Green Wounds as also old Ulcers and Fistula's, whether in the Mouth, Throat, Secrets, Arms, Thighs, Legs, or other parts of the Body. It abates Inflamations, takes away Deformities of the Skin, cleanses and clears the Eye-sight.

X. *The Preparations.* You may make thereof. 1. *A Liquid Juice.* 2. *An Essence.* 3. *A Decoction in Wine or Water.* 4. *A Lotion.* 5. *A Pouder.* 6. *A Balsam.* 7. *A Cataplasm.* 8. *A Distilled Water.* 9. *A Spirituous Tincture.* 10. *An Acid Tincture.* 11. *An Oily Tincture.* 12. *A Liquid Juice of the American.*

The *Virtues.*

XI. *The Liquid Juice.* It is drying, bitter and binding, an opener of Obstructions, cleansing and healing: It cures the yellow Jaundice, Dropsy and Gout, opens Obstructions of the Lungs, Liver, Spleen, Reins, Mesentery and Bladder; gives ease in the Colick, and all inward Pains and Torments whatsoever. It is good against the Bitings and Stingings of Vipers, and other Serpents, mad Dogs, Hornets, Scorpions, *Tarantula*, and other Venomous Creatures; prevails against the Plague or Pestilence, and all other malign Diseases; cures Tertian and Quartan Agues, and kills and expels Worms out of the Stomach and Belly; causes a good Color in the Face; is effectual against the Diseases of the Stomach and Lungs, as Fainting, Swooning, Loathing, want of Appetite, Indigestion, Coughs, Colds, Asthma's, Wheezing, shortness of Breath, difficulty of Breathing, and other like Diseases of those Parts. Dose 2 Ounces, more or less, Morning and Night, in White Port or *Lisbon* Wine, or Honied Water.

XII. *The Essence.* It has all the former Virtues, and more effectual to all the same purposes and intentions; besides which, it is good against the Dropsy, as also against the Stone, Gravel, Sand and Tartarous Mucilage in the Reins and Bladder, cleansing them of all sorts of viscous matter which may generate the Stone. It consolidates and heals all simple green Wounds and Ulcers, Fistula's, and other like Sores in the Mouth, Throat, Secrets, Legs, and other parts, they being washed therewith. Applyed with *Oil of Roses and Vinegar*, to the Forehead and Temples, it eases their inveterate Pains, and is good for such as are fallen into a Frenzy. Dose from one Spoonful to two, to be taken in the like Vehicle and manner as the former.

XIII. *The Decoction in Wine or Water.* It has all the Virtues of the *Juice* and *Essence*, but as it is weaker, so it must be given in much larger quantities, as from a quarter to half a Pint, sweetned with fine Sugar.

XIV. *The Lotion.* *Take a Pint of either Juice or Essence, three quarters of a Pint of the Decoction; Honey 4 Ounces, mix and dissolve.* It cures Wounds and Ulcers both external and internal, whether in the Stomach, Guts, or Mesentery; stops Bleeding, and outwardly by washing therewith, heals simple green Wounds, old Ulcers, Fistula's &c. in Mouth, Throat, Secrets, Arms, Legs, &c. it cleanses, drys, and quickly heals them.

XV. *The Pouder of the Herb and Flowers.* It has the Virtues of the Juice and Essence, and may be given Morning and Night from half a Dram to a Dram and half, in any proper Syrup, or other fit Vehicle, which the Patient best likes. Outwardly strewed upon old putrid Ulcers, it cleanses and drys them, and induces their healing.

XVI. *The Balsam.* It is a singular Vulnerary, heals simple green Wounds almost upon the spot; and cleanses old running Sores, Ulcers and Fistula's, and in a short time after cures them. Applyed also to the Gout, it gives ease in the same.

XVII. *The Cataplasm.* Made of the bruised green Leaves with some Vinegar, it eases Pains in any part, admirably cleanses the Skin, taking away Morphew, Scurf, Pimples, Freckles, and other like Deformities thereof.

XVIII. *The Distilled Water.* Dropt into the Eyes, it cleanses them from Mists, Clouds, Films, or other things which obfuscate the Sight, and very much strengthens the Optick Nerves; but it is much more effectual for this purpose, if it is mixt with an equal quantity or more, of the *Juice* or *Essence* aforegoing. The said Water, (but especially mixed with the *Juice* or *Essence*) is an excellent Abstersive, to cleanse and free the Skin from most deformities affecting the same. It heals green Wounds, cleanses and drys old running Sores, Ulcers, Fistula's, &c.

XIX. *The Spirituous Tincture.* It has the Virtues of the *Juice* and *Essence*, and gives ease in the Piles, they being bathed therewith. Dose one Spoonful in a Glass of Wine.

XX. *The Acid Tincture.* It is given in the Plague or Pestilence, as also in all malign and pestilential Fevers: Dose so many Drops as to give the Vehicle a pleasing Acidity, to be often repeated in the Day.

XXI. *The Oily Tincture.* It is good against the Stone and Gravel in Reins and Bladder, the Strangury, and all Obstructions, Pains and Diseases in those parts. Dose from 15 to 25 Drops, dropt into white Sugar, and taken in a *Decoction of Parsly Roots.*

XXII. *The Juice of the* American *Vervain.* *Monardus* says, that it goes far beyond either of the former: He says, that a certain Noble Woman in the *West Indies*, having used divers Physitians in vain, an *Indian Physitian*, very skilful in Herbs, gave her the *Juice of this Vervain* to drink, with some Sugar mixed therewith, (to abate some of its bitterness) by the use of which, she voided in a few days, a thick long Worm, being hairy, about a Foot long, and forked at the Tail, after which, she grew well. The same Noble Woman, commended the same to another Woman in *Peru*, who had not been well of a long time, who having taken it in the same manner for several days, at length voided many small and long Worms, and among the rest, one very long, like unto a long white Girdle, after which she became well. And this

this very thing being given to many others, who complained in like manner, they were all ſoon Cured, by voiding their Worms more or leſs; and ſome by voiding Rouls or Balls of Hair, and other Heterogeneous things. It is held to be no leſs effectual againſt all manner of Poiſon, as alſo the Bitings of Serpents, and other Venomous Creatures. Many other great things *Monardus* ſpeaks hereof, which ſuch as pleaſe, may have recourſe to the Author for the ſame.

CHAP. DCCXXII.

Of VETCHES *not bitter.*

I. *THE Names.* The Vetch is called in Greek, Βίκιον, Σάρχον, Κύαμον, ἡ Κύαμος: in Latine, *Vicia*, pl. *Viciæ*; in Engliſh, the *Vetch* or *Tare*. But we make a diſtinction; for tho' all the Species are called *Vetches*, yet the Manured kinds are moſt commonly called *Tares*; and of thoſe, both the Manured and Wild ſorts of them, we have already treated in *Chap.* 683. and 684. aforegoing; the other kinds more commonly called *Vetches*, remain to be treated of in this and the following *Chapters*

II *The Kinds.* Of theſe ſorts of *Vetches*, we make two principal Species, *viz.* 1. *The Vetches not bitter*, of which we treat in this preſent place. 2 *The bitter Vetches*, of which we ſhall diſcourſe in the *Chapter* next enſuing.

III. *The Kinds of Vetches not bitter.* There is a large Stock of theſe, many of which grow in Foreign Parts, and far diſtant Regions, which we poſſibly may not ſee in many Ages; of theſe Strangers we ſhall ſay nothing; but thoſe of which we treat, ſhall be what are daily found growing Wild amongſt us, or are otherwiſe Nurſt up by the Curious in their Gardens, the chief of which are theſe following. 1. Ἀφάκη ἀγρία: in Latine, *Aphaca*, *Aphaca Sylveſtris*, The yellow Wild Vetch. *Lugdunenſis* takes it to be the Ὀροβάγχη, *Orobanche*; *Theophraſti*, lib. 5. cap. 22. *Cauſarum*; which grows amongſt *Orobus* and ſtrangles it. *Anguilara* and *Camerarius* take it to be his Πίτυς, *Pitine*: *Lobel* calls it *Aphaca Dioſcoridis*; and *Lugdunenſis*, *Orobanche Legumen*, (becauſe he acknowledges another *Orobanche.)* It is the *Elatine tertia Tabernæmontani*, and the *Vicia lutea ſolijs Convolvuli minoris Bauhini.* 2. Ἀστράγαλος, *Aſtragalus*, Milk Vetch; it is alſo called *Aſtragaloides Herbariorum*, *Aſtragalus Nothus*, Baſtard, or baſe Milk Vetch. 3. Ἡδύσαρον, *Hedyſarum*, *Securidaca*, Hatchet Vetch, which is of two kinds, firſt, *Hedyſarum majus*, *Securidaca major vera*, The true greater Hatchet-Vetch, or Sicklewort. 4. Secondly, *Hedyſarum minus*, *Securidaca minor*, The leſſer Hatchet Vetch. 5 *Ferrum Equinum majus Tabernæmontani*, *Solea Equina Lugdunenſis*, The greater Horſe-Shooe Vetch. 6. *Ferrum Equinum minus*, The leſſer Horſe-Shooe Vetch. 7. *Ornithopodium majus*, *Pes Avis major*, The greater Birds Foot, (ſo called from the form of the Pods.) 8. *Ornithopodium minus*, *Pes Avis minor*, The leſſer Birds-Foot. 9. *Ornithopodium radice nodoſa*, Knotted Birds-Foot. 10. *Anthyllis Leguminoſa vulgaris Cluſij*; *Anthyllis prior Dodonæi*; *Lagopodium Tabernæmontani*; *Anthyllis Lentiſimilis Lobelij*; *Arthetica Saxonum Thalij*; *Vulneraria ruſtica Geſneri*, (becauſe his Country-Men called it *Wundkraut*, Wound-wort:) *Loto affinis vulneraria pratenſis Bauhini*, Our common Kidney Vetch, 11. *Stella Leguminoſa Lobelij*; *Vicia Seſamacea Columnæ Bauhino*, (which Name I think *Bauhine* has wrongfully applyed;) The Star Codded Vetch. 12. *Vicia Glycyrrhizata Gerardi*; *Glaux vulgaris Leguminoſa*, The Liquorice like Vetch. It is the *Fænugrecum Sylveſtre Tragi & Dodonæi*; the *Glycyrrhiza Sylveſtris Geſneri*; and the *Glaux vulgaris Lobelij.* 13. *Vicia Glycyrrhizata altera*; *Glaux altera Leguminoſa*, *Glycyrrhiza Sylveſtris alia Camerarij & Thalij*, The other Liquorice like Vetch.

The Deſcriptions.

IV. The firſt, or yellow Wild Vetch. *Its Root is ſmall and long, with many Fibres, not enduring all Winter, but periſhing every Year. It riſes up higher than* Lentils, *with many weak, ſleuder, and cornered Stalks full of Joints, with ſmall Leaves at them, ſet by couples cloſe together, until they be well grown, which then ſtand more ſeparate, each of which is broad at bottom, as it were encloſing the Stalk, and ſmall and ſharp at the end, ſomething*

Vetch Yellow, Wild.

like to the ſmall Bindweed *Leaves, branching upwards, and every one ending in a ſmall Claſper. The Flowers come forth at the Joints of the Leaves, and Claſpers with them, from the middle upwards, of a pale yellowiſh color, and after them ſmall, and ſomewhat flat Cods, longer than thoſe of* Lentils, *in which lye 4 or 5 hard, black, round, flattiſh, ſhining* Grains *or* Tares.

V. The ſecond, or Baſtard, or baſe Milk Vetch. *Its Root grows great and thick at the Head, tough and woody, running deep into the Earth, and abiding*

ding many Years; but all its Stalks perish every Year, new arising again in the Spring, which are several, upright, and hard crested, growing to a Yard in height, and set on all sides with winged Leaves, *four or five couple on a middle Rib, of a very sad green color, no bigger than those of* Lentils. *The* Flowers *stand at the tops of the Stalks*

Vetch Milk Bastard.

and Branches, many set together, which are small and short, of a dead purplish color, turning Wan with standing; and change into small, black, and almost round pointed Cods, in which are contained 4 or 5 small blackish Grains or Pulse.

VI. The third, or the true great Hatchet Vetch, or Sickle-wort. *Its Root is small, perishing every Year. It grows not above a Foot high, with divers winged Leaves growing on its Stalks, which are so weak, as not to stand upright. Each of the Leaves is small, not very long, and round at the end. At the top are many small yellow* Flowers, (Matthiolus *says reddish, in which he was mistaken:*) *After which, come as many long, flat, thin, reddish, small crooked pointed Cods, containing flat and reddish Grains; so lying in them, that they may be discerned thro' the Cod; the whole Cod being compared in Form to a Hatchet.*

VII. The fourth, or lesser Hatchet Vetch. *Its Root is like the former, and perishes Yearly with us. In form and manner of growing, it is much like to the former, but something lesser; yet not much lower, if it grows in any good Ground. The* Flowers *grow many together, of a pale yellow color, and after them come small crooked Cods, bowed almost together, or much like to a Horse-Shoe; in which lye pale brown Grains, not fully round, but square and lesser.*

Vetch Hatchet Greater,

OR

Sickle-Wort Greater.

VIII. The fifth, or greater Horse Shoe Vetch. *Its Root is slender, 2 or 3 Inches long, with several Fibres or Strings adjoining, white and hard, and lives many Years. It has divers small winged* Leaves, *set on small weak Stalks, leaning, or lying upon the Ground, each Leaf very small, short, a little long-ish, almost round pointed, of a whitish green color. At the Joints with the Leaves, come forth single Flowers, viz. one at a place, on a very short Foot-Stalk, being small and yellow; after which, follow a long flat Cod, a little bowed, and cut or divided on the Concave or inner edge, into 4, 5, or 6 Divisions, each being cut in round, something like the Letter C or like an* Horse Shoe, *whence it took its Name; in which lye so many Grains, as there are Spaces between the Divisions or Cuts, which are small, long-ish and crooked.*

IX. The sixth, or lesser Horse-Shoe Vetch. *This in its Roots, Stalks, Branches, Leaves, Flowers, Cods, and manner of growing, is very like to the former or greater kind, but lesser by the half, the Stalks being not above three or four Inches long, and lying close upon the Ground, and is of a little whiter color than it.*

X. The seventh, or greater Birds-foot Vetch. *It has a long, slender, stringy Root, running deep into the Earth. It is a small Vetch, (tho' greater than the next) not growing above a Span, or 8 or 9 Inches high, with many Branches spread on the Ground, set with many Wings of small Leaves, in manner of the last Vetches, but much smaller. The Flowers grow upon the Branches, many small ones set in a Tuft or Head together, of a pale yellow color, which afterwards turn into so many small jointed Pods, well resembling the Claws of a small Bird. Whence*

the Name;) in which are contained many ſmall round Grains.

XI. The eighth, or leſſer Birds-Foot Vetch. *This in its Roots, Stalks, Leaves, Flowers, Cods, and manner of growing, is like the former, but leſſer in all its parts, and growing with its Branches and Leaves in a more handſom manner, in which is all the difference.*

XII. The ninth, or Knotted Birds-Foot Vetch. *This has in its Roots many ſmall white Knots or Kernels among its Fibres; otherwiſe in its Stalks, Winged Leaves, Flowers, Cods, and manner of growing, it is like to the greater* Birds-foot, *ſaving that the Flowers are of a pale whitiſh red color; the Cods diſtinct by Joints, and the whole Plant ſomething larger.*

XIII. The tenth, or our common Kidney Vetch. *Its Root is long, blackiſh on the outſide, white within, parted many times into 2 or 3 or more long parts, with ſome Fibres adjoining to them. It is a ſmall Plant, ſcarcely growing to be a Foot high, having many Winged Leaves coming from the* Root, *which are ſomething ſmall, long, ſoft, ſappy, pointed, green on the upperſide, and woolly underneath; not always ſet orderly one againſt another, but confuſedly, the greateſt and longeſt being at the end,*

Vetch Kidney, *Common.*

which ſome unadviſedly have compared to Lentil-Leaves, *but bigger; among the Leaves riſe up ſoft Stalks, divided into Branches, with the like Winged Leaves on them. At their tops grow Tufts of many ſmall yellowiſh ſweet Flowers, ſometimes of a white, or pale purple, not much unlike, as* Cluſius *ſays, in form to thoſe of the* Meadow-Trefoil, *ſtanding in white hoary Husks. After the Flowers are paſt, there come in thoſe Husks or Pods, ſmall, round, flattiſh Grains, very like to thoſe of the* Meadow-Trefoil, *but a little redder, and uſually but one in a Cod.*

XIV. The eleventh, or Star Codded Vetch. *Its Root is ſmall, ſlender, and yellowiſh, running deep into the Ground. It grows to be about 6 Inches, or it may be a Span high, with upright Stalks, on which are ſet many Winged Leaves, conſiſting of many very ſmall Leaves, like unto thoſe of the* Birds-Foot. *From the Joints of the Stalks with the Leaves, comes a Tuft of ſmall pale yellow Flowers, upon a ſmall prickly fading Footſtalk, which turn into 5 or 6 ſmall, long, crooked pointed Cods, ſtanding one againſt another, like unto a* Star, *from whence came the Name; but not jointed as the* Birds-foot *are, having within them ſmall browniſh Seed, of the Taſte of other Pulſe, but a little clammy withal.*

XV. The twelfth, or Liquorice like Vetch. *Its Root is thick and long, dividing it ſelf into two or three very long Strings, running very deep into the Ground, (as deep even as* Liquorice *Root) ſweet in Taſte like to Liquorice, which dyes not, but abides long, ſhooting four new Branches every Year in the Spring. From whence riſe up many weak, round, hard Stalks, trailing on the Ground, branched upwards; ſet ſomething thick with Winged Leaves, made of many leſſer ones, ſet by couples upon a middle Rib, much like to thoſe of the great* Wild Tare, *in* Chap. 683. Sect. 8. *aforegoing, and one larger, and pointed alſo at the end. The Flowers come forth at the Joints, many together, ſtanding upon a long Footſtalk, of a bleak white color, tending to yellow, which turn into crooked Cods, containing two rows of Grains, cornered, grayiſh, and of the Taſte of other Pulſes.*

XVI. The thirteenth, or other Liquorice like Vetch. *Its Root is like the former, thick, and very long, ſpreading, and running deep into the Ground, and ſweet in Taſte as the former, abiding many Years; and according to* Thalius, *is very like to the* True Liquorice. *It has ſuch like Stalks and Winged Leaves as the laſt, but not ſpreading ſo far, nor leaning ſo much down; nor are the Winged Leaves ſo large, but of a darker green on the upperſide, and gray underneath. The Flowers are of a Purpliſh color. The Cods are browniſh, long; and round; and the Grains within them more round than the former.*

XVII. *The Places.* The firſt grows in divers Corn-Fields in *Kent*, as about *Dartford*, where *Gerard* ſays he had found it. The ſecond is Nurſt up in *Gardens* with us. The third and fourth grow alſo in *our Gardens.* The fifth and ſixth are Natural to the *Britiſh* Climates, being often found upon dry Heaths, as beyond *Deptford* and *Swanſcomb* in *Kent*, and ſeveral other places. The ſeventh, eighth and ninth, grow alſo with us on Heaths, and open Untill'd places, in many parts of *England.* The tenth and eleventh, as alſo the ſeventh, are found likewiſe in many places of this Land: *Gerard* ſays, he found them all three growing upon *Hampſtead-Heath*, near *London*, right againſt the *Beacon*, going from *London*, near to a Gravel-Pit; and that they grow upon *Black-Heath*, in the Highway leading from *Greenwich* to *Charlton*, within half a Mile of the Town. The twelfth *Gerard* ſays, he found growing in *Suffolk*, in the Highway on the right Hand, as you go from *Sudbury*, to *Corner Church*, about 100 Paces from the end of the Town; and in many other places of the ſame County; and in *Eſſex*, about *Dunmow*, and in the Towns called *Clare*

and

and *Henningham* It grows alſo by *Purfleet*, about the Foot of the Hill on which the Wind-Mill ſtands, and ſeveral other parts of *Kent*. It grows in many places about *Cambridge*; in *Claringdon-Park* by *Salisbury*, and at *Thraſſton* in *Northamptonſhire*, and many other places of this Land. The thirteenth grows Wild in *Germany*, but I have not heard that it has been found in our Country, ſaving where it has been Nurſt up in Gardens.

XVIII. *The Times.* The firſt and ſecond, third, fourth, fifth and ſixth, Flower in *July*, and the Seed is ripe in *Auguſt* or *September*. The ſeventh, eighth and ninth, Flower in the Summer Months. The tenth and eleventh Flower towards the latter end of *July*, and thro' the Month of *Auguſt*, the Seed coming to ripeneſs in ſome little time after. The twelfth and thirteenth Flower in *June*, and their Grain or Pulſe is ripe in *Auguſt*.

XIX. *The Qualities.* As to their Qualities, they are all hot and dry in the firſt degree; their Grains or Pulſe abounding in a vaſt quantity of Volatile Salt, and therefore are Abſterſive, Aſtringent, Diuretick and Nutritive, having all the properties of the *common Manured Tare*. *The Milk Vetch* is Diuretick and Vulnerary. *The Hatchet Vetch* is Vulnerary, Stomatick, and Alexipharmick *The Horſe-Shoe Vetch* is of the ſame nature, but ſcarcely at all uſed in Phyſick. *The Birds-Foot Vetch* is Aperitive, Aſtringent, Diuretick, and Vulnerary. *The Kidney Vetches* are Vulnerary, Diuretick, and Nephritick. *The Liquorice Vetch*, as to its Root, it has the ſame properties with the true *Liquorice*, yet are wholly neglected, and not known to be uſed in Phyſick, I ſuppoſe becauſe the true *Liquorice* is ſo plentiful, common, and eaſie to be had.

XX. *The Specification.* *The yellow Wild Vetch* is Aſtringent, and ſtops Fluxes. *The Milk Vetch* is good againſt the Strangury, provokes Urine, ſtops Fluxes of the Bowels, ſtops Bleeding, drys up, and heals Wounds and Ulcers. *The Hatchet Vetch*, the Grains ſtrengthen the Stomach, cauſe a good Appetite, open Obſtructions of the *Viſcera*, reſiſt and expel Poiſon, and help againſt the Bitings and Stinging of Venomous Creatures; kill Worms in the Belly; cleanſe and heal old running Sores, and foul Ulcers, and are ſaid to take away Scurff, Morphew, and other Deformities of the Skin. *The Horſe-Shoe Vetch*, has the ſame Virtues and uſes with the *Hatchet Vetch*, juſt now enumerated. *The Birds-Foot Vetch* is ſaid to break the Stone in the Reins, and expel it, help Ruptures, and cure Wounds and Ulcers. *The Kidney Vetch*, it is an excellent Vulnerary, and uſed by the *Germans* to cure Wounds and Ulcers, and for the cure alſo (as *Thalius* ſays,) of the Gout. *The Liquorice Vetch*, tho' it has ſcarcely ever been uſed in Phyſick, yet I have made ſome Tryal of it, and find by Experience, that its Root is De-obſtructive of the *Viſcera*, chiefly of the Lungs, and very profitable againſt Aſthma's, Coughs, Colds, Catarrhs, Hoarſeneſs, Wheezing, Strangury, and cures Colicks; as alſo Wounds and Ulcers outward or inward.

XXI. *The Preparations.* 1. *The Parched Pulſe of the yellow Wild Vetch.* 2. *The Pultage of the ſame.* 3. *A Decoction of the Root of the Milk Vetch in Wine.* 4. *A Powder of the ſame Root.* 5. *A Powder or Meal of the Pulſe of the ſame.* 6. *A Powder or Meal, of the Pulſe of the Hatchet Vetch, and Horſe-Shooe Vetch.* 7. *A Decoction of the ſame, as alſo of the Leaves and Stalks of the Green Herb.* 8. *A Decoction of the Pulſe and Herb of the Birds-Foot Vetch.* 9. *A Decoction of the Pulſe and Herb of the Kidney, and Star Kidney Vetch.* 10. *A Juice of the ſame Herbs* 11. *A Conſection of the ſame* 12. *A Decoction of the Root of the Liquorice Vetch.* 13. *A Powder of the ſame.* 14. *A Volatile Salt from the Pulſes of all theſe Vetches.*

The Virtues.

XXII. *The Parched Pulſe of the yellow Wild Vetch.* So eaten it is Aſtringent, and ſtops Fluxes of the Belly, but is harder of Digeſtion than *Lentils*.

XXIII. *The Pultage of the ſame* It is made by boiling of them in Water, till their Cuticles are broken, after the manner of *Lentils*. So eaten it ſtops Fluxes both of Stomach and Belly. *Galen* ſays, it is binding as the *Lentil*, and is uſed to be eaten as *Lentils*, but drys more powerfully, and heals moderately; which Aſtringent quality *Dodonæus* ſays, he had found true by his own experience in this *Aphace*.

XXIV. *The Decoction of the Root of the Milk Vetch in Wine.* It is Aſtringent, and *Galen* ſays, it ſtops Fluxes, and provokes Urine, and is profitably uſed againſt the Soulneſs of the Gums, (that is the Scurvy in the Mouth,) as *Pliny* ſays.

XXV. *The Powder of the Root of the ſame.* Strewed upon running Sores or Ulcers, or caſt into them, it drys them up and heals them. It is good alſo to ſtop the Bleeding of Wounds.

XXVI. *The Powder or Meal of the Pulſe of the ſame.* Being dryed in an Oven, and caſt into Wounds and Ulcers, it drys and heals them.

XXVII. *The Powder or Meal of the Pulſe of the Hatchet Vetch, or Horſe-Shoe Vetch.* It is Stomatick, ſtrengthens that *Viſcus*, expels Poiſon, and opens Obſtructions of the Bowels; and is good againſt the Bitings and Stingings of Venomous Creatures, as *Matthiolus* ſays; and being taken with Honey as a Bolus, it cauſes the expectoration of tough and thin Flegm: kills Worms, and ſtrewed upon Ulcers it cleanſes them; and made into an Ointment with Honey, it heals Ulcers, and takes away Freckles, and other Deformities of the Skin. Doſe inwardly, one Dram, Morning and Evening, in Wine, Honey, *&c.*

XXVIII. *The Decoction of the ſame in Wine, as alſo of the Stalks and Leaves of the green Herbs.* It has all the Virtues of the former Powder, beſides which, it opens Obſtructions of the Stomach, Liver, Spleen, Meſentery, Reins, and other Bowels; ſtrengthens the Stomach, reſiſts Poiſon, kills Worms in the Belly, and is uſed as a Wound drink.

XXIX. *The Decoction of the Pulſe and Herb of the Birds-Foot Vetch.* It is a little drying and binding, and is uſed in Wound Drinks, and being a good Vulnerary, is uſed outwardly for the ſame purpoſe. And *Lugdunenſis* ſays, that the Knotted Birds Foot is found by experience, to break the Stone in the Reins and expel it; and that it wonderfully helps Ruptures inwardly taken, and outwardly applyed.

XXX. *The Decoction of the Pulſe and Herb of the Kidney Vetch.* It is uſed as a Diet or Wound-Drink, to induce the healing of Wounds, and alſo outwardly to waſh them therewith for the ſame purpoſe.

XXXI. *The Juice of the ſame Herb.* It is uſed (mixed with a little Wine) in the ſame manner as the Decoction, and for the ſame purpoſes, in curing Wounds, Ulcers, running Sores, and the Gout.

XXXII. *The Cataplaſm of the ſame.* Mixt with Pouder of *Tobacco*, it is good to cleanſe and heal old running Sores and Ulcers: and applyed to the Joints afflicted with the Gout, it eaſes the pain.

XXXIII. *The Decoction of the Root of the Liquorice Vetch in Wine.* It is good againſt Aſthma's, Coughs, Colds, Catarrhs, Hoarſeneſs, Obſtructions of the Stomach and Lungs, and other like Diſeaſes of thoſe parts; and has all the Virtues of the true *Liquorice*, but not altogether ſo powerful; but opens all Obſtructions of the Bowels, and cures the Colick.

XXXIV. *The Pouder of the ſame.* It has all the Virtues of the former Decoction, and being made into an Electuary with Honey, powerfully opens Obſtructions of the Lungs, and cures all Diſeaſes of that *Viſcus*, and outwardly applyed, heals Wounds and Ulcers.

XXXV. *The Volatile Salt, made from the Pulſes of all the Vetches.* It is made as that of *Beans*, in *Chap.* 55. *Sect.* 16. aforegoing, and has all the ſame Virtues, being good againſt Palſies, Cramps, Convulſions, Apoplexies, Epilepſies, Gouts, Rheumatiſms, Colick, and other Diſeaſes of the Head, Brain, Nerves, Viſcera and Womb. Doſe from 6 Grains to 12, in any proper Vehicle.

By an Over-ſight, theſe two following Cuts *being left out in their proper places, we thought good to add them here, rather than they ſhould be loſt.*

Great Wild Hedge Tare;

OR,

Buſh VETCH.

CHAP. DCCXXIII.

Of VETCH *Bitter:*

OR,

OROBUS.

I. *THE Names.* It is called in Arabick, *Herbum*, vel *Erbum*; alſo *Keiſene*, or *Kerſene*; in Greek Ὄροβος, παρὰ τὸ ἐρέπτεσθαι ὑπὸ τῶν Βοῶν, *quod Boves eo Saginentur*, as *Galen* ſays,) in Latine, *Ervum*, & *Orobus*; and in Engliſh, *Orobus* alſo, and *Bitter Vetch.*

II. *The Kinds.* There are firſt, *Orobus Hortenſis*, Garden Orobus, which is 1. *Orobus vulgaris*; *Ervum Matthioli*; *Mochus*; *Orobus receptus Herbariorum*; Our common Garden Orobus, or bitter Vetch. 2. *Orobus Creticus Matthioli*; Orobus or bitter Vetch of Candy. Secondly, *Orobus Sylveſtris*, Wild Orobus, *viz.* 3. *Ervum Sylveſtre Dodonæi*; *Ervum Sylveſtre Herbariorum Lobelij*; and *Catanance Geſneri, Lugdunenſis & Dodonæi*, in his *French* Herbal; alſo *Lathyrus Sylveſtris minor Bauhini*, tho' it has no Claſpers at all, as all his

his other *Lathyri*'s have, whereby he breaks his own order of treating of theſe Plants, in which he determined to treat of all ſuch Puiſes as had Claſpers together, whereas this has none; and ſuch as had none, by themſelves; Crimſon Flower'd Orobus, or Graſs Leav'd Orobus. 4. *Orobus Sylveſtris Narbonenſe*; *Orobus Cicereus*; *Orobus Semine, obtuſo Triangulo Badbini*; *Cicer Orobeum Theophraſti Lobelio*; Cornered or French Orobus. *Thirdly, Orobus Sylvarum, vel Sylvaticus*, Wood Orobus, *viz.* 5. *Orobus Sylvaticus latifolius*; *Orobus Sylvaticus major purpureus*; *Orobus Pannonicus Cluſij*; *Orobus Sylvaticus Baubini*; *Orobus Sylveſtris vernus Thalij*; *Phaſelus Lobelij*; *Phaſeolus Sylvarum Lugdunenſis*; *Arachus Dodonæi*; and *Aſtragalus Columnæ*; The broad Leav'd greater, or Purple Wood Orobus. 6. *Orobus Sylvaticus Anguſtifolius*; *Orobus Tertius Cluſij*, *Orobus Sylvaticus minor*; Narrow Leav'd, or ſmaller Wood Orobus.

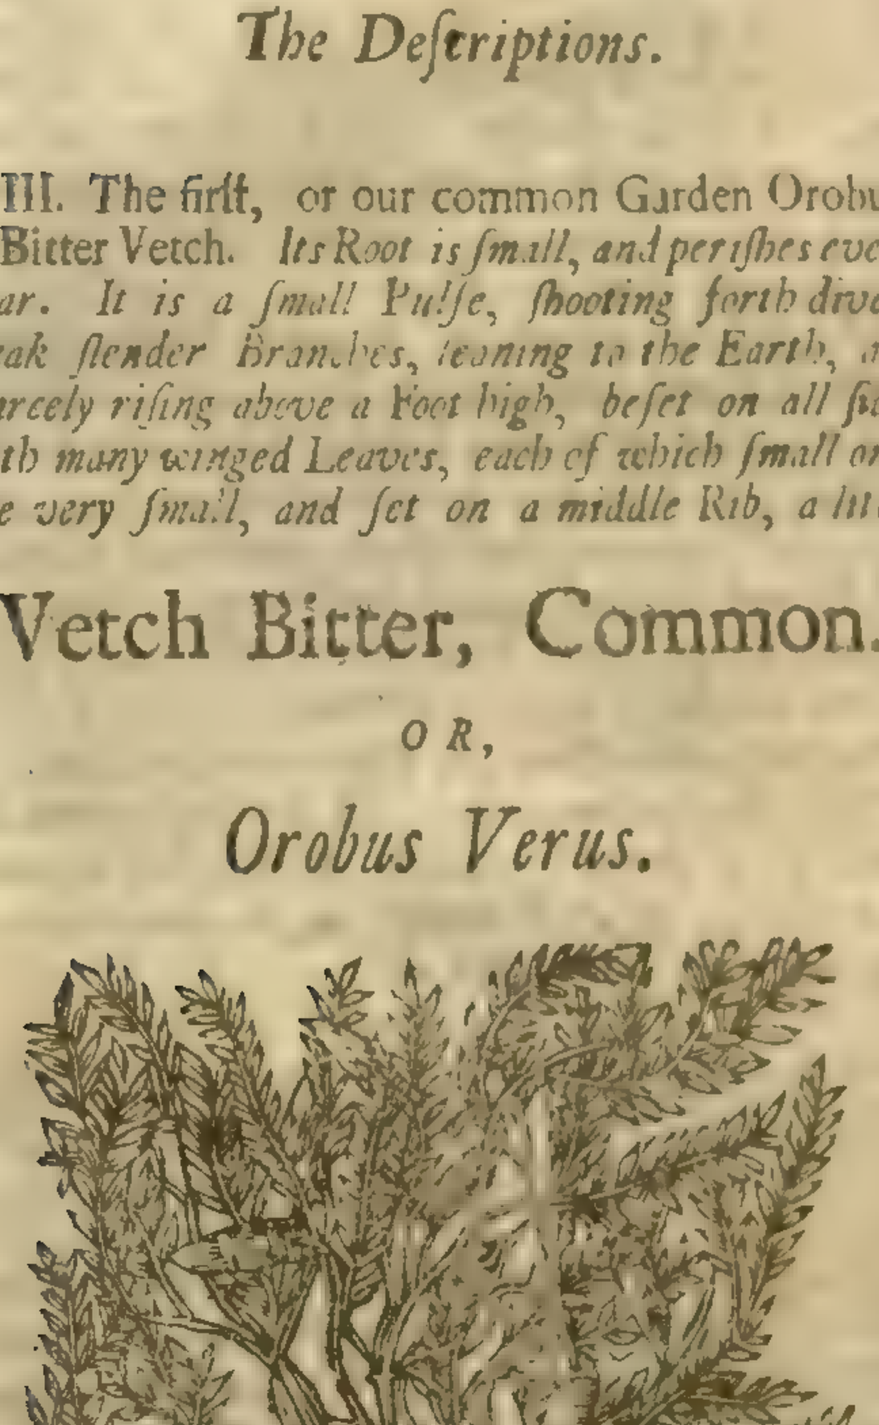
The Deſcriptions.

III. The firſt, or our common Garden Orobus, or Bitter Vetch. *Its Root is ſmall, and periſhes every Year. It is a ſmall Pulſe, ſhooting forth divers weak ſlender Branches, leaning to the Earth, and ſcarcely riſing above a Foot high, beſet on all ſides with many winged Leaves, each of which ſmall ones are very ſmall, and ſet on a middle Rib, a little*

Vetch Bitter, Common.

OR,

Orobus Verus.



long, narrow, and ſharp pointed, ſet one againſt another as other Vetches, Cicers, &c. The Flowers are ſmall and whitiſh, (tho' ſome may ſay Purple) ſtanding ſingle, every one by it ſelf at the Joints with the Leaves. After which, come ſmall round long Cods, no bigger than the Leg of a Louſe, bunched out in 3 or 4 parts, in which the Grain is contained, which is alſo ſmall round, ſmall, and of a pale color, and bitter in Taſte.

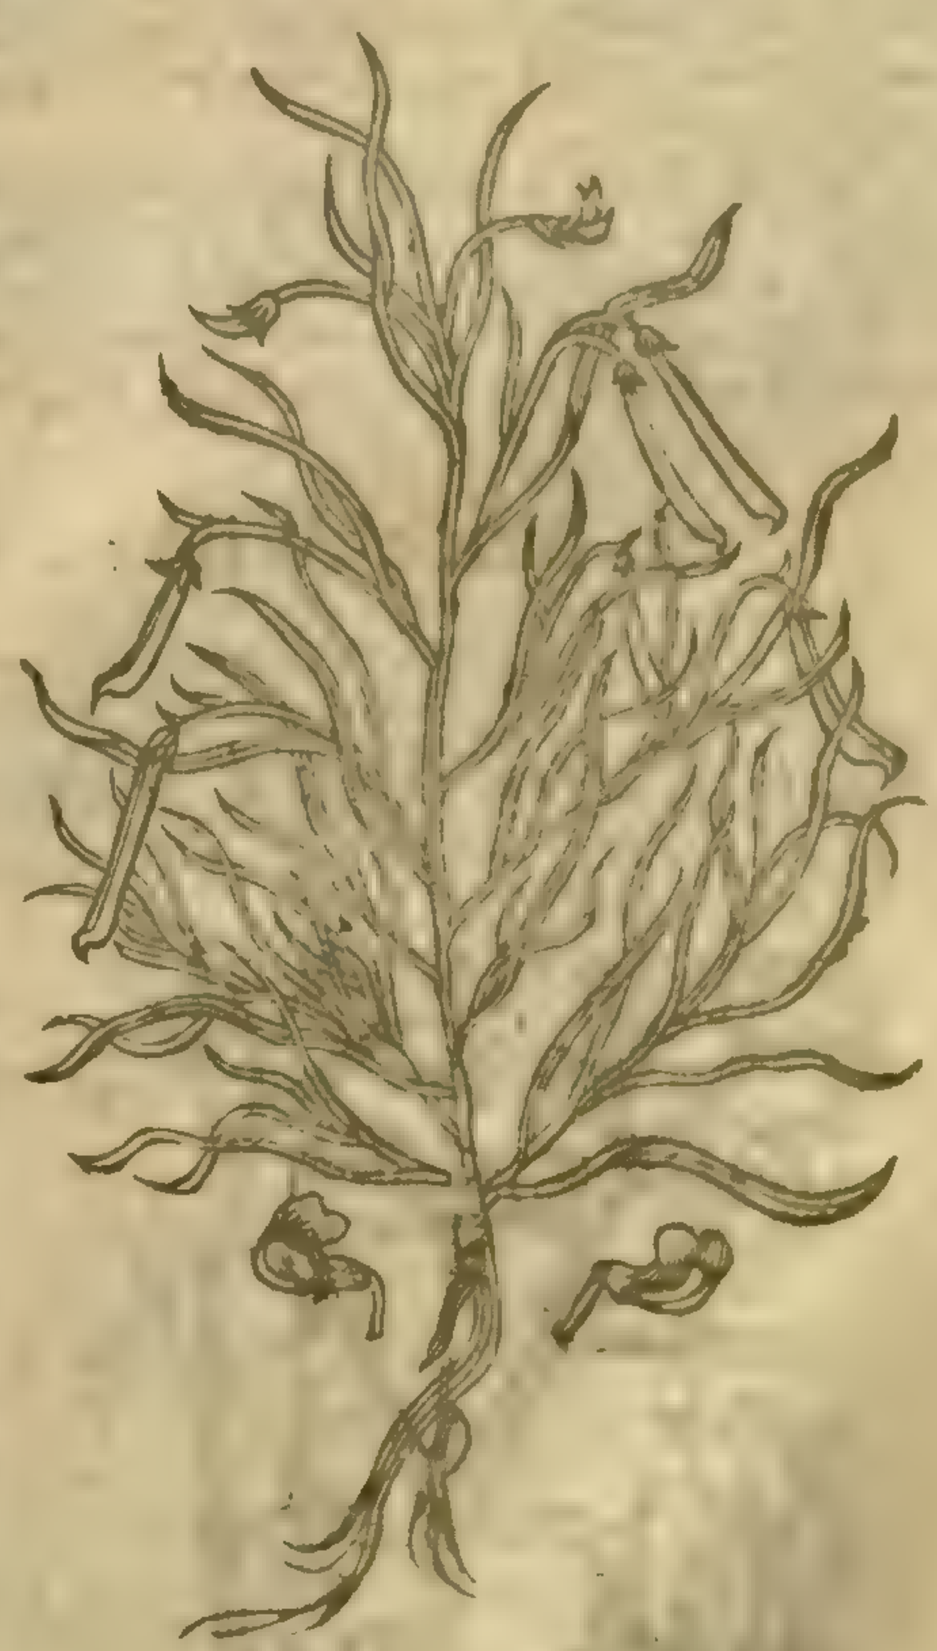
IV. The ſecond, or Orobus, or bitter Vetch of Candy. *This in its Root, Stalks, Branches, Winged Leaves, Flowers and Cods, as alſo in its manner of growing, is altogether like the former; but whereas* Matthiolus *ſays, it is ſuperior to the firſt, I have always obſerved it to be rather larger, otherwiſe the difference is ſo little between them, that ſetting aſide the Name, and Natural place of Growth, I ſhould take them to be but one Kind or Species.*

V. The third, or Crimſon Flower'd Orobus, or Graſs Leav'd bitter Vetch. *Its Root is long and ſlender, with ſome Fibres adhering to it, which periſhes with us in Winter. This Wild Orobus or Pulſe, riſes up with ſeveral branches, near two Feet high, eſpecially if it grows in any fertil Soil,*

Vetch Bitter, Crimſon:

OR,

Vetch Graſs Scarlet.



which are beſet unorderly, with many long and narrow dark green Leaves, ſmaller than many Graſſes. At the tops of the Stalks and Branches, grow pretty large Peaſe Bloſſom'd Flowers, of an Orient ſhining Crimſon color, (but Parkinſon ſays, that he had ſome in his Garden which came from Seed, which had white Flowers.) After which, came ſmall, ſlender, long, and almoſt round Cods, containing within them ſeveral hard blackiſh Grains.

VI. The fourth, or cornered, or French Orobus. *Its Root is long, ſlender, and fibrous, which ſends up a weak or leaning hollow Stalk, half a Yard high, ſet at the Joints with many Winged Leaves, having other ſmall Leaves, long, narrow, and ſharp pointed,*

ſet

ſet oppoſite to each other, on a middle Rib, *after the manner of thoſe of* Lentils: *At the Joints towards the top, come forth long* Footſtalks, *with many* Flowers *on them, ſet cloſe together, which afterwards give long, round, bunched out* Cods, *dented in between each* Grain, *which is twice as large as thoſe of the firſt* Orobus, *not ſo round, but a little corner'd; of a pale or yellowiſh color, differing little from them but in their ſo exact roundneſs, and dark appearance.*

VII. The fifth, or broad Leav'd greater, or purple Wood Orobus. *Its Root is long, black, and hard, bunching forth in ſome places, with ſome ſmall long Strings and Fibres adjoined to it, and endures many Years, It grows not much above a* Foot *high, having many ſquare Stalks, ſtriped along. The Leaves are Winged, the ſmaller Leaves ſet one by another on each ſide of the middle* Rib, *ſix, eight, or ten in number; very much larger than any of the other* Orobus's, *being* 2 *or* 3 *Inches long, and and an Inch or two broad, and ſharp pointed, with* 2 *or* 3 *Nerves running thro' them. The Flowers grow at the tops, many together, one above another, as it were in a Spike or Buſh, much larger than thoſe of the* Vetch, *and of a fine blewiſh Purple color, which when they begin to fade, will change a little, and become more pale; after which, come ſmall, long, ſlender, brown Cods, with ſmall round, and ſometimes longiſh round Grains within them, variably colored.*

VIII. The ſixth, or narrow Leav'd, or ſmaller Wood Orobus. *Its Root conſiſts of* 5 *or* 6 *long, ſlender, tuberous Clogs, not much unlike to thoſe of the* Aſphodil *or* Peony, *but ſmaller, blackiſh on the outſide and white within. It has ſlender, ſtraight creſted Stalks, about a Foot high. The Leaves ſtand by couples, being long and narrow. The Flowers grow on long Footſtalks, of a pure white color, and the Cods which follow, are long and black, with ſomewhat large black Grains within them. The Figure here given, is defective, the* Cutter *having been ſparing in his Labor, in not adding to it its Tuberous long Clogs before named.*

Vetch Bitter, Wild:

OR,

Vetch Narrow Leav'd Wild.

IX. *The Places.* The two firſt grow only with us in Gardens, the third grows Wild in Fields, about Hedges and Buſhes, and has been found about *Highgate* and *Pancras-Church*, near *London*. The fourth grows Wild about *Narbone* in *France*, and is Nurſt up with us in Gardens. The fifth and ſixth grow in ſhady places, as Woods and Foreſts.

X. *The Times.* The firſt four Flower in *June*, *July* and *Auguſt*, and their Seed is ripe in about a Month after their Flowering time: the two laſt about the end of *April*, or in *May*, and their Seed is ripe in *June*.

XI. *The Qualities.* Of all theſe, the firſt or *Common Orobus* is only uſed in Phyſick, and of that Plant, the Grain chiefly. It is hot in the firſt degree, and dry in the ſecond, Aperitive, Abſterſive, Diuretick and Vulnerary, Pectoral, a little Cathartick, and alſo Alexipharmick.

XII. *The Specification.* It opens Obſtructions of the *Viſcera*, cleanſes the Breſt and Lungs of thick Humors, provokes Urine, gives eaſe in the Strangury, purges the Bowels downwards; diſcuſſes the Tumor of the Spleen, cleanſes and heals foul Ulcers, is good againſt the Bitings of Serpents and mad Dogs, gives eaſe in a *Tenaſmus*, and is ſaid to reſtore in Conſumptions; it alſo breaks Carbuncles, and clears the Skin of Deformities.

XIII. *The Preparations.* Of the Grain there is made, 1. *A ſtrong Decoction in Wine or Water.* 2. *A Meal.* 3. *A Pultage.* 4. *A Cataplaſm of the green Cods, Stalks and all.*

The Virtues.

XIV. *The ſtrong Decoction of the Grain, in Wine or Water.* By its Bitterneſs it cleanſes, and opens Obſtructions of the *Viſcera*, chiefly of the Lungs, Liver, Spleen, Stomach, Meſentery, Reins and Inteſtines, cleanſing thoſe parts of pituitous, thick, and mucilaginous Humors which offend them. *Pliny* ſays, it is ſaid in the Emperor *Auguſtus*'s Epiſtles, that he was Cured by *Ervum*, viz. this *Orobus*, whoſe Grief was ſuppoſed to be tough, pituitous matter infeſting the Lungs, and not eaſie to be expectorated. It gently purges the Bowels downwards, and being taken faſting every Morning, it eaſes the Spleen, and opens its Obſtructions; mollifies the hardneſs of the Breaſts, and is good againſt the Bitings of Serpents, mad Dogs, and other Venomous Creatures, being taken mixed with Wine or Vinegar; and ſo alſo it provokes Urine, gives eaſe in the Strangury, and cures the *Tenaſmus*, if the Patient be not reduced thereby to a deep Conſumption; but an incipient Conſumption, whether Pining, or *Phthiſis*, it Cures by taking away the Obſtructions which hinder the Nutriment from going to the reſpective parts of the Body; and by healing the Ulcers of the Lungs newly begun. Outwardly it heals Wounds, old Sores, and running Ulcers by waſhing them therewith, whether in the Mouth, Secrets, or other parts.

XV. *The Meal.* It is made (without ſteeping the Grain in Water to take out its Bitterneſs, as ſome do,) by parching it till its Hulls break, then grinding it, and ſifting it through a fine Sieve. A Dram

Dram of it taken inwardly, mixed with Honey every Morning, gently purges: provokes Urine, and kills Worms in the Belly, and withal gives a good color in the Face. It has indeed all the Virtues of the former *Decoction*, but it is said that if it is taken in too large a Dose, it causes the Headach, and to make Bloody Urine, so powerful a Diuretick it is. Mixed with Honey as aforesaid, it cleanses, drys, and heals old running Sores, and foul filthy Ulcers, Fistula's, Cankers, *&c.* whether in the Mouth, Throat, Secrets, or any other parts; softens hard Tumors in Womens Breasts, and draws out the Poison from the Bitings of Serpents, mad Dogs, *&c.* being applyed; It is also said to cure the Itch, break Apostems, ripen Carbuncles, *&c.* if made into a Cataplasm with Wine, and laid thereon.

XVI. *The Pultage.* The Grain is first steeped in Water till its Bitterness is gone, then parched till the Hulls break, and after made into Meal as before. This made into Pultage with Water, or Milk, or Water and Milk, is used to be eaten (mostly in hard times:) it Nourishes much, and restores in Consumptions. If the *Pultage* is made with the former *Bitter Meal*, and applyed to the Skin, it is said to take away Freckles, and all other Deformities thereof, washing it also oftentimes with the aforesaid *Decoction.*

XVII. *The Cataplasm of the Green Cods.* Applyed to the Hair, (as also their Juice) it causes it to become of a black color.

CHAP. DCCXXIV.

Of the VINE.

I. *THE Names.* It is called in Arabick *Harin*, *Karin*, and *Karm*; in Greek, Ἄμπελος οἰνοφόρος: in Latine, *Vitis*, and *Vitis vinifera*, *Vitis Sativa*; in English, *The Vine.*

II. *The Kinds.* They are to be considered, either as to the Country, or the Species of the Grapes. *As to the Countries*, those which are chiefly known to us, are 1. *Our English Vines.* 2. *Rhenish, or German Vines.* 3. *French.* 4. *Italian.* 5. *Spanish.* 6. Those of the *Canaries.* 7. *Portugal.* 8. Those of the *Madera's.* 9. Those of *Florida.*

III. *As to the Species of the Grapes*; there are, 1. *The Rhenish White*, whence comes our Rhenish Wine. 2. *The French White*, whence *French* Wine. 3. *French Red*, whence *French* White Wines. 4. The *White Portugal*, whence White Clarets. 4. The *White Portugal*, whence White *Port-O-Port* and White *Lisbon* Wines. 5. *The Red Portugal*, whence Red *Port-O-Port* Wines. 6. *The Malaga Grape*, whence our Malaga Raisons and Wine. 7. *The Greek Black Grape*, which gives a very sweet blackish Wine. 8. *The White Muscadine Grape*, which is a very great Grape, sweet and firm, some of whose Bunches, (as *Parkinson* says,) have weighed Six Pounds, and some of the Grapes half an Ounce. 9. *The Red Muscadine*, which is as large as the *White*, and differs chiefly in color; from these two last come the *Muscadine Wines.* 10. *The White Frontiniack Grape*, which is of a very sweet and delicate Taste, and smells like Musk, whence the pleasant *Frontiniack Wine.* 11. *The Tent Grape*, which is black, which yields the *Tent Wine*, of a very sweet Taste, and black color, or very deep red, with which they color other Wines. 12. *The Alicant Grape*, whence our *Alicant Wine*, which is so deep a red, that no other is thought to be comparable to it, and therefore is called *Spaniard's blood.* 13. *The Berbar Grape*, whence our *Berbar Wine*, of so deep a red, that it is commonly called *Black Wine.* 14. *The Sherry Grape*, whence our Sherry Wine. 15. *The Canary Grape*, whence our Canary and Palm Wines. 16. *The White Madera Grape*, whence our White Madera Wine. 17. *The Red Madera Grape*, whence our Red Madera Wine. 18. *The Damascen Grape*, thought to be the *Uva Zibea Plinii*, *lib.* 14. *cap.* 3. which he makes to be *Vitis Alexandrina*, describing it by those very words which *Theophrastus* does, but is a kind of Raison-Grape. 19. *The Raison of the Sun Grape*, which is a very large Grape and consists of very great Clusters, of a reddish color when ripe with us, but in its Native Country, which is very hot, it is commonly covered with a notable Blewness. 20. *The Signese Grape*, which is a Syrian Grape, and grows near *Aleppo* in *Palestina*, as *Bochart* says, yielding a red Wine of a very pleasant Taste. 21. *The Carolina or Virginian White Fox Grape*, which is a fair large white Grape, of a Fox-like Smell, and a firm Substance, which when fully ripe, is a very pleasing Grape, very much gratifying the Pallat. 22. *The Carolina or Virginian Red Grape*, which is a small Grape and yields a very deep Blood red Wine. I remember that when I was in *Carolina*, one *Great Indian Man*, made in one Year about two Hogsheads of it, (from Vines which grew Wild in the Woods,) which was not so intensely Sweet as *Lent*, but when I drank of it at his House, I then thought it to be the pleasantest Wine I ever drank in my whole Life: It was very fine, not of so thick a Body as *Lent*, but of a profound Red, staining every thing of so perfect a Crimson color, as not easily to be obliterated, tho' upon the spot. These are the chief of these *Vines* or *Grapes*, which we thought good to take notice of in this Work, and which are most known amongst us. We own there are a vast number more, and possibly a great many which never yet came to our Knowledge; which if we could Name and enumerate them all, would be of as little use to the *Physician*, as they are of profit to us who never saw or heard of them; for which reason, we omit any further Descants concerning the same.

The Descriptions.

IV. *The great diversity of* Vines *is equal to that of the* Grapes, *to many of whose great Numbers, we can give no Names.* John Tradescant *said, that he had* 20 *sorts growing with him, which he never knew how, or what to call them: but saving that in their Branches, Leaves, manner and form of growing, all these Varieties seem to be but one and the same, we shall give but one Description for them all; their great differences being chiefly in the several Forms, Colors, Tasts, and Magnitude of the Grapes.* The Root is woody, not very great or thick, but tough and long, sending out many Branches, which spread far about and deep. *Being Manured, and where it has grown a long time, it comes to have a pretty thick body, Trunk or Stem, spreading out its Branches every way (if it be suffered) almost without end or measure, insomuch as some Vines growing in Woods, and near to very tall Trees, of above an hundred Foot high, I have seen to have climbed up to the highest parts of those Trees, and to have spread themselves out over*

over almoſt all their Branches, which at the proper ſeaſon of the Year, have been every where full of Bunches of Grapes, and ſo full, even to admiration: Theſe Arms or Branches of the Vine, are according to the Age thereof, ſome old, ſome new, ſome thicker and more woody, ſome more ſlender, but all of them ſo weak as not able to ſuſtain themſelves, and therefore climb, and twine and faſten themſelves upon whatſoever tall Tree or Poles they grow next to. The older Arms or Branches are covered with a thin ſcaly Rind, which will often chap and peel off of its ſelf; but the younger or youngeſt, are of a reddiſh color, ſmooth, and firm, with a hollowneſs or Pith in the middle. From the Joints

Vine Garden.

of the young Branches, and ſometimes from the Body of the elder Boughs, break out on every ſide, broad green Leaves, cut in on the edges into (for the moſt part) five diviſions, and withal notched or dented about. Right againſt the Leaf, and likewiſe at the farther end of the Branches, come forth long, twining Tendrels or Claſpers, winding themſelves about any thing which ſtands next them. At the bottom of theſe Leaves, come forth Cluſters of ſmall greeniſh yellow Flowers, and after them the Grapes growing in Cluſters in the ſame manner, but in various Forms, Shapes and Magnitudes, having as many different Colors and Taſts; for ſome Bunches are cloſe, ſome open, ſome exceeding long, with Branches adjoining; ſome more compact without Branches ſpreading from them: Some Grapes are round, ſome oval, ſome long, ſome a little corner'd, as it were ſquare: Some Grapes are very great, ſome in a mean, ſome leſſer, and ſome very ſmall, (as the ſmall Currants *which the* Grocers *ſell, of which we ſhall ſpeak in the Second Book of this Work next following.) Again, ſome Grapes are White, ſome Red, others Blew, others Black, and ſome again are party-colored. And as to their Taſtes, ſome are abſolutely ſoure, ſome of a harſh Taſt, ſome more pleaſing, ſome very pleaſant, ſome of a mixed Taſt, and ſome ſweet. Within every Grape is contained one, two, and ſometimes more, ſmall little Stones (excepting in the* Stoneleſs Grape;) *which in ſome Grapes are ſmall, in others larger, according to the Magnitude or kind of Grape. Where note, that to keep your Vines in good order, they ought to be cut low, as to their Bodies or Stems, and not ſuffered to grow high, nor with too many Branches, whereby they grow the better, and take up the leſs room, and withal bring forth their Grapes fairer, larger, and ſweeter.*

V. To the afore-enumerated Species, we ſhall here add another Vine, called *Vitis laciniatis foliis*, or *Parſly Vine*, which is ſcarcely a diſtinct kind of its ſelf, but rather one of the ſorts of the *White Muſcadine Grape. This kind grows in the very ſame form and manner as the other kinds do, the main difference conſiſting chiefly in the* Leaves, *which are thin, and very much cut in, into many parts, even almoſt to the middle of each Leaf, and each part dented about the edges,* The Grapes *are white and great, exactly like to the* White Muſcadine Grape, *and of the ſame reliſh or taſte, bearing very great Bunches, and ripening with the other ſorts of* Muſcadine Grapes.

VI. Ἄμπελος ἄγρια, Vitis Sylveſtris, *The Wild Vine growing in Woods. This in its* Root, Body, Branches, Leaves, Tendrels, *form and manner of growing, differs nothing from the* Manured Vine *firſt deſcribed, but only in its* Fruitfulneſs; *and it ſeems (as far as I have obſerved it in* Carolina *and other parts of the* Weſt-Indies,) *to be of two ſorts,* viz. The Grape Bearing, *and the* Barren. *The Grape Bearing yields almoſt innumerable Cluſters, which tho' very pleaſant, yet are not altogether ſo pleaſant as thoſe which are Manured, nor full out ſo large; but theſe by Tranſplantation into Gardens, and being managed as the Manured ones are, become altogether the ſame with them, (both the White and Red kinds) and perfectly forget their Wild Natures, bringing forth their* Grape *full as large, fair, pleaſant and ſweet, ſo that I can ſcarcely admit it to be a different Species from the Manured kinds.* The Barren Wild Vine, *differs in nothing from the Fruitful, or* Grape Bearing, *but only in its not bearing* Grapes; *which Barrenneſs, whether it comes from the ſimple Nature and Property of the Vine, or from the Nature and Barrenneſs of the Ground, I am not able to determine. If any who live in the* Weſt-Indies, *or other parts where they grow, would pleaſe to Tranſplant them out of their Native Soil, into one more* Fat *and* Rich, *they would in a ſhort time be able to determine the matter.*

VII. *The Places.* Their ſeveral Names, ſhew the places where each Species naturally grows, but all of them being Tranſplanted into our Country, will thrive and flouriſh very well, if a reaſonable care be taken of them; as may appear by ſome few of them, which are now become Natives of our Climate.

VIII. *The Times.* Vines as *Columella* ſays, are to be Pruned before the young Branches ſpring forth, which as *Palladius* ſays, is to be done in *February*; if they be Pruned later, they looſe their Juice and Nutriment with weeping, which if it kills not the Vine, yet very much hinders it from bearing. The *Manured* Flower ſooner than the *Wild* which grow in the Woods, and therefore their Grapes are alſo ſo much the ſooner ripe; but the times of their Flowering and ripening, differ very much one from another, as alſo in reſpect to the Climates where they grow; for as they are hotter or colder, ſo their Grapes are either ſooner or later ripe.

OBSER-

OBSERVATIONS.

IX. 1. If you would make a Vineyard in our cold and moiſt Climate, chuſe a wholeſome, dry, and warm peice of Ground, ſhelter'd with a Hill from the North-Weſt, North, and North-Eaſt Winds, and open to the South-Eaſt, South, and South-Weſt Sun; let the Earth be well dig'd, deep, broken ſmall, and cleared from the Roots of Weeds in Summer-time, before *Michaelmas*; then in fair open Weather in *December*, plant your Rooted Vines, of three or four Years old, in even ſtrait Ranks, about 6 Feet aſunder, very ſhallow, yet ſo that their Roots be covered; and between every Rank of Vines, let there be a Path of 4 Feet broad, that you may eaſily paſs between the Ranks.

X. 2. The firſt Year after this Planting, do not prune them too much, but ſet a Stake cloſe by each Root, of about 4 Feet high, to which ſoftly tye the ſtrongeſt Shoot, and let the other Branches fall down as they will; and in *April* following, or beginning of *May*, juſt as they bud forth Leaves, bow the tops of each Vine Arch-wiſe to the next Stake, and there tye it ſo as it may not ſlip away; and from this bowed Branch, will come out new Shoots, which will produce Grapes which will hang down to the Earth, and thoſe will be the ſweeteſt which will be neareſt the Ground.

XI. 3. This is all which is to be done to them untill Pruning time, which is from the latter end of *January*, till the latter end of *February*, and then you muſt cut away this Branch which was tyed the laſt Year to the Stake, and Arched down, even as low as the loweſt Eye, but one or two at the moſt; and then tye up another of the ſtrongeſt Branches from the Stock, inſtead of the former, Pruning away all the other Branches within an Eye or two of their bottoms; for the fewer Branches you leave to the Root, the more Grapes you will have the Year following.

XII. 4. The Ground in your Vineyard muſt be digged up every Year, tho' not deep, both between each Vine, and alſo the Paths between each Rank; and freſh Mould out of the Paths, is to be thrown to their Roots, and ſo all laid ſmooth again, and clear from Weeds every Spring; the Weeds in Summer muſt be Howed up often; for the barer the Earth is kept, the better will your Vines thrive, and the larger and better will be your Grapes; but the Earth about the Vine-Roots muſt not be ſtirred in Summer, nor in their time of Bearing.

XIII. 5. The Elder the Vineyard grows, the deeper it ſhould be digg'd, and turn'd up yearly, and ſome very old rotten Dung or Aſhes ſhould then in *February* or *March*, yearly, or every other Year, be mixt with the Natural Earth, but too much Dung, (eſpecially if it be new) is not good, and Aſhes are much better than Dung. The Elder your Vines are, if they be Healthy and Sound, the larger and better Grapes will they bring forth; but when you find them to decay, you muſt ſet young ones in their ſtead.

XIV. 6. To increaſe your Stock, or ſtore of Vines, you muſt either lay the new Branches in the Earth, or elſe plant Cuttings; both ways they will be apt to take Root, and in a Year or two, will be ready to Tranſplant, and diſpoſe as you have occaſion; and whilſt they ſtand unremoved, theſe new Plants muſt be yearly Pruned at the ſame time with the Stocks, *viz.* thro' the whole Month of *February*, and after the ſame manner.

XV. 7. And therefore to get new Roots either to Plant your Vineyard at firſt, or to ſupply the Stocks as they decay, you muſt take them from thoſe produced by the former ſorts of Layers or Cuttings, which were partly covered with Earth, that they might take Root in Winter, which in about two or three Years time will be well Rooted, ſo as they may be removed. Or you may take Suckers from the old Vines or Stocks, which may anſwer the end full as well.

XVI. 8. But if you would raiſe a Nurſery from the Cuttings of Vine Branches, let them be the Cuttings of that Years growth, which Plant in a Nurſery a-part, of good rich Mould. Any Cuttings almoſt will grow, but the largeſt and ſtrongeſt Branches of that Year afford the beſt. Theſe Cuttings muſt be about a Foot, or Foot and half long, conſiſting of four or five Joints or Eyes at moſt, whereof two muſt be thruſt into the Earth, and one or two left above Ground. Theſe Cuttings muſt ſtand in the Nurſeries 2 or 3 Years to get good Roots, and then they may be Planted in the Vineyard. The Cuttings from Branches which bare well the ſame Year, and were not much ſhaded from the Sun are beſt.

XVII. 9. Vines proſper beſt in a dry, gravelly, or ſtoney Earth; Clay, or any ſtiff or wet Soil, is diſagreeable to their Nature, and a rich black over-dung'd Earth, will cauſe them to ſhoot too much into Wood, and to bear but few Grapes, and thoſe commonly *Morbide*, that is flat, or ill ſhaped, and not well taſted. Generally all Vines affect an Eaſterly and South Sun, but proſper not upon a Weſt or North Wall; and they ought to be defended with high Hills or Trees, from cold North-Weſt, North, and North-Eaſt Winds.

XVIII. 10. Every Winter the Earth about the Roots muſt be opened, and ſome good old well rotted Dung or Aſhes muſt be added to the Earth, and well mixed therewith, (as is before hinted) and ſo applyed to the Roots of the Vines, which being Planted under good Walls, and well ſpread, and Nailed thereto, will bear in moſt Years good ſtore of Grapes. The time of Pruning them, we have told you before, but ſome begin that work at the latter end of *December*, for the new Shoots only bear Grapes; therefore in Cutting of the Branches, an Eye or two muſt be left to ſhoot out new Branches again; for if you cut cloſe to the old Wood, few or no Branches from thence will ſucceed: So that in Cutting or Pruning of Vines, the Rules for Pruning other Fruit Trees muſt not be followed; for thoſe are to be cut off cloſe to a Bud; but Vines muſt be cut about the middle, between two Buds.

XIX. 11. A Fertil Soil is moſt for ſome Vines, *viz.* ſuch as bring forth ſtrong Bodied and fat Wines, which is every black Earth, that is not very cloſe nor clammy as *Florentinus* ſays: *Columella* adviſes to have regard to the kind or nature of the Vine, to plant it in a Soil agreeable to the Earth of the Country where it was a Native. A poor and lean Vine may be Planted in a Fat and Fruitful Soil that is ſo of its own Nature, but yet not too Fat. A ſtrong and Fruitful Vine may be Planted in a leaner or more Steril Ground. A large and ſpreading Vine, may be Planted in a more cloſe and compact Earth. A Vine of few Branches, may be Planted in a more looſe but Fruitful Soil. But ſays *Columella*, the Vine delights not to grow in a Soil too much Dung'd, let the Dung be of what kind ſoever. But Mould mixed with ſome Shavings of Horn, being diſpoſed about the Roots, will cauſe the Vine to become very Fruitful.

XX. 12. A late *French* Author ſays, that tho' ſome are of Opinion that Vines ſhould be Pruned in *February*, or earlier, yet he ſays they are now uſually Pruned in *March*; and that if a Vine be

not Pruned, the Grapes will not be large nor well tasted, and besides, that it will not be of any long Life. That all the dead and useless Branches are to be cut off: That the best Branches shooting out the largest Stems, are to be cut off to 4 Eyes, and the other Branches lower, or beneath them, to 2 Eyes: That in Pruning, an Inch of Wood is to be left above the Eye, at the upper end of the Branch: That the Cut must be made sloping on the contrary side to the Eye, for fear of prejudicing it; for when the Sap is in motion, the Vine weeps very much; so that if the Slope were on the Eye side, it would in a manner be drowned by the Tears: And that the Vine be dis-budded and tyed up in *May*, *June* and *July*, that the Grapes may thrive, and grow perfectly ripe. That the lower Branches are Pruned to two Eyes, that they may give us two other good Branches, which may be fit to be Pruned the Year following, whereby you may retrench the Branch before Pruned to 4 Eyes, with all the rest shooting from it. That these 2 new Branches springing from the said lower Branch, are to be so Pruned, that 4 Eyes may be left to the highest Branch thereof, and 2 Eyes only to the lower of the same. But if the first said lower Branch gives but one Branch, that is then to be Pruned to 2 Eyes; if it gives no Branch, then you go to the upper Branch which had 4 Eyes left, which if it has 4 Branches, you must cut off the two higher Branches, and Prune the two lower, leaving 4 Eyes to the higher of the two, and two Eyes to the lower.

XXI 13. But since we scarcely ever Plant Vineyards in *England*, but place our Vines against Walls, you must dig a Trench about a Foot and half broad, and prepare your Layers or Cuttings, which may have each 3 Eyes apiece; cut off a small part of the Fibres, and lay your Layers in the Trench 2 Feet asunder, that the Lattice may the sooner be formed; after which, lay on some Dung, till the Trench be quite filled up, so will the Vines shoot out admirably: If the Earth be hot, Cow-dung is the most proper, but if that can't be had, then take Horse-Dung which is well and perfectly rotten, and discharged of its heat: But in a wet and cold Ground, Horse-dung half rotten will do better than the other, which being of a cold Nature, Cow-dung will not so well agree.

XXII. 14. Our Vines in *England*, begin to put forth their Leaves about the end of *April*, and are in Flower about the latter end of *June*; not very long after it will be good to stop the Branch some distance from the Flowers, that the Grapes coming on, may have the more Nourishment, and the Sap not drawn away from them, or spent upon other useless parts.

XXIII. 15. In the end of *August*, cut away such Branches and Leaves as keep the Sun from the Grapes, so will they ripen the better, and some early kinds will be throughly ripe in *September*, others in *October*; but it often happens, that such as are late ripe, are spoiled by Frosts, unless they be well defended with a Tilt, especially in the Night, from Sun-set, till the Sun is nearly an Hour high; and if it is a Frosty Season, all the day long.

XXIV. 16. Besides the Vines we have enumerated, there are more than an hundred sorts of others, to which we can give no Names, and many of which are very good kinds; but we in this place are to consider which of them will grow best with us in *England*, which are 1. *The Cluster Grape*, or *small Black Grape*, which is first ripe with us, which are thick set on the Bunches, and when ripe, black and well tasted. 2. *The White Muscadine Grape*, which has large Bunches, and has great Grapes, sweet and good, and ripening well most Years. 3. *The Red Muscadine Grape*, as large as the White, but requires the most Sunny places, because it ripens not here so well as the former. 4. *The Frontiniack Grape*, which is a white, sweet, Musky Grape, but in some cold Seasons, come not to perfection here. 5. *The Raison of the Sun Grape*, which is large, red and good, and in a warm place ripens reasonably well. 6. *The Passy Vine*, or *New England*, or *Canada Grape*, which is a White Grape, ripens with the last, and but thinly set on the Bunches. To these we may add, 7. *The Burlet Grape*, which is the largest Grape we have, but are very sowre, and ripen not with us, except by accident, as having an extream hot Season. The Bunches are great, and the Grapes large and white, whereby they make an admirable show on a Wall. Our chief use of this Grape, is to make Verjuice of it, which is very excellent. If by chance in a very hot Year, it comes to ripeness, the Grapes are said to be pleasant. There are many other sorts of good Grapes, which possibly may grow admirably well in our Country, concerning which you may consult the *Vinerones*.

XXV. 17. *The Juice of the unripe Grape*, the Greeks call Ὀμφάκιον: the Latines, *Omphacium*, and *Agresta*: but we in English, *Verjuice*. The *Flowers of the Wild Vine* are called Οἰνάνθη: in Latine, *Oenanthe*, and *Flos Vini*, (in former times much in use, but now wholly neglected.) *The Grapes dryed in the Sun*, are called *Uvæ Passæ*, and *Passulæ Solis*, *Raisons*; and *A Bunch of Grapes so dryed*, is called in Greek, Σταφὶς: in Latine, *Uva Passa*, and *Passula*. *A Bunch of Grapes new gathered*, is called Βότρυς and Σταφυλὴ: in Latine, *Uva*, and *Racemus*. *The Grape it self* is called Ἄκινος, in Latine, *Acinus*. *The Grape Stone* is called in Greek, Γίγαρτον, and γιγαρτον ἄκινος: in Latine *Vinaceus*, *Acina*, and *Nuclei Acini*; also *Arilli*, quasi *Ariduli*, because they are dry, and yield no Juice. *The Wine* is called in Greek, Οἶνος: in Latine, *Vinum*. *The Wine Lees whilst moist and liquid*, are called *Fæces Vini*. *The Tartar, or dryed or hardned Lees*, is called in Greek, Σφέκλη: in Latine, *Fex Vini Usta*, *Lapis Vini*, *Lapis Vineus*, *Tartarum* vel *Tartarus*, (I suppose from its setling into the deep or bottom) and in English *Tartar* and *Argol*. *The Pressings of the Wine*, or *Wine-Husks*, are called *Vinacea*, pl. by *Columella*, and by us the *Rape*, or *Pressings*. *The Mother*, (which sometimes comes upon the top of the Wine, whether in Working, or otherwise by loss of its Spirits,) in Greek, τὰ σέμφυλα, pl. in Latine, *Vinacea*, *reliquiæ*, *omniáque retrimenta quæ supersunt post expressas Uvas*, Galen, *de aliment.* lib. 2. *The Stalk* which is in the middle of the Clusters or Bunches, on which the Grapes do hang, is called by *Galen*, Βότρυχος, and of *Varro*, *Scapas Uvarum*. *The Vineyard* is called Ἀμπελὼν, ϗ Οἰνόφυτον: and in Latine, *Vinetum*. And the *Vinerone* is called Ἀμπελουργὸς, and in Latine, *Vinitor*, the *Vine-Dresser*.

XXVI. *The Qualities.* It is hard to determine the Qualities of Vines and their Productions, because they are so various: However, the Leaves and the Stones of the Grapes are temperate in respect of Cold, but dry in the second degree, Astringent, Vulnerary and Styptick. The *Tears* are cooling. The *Grapes* are cooling and loosening, inducing Fluxes of the Belly, if eaten too plentifully. The *Wine* hot and dry in the second degree, Astringent, or Diuretick according to the Nature of the Grape, moving the Belly, or Styptick for the same reason; but all Wines in general, as they

abound

abound with plenty of Spirits, ſo they are (being moderately and prudently uſed) grateful to the Stomach, and Cordial, cheer the Heart, revive the Spirits, reſtore Nature, and refreſh and ſtrengthen the whole Body. The *Verjuice* is cooling, drying, Styptick and Stomatick. The *Tartar* is cold, dry, Abſterſive, Aperitive, Stomatick, and moderately Cathartick, more eſpecially when it is freed from its groſſer Recrements.

XXVII. *The Specification.* The various and differing Productions of the *Vine*, are ſuch which have as various and differing *Qualities*, from whence their *Specifications* are as various and different; ſo that it would be very troubleſome to enumerate them all ſeverally here, foraſmuch as many of theſe Particulars have a conſiderable number of Preparations ariſing from each of them; for which reaſon, we ſhall omit their Specifick Properties in this place, and give an account of the ſame, as we treat in order of the ſeveral Products or Parts, and Preparations of this Plant.

XXVIII. *The Preparations.* 1. *A Juice of the Leaves and Tendrels.* 2. *A Decoction of the ſame.* 3. *The Tears.* 4. *The Aſhes of the Branches.* 5. *A Lye of the Aſhes.* 6. *An Unguent of the Aſhes.* 7. *A Lotion or Waſh.* 8. *The Grapes.* 9. *Verjuice.* 10. *Muſt, or New Wine.* 11. *Rob, or* Sapa. 12. *Wine Fermented or Perfected.* 13. *Brandy.* 14. *Spirit of Wine.* 15. *Philoſophick Spirit of Wine.* 16. *Raiſons, or dryed Grapes.* 17. *Honey of Raiſons.* 18. *A Decoction of Grape or Raiſon Stones.* 19. *A Powder of the Stones.* 20. *Vinegar.* 21. *Spirit of Vinegar.* 22. *Wine Artificial.* 23. Hippocras. 24. *Gum of the Vine.* 25. *Wine Lees.* 26. Tartar *or* Argol. 27. *Cream of* Tartar. 28. Tartar *Emetick.* 29. *Spirit of* Tartar. 30. *Oil of* Tartar *Diſtilled.* 31. Mixtura Simplex. 32. *Salt of* Tartar *Pure.* 33. *Salt of* Tartar *Nitrated.* 34. *Oil of* Tartar per deliquium. 35. Sal Tartari Foliatum. 36. Cremor Tartari Solubile. 37. *Soluble Emetick* Tartar. 38. Sal Tartari Vitriolatum. 39. Sal Tartari *Volatile.* 40. *Liquor of Tartar.* 41. *Spirit of* Tartar *Compound.* 42. Diateſſaron, *or Punch.*

The Virtues.

XXIX. *The Juice of the Leaves and Tendrels.* It is Cooling, Drying, Aſtringent and Healing. Mixt with Honey, it makes a good Lotion for a ſore Mouth or Throat, or Sores in the Privy parts, to waſh, gargle, and bath therewith, it alſo ſtops Vomitings, Fluxes, Spitting of Blood, and Womens Courſes.

XXX. *The Decoction of the ſame.* If a little Roch Alum be diſſolved in it, and it be then ſweetned with Honey, it has all the former Virtues of the Juice; but drank (without the mixture of the Alum and Honey) it is of good uſe againſt Fevers.

XXXI. *The Tears of the Vine.* Theſe are droppings of the Branches of the Vine, when cut out of due time, or too late in the Spring; drank, it is good either to diſſolve a gretty Stone in the Reins or Bladder, or to expel and drive out Sand, Tartarous matter, Gravel, and ſmall Stones out of thoſe parts; and poſſibly it may be more effectual in this caſe, if it be taken when ſweetned with Honey; for that Honey has not only a power of Diſſolving and Cleanſing, but alſo of making the Paſſages ſmooth and ſlippery.

XXXII. *The Lye made of the Aſhes of Vine Branches.* It is very effectual againſt the Gravel and Stone in the Reins, being drunk either by it ſelf, or mixt with Water, Pear Water, Elder mixed with a little Vinegar, and uſed as a Bath, allays Inflammation and pains, and [illegible] Warts in the Anus [illegible] there. and [illegible] The [illegible] Lye [illegible] with [illegible] or Beans with Lye, and mixt with [illegible] and Cummin, it helps [illegible] Spleen, and helps Freckles and [illegible] place. [illegible] mixed with Wine, [illegible] Antidote [illegible]

XXXIII. *The Aſhes of* [illegible] Made into an Ointment with [illegible] againſt hard Tumors, [illegible] Ulcers, and herbs there; helps [illegible] and ſtrengthens of the Nerves. [illegible] with Oil, and applied [illegible] ſions, eaſes the [illegible] Wounds or Scratches. And [illegible] plaiſter with *Nitre* and *Litharge*, [illegible] conſumes or waſtes Worts, and other Excreſcences of the Flesh.

XXXIV. *The Ointment of the Aſhes.* Take of *Calcined Vine Aſhes* 4 *Ounces*, *Sal Nitre in fine Powder* 1 *Ounce*; *Honey in fine Powder* half an *Ounce*, *Golden Colored Palm Oil*, *Quantity of Oil according to the Rule* 12 *Ounces*, *Oil of Rue* 2 *Drams*: *The Palm Oil being melted to the heat of a Bath, put in the other Ingredients, and mix them well together.* It diſſolves and [illegible] and diſſolves even Callous hard [illegible] eaſes pains in the Nerves and Joints, and is [illegible] againſt Gouts, Sciatica's, ſimple Contuſions, old Sores, Ulcers, Fiſtula's, Tetters, Ring-Worms, *Herpes*, *Impetigo*, Worms in the Face and Skin, and other like rebellious Maladies.

XXXV. *The Lotion or Waſh.* Take *of the Juice of the Leaves* 6 *Ounces*; *Red Port Wine* 12 *Ounces*; *Honey* 4 *Ounces*, *mix and make a Lotion.* It is good to Waſh and Gargle, and heal Sore and Ulcerated Mouths and Throats; and alſo to cleanſe and heal Ulcers in other parts. Put into the Eyes, it ſtops Defluxions, cleans the Sight, and heals Sores and Ulcers therein.

XXXVI. *The Grapes.* The fleſh [illegible] ripe Grapes being eaten, ſtrengthen the Stomach, refreſh the Vital Powers, cauſe a good Appetite, and cool in Fevers: Thoſe of a Red and Juice, are ſaid to ſtop Spitting of Blood, and other [illegible] ward Bleedings. Becauſe of their Styptick [illegible] but almoſt all ſorts of Grapes, if eaten in great a plenty, are apt to cauſe Fluxes, and to do other Prejudices to the Body, not eaſily to be retrieved; whereas moderately eaten, they are otherwiſe of ſingular advantage to it.

XXXVII. *The Verjuice.* It is a Juice preſſed out of any unripe Grapes, but more eſpecially out of that kind of Grape which will not ripen with us, being a very fair large Grape, and making very large Bunches. It is called *Omphacium*, alſo *Succus Omphacinus.* It is a pleaſing ſort of tart Juice, fit to be uſed in Broths, Meats and Sawces, to acuate and ſtrengthen the Appetite, alſo to reſiſt Vomiting, and to refreſh and accelerate the fainting Spirits. Made into a *Syrup with fine Sugar*, it is very grateful to the Stomach, quenches Thirſt, and extinguiſhes the heat of Fevers. Mixt with Honey, and uſed as a Lotion or [illegible] it cures Sores and Ulcers in the Mouth and Throat, &c.

XXXVIII. *The Muſt*, or *New Wine.* It is pleaſing to the Palate, but not ſo wholeſome as that which has Age upon it, and is very fine. Several ſorts of *Muſt* are apt to looſen the Belly, but particularly *New Canary*, creates Obſtructions

in the Reins, and many times cauſes a Strangury, or a kind of ſtoppage and heat of Urine: But according to the Variety of Grapes, and the Climates and Soils in which they grow, ſuch are the *Qualities* of the *Muſt*; ſome are Laxative, ſome Aſtringent, ſome Styptick, *&c.* and according to thoſe Qualities or Properties, varieties of Preparations may be made of them.

XXXIX. *Rob*, or *Sapa*, Syrup of *Muſt*, or New Wine. *Take Wine newly preſt from ripe Grapes, White or Red, boil it over a gentle Fire, or rather in* Balneo, *to the thickneſs of Honey.* It is of uſe for queaſie and ill Stomachs, for Faintings, Vomitings, and want of Appetite; it is alſo good for Sores and Ulcers in the Gums, Mouth and Throat, becauſe it is not only Abſterſive and Healing, but alſo repreſſes the Flux of Humors, having a Styptick quality in it, (but is more or leſs Styptick, according to the kind and Qualities of the Grape it is preſt from;) you may take it Morning, Noon and Night, as much as a Walnut at a time, alone by it ſelf, to ſtrengthen the Stomach, provoke Appetite, *&c.* This you are alſo to Note, That in what *Medical Author* ſo ever you read *Rob* or *Sapa*, without any other Epithite, but ſimply Written, without any relation of what it ſhould be made, that this *Rob* or *Sapa*, is the thing which is always intended.

XL. *Wine Fermented or Perfected.* All Wines whatſoever ſtrengthen the Stomach, chear the Heart, revive the Spirits, and exhilerate whole Nature; Strong Wines ſtrengthen moſt, but many of them are heady, and being drank in too great a meaſure, are apt to enflame the Blood and Spirits, and cauſe Fevers. Weak Wines cleanſe much, and that by Urine, but being too plentifully drank, are apt to cauſe Rheumatiſms, Gouts, *&c.* The middle ſort of Wines (being very fine) are wholſomeſt, and fitteſt for our Bodies. All ſorts of *French* Wines breed Gouts, Rheumatiſms, Sand, Gravel, Stone, and Tartarous humors in the Urinary parts. All Styptick Red Wines, as *Alicant*, *Barabar*, &c. ſtop the over-great Flux of Urine, and are prevalent againſt a *Diabetes*. Choice Canary, as *Palm Wine*, *Madera Wines White and Red*, *Sherry*, *White and Red Port Wines*, *and* Lisbon *Wines*, *White and Red* Florence *Wines*, and ſuch other like ſtrong and Generous Wines, are great Cordials, and ought to be choſen when uſed in Cordial Compoſitions, becauſe they add Life and Spirit to the Medicament, and make it more Grateful to the Stomach and other Bowels.

XLI. *Brandy*, or *Common Spirit of Wine. It is made of well Fermented, and ſometimes of Prick't Wines, in a Copper Veſica Tinn'd within, with its Head and Refrigeratory, or Worm, drawing it off ſo long, till it becomes of ſuch a Conſiſtency as to be but juſt Proof, which may be again rectified in* Balneo, *if you ſo pleaſe.* This Spirit being old, when the Fire is as it were out of it, is much better than when new drawn; and then a ſmall Dram being taken of it now and then by it ſelf, (or mixed with white Sugar, or ſome Syrup, as ſome will have it) is a ſingular Cordial, a ſtrengthener of the Stomach, a reviver of the Spirits, a chearer of the Heart, an exciter of Natural heat, and a cauſer of Digeſtion; warming of the Body, and a quickner of the Circulation of the Blood. With this is made *Black-berry*, or *Bramble-berry Brandy*, *Mulberry Brandy*, *Raſpberry Brandy*, Morella *Cherry-Brandy*, *Black Cherry Brandy*, &c. and with it ſeveral *Tinctures* are drawn out of particular *Simples*, as from *Catechu*, *Cochinele*, *Saffron*, &c. much better than can be done with the beſt rectified Spirit of Wine.

XLII. *Spiritus Vini*, Spirit of Wine. *It is made from Brandy, by Diſtillation in a Copper Veſica, with its Head Tinn'd well within, fitted to its proper Worm and Receiver; continuing the Work till the ſubtileſt and fineſt parts are aſcended, (which you may know by the Taſte;) after which it may be ſeveral times rectified in* Balneo, *drawing off the half, third, or fourth parts, till the Spirit is high, and no Humidity remain which will flame.* Where Note, that the Orifice of the Still being cover'd with a four fold thin Paper, or thick Cloth, the Spirituous parts will only penetrate, and the Watery fall back again. It is a ſingular *Menſtruum* to make *Extracts*, *Tinctures* and *Elixirs* with, and performs many other Admirable things in Chymiſtry, as all Learned Phyſicians abundantly know.

XLIII. *Philoſophick Spirit of Wine. Take Pure Flowers of* Sal Armoniack, *or* Sal Armoniack *twice or thrice Sublimed from common Salt, 4 Ounces; affuſe thereon the beſt Alcholiz'd Spirit of Wine, or Spirit of Wine perfectly deflegmated, or that Diſtilled from Salt of Tartar till it is free from Flegm, ſo much as to over top it 3 or 4 Inches; being in a Glaſs Vial cloſe ſtopt with Wax, let it ſtand only in a Blood warm Digeſtion, 14 or 20, or 30 days, that the Spirit of Wine may fully imbibe, and be impregnated with the Fire or Sulphur of the* Sal Armoniack, *to wit, with its Volatile Particles or Salt; which keep for uſe. But* Kirkringius *adviſes, after this, to Diſtill off the Spirit from the remaining Salt, Cohobating and Diſtilling off the Spirit three times.* This Philoſophick Spirit of Wine, is a *Menſtruum* vaſtly beyond the beſt Simple rectified Spirit, for extracting all ſorts of Vegetable or Mineral *Tinctures*, making of *Elixirs*, *Poteſtates*, &c. One of its uſes is to extract a Blood-red Tincture from the *Glaſs of Antimony*, and from other Mineral and Metalick Bodies. It is not much unlike, and poſſibly not inferior to that of *Baſil Valentines*, mentioned in our *Pharm. Lond. lib.* 1. *cap.* 9. *ſect.* 22. having indeed all thoſe Virtues. It is profitably uſed in Rheumatiſms, Gout, Stone, Jaundice, Dropſie, and all inward Obſtructions: They that pleaſe to uſe it may poſſibly give me Thanks, for communicating the Secret uſe of this moſt Excellent Spirit; ſome few Drops (from 15, to 30 or 40,) may be given in a Glaſs of Generous Wine.

XLIV. *Raiſons or Dryed Grapes.* They are Grateful to the Stomach, ſtrengthen the Bowels, good againſt Coughs, Colds, Catarrhs, Aſthma's, Wheezings, and reſtore in Conſumptions, being often eaten alone, or every Morning and Night, with choice Old *Cheſhire Cheeſe*, and *White Ship-Biſcake*, by which way of eating them, they ſtop old and inveterate Fluxes of the Bowels, and Fortifie as it were the whole Body: The *Damaſco-Raiſons* have a little Tartneſs in them, and are very pleaſing to the Stomach: The *Malaga Raiſons* are alſo of ſingular good uſe; but the *Raiſons of the Sun* exceed all others for all the purpoſes already mentioned.

XLV. *Honey of Raiſons.* Mel Paſſulatum. *Take Raiſons of the Sun ſtoned, and bruiſed in a Marble Mortar, 2 Pounds; warm Water 6 Pounds; infuſe 24 Hours, then boil in* Balneo *to the Conſumption of the half, and preſs out the Liquor ſtrongly, which with Clarified Honey a Pound and a half, boil to its due Conſiſtency: If inſtead of the Water, you take Canary, Malaga or Tent, the Medicine will be ſo much the better.* It is a choice thing againſt Aſthma's, Colds, Coughs, Catarrhs, Conſumptions, Hoarſneſs, Wheezing, and other like Diſeaſes of the Breſt and Lungs.

Mle

Mel de Passulis Compositum, or a Compound Honey of Raisons, is thus made. *Take Juices of Male Peony Roots, of Liquorice, of Baum, of Harts-Tongue, of Hyssop, of each an Ounce; of the Pulp of Raisons made with Malaga Wine or Canary, a Pound*; Double Refined Sugar *a Pound and a quarter; mix them, and boil to a Consistency* It has all the former Virtues, besides which, it is peculiar for Children against Convulsions, the Falling Sickness, Chin-cough, and the Rickets.

XLVI. *Decoction of Grape, or Raison Stones.* It is good to stop Fluxes of Blood in any part, as Bleeding at Nose, Spitting and Vomiting Blood, inward Bleedings, Bloody Flux, and Pissing of Blood. It stops all sorts of Fluxes of the Belly, strengthens the Stomach, and prevails against a *Diabetes.*

XLVII. *The Pouder of the Grape or Raison Stones.* It has all the former Virtues, and may be given from half a Dram to a Dram in a little *Honey of Raisons*, and then washt down with a Draught of the *Decoction of the Stones.* The Pouder outwardly applyed, is a good Styptick in stopping of Blood.

XLVIII. *Acetum*, Vinegar. How our *Distillers* make Vinegar, we have taught at large in our *Doron Medicum*, *lib.* 1. *cap.* 24. *sect.* 36. so that it would be *Allum agere*, to repeat that again here. But for such as cannot go that way to work, for want of Necessaries, it may be done another way, after the following manner. *Make a Paste of Wheat Meal and White Wine, adding to every Pound and half thereof, half an Ounce of dryed Salt, reduced in a very hot Mortar to a fine Pouder; let all be wrought very well together, and lye in* Digestion 24 *Hours, then make it all out into little Loaves, which Bake in an Oven with a soft heat*: Take *these Loaves and steep them in the strongest Wine Vinegar, (in every Gallon of which,* 4 *Ounces or more of fine* Poudered Salt *is added,) with which make a Paste again, and make into little Loaves, and Bake as before. This Work so often repeat, till the Loaves will be no more dissolved in the Vinegar, or rather receive no more Acidity from it; which done, put a sufficient quantity of this Bread, into* 4, 6, *or* 10 *Gallons, or what Quantity you please of Strong Wine, (especially such of it as is prickt, or begins to grow acid) and it will in a very short time be converted into good Vinegar.* Vinegar if it is good, and very acute or sharp, is an excellent Stomatick, and therefore it is almost always an Ingredient in the most excellent Sawces. It is a most singular thing to quench Thirst, abate the heat of the most violent Fevers, resist Poison; and is generally an Ingredient in most Liquid Compositions against the Spotted Fever, Malign Fevers, Measles, Small Pox, and the Plague or Pestilence it self; and all sorts of Contagious Infections, and Pestilential Diseases. It is Styptick, and good to stop all sorts of Fluxes of Blood, whether inward or outward.

XLIX. *Spirit of Vinegar.* Spiritus Aceti, Acetum Distillatum, 1. *Take of the best Wine Vinegar, put it into a Glass Still, and with a gentle Fire in* Balneo Mariæ, *or in Ashes, draw off the Flegm without Taste, which will be near a quarter part; change the Receiver, and force over the Spirit. If the Spirit is for* Physical *uses, you must take heed of Burning, lest your Preparation smell of the same. If it is for a* Metaline *use, draw off the Flegm in* Balneo, *and in Sand Distil violently, till a red Spirit ascends, and all be come over.* II. Or thus, according to Clossæus. *Take* 6 *Quarts of Vinegar, and Distil in a lukewarm* Balneo M. *till but one Quart remains; then in Sand or Ashes, draw off the remainder to dryness, [illegible] or three times after the same.* III. Or thus, which is yet stronger. *Infuse Vinegar in the [illegible] of Honey, and set it in Circulation, and [illegible] purific, by distilling them in the Body of the Vinegar, and Circulize again. [illegible] Still, and make them into [illegible] and then draw the Spirit off in a Retort, [illegible] so will it be Fiery and Corrosive.* IV Spiritus Aceti Sennerti. *Take Faces of Distilled Vinegar, calcine them dry, add to the same Spirit of Vinegar, and draw it off again in Sand, Obtaining [illegible] all its common or fixt Salt upon and in the Spirit. This is Radicated or Alkalized Vinegar.* V Or thus *Take Faces or Lees of Vinegar, Distil in a Vesicatory with its Refrigeratory, so will you have a Fiery Spirit, which will dissolve Metals, Stones and Minerals.* VI Spiritus Aceti Terebinthinatus. *It is made of Vinegar and Turpentine. Distil them in a Retort, then separating the Oil and Spirit from the Flegm, or Water.* VII Dr. Anthonies Spirit of Vinegar, with which he made his Aurum Potabile. *Get three or four Glass Stills, which will hold a Gallon or two apiece, and about 6 Gallons of the strongest Red Wine Vinegar, (Vinegar of White Wine or Claret, will be too weak) made of Red Wine, or of Canary, or Muscadine. Put the Vinegar into the Stills, and set as many a going as the* Balneum *will hold, (which Balneum ought to be two feet and a half Square, to hold many Glasses) take a Pint of that which runs first, and put it away as weak, and not fit for use, then Distill the rest to dryness: Wash the Stills with a little of the Flegm or first running: Distil again, and put away the first Pint; this Work repeat four or five times; so of a Gallon of Vinegar, you will have three Pints of Spirit; and of your six Gallons nearly* 10 *Pints. If your Spirit is yet too weak, you must Distil it oftner; this Spirit keep in a Glass close stopt with a Glass Stopple.* For a Quart of this *Menstruum*, Bishop Bilson gave Dr. Anthony *Thirty Shillings.* VIII Radicate, Spirit of Vinegar, according to Muggrave. *Take Spirit of Vinegar, or the former Radicated Vinegar, and Distil it a new from* Sal Armoniack. *So will it be much more potent.* Spirit of Vinegar attenuates, incides, discusses, represses, cools, and has all the Properties of Vinegar, but much more intense and strong. It is used as a *Menstruum*, to perform Chymical Extractions with. *The Terebinthinated or Radicated Vinegar*, is for the dissolution of Stones of all sorts, chiefly of Gems or Pretious Stones, of which *Crollius* and *Hartman* make much mention; and it is used by *Paracelsus* against Diseases of the Stone, by giving it in a proper or Specifick Vehicle. These Authors say, that it will dissolve *Flints* and other Stones, without any Previous Calcination, and is also profitable for many other uses: Now if it has a Power of Dissolving such hard Substances without Calcination, it must certainly have much more power to do the same, after such a Preparatory Operation of the Fire. Dr. *Anthonies Spirit of Vinegar*, may without doubt have all the same Virtues and uses with other Spirits, but what he applyed it to, was chiefly to make his *Menstruum*, with which he prepared his *Aurum Potabile*, that Medicine so much Fam'd throughout almost the whole World.

L. *Wine Artificial. Take Malaga Raisons freed from their Stalks an hundred Weight, for Rain-Water* 25 *Gallons; put the boiling Water upon the Raisons, stirring them well together, which let stand* 48 *Hours or more, till the Water has drawn forth all the Sweetness and Strength out of the Raisons; then draw off the Water from the Fruit into a Wooden*

Wooden Vat, where let it ſtand till it begins to Ferment; Barrel it up, keeping it upon the Lees till the Fermentation is over, and the Wine is abſolutely Fine, which then may if you ſo pleaſe, be Bottled up. This is not inferior in Strength to any *French* Wine, and much more pleaſant, drinking a great deal more Acute and Brisk. It has the Virtues of other ſtrong Wines, and may be drank ordinarily as other Wines. If you pleaſe, you may alter its White or Pale color, and make it of a Red color, by putting into it *Alkanet-Roots*, which will give it a Glorious Red, and thereby make it much more taking to ſome ſort of People. When *Malaga Raiſons* are Cheap, or at the ordinary Price, this Wine will (your Labour being ſet aſide) ſcarcely ſtand you in Three Pence a Quart.

LI. *Hippocras*, or Spiced Wine, *Vinum Hippocraticum.* I. Dr. Bates Hippocras. *Take Ginger, Cloves, of each one Ounce, Cinnamon, Nutmegs, of each two Ounces; Spaniſh Wine or Canary, ſix Quarts; double refined Sugar* 3 *Pounds and a half, mixt with New Milk a Quart and half a Pint; let them ſtand* 24 *Hours, then ſtrain off, to which add one Limon thin ſliced, and two tender Sprigs of Roſemary; often paſſing it thro'* Hippocrates's *Sleeve, till it becomes clear.* Doſe 3 or 4 Ounces in Languors or Faintings. II. The common Hippocras of the Shops. *Take Ginger* 3 *Drams, Cloves, Nutmegs, of each* 2 *Drams, Mace two Scruples, White Pepper, Cardamoms of each a Scruple; Cinnamon* 6 *Drams, Marſh-Mallow Seed, one Ounce: Canary, or White* Lisbon, *or pure Red Port Wine* 6 *Quarts: Let all the Ingredients be bruiſed, and put into a thin Milk Cloth bag, with a Stone in it to make it ſink, then put in the Wine, and let all infuſe for a Quarter of a Year, then draw it off, and Bottle it up.* Where Note, *that ſome boil the Spices in the Wine, which they ſweeten with Double Refined Sugar, and then let it paſs thro' a* Hippocras *Bag, Bottling it up afterwards: But if you would have this, or any other Liquor purely clear, you muſt uſe a Tripple* Hippocras *Bag, made of White Cotton or Flannel; ſo what Fæces paſs the firſt Bag will ſtay in the ſecond, and what paſſes the ſecond, will ſtop in the third and laſt: You muſt order them ſo, that the Point or Corner of the one may hang in the Mouth of the other; and the Corner or Point of the third and laſt, in the Mouth of the Cup or Veſſel to receive the Wine.* III. Hippocras Extemporanee. Hippocras made in an Inſtant. *Take white Pepper a Dram, Cloves an Ounce, Nutmegs, Mace, Ginger, of each two Ounces; Cinnamon* 8 *Ounces, Spirit of Wine three Pints: the Ingredients being all ſufficiently bruiſed, mix with the Spirit, and digeſt* 14 *days cloſe ſtopt in a cold place, ſhaking the Veſſel twice a day, then preſs out the Tincture very hard: To the* Magma *or* Fæces, *affuſe freſh Spirit of Wine a Pint and a half, mix, digeſt, and ſhake as before for* 14 *other days, then preſs out the Tincture very hard; put this latter Tincture to the former, mix them, and let them ſettle for* 4 *or* 5 *days, then decant the clear, and filter it thro' brown Paper, which keep for uſe. Take of your intended Wine you will make your* Hippocras *of, a Quart, of the aforeſaid Tincture three large Spoonfuls, more or leſs, (as you would have it in Strength) mix them together, and you will have good* Hippocras *in a Moment.* Where Note, *That if the Wine be of it ſelf harſh, it ought to be aforehand Dulcified with Double Refined Sugar, by which it will be made more grateful to the Palate; and then letting it ſtand till it is Pure and Fine, it may be Bottled up.* Dr. Bates ſays, that if you add White Pepper half a Dram, to his *Recipe*, it will make the Compoſition more Grateful to the Stomach; and for ſuch as love Perfumes, he ſays you may add half an Ounce of of Musk Seed. All theſe ſeveral Preparations are very Cordial, ſtrengthen and fortify the Head, Heart and Stomach, ſupport the Animal and Vital Powers, recreate the Spirits, dry up Humidities, and refreſh the Body over wearied with much Labour: They cauſe Appetite and a good Digeſtion, are good againſt Fainting and Swooning, and admirably expel Wind, whether in the Stomach or Bowels, which trouble them with ſowre Belchings, Heart burnings, Gripings, Colicks, and the like.

LII. *Gum of the Vine.* The Gum which iſſues out of the Vine of it ſelf, ſticking to the Bark, (which it emits in hot Climates, but very rarely in ours) being taken from half a Dram to a Dram, diſſolved in White Port, or *Lisbon* Wine, is of good uſe in the Strangury, and to expel Sand, Gravel, and Tartarous Mucilage out of the Urinary Paſſages: Being bathed on the Skin, it takes away Scurff, Morphew, Scabs, Tettars, Kingworms, and ſuch like Deformities thereof; as alſo the *Leprous Scurf*, if the places be firſt waſht with a *Diſſolution of Nitre in Water*, or the Gum be diſſolved in the ſaid Nitrated Water, and ſo uſed. When the Green Branches of the Vine are burnt, a Gummy Water will drop from their ends: this being ſaved, will perform the ſame things as the aforeſaid Gum, having one and the ſame Nature and Qualities. They ſay, being mixed with Oil and uſed, it will take away Hair, and conſume Warts; this, tho' I know nothing of by Experience, yet I much doubt it, becauſe of its ſoft, and almoſt inſipid Qualities.

LIII. *Wine Lees.* From the Lees of Wine, a *Volatile Salt of Tartar* may be Diſtilled, or Extracted after this manner. *Take Lees of Wine dryed with a gentle Fire, put them into a large Earthen or Glaſs Retort, ſo as to fill it about two third parts full. Put it into a Reverberatory Furnace, with a large Receiver: make at firſt but a ſmall Fire, ſo as to heat the Cornute by degrees, that the inſipid Flegm may be drawn forth. When Fumes or Vapors begin to ariſe, empty the Flegm out of the Receiver, and join it to the Beak of the Retort again, Luting it well. Encreaſe the Fire by Degrees, till the Recipient is filled with white Clouds; continue the Fire at that height, till the Recipient begins to cool, then increaſe the Fire to the height, which continue ſo long till no more Vapors will aſcend. The Veſſel being grown cold, unlute the Receiver, and ſhake it well about, to cauſe the* Volatile Salt *which ſticks to it, to fall to the bottom. Then put all into a Bolt-head with a long Neck, fitted with a proper Head and a ſmall Receiver, which Lute well in the Joints. Put it into a Sand heat, with a ſoft or ſmall Fire, ſo will the* Volatile Salt *ariſe, and ſtick to the head and top of the Bolt-head. Take off this Head, and apply another in its ſtead, gather your Salt, and cloſe it up immediately, for otherwiſe it will preſently diſſolve into Liquor: Continue now the Fire, and continually gather up the Salt as you ſee it aſcend. When no more will ariſe, you may Diſtil a ſmall Quantity of Liquor, and then put out the Fire. This Liquor is a quantity of Flegm, joined with ſome Volatile Salt, and may be called* Volatile Spirit of Tartar, *having the ſame Virtues with the Salt, and may be given from* 8 *Drops to* 24. *in any proper Vehicle.* You may alſo make this Volatile Salt of Tartar after this manner. *Take Wine Lees what quantity you pleaſe, ſeparate by ſtraining, and preſſing the Wine contained in them. From this Wine draw a very Subtil, Volatile, and Inflamable Spirit, which reſerve.* The Magma *remaining,*

ing, dry in the Sun, or in a gentle Sand heat. Pouder it, and ſprinkle it with the afore-reſerved Spirit, or with other well Rectified Spirit of Wine, making it moderately moiſt. Let the whole Maſs dry of it ſelf, as you dry'd it before: then fill with it two thirds of a large Retort of Potters Earth, place it in a large Reverberatory Furnace, fitted and well Luted to a large Recipient. Diſtil firſt with a gentle Fire, increaſing it by degrees for about 12 Hours, till the Fire comes to the utmoſt violence: After which, the Veſſels being cold, unlute them, and you will have in the Receiver, the Volatile Salt of Tartar, *mixed with the Oily part, and much Flegm. Empty both together into a large Matraſs, with a long Neck, which place in a Sand heat, covering it with its Head, well luted to a Receiver. Diſtil with a moderate Fire, as in the Rectification of other Volatile Salts; ſo will the* Volatile Salt of Tartar *aſcend firſt, and ſtick to the inſide of the Head, in a White and Cryſtalline Form, which gather with what Dexterity and Speed you can, that it may be perfectly ſeparated from the Oily parts, which will aſcend next to this Volatile Salt.* Where Note, that the Rectified Spirit of Wine is not abſolutely neceſſary in this Work; but there is this in it, that by embracing ſome part of the Acid of the Lees, and taking it along with it in its Diſtillation, it frees the *Volatile Salt*, ſo as that you will have it in greater quantity, than otherwiſe without it. In theſe Operations, the Acid Subſtance of the Juice of the Grape, unites it ſelf with a great part of the *Volatile Salt*, to make the Compoſition of the *Tartar*: Whence it is, that *Tartar* yields not ſo much *Volatile Salt* as the *Moiſt Lees* at the bottom of the Cask do, which mightily abound in a *Volatile Salt*, and a *Sulphurous Spirit*. And hence it is, that the *Volatile Salt of Tartar*, is more eaſily, and more plentifully drawn from *the Lees*, than from the more *Solid*, and *Stony Tartar*. *The Virtues.* This *Volatile Salt of Tartar* is ſaid to purifie the whole Maſs of Blood, both by Sweat and Urine, and ſometimes by Stool, whereby the Maſs of Putrefactive Humors and Matter is carried off. It is good againſt the Palſie, Apoplexy, Epilepſy, Lethargy, and other like Diſeaſes of Head, Brain and Nerves; reſiſts all intermitting Fevers, chiefly Tertians and Quartans, opens all Obſtructions of Stomach, Liver, Spleen, Meſentery, Gall, Reins and Womb; cures Cachexies, Dropſies, Jaundice, Scurvy, and other ſtubborn Diſeaſes. Doſe from 10 Grains to a Scruple, in any fit Vehicle. *A Cataplaſm of Wine Lees. It is made by mixing them with Rye Flower or Meal, till they come to a Conſiſtency.* Being applyed, it is accounted an excellent thing to eaſe the pains of the Gout.

LIV. *Tartar or Argol.* It is that hard part of the Lees of Wine, which ſhooting it ſelf to the ſides of the Cask, ſticks to the ſame, and becomes hard almoſt like a Stone. That which is taken from Rheniſh, and other White Wines, is the beſt to be prepared into Medicines: But the *Red Tartar*, which proceeds from *Red Wines*, as it yields nothing near ſo much Salt, ſo it is much inferior to the former, but ſerves well enough for *Dyers*, in fixing their Colors, and for *Gold-Smiths* to boil their Silver in to whiten it. *The White Tartar* is many times given unprepared, being reduced into a Fine and Subtil Pouder, from 2 Drams to half an Ounce, in half a Pint or more, of boiling hot Water-Gruel. It purges the Bowels, and cleanſes them, as alſo the Urinary parts, of Slimy and Watery Humors, and is profitable againſt Cachexies, Dropſies, Obſtructions of the Reins, Bladder and Womb, *&c.* But this *Crude unprepared Tartar* is ſeldom given, for that the *Purified Tartar*, as alſo the *Cream of Tartar*, is common enough to be had, and at an eaſie price: *Purified Tartar* is thus made. *Take pure white Cryſtaline Tartar* 10 *Pounds, beat it into fine Pouder, and diſſolve it in* 6 *Gallons of boiling Spring Water, and continue the boiling till it is diſſolved; then preſently ſtrain hot thro' an* Hippocras *Bag: The ſtrained Liquor continually ſtir round with a Wooden Slice, till it is cold, then let it reſt, and in* 2 *or* 3 *hours after, the pure fine* Tartar *will ſink to the bottom of the Veſſel, in form of an impalpable and ſhining white Pouder, which is* Tartar *Purified*, and is equal with either Cream or Cryſtals of Tartar. *The Virtues*, Doſe and Uſe is as the former, and the ſame with *Cream or Cryſtals of Tartar* next following. See our *Sepiaſium*, or *Druggiſts-Shop, lib.* 2. *cap.* 10.

LV. *Cream and Cryſtals of Tartar. Diſſolve what quantity of White Tartar you pleaſe, in a large quantity of boiling Water, which done, paſs it thro' an* Hippocras Bag, *into a large Earthen Veſſel, or Bell Glaſs underneath: Evaporate about half away, and ſet it to Cryſtallize for* 2 *or* 3 *days, (ſaving what ſwims a top, as well as the Cryſtals;) Evaporate again half away, and ſet it to Cryſtallize, doing this ſo long till you have gotten all the Tartar. What ſwims on the top is called* Cremor Tartari, *The Cream of Tartar; and that which ſhoots on the ſides and bottom, is called the* Cryſtals of Tartar. Where Note, that in diſſolving and boiling the Tartar in the Water, it ought to be done rather in an Earthen Pot, than in an Iron one, leſt it ſhould draw a Tincture from the Iron. *The Virtues* of both theſe Preparations are one and the ſame, and the ſame with the *Purified Tartar* in the former *Section*, being Aperitive, Purgative, good for Cachectical, Hydropical and Aſthmatick Perſons; and excellent againſt Tertian and Quartan Agues. The Doſe is from 2 Drams to half an Ounce, more or leſs, which being reduced to very fine Pouder, ought to be given in the Vehicle boiling hot, that it may diſſolve therein, and not fall to the bottom.

LVI *Tartar Emetick. Take Cream or Cryſtals of Tartar in fine Pouder,* Crocus Metallorum *in Subtil Pouder, of each* 4 *Ounces; mix them, and diſſolve in boiling Water, then filter, and evaporate to dryneſs.* It is the beſt of all Emeticks, Operating with much Gentleneſs and Safety, Purging both upwards and downwards, and may be given from *gr. ij.* to *viij.* It may be given in hot Water-Gruel, or in ſome Conſerve or Electuary, or the Pulp of a roaſted Apple, waſhing it down with a little warm Poſſet-Drink, or Water-Gruel. It is good againſt Frenzy, Madneſs, *Carus*, Lethargy, Epilepſy, Vertigo, Melancholy, Sickneſs and Wind in the Stomach, pains of the Sides, Jaundice, Dropſie, Gout, Rheumatiſm, Putrid and Malign Fevers, Tertian and Quartan Agues; inveterate Obſtructions of Liver, Spleen, Reins, Womb and Meſentery; and is profitable againſt a Dyſentery, and the malignity of the Plague or Peſtilence it ſelf. *Emetick Tartar* may be made by ſeveral other Preſcripts, as you may ſee more at large in our *Sepiaſium*, or *Druggiſts Shop, lib.* 2. *cap.* 10. *ſect.* 15, *&* 16. and in *Our Pharm. Bateana, lib.* 1. *cap.* 10. *ſect.* 48. to which we refer you.

LVII. *Spirit of Tartar. Take White Tartar in Pouder as much as you pleaſe, put it into a large Earthen Retort Luted all over, ſo large as that it may not fill it above half or* ⅔ *parts full, which place in a cloſe Furnace of Reverberation: Make firſt a gentle Fire, which continue ſo long till nearly all the Flegm is come off: Then change the Receiver,*

and

and fit to the Retort a large Glaſs Recipient. Increaſe the Fire Gradatim, *till it comes to the utmoſt degree, and ſo great that the Recipient be filled wholly with white Clouds, for a pretty long ſeaſon: Continue this degree of Fire, till the Recipient becomes clear again; at what time put out the Fire, and ſtop up the Regiſters of the Furnace, letting the Retort cool. Then unlute the Joint of the Recipient, and put the Liquor into a large Matraſs with a long Neck, fixing to it a fit Head, and in a gentle Sand heat draw off the Spirit (leaving the Oil at the bottom) repleat with a great deal of the* Volatile Salt of Tartar, *and ſome few Particles of its fine and purer Oil, which keep in a Glaſs cloſe ſtopt.* This Spirit is a great Sudorifick, expelling from the Center to the Circumference, all Sharp, Corroſive, Malign, Poiſonous, and Peſtilential Humors; and all ſuch unnatural or corrupted Juices, which are the cauſe of inveterate Leproſies, Scabs, Scurf, Morphew, *Eriſipelas*, *Herpes*, Ring-worms, Tettars, *Impetigo*, and the like. It is powerful againſt all ſorts of Colicks, Rheumatiſms, Gouts, Quinſies, Inflamations of the Throat and Tonſils, Pleuriſies, *French* Pox, *&c.* It alſo opens all Obſtructions of the Stomach, Liver, Spleen, Reins, Meſentery and Womb; and is prevalent againſt Cachexies, Green Sickneſs, Dropſie, Jaundice, Obſtructions of the Terms, *&c.* Doſe from a Scruple to a Dram, or two Drams in any fit Vehicle. See more hereof in *Our Pharmacopœia Londinenſis*, *lib.* 1. *cap.* 8. *ſect.* 7, §. 4. and in *Our Pharmacopœia Bateana*, *lib.* 1. *cap.* 3. *ſect.* 20. where you may receive abundant Satisfaction.

LVIII. *Oleum Tartari Diſtillatum.* The Diſtilled Oil of Tartar. This Oil is drawn with the Spirit, in the former Proceſs juſt now declared, and in the ſeparation of the Spirit is left behind in the Cucurbit or Matraſs. This Oil may be rectified from its more Empyreumatick and groſs parts, after this manner. *Take of the aforeſaid Oil, and add to it four or five times its weight of* Colcothar, *and in a Glaſs Retort draw off the Oil by a gentle Sand heat. This Oil when rectified, will ſtill be ſtinking, tho' nothing like that before Rectification; but it will yet ſtink leſs, if it be two or three times thus Rectified.* It may be given thus Rectified, from *gut. ij. ad vij.* dropt into fine Pouder-Sugar, and ſo given in ſome fit Vehicle, againſt Fits of the Mother. It alſo expels Wind, and gives eaſe in the Colick. It generally cures Vapors by meerly Smelling to; but by reaſon of its exceeding Fœtidneſs, is not much uſed inwardly: 'Tis true, that being Rectified from the *Calcin'd Vitriol*, 'tis ſomething better. It cannot be any ways made pleaſant to the Smell, but be Elixirating of it, firſt with Rectified *Spirit of Nitre*, and then mixing it with three times its quantity of Rectified *Spirit of Wine*, then it may be given inwardly from 10 Drops to 40. in any fit Vehicle, againſt Diſeaſes of the Head, Brain, Nerves, Womb and Joints.

LIX. *Mixtura Simplex*, or *Spiritus Diatrion. Take Rectified Spirit of Tartar, ſix Ounses: Volatile Spirit of Vitriol (which aſcends next and immediately after the Flegm) 2 Ounces:* Spiritus Theriacalis *Camphorated,* 10 *Ounces; mix, and digeſt in a Phial Hermetically Sealed for a Month, that they may be perfectly united according to Art.* This Mixture attenuates, opens, and by the Subtilty of its Particles, penetrates through the whole Body without any trouble: According to *Paracelſus*, it is a potent thing in curing the Epilepſy, gives immediate relief in the Pleuriſie, and removes all Obſtructions of the *Viſcera.* It is a potent thing againſt burning, malign and Peſtilential Fevers, expelling the Malignity by Sweat, and is a ſingular Preparation againſt Hypochondriack Diſtempers and Melancholy; as alſo againſt Vapors, and Hyſterick Fits. Doſe one Dram, more or leſs, in Canary, or Canary mixt with Cinnamon-Water. See more hereof in my *Pharmacopœia Bateana*, *lib.* 1. *cap.* 2. *ſect.* 12.

LX. *Sal Tartari:* Salt of Tartar Pure. *It is made of White Tartar being Calcin'd in a Naked Fire, in a Reverberatory, or other Furnace of Calcination; after which, the Salt is Extracted with fair Water by Elixiviation, Filteration and Deſiccation, after the manner of making all other fixed Salts. Or you may prepare it from the* Caput Mortuum, *remaining after the Diſtillation of the former Spirit and Oil of Tartar, after it has been again Calcin'd to Whiteneſs, by the former manner of Elixiviation, Filtration and Deſiccation.* This Salt is an admirable thing againſt the Stone, Sand, Gravel, and tartarous matter in the Reins and Bladder; it opens all Obſtructions of the *Viſcera*, provokes Urine powerfully, and is an excellent thing againſt the Scurvy, Dropſie, Jaundice, and Gout; and outwardly prevails againſt Scurff, Morphew, Scabs, Leproſie, Ulcers, *Serpigines*, Tettars, *Herpes*, Scald Heads, Tanning, Sun-burning, and all other Deformities of the Skin. It abſorbs Acidities in the Stomach and other Bowels, and is an immediate thing againſt Heart-burning, Doſe from half a Scruple to a Scruple, in Ale, Beer, Water, or White Wine, *&c.*

LXI. *Sal Tartari cum Nitro*, Salt of Tartar with Nitre. *Take Crude white Tartar*, Sal Nitre, *of each (in Pouder) equal parts; mix, and in a Crucible Calcine to Whiteneſs, by ſtirring the ſame with a red hot Iron, till the Nitre is wholly conſumed, which is known by the ceaſing of the Flagration and Burning. Thus the Tartar being Calcin'd as white as Snow, is yet the ſame in Weight with the Tartar at firſt, by which it appears, that the Tartar is nearly all Salt. If you mix this Salt with an equal quantity of Sulphur, and Calcine again, you will take away the nauſeous* Lixiviate *Taſte of the Salt, by which it will become not only more pleaſant, but alſo in a great meaſure reſiſt the Intromiſſion of the Air, ſo that it will not ſo eaſily melt or diſſolve.* It is Diuretick, is a Famous Opener of Obſtructions, and has all the Virtues of the former pure Salt. It takes away ſtoppages of the Lungs, Stomach and Bowels, provokes the Terms, and is prevalent againſt Aſthma's, Coughs, Colds, Conſumptions, Pleuriſies, Cachexies, Dropſies, Jaundice, *&c.* Doſe from half a Dram to a Dram, in Ale, Beer, Broth, Wine, *&c.* See our *Pharm. Londinenſis*, *lib.* 3. *cap.* 11. *ſect.* 99. And our *Pharm. Bateana*, *lib.* 1. *cap.* 10. *ſect.* 42.

LXII. *Oleum Tartari per deliquium:* Oil of Tartar by Diſſolution. *Put pure Salt of Tartar upon a Poliſht Marble, which place ſhelving in a Cellar, over an Earthen Glaz'd Pot or Pan, or broad Glaſs Veſſel, in a moiſt Cellar, ſo will the Salt diſſolve into an Oil, and fall down into the Receiver. Or put it into a* Hippocras *Bag, which hang up in a moiſt Cellar, with a Glaſs, or Earthen Glaſs'd Receiver under it, to receive the dripping Oil, which Filter and Evaporate to a Conſiſtency. But if you would have immediately Oil of Tartar* per deliquium, *then put one Ounce of pure fine white Salt of Tartar, into two Ounces of Water, and it will all diſſolve into Liquor, which if you pleaſe, you may Filter thro' brown Paper, and keep for uſe.* It has all the Virtues of the Salt, and may be given from half a Dram to a Dram, in any proper Liquor.

LXIII. *Sal Tartari Foliatum*; Foliated Salt of Tartar. *Take Pure Salt of Tartar as much as you pleaſe*

pleaſe, put it into a large Glaſs Cucurbit, and gently pour on it as much Spirit of Vinegar as the Salt can ſuck up, ſo that they may be ſatiated with each other, and no Effervescency at all remains, ſo will the Work be done at once: Some part of the Humidity of the Spirit, evaporate by a gentle Sand heat, ſo will a black ſubſtance remain at bottom of the Glaſs. Being cold, diſſolve it in good Spirit of Wine, *Filter thro' brown Paper, and in a Glaſs Cucurbit in a Sand heat, Evaporate to dryneſs. Diſſolve again in Spirit of Wine, Filterate and Evaporate as before. This Work repeat, till the Salt is white, dry, and in diſtinct Leaves at bottom of the Veſſel.* It is of ſingular uſe to purifie or cleanſe the whole Maſs of Blood and Humors, and to reſolve and carry off all manner of Tartarous Mucilage, (which is the cauſe of many Chronick and rebellious Diſeaſes,) whether in the *Viſcera*, or any other parts of the body. It keeps the Belly ſoluble, and purges by Urine all the Filth of the Reins, Ureters and Bladder. Doſe from 10 Grains to 20, in Broth, or ſome other proper Vehicle.

LXIV. *Cremor Tartari Solubilis*; Soluble Cream of Tartar. *Take Cream of Tartar, diſſolve it in a ſufficient quantity of warm or boiling Water; then drop in Oil of Tartar* per deliquium, *till the Ebulition ceaſes, after which Evaporate the humidity to dryneſs.* It will readily diſſolve in any warm Broth, Gruel, or Liquor, and may be given from half a Dram to a Dram. It gently looſens the Belly, abates the heat of Fevers, ſtrengthens the Stomach, and opens Obſtructions.

LXV. *Soluble Emetick Tartar. Take of the former Soluble* Cremor Tartari, Crocus Metallorum *levigated, of each two Ounces; Spring Water three Pints; digeſt a Week, or in a gentle Sand heat, often ſhaking the Glaſs; then boil gently for an hour or more, after which Filtrate, and Evaporate to dryneſs.* This has all the Virtues of the former *Emetick Tartar*, but is more fit for uſe in many Patients, becauſe it will readily diſſolve in any cold Liquor, and may be given in the ſame manner and doſe.

LXVI. *Sal Tartari Vitriolatum*; Salt of Tartar Vitriolated. *Take of the aforeſaid Oil of Tartar* per deliquium, *a Pound, more or leſs; drop upon it Spirit (or Oil) of Vitriol or Sulphur, ſo much till it makes no noiſe; when the Ebulition ceaſes, Evaporate with a gentle heat to dryneſs.* It purges very well in one or two Drams, with much eaſe, and cleanſes the Body admirably. It kills Worms in Children, being given from 10 Grains to a Scruple or more, in warm Broth or Gruel: It cleanſes and ſtrengthens the Stomach, cuts and diſſolves tough and clammy humors in the *Viſcera*; cauſes a good Appetite and Digeſtion, quenches Thirſt, and extinguiſhes the heat of the moſt burning and malign Fevers; diſſolves Tartar in the Body, and opens all manner of Obſtructions; it provokes the Terms, and is good againſt the Rickets in Children, and Green Sickneſs in Virgins; and is ſaid to cure alſo Tertian and Quartan Agues.

LXVII. *Sal Tartari Volatile*; Volatile Salt of Tartar. *Take white Tartar Calcin'd to blackneſs, or rather ſomewhat more,* viz. *till it is grey, three Pounds; put it into a great Iron Pot, upon which put fair Water, ſo much as to over-top it an Inch or two: Put the Pot over a gentle Fire, which when the Calcin'd Tartar is fully Embodied with the Water, and is become Blood-warm, ſtrew upon it by degrees, a handful of* Crude Tartar *in fine Pouder, ſo will an Effervescence ariſe: Continue to ſtrew more Pouder of Tartar upon it* gradatim, *ſo will the Fermentation increaſe, and the Bubbles grow larger and more numerous, gathering together not much unlike a* Bunch of Grapes: *Mean while, let not the Fire exceed in heat ſuch as is commonly uſed for Fermentations; ſtill ſtrewing in more Pouder of* Crude Tartar, *not too much at a time, leſt the Ebulition ſhould run over the ſides of the Veſſel. When you ſee the Ebulition ceaſes, you muſt ceaſe to ſtrew in any more Crude Pouder of Tartar. Put this whole matter into a very large Iron Gourd, with a very long Neck, which cover with its Head and Receiver: Lute well the Junctures, and Diſtil in a Sand heat, firſt with a very gentle Fire, (applying continually cold wet Cloths about the Gourd, to ſtop a little the boiling of the matter) at laſt augment the Fire, ſo will the Volatile Salt aſcend. The Diſtilled Liquor rectify again, as much as is fit for the Separation of the Salt, which you will have in Whiteneſs and Purity.* This Volatilization is made by reaſon of the Fermentation, made by mixing of *Crude Tartar* with the fixed *Salt of Tartar*, whereby a perfect Separation of the Salt is made, (as well from the Calcin'd as Crude parts) and ſo Volatiliz'd; that after Diſtillation there is not to be found in the *Fæces* any Salt at all, either Volatile or Fixed. But there is another way of making this Volatile Salt of Tartar, from the pure fixed Salt thus: *Take pure fine Salt of Tartar 2 Pounds, of the black diſtilled Oil of Tartar a Pound, mix them well together, and put them into a Glaſs Retort, which ſtop very cloſe, and place it in a gentle Sand heat for 6 Months; then open the Mouth, and fix thereto a large Receiver well Luted, and place it in a Sand heat. Diſtil with a gradual Fire, ſo will a great quantity of Volatile Salt come forth, ſmelling like Urine, but white and Cryſtalline, of a very penetrating Smell, with a Liquor alſo, which contains in it a ſmall quantity of the ſame Salt and a little Oil, almoſt as penetrating as the white Cryſtalline Salt.* In this Preparation, by reaſon of the long Digeſtion, there is a ſecret Fermentation between the Diſtilled Oil and the Fixed Salt; and tho' the ſaid Oil contains much Volatile Salt, yet the Volatile Salt here aſcending, proceeds chiefly from the Fixed Salt of Tartar it ſelf, which in this Operation quitting its Chains, immediately becomes Volatile, and manifeſts it ſelf with all the Properties and Qualities of a Volatile Salt. The reaſon is, becauſe the Volatile Salt here aſcending, is in a very great quantity, and much more than the weight of the Oil; and the *Fæces* remaining (which are only a black Oily Coal) weigh very much leſs than the *Salt of Tartar* made uſe of. The Virtues, Uſes and Doſes of this *Volatile Salt*, prepared by either of theſe ways, are fully and exactly the ſame, with Volatile Salt extracted from the Lees of Wine, at *Sect.* LIII. aforegoing.

LXVIII. *Liquor of Tartar. Take Calcin'd Tartar, and Common Salt, of each a Pound; fair Water 2 Quarts; mix, and digeſt in a gentle Sand heat for a Week, ſtirring it every day; ſtrain, and add thereto pure* White Tartar *in fine Pouder, a Pound: digeſt in a moderate Sand heat for a Month; then ſtrain out thro' a* Hippocras *Bag, and afterwards filter the ſtrained out Liquor thro' a brown Paper, and keep it for uſe.* It will gently purge the Belly of Viſcous and Watery humors, being given from one Spoonful to two, (more or leſs) in Broth, Gruel, or Rheniſh Wine and Mead. It excellently opens all Obſtructions of Liver, Spleen, Meſentery, Reins and Womb, provokes Urine, and cleanſes the Urinary parts; is good againſt Melancholy, the Scurvy, Dropſie, Jaundice, Gout, Obſtructions of the Terms, Vapors and Giddineſs of the Head, Green Sickneſs, *&c.*

LXIX. *Spirit of Tartar Compound. Extract a fine white Salt of Tartar from the* Caput Mortuum, *left after the Diſtilling of the Spirit and Oil of Tartar, at* Sect. LVII. *and* LVIII. *aforegoing, which mix with the ſaid Flegm, Spirit and Oil: digeſt in* Balneo, *in a cloſe Veſſel, till the Salt is diſſolved; then make Balls thereof with dry Clay, and diſtil them by Retort, in a naked Fire; and all the Salt will come over with the Spirit and Oil, perfectly united to the Spirit; from which ſeparate the Fœtid Oil according to Art.* It has all the Virtues of the former Spirit of Tartar (at Sect. LVII. above,) exalted, and therefore is much more powerful, but may be given in the ſame Doſe, and after the ſame manner.

LXX. *Diateſſaron*; *Punch*, or a Mixture of four things. *Take choice Brandy, fair Water, of each a Quart; pure Lime Juice a Pint; Double Refin'd Sugar a Pound; mix altogether, and ſtir the Mixture till the Sugar is all diſſolved.* For a Concluſion to the *Fruit of the Vine*, or the *Juice of the Grape*, we thought it fitting to add this wonderful Reviving Cordial, this Charming Liquor of Conſolation, which gives relief to the Miſerable, removes Grief, chears the Sorrowful, elevates the Dejected, gives admirable ſatisfaction to the Diſcontented, and a plenary Releaſe to the Slave, of what Kindred or Nation ſo ever; making every one ſeem happy to himſelf, who has the free Liberty of drinking it plentifully, and oft as he thinks it convenient. It truly chears the Heart, revives the Spirits, ſtrengthens Univerſal Nature, and makes the Patient Pleaſant and Sprightly, if moderately taken. I know it to be a true Reſtorative, and to have Cured ſuch as have been in deep Conſumptions, by drinking it every Day for about 5, 6, or 7 Months together, half a Pint every Morning faſting, eating with it a White Ship Bisket, toaſted, and ſoaked in the ſame; half a Pint half an Hour before Dinner; half a Pint about 5 in the Afternoon, and half a Pint at going to Bed. This Quantity may do well enough for *Men*, but the *Female Sex*, may (if they pleaſe) a little diminiſh the Doſe, as their Reaſon and Experience ſhall direct them.

CHAP. DCCXXV.

Of VIOLETS *GARDEN* and *WILD.*

I. *THE Names.* It is called in Arabick, *Seneffige*, *Sonofrigi*, and *Beneſeſegi:* in Greek, Ἴον: in Latine *Viola*, and in Engliſh *Violet.*

II. *The Kinds.* We have firſt, Ἴον πορφυρῶν, *Viola Purpurea Dioſcoridis*; Ἴον μέλαν, vel μελάνιον, *Viola nigra Theophraſti*; *Viola Hortenſis*, and *Viola Martia*, *Viola purpurea*, Garden or March Violets. 2. *Viola Martia vel purpura flore Multiplici*, Double March Violets. 3. *Viola ſurrecta purpurea*, *Viola Arboreſcens Matthioli*; *Viola fruticoſa Geſneri*; *Viola Elatior Cluſij*; *Viola Martia Cauliculis ſurrectis Lobelij*; *Viola aſſurgens tricolor Dodonæi*; *Violarum mater Lugdunenſis*, Upright Wild Violet. 4. *Viola Sylveſtris vulgaris*, Common Wild Violet. 5. *Viola laciniato folio*, *Viola Montana laciniata Cluſij*, *Viola laciniato folio Caroliniana*, The Wild Jagged Leav'd Violet, or Wild Carolinian Violet.

The Deſcriptions.

III. The firſt, or ſingle Garden Violet, *ſpreads its Root in the Ground both deep and wide, taking ſtrong hold thereof. From whence come forth many Branches of round green Leaves, finely ſnipt or dented about the edges, growing upon ſeveral ſmall Footſtalks, ſet at divers places of the many creeping Branches, which as they run, do here and there take Root in the Ground, bearing thereon many Flowers, ſeverally at the Joints with the Leaves, which conſiſt of five ſmall Leaves, with a ſhort round Tail, Heel or Spur behind, of a perfect blew purple color, and of a very fragrant ſweet Smell: After which, come forth round Seed Veſſels, ſtanding likewiſe upon their ſmall Footſtalks, in which is contained round white Seed: but theſe Heads riſe not from the Footſtalks on which the Flowers grew (as is uſual in all other Plants) but apart by themſelves; and being Sown, will produce others like unto it ſelf, whereby there may be made a more ſpeedy increaſe to Plant a Garden, than by Slipping, as is the uſual manner. Of this kind, there is a ſort which bears white ſingle Flowers, not differing in Smell or any thing elſe. And another ſort which bears a dead, or ſad reddiſh color'd Flower, with a weaker Smell, but in all other particulars alike.*

Violet Garden Purple.

IV. The ſecond, or Double March Violet *There is no difference between this kind and the former, but in the Duplicity of the Flowers, which have ſo many Leaves ſet and thruſt together, that they are like unto hard Buttons. Of this Double kind, there are both Purple and White, as in the Single, but the White ſort is ſeldom ſo thick and Double as the Purple.*

V. The third, or common Wild Violet. *This is altogether like the firſt ſingle* Garden Violet, *but that its Leaves are fewer in number, ſomewhat thinner, and a little longer, or not fully ſo round. The Flowers are alſo larger, and of a very pale Purpliſh blew color, near unto a* Watchet, *ſome of which*

Violet Wild Common.

which have the Smell of the Garden Kind, *but much weaker; and some of them have almost no Smell at all. Of this Wild kind, there is the Purple sort, and the yellowish white. I am apt to believe, that the Garden kind is only this Wild kind Transplanted into Gardens, where having a better Soil to grow in, it becomes more perfect in its Color and Smell.*

VI. The fourth, or Upright Wild Violet. *Its Root consists of Strings, which abide not after Seed time, but preserves its Species by Sowing it self every Year. It grows to be about a* Foot *high or more, with hard upright Stalks, which yet bend down again their tops, having two Leaves somewhat round, set at each Joint, but longer, and more dented about the edges than those of the Garden kinds; at which Joints, with the Leaves on both sides of the Stalks, comes forth a larger Flower, and more spread open than it, being more like a* Hearts-ease, *or* Pansey, *but of a pale purplish color; which as* Matthiolus *says, is almost as sweet as the* Garden Violet; *but as* Lobel *says, is without any Smell at all. After the Flowers are past, follow the Seed Vessels, (which are longer than those either of* Violets *or* Hearts-ease) *in which is contained as small Seed as that of* Hearts-ease, *but whitish.*

VII. The fifth, or Wild Jagged Violet, or Carolinian Violet. *It has a spreading fibrous Root, and rises up with Stalks about a Foot or more high, but so weak as that they can scarcely keep themselves upright, but bend towards the Ground, unless they have some Shrubs, Bushes, or other matter to lean against. There first Spring from the Root several Leaves, upon a pretty long Footstalk, which are long, and cut in on the edges on both sides, into several Divisions, which some will have to resemble the longer sort of* Crowfoot *Leaves, others an* Anemone **Leaf**; *but those which I saw and gathered with my own Hands, were jagged, and shaped more like a* Vervain-Leaf, *setting aside the color. Between these Leaves rise up several small Stalks, with like Leaves, but lesser upon them, which grow lesser and lesser up to their tops, which have Flowers upon them, of a pale Purple color, very like in form to our common* Garden *kinds, but not so deep shaded, but some of them of a pale Purple, and some of a whitish yellow, and some of these last with a little reddishness towards the bottom of their Leaves; some of these Flowers had a very faint or Languid Smell of our common* Garden Violets, *and others had no Smell at all: The Stalks bore also round Heads or Seed Vessels, (which contained the Seed) like to the Seed Vessels of* Violets.

VIII. *The Places.* The first and second grow in *Gardens*; the third Wild in *Fields* and *Woods*, under *Hedge Sides*; the fourth grows wild in warm Climates, as *Spain*, *Italy*, *Greece*, *Asia*, &c. but with us in Gardens; the fifth grows Wild in several parts of *America.* I found it growing plentifully in *South Carolina*, in the Woods not far from *Charles Town.*

IX. *The Times.* They all Flower in *March*, and if the Season is mild, sometimes earlier. The *Double Violets* Flower later than the *Single*, and hold their Flowers longer; and some of them have been observed to Flower again in *Autumn*, if the Weather be temperate and mild.

X. *Observat.* The Culture of the *Single Garden Violet*, is what every body knows, which delights it self in shady places, and such as are least exposed to the Sun. The *Double Violet* grows in any sort of Ground, upon the edges of Borders in Gardens, which when it blows, its Flower is very agreeable to both Eye and Smell: To make it thrive, it ought to be Re-planted every three Years, and so kept clear from Weeds, which is all the trouble it requires.

XI. *The Qualities.* Garden Violets while fresh and green, are cold and moist in the first degree, Aperitive, and gently Abstersive, or opening the Bowels by Purging.

XII. *The Specification.* Violets cool the heat of Fevers, allay Inflamations in the Throat and Lungs, are profitable in the beginning of a Quinsie and Pleurisie, and are said to help the Falling-Sickness in Children.

XIII. *The Preparations.* You may have therefrom, 1. *A Juice both of the Leaves and Flowers.* 2. *An Infusion of the Flowers.* 3. *A Syrup of the Flowers.* 4. *A Pouder of the Leaves.* 5. *A Pouder of the Flowers.* 6. *A Pouder of the Seed.* 7. *A Cataplasm of the Leaves, as also of the Flowers of the* White Violet. 8. *A Julep.* 9. *Oil of Violets.*

The Virtues.

XIV. *The Juices.* 1. *Of the Leaves.* It cools any heat or distemperature of the Body, whether inward or outward; abates Inflamations in the Eyes, also in the Womb, and in the Fundament, by being used as a Topick. And being drank to 2, 3, or 4 Ounces, it gently opens and purges the Bowels, and is good against Quinsies and Pleurisies. 2. *Juice of the Flowers.* It has the same Virtues, and is good against the Pleurisie and Obstructions of the Lungs, hot and sharp Rheums, hoarseness and wheezing.

XV. *The Infuſion of the Flowers, freſh or dry.* It has all the former Virtues, but not full out ſo effectual, and therefore may be drank to half a Pint or more. Being made pleaſant with the *Syrup of Violets*, and ſharp with a little *Oil of Sulphur*, it is an excellent Gargle for a ſore Throat, is profitable againſt a Quinſie and Pleuriſie, and cures the moſt malignant burning Fever.

XVI. *The Syrup of the Flowers.* It is made 1. With the Juice of the Flowers thus. *Take Juice of the Flowers of Violets a Quart; double refined Sugar 4 Pounds, mix and melt in the heat of a Bath without Boiling.* It cools, moiſtens, allays the heat of Fevers, quenches Thirſt, comforts the Stomach, chears the Heart, and reſiſts Putrefaction. Doſe from one to two Ounces, given to four Ounces, it purges Choler admirably. 2. *With an Infuſion in Water. Take freſh Flowers of Violets a Pound, fair Water boiling hot a Quart; ſtop them cloſe up in a Glaſs Matraſs or* Vefica *for a day, then ſtrain out by preſſing; in the ſtrained Liquor two Pounds, diſſolve of Double Refined Sugar, four Pounds, by the heat of a Bath, and taking off the Scum, make it into a Syrup without Boiling.* It has all the former Virtues, but leſs powerful, and therefore may be given in double the quantity. Either of theſe Syrups will be much more effectual in hot, burning, malign and peſtilential Fevers, if they be made a little Acid (when given) with ſome few Drops of the *Spirits or Oils of Sulphur or Vitriol*, by which they will be made of a Claret Wine color, and of a fine tart Reliſh, pleaſing the Palate, and ſo more potent in cooling all preternatural heats, and quenching Thirſt, *&c.*

XVII. *The Pouder of the Leaves.* Taken to a Dram in Veal Broth, or White Wine Mull'd, it allays inward Inflamations, and purges the Body of Cholerick Humors.

XVIII. *The Pouder of the Purple Violet Flowers.* Given to a Dram as the former, it has the ſame Virtues and Effects, but Purges not altogether ſo ſtrongly: It is alſo ſaid to be good againſt the Quinſie, and the Falling Sickneſs in Children, eſpecially in the beginning of the Diſeaſe.

XIX. *The Pouder of the Seed.* It is good againſt the Stinging of Scorpions, is Pectoral, and good againſt Fevers, Quinſies, Pleuriſies, and Epilepſy; heat and ſcalding of Urine, and all pains in the Reins and Back, the Strangury, or Obſtructions of the Urinary parts. Doſe one Dram, in any convenient Diuretick, and cooling Vehicle.

XX. *The Cataplaſm.* It is made of the green Leaves, being fryed with Yolks of Eggs. It being applyed, eaſes pains, and diſcuſſes Swellings in the Fundament, and in a ſhort time is ſaid to cure the Piles. Made with *Oil of Roſes*, it diſcuſſes Tumors, abates Inflamations in any part, and eaſes pains of the Head cauſed thro' want of Sleep.

XXI. *Julepum Violarum*, Julep of Violets. *It is made of the Water or Infuſion of Violet Flowers and Sugar, a Pound of Double Refined Sugar to two Quarts of the Water or Infuſion.* The Virtues are the ſame with the Syrup, and may be uſed to all the ſame purpoſes and intentions.

XXII. *Oleum Violaceum.* Oil of Violets. *Take Purple Violet Flowers, which bruiſe in a Stone Mortar with a wooden Peſtle, 12 Ounces; Oil Omphacine ſeveral times waſhed, 3 Pounds; mix, and expoſe them in a Glaſs cloſe ſtopt, to hot Sun for a Week, ſhaking them every day; then boil them gently in a Bath, preſs them out, and put in freſh Flowers, doing in like manner, which repeat a third time, and keep the Oil upon three Pounds of Juice of Violets, ſhaking them together twice a day for a Month at leaſt.* It is Cooling and Moiſtning, Opening and Anodyn, good againſt Inflamations, *Phlegmons*, burning Fevers, Hectick, Frenſies, and *Atrophies*; it alſo eaſes pains of the Breſt and Lungs.

CHAP. DCCXXVI.

Of VIOLETS *Corn* and *Dames.*

I. *THE Names.* Tho' theſe are properly no *Violets*, nor in the leaſt of kin to them, yet ſince Cuſtom has obtain'd that they ſhould be ſo called, we were obliged to rank them in order of the *Alphabet*, and in this place where you now find them. The firſt I ſuppoſe was unknown to the Ancient *Greeks* and *Latines*, and therefore we have no *Greek*, nor Ancient *Latine* Name for them. The firſt is called in *Latine*, *Viola arvenſis*, *Viola Segetum*, *Caryophillus Segetum*; in Engliſh, *Corn Violet*, or *Venus Looking-Glaſs*, by *Gerard*. The ſecond is called in Latine, *Viola Matronalis*, and in Engliſh, *Dames Violet.*

II. *The Kinds.* Of the firſt or Corn Violet, there are two ſorts, *viz.* 1. *Viola arvenſis major Dodonæi*, *Viola pentagonia major Tabernæmontani*, *Viola Segetum major*; *Onobrychis & Campanula arvenſis Lugdunenſis*, The greater Corn Violet. 2. *Viola arvenſis minor*, *Viola Segetum minor*, The leſſer Corn Violet.

III. Of the ſecond or Dames-Violet, we have 1. *Heſperis vulgaris, ſive Viola Matronalis communis*; *Viola Hyemalis*, *Damaſcena & Muſchatella*; in Engliſh, Common Single Flower'd Dames Violets, Queens Gilliflower, and Winter-Gilliflower. 2. *Heſperis Pannonica*, *Viola Matronalis Pannonica*; Hungarian Dames Violet. 3. *Heſperis, ſive Viola Matronalis flore albo pleno*, *Viola alba Tragi*, *Perſica Hermolai*, ſuppoſed to be the *Lucoium Fuſchij*; *Viola Matronalis flore pleno Dodonæi & Lugdunenſis*; *Viola Damaſcena flore pleno Lobelij*; *Viola Hyberna* ſive *Hyemalis*; *Heſperis flore pleno albo*, White double Dames Violets. 4. *Heſperis flore pleno Purpurante*, *Viola Matronalis flore pleno Purpurante*; Double Purple Dames Violets.

The Deſcriptions.

Firſt, Of the CORN-VIOLETS.

IV. The firſt, *or* Viola Segetum major, Viola pentagonia major, Speculum Veneris majus, *The Greater Corn Violet. Its Root is ſmall, Fibrous and Annual, which ſends forth ſeveral ſlender, weak, trailing Stalks lying on the Ground, divided and ſubdivided from every Joint into Branches, ſo plentifully, that one Plant growing in a good Garden, would hardly be covered by a Half Buſhel Meaſure: the Branches are thick ſet without order, with ſmall and ſomewhat long Leaves, ſlightly dented, or rather waved on the edges: at every Leaf from the middle of the Stalk upwards, comes forth a Flower, of the bigneſs of a* Two-Pence, *ſo (that five hundred Flowers almoſt, will be ſeen open at once, which is indeed a Noble Sight;)*

Sight;) set in a fine pointed green Husk, of a fair purplish blew color, made of one whole Leaf, plaited into five round pointed ends, white at the

Violet Corn Greater.

bottom, with a white Pointel in the middle, closing up every Night, and opening in the Day time only; the Seed is small and yellow, and contained in small long Heads.

V. The second, or *Viola Segetum minor*, *Speculum Veneris minus*, Codded or small Corn Violet. *Its Root is small and Annual, also not much unlike the former, which sends up Stalks more upright, like unto the little* Centory, *with stiffer and fewer Branches, more harsh or tough also in handling. The Leaves are like unto the former, but something less. At every Joint almost, come forth two or three Flowers, standing at the ends of long Cods, like unto* Lysimachia Siliquosa, *of the same fashion and color as the former, but so small as the Eye of a little Bird, never rising above the Husk it stands in; and not but in the heat of the day to be seen, which then only lays it self open. The Seed is small and yellow also as the former.*

VI. *The Places.* The first grows in Corn-fields, between *Greenhith* and *Dartford* in *Kent*; as also in the Corn-fields about *Lilly*, a Town in the furthermost parts of *Hartfordshire*, towards *Bedford*; and for its pleasant Aspect, is also brought into, and Planted in Gardens. The second is found about *Hatfield*, in *Hartfordshire*, and in several other places of this Land. *Parkinson* says, it is much more frequent than the other.

VII. *The Times.* They both Flower in *June* and *July*, even to the end of *August*, the Seed ripening in the mean time.

Secondly, Of the DAMES-VIOLETS.

VIII. The first, or Common Single Flower'd Dames Violets. *Its Root is wholly composed of Strings or Fibres, which abide many Years, sending up fresh Stalks every Year, the Leaves abiding all the Winter. Its Leaves are broader, greener, and sharper pointed than the* Stock Gilliflowers, *and a little indented about the edges. The Stalks grow to be about two feet high, bearing many green Leaves upon them, smaller than those at the bottom, and branched at the top, bearing many Flowers, in fashion much like to those of* Stock-Gilliflowers, *consisting of four Leaves in like manner, but not*

Violet Dames, *Single Common.*

so large, of a faint purplish color in some, and in others white, having a pretty sweet Smell, especially towards Night, (whence came as is supposed, the Name Hesperis,) *but in the Day time little or none all. After the Flowers are past, come small, long, and round Pods, in which are contained two rows of small and long black Seed.*

IX. The second, or Hungarian Dames Violets. *Its Root is Fibrous, and its Leaves very like the former, but smoother and thicker, and not at all cut in or indented about the edges. The Flowers are like the former also, but of a dull pale color, turning themselves, and seldom lying plain open, having many Purple Veins and Streaks, running thro' the Leaves of the Flowers, of little or no Smell in the Day time, but of a very sweet Scent in the Evening and Morning. The Seed is like also, but a little browner.*

X. The third, or Double White Dames Violets. *It grows not so great in any part thereof, nor so high as the Single does, except in the Flowers, which*

which being very thick of Leaves, of a pure white color, and many ſtanding in a Cluſter, ſweeter alſo than the Garden Single Kind,* *and longer abiding, cauſes it to be had in ſome eſteem. Its Leaves are ſomething leſſer, and of a freſher green color, little or nothing ſnipp'd about the edges, and more tender; but its branches are more plentiful, and more eaſie to be ſlip't to be Planted again, than thoſe of the* Single Kind, *but gives no Seed, as many other Double Flower'd Plants do in like manner. It is alſo more tender to be kept in Winter time than the* Single Kind.

XI. The fourth, or Double Purple Dames Violets. *Theſe differ little or nothing from the former, ſaving in the color of the Flowers, which in this is of a fine pale Purpliſh color, and not full out ſo double as they, nor ſo many cluſtering together.*

XII. *The Places.* They all grow in Gardens for Ornament ſake in a great meaſure; and the two Double Kinds in many Gardens in the Weſt parts of *England.*

XIII. *The Times.* They all Flower in *May*, *June*, and *July* chiefly; and the White Double abides longeſt in Flower, if it grows not too much in the Sun.

XIV. *As to the Qualities, Specification, Preparations and Virtues* of theſe *Corn* and *Dames Violets*, Authors are totally ſilent; nor have we learn'd any thing of them by Experience: yet we did not think it fit that they ſhould want a place in this *Our Herbal*, ſince the moſt *General Floriſts*, and all Lovers of Flowers, for their Beauty ſake, allow them a room in their Gardens.

CHAP. DCCXXVII.

Of VIPERS *Graſs.*

I. *THE Names.* It has no *Arabick* nor *Greek* Names that we know of, nor any Ancient *Latin* Name, being a Plant of modern Invention, and therefore is called by our modern Phyſicians, *Serpentaria*, *Viperaria*, *Viperina*, (from its Virtues in curing the Bitings of that Serpent) and *Scorzonera*, (from the *Spaniards*, being equivalent to *Viperaria*) and in Engliſh *Vipers Graſs*, and alſo *Scorzonera.*

II. *The Kinds.* Authors make 7, 8 or 9 kinds, but moſt of them being perfect Strangers to us, and not to be ſeen in *England* in Ages, we ſhall only diſcourſe here of ſuch as are Planted and Nurſt up in our Gardens, which are the four following, *viz.* 1. *Scorzonera, ſeu Viperaria, Hiſpanica major*, The Greater Spaniſh Vipers Graſs. 2. *Scorzonera minor Pannonica purpurea*, Hungarian Purple Flower'd Vipers Graſs. 3. *Scorzonera major Pannonica latifolia*, The Greater Hungarian broad leav'd Vipers Graſs. 4. *Scorzonera minima radice tuberoſa Hiſpanica*, The ſmalleſt Spaniſh Vipers Graſs with a Tuberoſe Root.

The Deſcriptions.

III. The firſt, or Greater Spaniſh Vipers Graſs. *Its Root is long, thick and round, brittle and black, with a certain roughneſs on the outſide, but very white within, yielding when broken, a Milky Liquor, as every other part of the* Plant *does beſides, yet the* Root *more than any other part; and withal, it abides many Years without decay. It has ſeveral long Leaves, not broad, nor yet very narrow, hard and crumpled on the edges, and ſometimes unevenly indented or waved on the edges, of a blewiſh green color. From among which, riſes up one Stalk, and no more for the moſt part, two Feet high, or thereabouts, having here and there ſome narrower long Leaves thereon than thoſe below. The top of the Stalk branches it ſelf forth into other parts, every one bearing a long ſcaly Head, from out of the top whereof, riſes a fair, large, double Flower, of a pale yellow color, much like to the Flower of* Yellow Goats Beard, *but a little leſs; which being paſt, the Seed comes, being long, whitiſh and rough, incloſed in much Down, and among them many other long ſmooth Seeds, which are limber and fruitleſs, but are all carried away with the Wind.*

IV. The ſecond, or Purple Hungarian Vipers-Graſs. *Its Root is like the former, and it has long and narrow Leaves, of the ſame blewiſh green color with the former. The Stalk riſes up to be about a Foot and half high, with a few ſuch like Leaves, but ſhorter thereon, ſpreading out at the top into 2 or 3 parts, bearing on each of them one Flower faſhion'd like the former, and ſtanding in the like ſcaly Knob or Head, but of a blewiſh purple color, and not fully ſo large, which has the ſweeteſt Smell of any of the Species, or Kinds of* Vipers-Graſs, *not much inferior to the moſt delicate Perfume.*

V. The third, or Greateſt Hungarian broad Leav'd Vipers-Graſs. *Its Root is long and great,*

Vipers Graſs, {*Yellow* / *Purple*} *Flowered.*

Sect. III. *and* IV.

Vipers Graſs *Tuberoſe Rooted*, Sect. VI.

thruſting

thruſting it ſelf out into many Branches or Heads, from the upper part thereof; blackiſh on the outſide, but white and pleaſant within as the other, yielding Milk in every part of the ſame, in like manner alſo, abiding many Years, and not periſhing after Seed time, as the Goats Beards *do, whereof the* Vipers Graſſes *are accounted as kinds. It is very like to the firſt* Spaniſh *Kind, almoſt in all things, but the Leaves hereof are more in number, which riſe from the head of the Root, and as broad and as long as they, but not crumpled about the edges, nor of that grayiſh green color, but ſmooth, and of a dark or dead green color. It has two or three Stalks riſing up among the Leaves, and ſometimes but one, according as the Root has increaſed into ſeveral Heads, having ſome leſſer Leaves upon them, and at the top a ſcaly, and ſomewhat long green head, from the middle whereof, grows the like double yellow Flower, as in the* Spaniſh *Kind, and the like Seed alſo, lying in the like Downy Subſtance; neither of them to be well diſcerned the one from the other, after they have grown any time in the Garden together.*

VI. The fourth, or ſmalleſt Spaniſh Vipers-Graſs with a Tuberoſe Root. *Its Root is as thick as three Fingers or more, but ſhorter than the other Kinds, Tuberoſe at the end, blackiſh without, and whitiſh within, yielding but little Milk when it is broken, but abides the Winter almoſt as well as any of the former. It has divers Leaves very ſmall and narrow, lying on the Ground, ſome Roots giving ſmooth Leaves, and others crumpled or waved about the edges. The Stalk or Stalks are very ſmall, ſcarcely riſing half a Foot high, bearing a long, ſmall, ſcaly Head, with a ſmall and ſingle pale yellow Flower, in which grow ſmaller black Seeds, and encloſed in far leſſer Down than in any of the others.*

VII. *The Places.* The Native places of theſe Plants, are declared in their Titles or Names, but now they are made Free Denizons of our Country, and are found nurſt up, and growing in many of our Gardens.

VIII. *The Times.* They all Flower from the beginning of *May*, and their Seed is ripe before the end of *June*; after which, the Stalks wither and dye away, new Springing from the Root again before Winter.

IX. *The Qualities.* They are temperate in reſpect of heat or cold, drineſs or moiſture; Cordial or Cardiack, and Alexipharmick, or reſiſters of Poyſon.

X. *The Specification.* As they are ſaid to ſtrengthen the Heart and Vital Spirits, ſo alſo *Monardus* ſays they are a Counter Poiſon, and have been found to cure the bitings of Vipers, or other like Venomous Serpents.

XI. *The Preparations.* 1. *The Boiled, Roaſted, or Baked Roots.* 2. *The Liquid Juice.* 3. *An Ophthalmick.* 4. *A Condite or Preſerve.* 5. *A Diſtilled Water.*

The Virtues.

XII. *The Boiled, Roaſted, or Baked Roots.* They are ſweet in Taſte, almoſt like a Parſnep, and may be eaten in the ſame manner; without doubt they chear the Heart, ſtrengthen the Animal Spirits, and reſtore in Conſumptions.

XIII. *The Liquid Juice.* According to *Monardus*, it is a good Cordial and Counter-Poiſon, and does not only help, or cure the biting of the Viper, but of any other Poiſonous Creature; it is good againſt Burning and Contagious Fevers, and induces Sweating, thereby expelling thro' the Pores, Peſtilential Infection. It is good againſt Paſſions and Tremblings of the Heart, Sadneſs, Melancholy, and Swooning Fits. It opens Obſtructions of Liver, Spleen, Meſentery and Womb, provokes the Courſes, is good againſt Hyſterick Fits, and other Diſaffections of the Womb, and prevails againſt the Head-ach, Vertigo, and other Diſeaſes of the Head and Brain; ſtrengthening after an admirable manner, the Animal and Vital Powers. This *Juice* may be taken not only from the Roots, but alſo from the Leaves and the whole Plant.

XIV. *The Ophthalmick. Take of the Clarified Juice a Pint, Clarified Honey two Ounces, mix and diſſolve.* Dropped into the Eyes, it is good againſt Inflamation and Blood-ſhot, takes away Clouds, Spots and Blemiſhes in them, and heals them if Sore or Ulcerated, ſtrengthning the Sight withal.

XV. *The Condited or Preſerved Root.* They are pleaſant to be eaten as a Sweet Meat, not inferior to *Eringo* Roots, and may have in ſome ſmall meaſure the Virtues of the Liquid Juice.

XVI. *The Diſtilled Water.* Authors give it the Virtues of the *Liquid Juice*, but I am confident it is nothing near ſo ſtrong or effectual; but they give it againſt hot, burning and malign Fevers, and the Infection of the Plague, and all ſorts of Contagious, Infectious and Peſtilential Diſeaſes, Faintings, Swoonings, and other Paſſions of the Heart.

CHAP. DCCXXVIII.

Of the VIRGINIA *Creeper:*

OR,

CLIMER.

I. *THE Names.* It is a Plant of Noval Invention, being brought to us from *Virginia*, and other parts of the *Weſt-Indies*; and therefore has no Ancient *Greek* or *Latin* Name; but it is called in *Latin* by our Moderns, *Vitis Virginienſis*, or rather *Hedera Virginiana*, and in Engliſh, the *Virginia Creeper*, or *Climer*.

II. *The Kinds. Parkinſon* makes two ſorts hereof, *viz. The Five Leav'd Creeper*, and the *Three Leav'd Creeper*. Mr. *Rea*, in his *Pomona*, *pag.* 227. makes but one Species; but for Satisfaction ſake, we will give you all that they have both ſaid.

The Deſcriptions.

III. The firſt, *or* Hedera Quinquefolia Virginiana, Five Leav'd Creeper. *Its Root ſpreads here and there under the Ground, not very deep: It is a ſlender Vine, Ivy, or Plant, tall and climbing, and riſes out of the Earth with ſeveral Stems, none much bigger than a Mans Thumb, but many leſs. From whence ſhoot forth many long weak Branches, not able to ſtand upright, unleſs they be ſuſtained; yet Planted next to a Wall or high Pales, Poles, Trees or the like, the Branches at ſeveral diſtances of the Leaves, will ſhoot forth ſmall ſhort Tendrels, not twining themſelves about any thing, but ending in four, five, ſix, or more*

more ſhort, and ſomething broad Claws, which will ſtick to, and faſten like a Hand with Fingers, ſo cloſe thereunto, that if pulled off, or forc'd away from the Wall, or thing it ſticks to, it will bring part of the Wall, Bricks, Stone, Board, or other matter it is joined to, away with it: By theſe Claws it ſtays it ſelf, and ſo fixes it ſelf, as to climb up to the top of the higheſt Chimney of any Houſe, or to the very top of the higheſt Tree, being Planted againſt them. The Leaves are crumpled, or rather folded together, at the firſt coming forth, and very red, which alter in growing large, and are very fair, large and green, divided into 4, 5, 6 *or* 7 *Leaves, ſtanding together upon a ſmall Footſtalk, ſet without Order on the Branches; at the ends whereof, as alſo ſometimes at other places, come forth divers ſhort Tufts or Buds for Flowers; but in our cold Climate, we ſcarcely ever ſee them open themſelves, to ſhew what manner of Flower they would be, or what manner of Fruit would follow them.*

IV. The ſecond, *or* Hedera Virginiana Trifolia, *The three Leav'd Creeper. The Roots of this Plant do ſhoot under Ground, and ſend forth young woody Stalks, of which ſome will ſtand upright, others lye down, and take Root again as they ſpread, as alſo in any Wall they ſtand nigh to, like unto our* Barren Ivy. *The Leaves are broad and large, three always ſet together upon a long Footſtalk. At the Joints with the Leaves, come forth pale Flowers, in a looſe Tuft or Cluſter, which turn into pale yellow Berries, with ſmall hard round Aſh color'd Seed, in a dry wrinkled Skin or Husk, without any moiſture at all in them. This Plant yields a white Milk, without any Taſte, being broken in any part thereof, which after it has continu'd a while, will change to be as black as Ink, and therefore held fit to color Hair, Leather, or any other things.*

V. Mr. *Rea*'s ſingular Deſcription of the *Virginia* Climer, is this. *Its Roots run on the top of the Ground, and by cutting ſome of them from the Stock, and turning up the ends, new Plants may be raiſed. It riſes up with divers ſmall Stems, divided into many long weak Branches, which ſet againſt a Wall, will faſten thereunto, with ſmall Claws like unto a* Birds-foot, *and climb to the top of a tall Chimney. The Leaves at firſt are red and crumpled, but afterwards fair and green, divided into* 5, 6, *or more Leaves, ſtanding together upon a ſmall Footſtalk, ſet without order. The Flowers with us appear only in Bud, but never are ſeen to open.*

VI. *The Places.* They grow in *Virginia*, and other Cold parts of *America*, from whence they have been Tranſplanted to us, with whom they thrive well, being Planted in our Gardens againſt high Stone, or Brick Walls, or the ſides of very high Houſes.

VII. *The Times.* The particular times of their Flowering, our Authors have not Obſerved, but it is in the Summer Months.

VIII. Nothing has been Obſerved as to their *Qualities, Specification, Preparations and Virtues*, and therefore we are Silent concerning of them; however, being a very Beautiful Ornament, we thought not fit to over-paſs them.

CHAP. DCCXXIX.

Of VIRGINIA *Silk-Graſs.*

I. *The Names.* It is a Plant of Noval Invention, and therefore no Primary *Greek* or *Latin* Names can be given for it, but only ſuch as have been aſcribed to it by Modern Authors, by whom it is called *Periploca Virginiana*, and in Engliſh *Virginia Silk*, and *Silk Graſs*.

II. *The Kinds.* Mr. *Rea* gives us the Deſcription of but one ſort, but *Parkinſon* of two, *viz.* 1. *Periploca recta, vel major Virginiana*, The Greater Virginia Silk-Graſs. 2. *Periploca Virginiana minor*, The Leſſer Virginia Silk-Graſs. *Gerard* will have it to be a kind of *Aſclepias* or *Swallow-wort*, but then he might have called it *Aſclepias Lactans*, becauſe this is Milky, or has a Milky Juice, whereas the true *Aſclepias* has no ſuch thing. *Alpinus de Plant. Ægypt. cap.* 25. has a Plant called *Beidelſar*; *Honorius Bellus*, in *Epiſt.* 3. & 4. to *Cluſius*, has *Oſſar Frutex*; and *Cluſius* in the ſame Book another Plant, which he calls *Apocynum Syriacum, Paleſtinum & Ægyptiacum:* Theſe, ſome will have to be this *Silk-Graſs*, but this they cannot be; for either of them is a *Frutex* or *Shrub*, whereas this is not, but looſes its Leaves and Stalks, they dying down to the Ground every Year. Again, the Milk of thoſe Plants is *Cauſtick*, as *Alpinus* and *Bellus* ſay, whereas the Milk of our *Virginia Silk-Graſs* is not. Alſo the Cods of thoſe of *Alpinus*, *Bellus*, and *Cluſius*, are nearly ſtraight, whereas thoſe of our *Silk-Graſs* are crooked, almoſt like Hooks, and yet they grow perfectly upright.

The Deſcriptions.

III. Mr. *Rea*'s Deſcription, which I take to be of the Greater kind, is this. Virginian *Silk is a Plant more reſpected for being a Stranger, than for the Beauty of its Flowers: Its Root is big, long and white, running far under Ground, and ſpringing up again in many places. It riſes up with one or more round Stalk, almoſt four Feet high, ſet at ſeveral Joints with two long, broad, veined, round pointed green Leaves. At the top of the Stalk, out of a Skinny Hoſe, comes forth a great Tuft of Flowers, to the number of thirty or forty, hanging down on long Footſtalks, each Flower conſiſting of five ſmall hollow Leaves, of a pale purpliſh color, neither fair nor pleaſant. After they are paſt, come long crooked Cods, ſtanding upright, containing flat brown Seeds, wrapped within a great deal of fine ſoft whitiſh brown Silk. This I take to be* Parkinſon's *Greater* Virginia Silk.

IV. The firſt, or *Parkinſon*'s Greater Virginia Silk-Graſs. *Its Root is long and white, of the bigneſs of a Mans thumb, running under Ground very far, and ſhooting up in divers places, the Heads being ſet full of ſmall white Grumes or Knots, yielding forth many Branches or Stalks, if it ſtands any time in a place. It riſes up with one or more ſtrong and round Stalks,* 3 *or* 4 *Feet high, on which are ſet at the ſeveral Joints, two fair, long and broad Leaves, round pointed, with many Veins therein, growing cloſe to the Stem, without any Footſtalk. At the tops of the Stalks, and ſometimes at the Joints with the Leaves, comes forth a great*

great Bush of Flowers, out of a thin Skin, to the number of 20, *sometimes of* 30 *or* 40, *every one upon a long Foot-stalk, hanging down their Heads for the most part, especially those which are outwardmost, each standing within a Husk of green Leaves turned to the Stalkward, like to the* Virginia Lysimachia Flower, *and each of them consisting of five small Leaves, of a pale Purplish color on the upperside, and of a pale yellowish Purple underneath, both sides of each Leaf being as it were folded together, making them seem hollow and pointed, with a few short Chives in the middle: After which, come long and crooked Cods, standing upright and sharp pointed, in which are contained flat browniſh Seed, dispersedly lying within a great deal of fine soft and whitish brown Silk, very like unto Cods, Seed, and Silk of* Asclepias *or* Swallow-wort, *but that the Cods are greater, more crooked, and harder also in the outward Shell. This so Beautiful a Plant, (as* Parkinson *calls it) even the whole Plant, Leaves and Stalks being broken, yields a pale Milk.*

V. The second, *or* Periploca Virginiana minor, five Apocynum Virginianum minus, *or lesser* Virginia Silk-Grass. *This creeps not with its Roots in the Ground, like the former, but from many long Fibres shoots forth a round brown Stalk about half a Yard high, having at each Joint a pair of long narrow Leaves, and at top such a large Tuft of Flowers as in the first, but of a deeper Purple color, which have a certain clammineſs on them, that will detain* Flies, *or other light things which happen to fall thereon; after which, come long and strait Cods, (not Crooked like the Greater sort): with flat brown Seed lying therein, in a white kind of Silk or Down, like unto* Asclepias *or* Swallow-wort: *This yields a Milky Sap or Juice like the other, which some think to be dangerous, tho' Experience has declar'd no such thing; and therefore must be left to a farther Scrutiny, by Tryals hereafter to be made.*

VI. *The Places.* They both are Natives of *Virginia*, and other places of the *West-Indies*, where they grow abundantly. They have been often raised by Seeds which have come from thence, and altho' the Stalks dye to the Ground every Winter, yet the Root is of long continuance, and will send forth new at the Spring, especially if the place where it grows be covered with Horse-Dung in the Winter, to defend it from the Frosts.

VII. *The Times.* They Flower in *July*, but not every Year, and their Silk and Seeds are ripe in *August*, but it scarcely ever brings forth its Cods with us, by reason of the coldness of our Climate.

VIII. *Observat. Gerard* says, (of the larger Species) that the Cods are stuffed full of a most pure Silk, of a shining white color, among which Silk is the Seed. These Cods are not only full of Silk, but every Nerve or Sinew, wherewith the Leaves are Ribbed, are likewise most pure Silk; as also the Peelings of the Stems, Stalks, or Branches, which come from them, even as Flax or Hemp from their Stalks. 'Tis admirable to think, how God has Blessed those Countries with a Substantial matter (which they daily tread under Foot) by which they may be both well and Honourably Cloathed, and which is sufficient to Apparel or Cloath many Kingdoms, if carefully Manured and Manufactured. But *Parkinson* says concerning it, That he knows there is another Plant growing in *Virginia*, called *Silk-Grass*, which is much differing from this.

IX. *As to its Qualities, Specification, Preparations and Virtues*, Authors have said nothing, nor do we say any thing concerning the same. The Natives make Ropes and Cords of it, but nothing else, being much stronger than either Hemp or Silk; but was it Manufactured as it might be, it would make Super-fine Cloathing of all sorts, much exceeding any thing made of Flax, Hemp, or Cotton, and possibly not much inferior (if any thing at all) to what is made of the fineſt and best Silk.

CHAP. DCCXXX.

Of WAKE-ROBIN:

OR,

Cuckow-Point.

I. *THE Names.* It is called in Arabick *Farus* and *Sara*, in Greek Ἄρον: and in Latine *Arum:* some call it *Pes Vituli*, from the Form of its Leaf; and some from the Figure of its Pestle, in the middle of the Hose, call it *Sacerdotis Penis*, and *Canis Priapus:* some call it *Dracontea minor*, and *Serpentaria minor*; but we in English call it *Wake-Robin* and *Cuckow-Point*, or *Starch-Wort*.

II. *The Kinds.* There are many Species of it, but only two which are frequent with us, *viz.* 1. *Arum vulgare non Maculatum*, Our common Wake-Robin without Spots. 2. *Arum vulgare Maculatum*, Our Common Spotted Wake-Robin. Some will have *Arisarum*, or *Friers-Cowle*, to be a kind of *Wake-Robin*, and call it *Hooded Wake-Robin*, but of this we have already treated in its proper place.

The Descriptions.

III. The first, or Common Wake-Robin without Spots. *Its Root is Tuberous, and about the bigness of a* Walnut Green *and all, if it grows in good Ground, is brown without, and white within, very Succulent, with some Fibrous additions to it. If chewed between the Teeth, it has a vehement Heat, and Burning sharpness with it, almost beyond expression, so that if a bit of it, not so big as a small* Bean, *should be Chewed in the Mouth but for a Minute, it would so inflame the Mouth, Tongue and Throat, that possibly the Inflamation would scarcely be allayed in* 48 *Hours; and I have known some who out of Wantonness, have Chewed it, who have (by reason of its Violence) been in danger of their Lives, nor in more than a Weeks time could recover themselves: And yet this is manifest by daily Experience, that the dryed Root (tho' it may be as hot as* Pepper) *is void of all these Dangerous Accidents. Its* Juice, *or fine* Pouder, *has a very strange Clammineſs in it, stiffening Linnen or any other thing on which it is laid, no less than Starch; and in former days, when the*

making of our Ordinary Starch, which is made of Wheat-Flower, was not known, or in frequent use, the Roots hereof were used to Starch their Linnen, which would so Sting and Chap the Skin of the Servants Hands that used it, that they could scarcely get them smooth and whole, by the next time of using again. It shoots forth 3, 4, or 5 Leaves at most from one Root, one of which is something large

Wake-Robin *not Spotted; Or Greater.*

and long, broad at the bottom next the Stalk, and forked like unto a Wild Sorrel *Leaf, but ending in a Point, without Dent or Cut on the edges, of a sad green color, each standing upon a thick round Stalk, of an Hand Breadth or more. Among which, (after they have been up two or three Months, and begin to wither,) rises up a bare Naked round whitish green Stalk, something spotted and straked with Purple, like the Stalk of* Dragons, *which grows somewhat higher than the Leaves; at the top whereof stands a long hollow Hose or Husk, close at the bottom, but open from the middle upwards, ending in a Point: In the middle of which, grows a small long Pestle or Pointel, smaller at the bottom than at the top, of a dark Purplish color, as the Hose or Husk is on the inside, tho' green without; which after it has so remain'd for some time, the Hose or Husk decays with its Pestle, and the Foot or bottom thereof grows to be a small long Bunch of Berries, green at the first, and each of them when they are ripe, of a yellowish red color, of the bigness of a* Hasle-Nut *Kernel, which abide thereon almost till Winter. In the time when this Plant bears its Berries, its Root (which is Tuberous and somewhat long, not growing down right, but for the most part lying along; its Leaves shooting forth at its bigger end,) is somewhat shrivelled and loose, another being grown under it which is solid and firm, with many Fibres or small Threads hanging thereto, which in the beginning of the Year, when the Leaves begin to Spring, being broken, yields a Milky Sap or Juice, which is violently hot and biting. The whole Plant has the same sharp and biting Taste, vehemently pricking, burning, and inflaming the Tongue upon the Tasting thereof, which violent Heat continues a great while, without any diminution or alteration.*

Wake-Robin *not Spotted; Or Greater.*

Wake-Robin *Spotted, or lesser.*

IV. The

IV. The second, or Spotted Wake-Robin. *This in its Root, Stalks, Leaves, Cod, Fruit and manner of growing, differs nothing from the former, saving that both Roots and Leaves are more violently sharp and biting; and that the Leaves hereof are somewhat harder in feeling, sharper pointed, and have some blackish Spots thereon, like the Spotted* Arsmart, *which for the most part, abide in the Summer longer green than those of the first do.*

V. *The Places.* They grow frequently in many parts of *England*, in Woods, and near unto Ditches, and by Ditch-sides under Hedges, in shadowy places.

VI. *The Times.* The Leaves appear presently after Winter, early in the Spring, and continue but to the middle of Summer, or some small time longer. The *Pestle* shews it self out of its Hose or Husk in *June*, appearing before the Leaves fall away, whilst they are yet in Withering; and when they are gone, the Bunch or Cluster of Berries, *viz.* its Fruit, becomes ripe towards the end of *July*, or in *August*.

VII. *The Qualities.* It is hot and dry in the fourth degree, Aperitive, Absterstive, Diuretick and Digestive, Pectoral, Cardiack and Hysterick, Anti-asthmatick, Emmenagogick, and Alexipharmick.

VIII. *The Specification.* It is prevalent against Asthma's, Coughs, Colds, Obstructions of Lungs, Liver, Spleen, Mesentery, Reins and Womb, provokes the Terms and After-birth, is good against *Disury* and Strangury, gives ease in the Piles, and is a potent remedy against the Plague or Pestilence, and Poison.

IX. *The Preparations.* You may have therefrom, 1. *The Green Leaves.* 2. *A Juice of Herb or Berries.* 3. *A Juice of the Root.* 4. *A Decoction in Water.* 5. *A Milk.* 6. *A Pouder of Roots, Berries or Leaves.* 7. *An Oil.* 8. *A Cataplasm.* 9. *A Distilled Water.* 10. *The* Fœcula *or Starch.*

The Virtues.

X. *The Green Leaves.* Being bruised and laid upon any place pained with *Sciatica* or Gout, it draws out the Morbifick matter, and eases the pain: And applyed to the Bitings of Mad Dogs, Vipers, or Plague Sores, it draws out the Poison and Malignity, and secures the Patient from Danger.

XI. *The Juice of the Herb or Berries.* Taken to the quantity of a Spoonful in any fit Vehicle, it prevails against both Poison and Plague; and if a little *Vinegar* or *Juice of Limons* be added to it, it somewhat allays the sharp biting Taste thereof: *The Juice of the Berries* given in White Wine, provokes the Terms in Women, provokes Urine, and prevails against *Disury* and Strangury, brings away the After-birth, and cleanses effectually after Child bearing; and taken with *Sheeps Milk*, it heals inward Ulcers of the Bowels.

XII. *The Juice of the Root.* It has all the Virtues of the Juice of the Herb, but is much stronger, and therefore must be given with Caution; mixt with some other proper Vehicle, it cleanses all manner of rotten filthy Ulcers in what part of the Body soever, and heals the stinking Ulcers in the Nostrils, called *Ozena* and the *Polipus*.

XIII. *The Decoction of the Herb, Root or Berries, in Water.* It has all the Virtues of the Juices, but very much safer, and may be given to half a Pint at a time. Dropt into the Eyes, it cleanses them from any Film or Skin, Clouds, Mists, or other things which obfuscate the Sight; is good against an *Ophthalmia*, helps their watering and redness, and when by chance they become black and blew.

XIV. *The Milk.* It is made by boiling the Root therein: It has all the Virtues of *Juice* and *Decoction*, and is good to heal internal Ulcers: Dose 3 or 4 Spoonfuls or more.

XV. *The Pouder of Roots, Berries or Leaves.* Taken to a Dram, it is a most present and certain Remedy against the Plague, Poison, and the bitings of Serpents or Mad Dogs: The same taken mixed with *Clarified Honey, or Sugar*, (in form of an *Electuary*) is admirably good against Asthma's, Coughs, Colds, Hoarseness, Wheezing, and shortness of Breath: It is Stomatick, expels Wind, Digests, and Absterges the Stomach, Lungs, and other Bowels, from tough Salt Flegm; and has all the other Virtues of both Juices and Decoction: It provokes Urine and the Terms, and admirably cleanses after Delivery.

XVI. *The Oil of Roots, Berries, or Leaves.* Anointed on pained places it gives ease, and is good against the Palsie: Dropt into the Ears, it eases their pain, and helps against Deafness; gives ease also in the Piles or Hemorrhoids, and is profitable against the Falling down of the Fundament.

XVII. *The Cataplasm.* The Root mixed with *Bean-flower into a Pultise*, and applyed to the Throat or Jaws which are Inflamed, helps them. *The Roots or Berries made into a Pultise with Ox-Dung*, and applyed, gives ease in the pains of the Sciatica and Gout.

XVIII. *The Distilled Water of Roots or Leaves, or both.* It is good for all the purposes aforesaid. An Ounce or more taken at a time, is said to cure Ruptures, and to prevail against the Itch. If the fresh Roots are bruised, and distilled with Milk, they yield a most excellent Water to cleanse the Skin from Scurff, Morphew, Freckles, Spots, or any other Defilements whatsoever.

XIX. *The* Fœcula *or Starch.* It is made 1. *Of the Pouder of the Dryed Root.* 2. *From the Green Root, as you make the* Fœcula *of Briony Roots.* Besides its use for Starching of Linnen, it has all the former Virtues of the Pouder, and may be given to a Dram in any proper Vehicle.

XX. *A Caution.* By reason of the Vehemency of the Green Root, its Juice ought to be used very cautiously, and only to be administred by a Wise Hand. The Pouder is an hundred times more safe.

CHAP. DCCXXXI.

Of WALL-FLOWERS *Single* and *Double.*

I. *THE Names.* This Plant is called by the Arabians *Keiri*, or *Cheiri*; in Greek, Λευκόϊον κεφαλώδες: in Latin, *Leucoium Luteum*; and in English *Wall-Flower*.

II. *The Kinds.* There are two special sorts of Wall-Flowers, *viz.* 1. *The Single Kind.* 2. *The Double Flowered.* Of the Single Kind, we have, 1. *Keiri*, five, *Leucoium luteum simplex vulgare*, Our Common Single Wall-Flower. 2. *Keiri*, five, *Leucoium luteum simplex majus*, The Great Single Wall-Flower. 3. *Keiri simplex flore albo*, The White Single Wall-Flower.

III. Of the Double Kind, we have, 1. *Keiri*, five *Leucoium Luteum flore pleno vulgare*, Our Common Double Wall-Flower. 2. *Keiri* five, *Leucoium Luteum flore pleno alterum.* Pale Double Wall-Flower. 3. *Keiri*, five, *Leucoium Luteum majus flore pleno ferrugineo*, The Double red-

redddiſh yellow Wall-Flower. 4. *Keiri*, five *Leucoium Luteum flore pleno maximum*, The Greateſt Double Yellow Wall-Flower.

The Deſcriptions.

IV. The firſt, or our Common Single Wall-Flower. *Its Root is white, hard, and fibrous, has ſeveral ſmall, narrow, long, and dark green Leaves, ſet without order, upon round, whitiſh woody Stalks,*

Wall-Flower Single, *Common.*

which bear at the tops many Single yellow Flowers one above another, each of them having four Leaves apiece, and a very ſweet Smell: After which, come long Pods, containing reddiſh Seed.

V. The ſecond, or Great Single Wall-Flower. *Its Root is like the former, and will periſh in Winter, if not defended from hard Froſts. Its Leaves as well as Flowers, are much larger than the former. The Leaves are of a darker, and of a ſhining green color, and the Flowers of a very deep Gold yellow color, and commonly as broad as a Half-Crown piece of Silver. The Spike or top of Flowers is alſo much longer, and it abides much longer in Flowering, and is much ſweeter in its Scent or Smell. The Pods for Seed are thicker and ſhorter, with a ſmall point at the end. This Plant is ſlower in ſpreading it ſelf out into Branches, and more tender to be preſerved, and is increaſed by Planting its Branches, being ſlipt off.*

VI. The third, or White Single Wall-Flower. *It has a Root like the former, and its Leaves are as green as the Great kind, but nothing ſo large. The Flowers ſtand at the top, but not in ſo long a Spike, but rather in a Tuft, and each Flower is compoſed of 4 Leaves, of a white color, not much larger than the Common Kind, but of a weaker Smell. The Pods are not ſo great as thoſe of the former greater one. This is more eaſie to be propagated or increaſed, but requires ſome care in defending it from the Cold of Winter.*

Wall-Flower Single, *Great.*

Belonging to SECT. V.

VII. The firſt of the Double Kind, *or* Our Common Double Wall-Flower. *This in its Roots, Leaves and Stalks, are very like unto the firſt*

Wall-Flower Double *Common.*

Single

Single Kind, *saving that the Leaves hereof are not of so deep a green color. The Flowers stand at the top of the Stalks, one above another, as it were a long Spike, which Flower by degrees, the lowest first, and so upwards, by which means it is a long time in Flowering, the Flowers being very Double, of a Gold yellow color, and very sweet.*

VIII. The second, or Pale Double Wall-Flower. *The Flowers in this stand not Spike Fashion as the former, but more open spread, and do all of them blow open almost at one time, and not by degrees as the others do. They are of a paler yellow color, and differ in nothing else, saving that the green Leaves hereof are also of a paler green.*

IX. The third, or Double reddish yellow Wall-Flower. *Its Leaves are as green, and almost as large as the* Great Single Yellow kind, *or full as big as the Leaves of the* White Wall-Flower. *The Flowers are not much larger than the ordinary, but are of a darker yellow color than the* Great Single *kind, and of a more brownish or red color on the underside of the Leaves, being as it were striped.*

X. The fourth, or Greatest Double yellow Wall-Flower. *Its Leaves are as green and as large, if not larger than those of the* Great Single *kind. The Flowers are also of the same deep Gold yellow color, but much larger than any of the former Double kinds, and as sweet in smelling to, as any of them.*

XI. *The Places.* The first grows upon old Stone and Brick-Walls, and sides of very old Stone-Buildings, in many places through the whole Kingdom; but has of late been brought into, and Planted in Gardens, where the other six kinds are also kept and Nurst up.

XII. *The Times.* All the *Single Kinds* do Flower often in the end of *Autumn*, and if the Winter is mild, all the Winter long; but especially in the Months of *February*, *March* and *April*, even till the heat of the Spring stops them. The *Double Kinds* Flower sometimes very early, and sometimes very late in the Year, but do not continue Flowering in that manner the Year throughout.

OBSERVATIONS.

XIII. 1. *As to the Single Flowers.* Their Seed should be Sown in *September*, in the Earth just as you find it, without any previous Preparation; for it is the Nature of this Flower to grow upon Walls, and even amongst Rubbish.

XIV. 2. When they are Cultivated, more Care is to be taken of them, that they may serve as Ornaments in a Garden, for Borders of Beds and Plats, where they look very agreeably.

XV. 3. Having managed them as you do Flowers for Transplantation, as soon as you think them strong enough to change their places, put them in one that agrees with them, and Water them daily, to facilitate their taking Root.

XVI. 4. Be also very mindful to clear them of Weeds; for this, as well as the *Double Flower*, being Vivacious Plants, they will then grow to your satisfaction; the rest of their Culture is to be done as in the *Double Flower*.

XVII. 5. *Of the Double Flower you must be more Careful*; and it is to be multiplyed by Layers, or by Slips: If by Layers, chuse the best, and lay them in the Earth; and that they may not rise too fast, drive a Hook down upon them, and let the Earth upon your Layers, be of the same Ground in which they are laid.

XVIII. 6. Then Water them daily, that they may the better take Root, and sooner fasten themselves in the Earth, and let them be laid as soon as they have lost their Flowers, *viz.* in the end of *May*, or beginning of *June*; and leave them till *September* or *October*, at which time take them up, and put them either in Open Ground, or in Pots.

XIX. 7. If you place them in Borders of Plots, *&c.* the Garden Earth will do well enough; but if in Pots, take two thirds of Sifted Kitchen-Garden Earth, and one third of Mould, with which (being mixed) fill your Pots, putting your Layers into it according to Art.

XX. 8. And since these Flowers are apt to be injured by Cold, you must House your Pots in time, lest the Earth should Freeze and break your Pots, and so hurt your Plants: But as for those in the Open Grounds, you have no farther care to take of them, for they will always bear the Weather.

XXI. 9. If you multiply them by Slips, let them not be kept dry, that they may be Nourished so as to extend their Fibrous Roots round about to attract the nourishing Sap, or Juice of the Earth.

XXII. 10. Let your Slips be well chosen, and put into Pots or Pans filled with Sifted Garden-Earth, with some Mould thinly spread upon it, into which set your Slips half their length; put the Earth gently down upon them with your hand, to help to fasten them the sooner; Water them, and put them in a shady place till they begin to spring, after which, remove them into the Sun.

XXIII. 11. Let them be Planted at the same time you do the Layers, and when they have taken good Root, let them be Transplanted into the places you design for them, not forgetting to Water and Weed them, as often as occasion requires it.

XXIV. *The Qualities.* They are hot and dry in the first degree, Abstersive, Resolutive, Vulnerary, of thin parts, Neurotick, Hysterick, and Emmenagogick.

XXV. *The Specification.* They heal Wounds, provoke the Terms, expel the Dead Child, and are good against Agues, Apoplexies and Palsies.

XXVI. *The Preparations.* 1. *A Juice from the Heads of Flowers.* 2. *A Decoction of the Heads of Flowers in Wine.* 3. *A Decoction of the Roots in Vinegar.* 4. *A Gargarism.* 5. *An Ophthalmick.* 6. *A Powder of the Seed.* 7. Oleum Cheirinum, five Keirinum, *Oil of the Flowers.* 8. *A Bath to Sit in.* 9. *A Cataplasm.* 10. *A Distilled Water.* 11. *A Conserve of the Flowers.*

The Virtues.

XXVII. *The Juice from the Heads of the Flowers.* It provokes the Terms in Women, expels the Dead Child, and forces away the After-birth; opens Obstructions of Liver, Spleen and Reins; cleanses the Stomach, Bowels and Womb, and is good against Vapors, Paralytick and Apoplectick Fits. Dose 3 or 4 Spoonfuls in Wine, or the *Distilled Water*, or other fit Vehicle; mixt with *Spirit of Wine*, it cleanses Wounds and Ulcers, and heals them.

XXVIII. *The Decoction of the Heads of Flowers in Wine.* If it is made strong, it has all the former Virtues of the Juice, and therefore ought not to be taken of Women with Child, for fear of causing Miscarriage. Dose half a Pint at a time. It strengthens the whole Body, or any Member of it

grown

grown looſe and weak, by reaſon of Paralytick and Convulſive Diſtempers.

XXIX. *The Decoction of the Roots in Vinegar.* Being taken inwardly in the *Diſtilled Water*, and alſo outwardly applyed, it ſoftens the hardneſs of the Liver, Spleen, Meſentery and Womb.

XXX. *The Gargariſm. Take of the Juice 6 Ounces, of the Diſtilled Water 3 Ounces, Roch-Alum 2 Drams; Spirit of Wine an Ounce and half; Honey 2 Ounces; mix and diſſolve.* It cleanſes and heals Ulcers and Sores of the Mouth, Gums and Throat, and other parts of the Body, the parts being daily Gargariz'd or waſht therewith warm.

XXXI. *The Ophthalmick. Take of the Juice 4 Ounces; Spirit of Wine or Brandy, 2 Ounces; Honey an Ounce and half; ſtrong Tincture of* Aloes Succotrina, *half an Ounce; mix and diſſolve.* Dropt into the Eyes it cleanſes them from Clouds, Miſts, and other things which obfuſcate the Sight; heals Sores and Ulcers in the Eyes, ſtrengthens them, and ſtops a Flux of Rheum falling into them.

XXXII. *The Pouder of the Seed.* It may be given to a Dram in any proper Vehicle. It has all the Virtues of the Juice and Decoction, and may be uſed Morning and Night, as long as need requires. It has been given with Succeſs againſt the Rickets in Children.

XXXIII. *The Oil of the Flowers.* It is Diſcuſſive and Anodyn, gives eaſe in pains of the Breſt, Reins, Joints, Nerves, *&c.* and is a very good thing againſt the Gout.

XXXIV. *The Bath.* It is made of the whole Plant when in Flower, boil'd in fair Water with a proportional quantity of *Genoa Soap.* It is good for Women to Sit in, who have a ſtoppage of their Courſes, or are not well cleanſed after Delivery, becauſe it induces the Terms, and cleanſes the Womb of putrid Recrements.

XXXV. *The Cataplaſm. It is made of the Heads of Flowers beaten in a Mortar, adding ſome Salt.* Bound hard to the Wriſts, it is uſed as a Remedy to cure Agues. But if made by *boiling the ſame in Vinegar, with the addition of Barley Flower*, and then applyed warm to places pained with the Gout, it gives eaſe in the pain, diſcuſſes the Tumor, cures the Diſeaſe, and admirably ſtrengthens the part.

XXXVI. *The Diſtilled Water from the Heads of Flowers.* It has the Virtues of the Juice and Decoction, but nothing near ſo efficacious: mixt *with a quarter part of Spirit of Wine, and dulcified with white Sugar*, it is ſaid to cleanſe the Blood, comfort the inward part, eaſe pain, and cauſe Chearfulneſs.

XXXVII. *The Conſerve of the Flowers.* It is given to the quantity of a large Cheſnut or Wall-nut, Morning, Noon and Night, againſt Convulſive and Paralytick Diſtempers, and Weakneſſes of the Meſentery, Womb, and other Bowels.

CHAP. DCCXXXII.

Of WHEAT, *Buck* and *Cow.*

I. *THE Names.* The firſt of theſe is generally taken to be the Ἐρύσιμον *Theophraſti*, which *Gaza* Tranſlates *Trionum*; but ſome put a difference between this *Eryſimum* and the other, calling this *Eryſimum Cereale.* It is alſo called in Greek by ſome Τεραγπύρον: in Latin *Fagotriticum*, and by *Matthiolus* and *Lugdunenſis*, *Frumentum Saraſenicum*: *Dodonæus* calls it *Fegopyrum*, *Tragopyrum* and *Tragotriticum*: *Tragus* calls it *Ocymum Veterum*; but *Cluſius* and *Tabernæmontanus*, *Ocymum Cereale*; and in Engliſh *Buck-Wheat.*

II. *The Kinds.* This Plant is *Singularis ſui Generis*, and therefore not being manifold, can admit but of one Denomination.

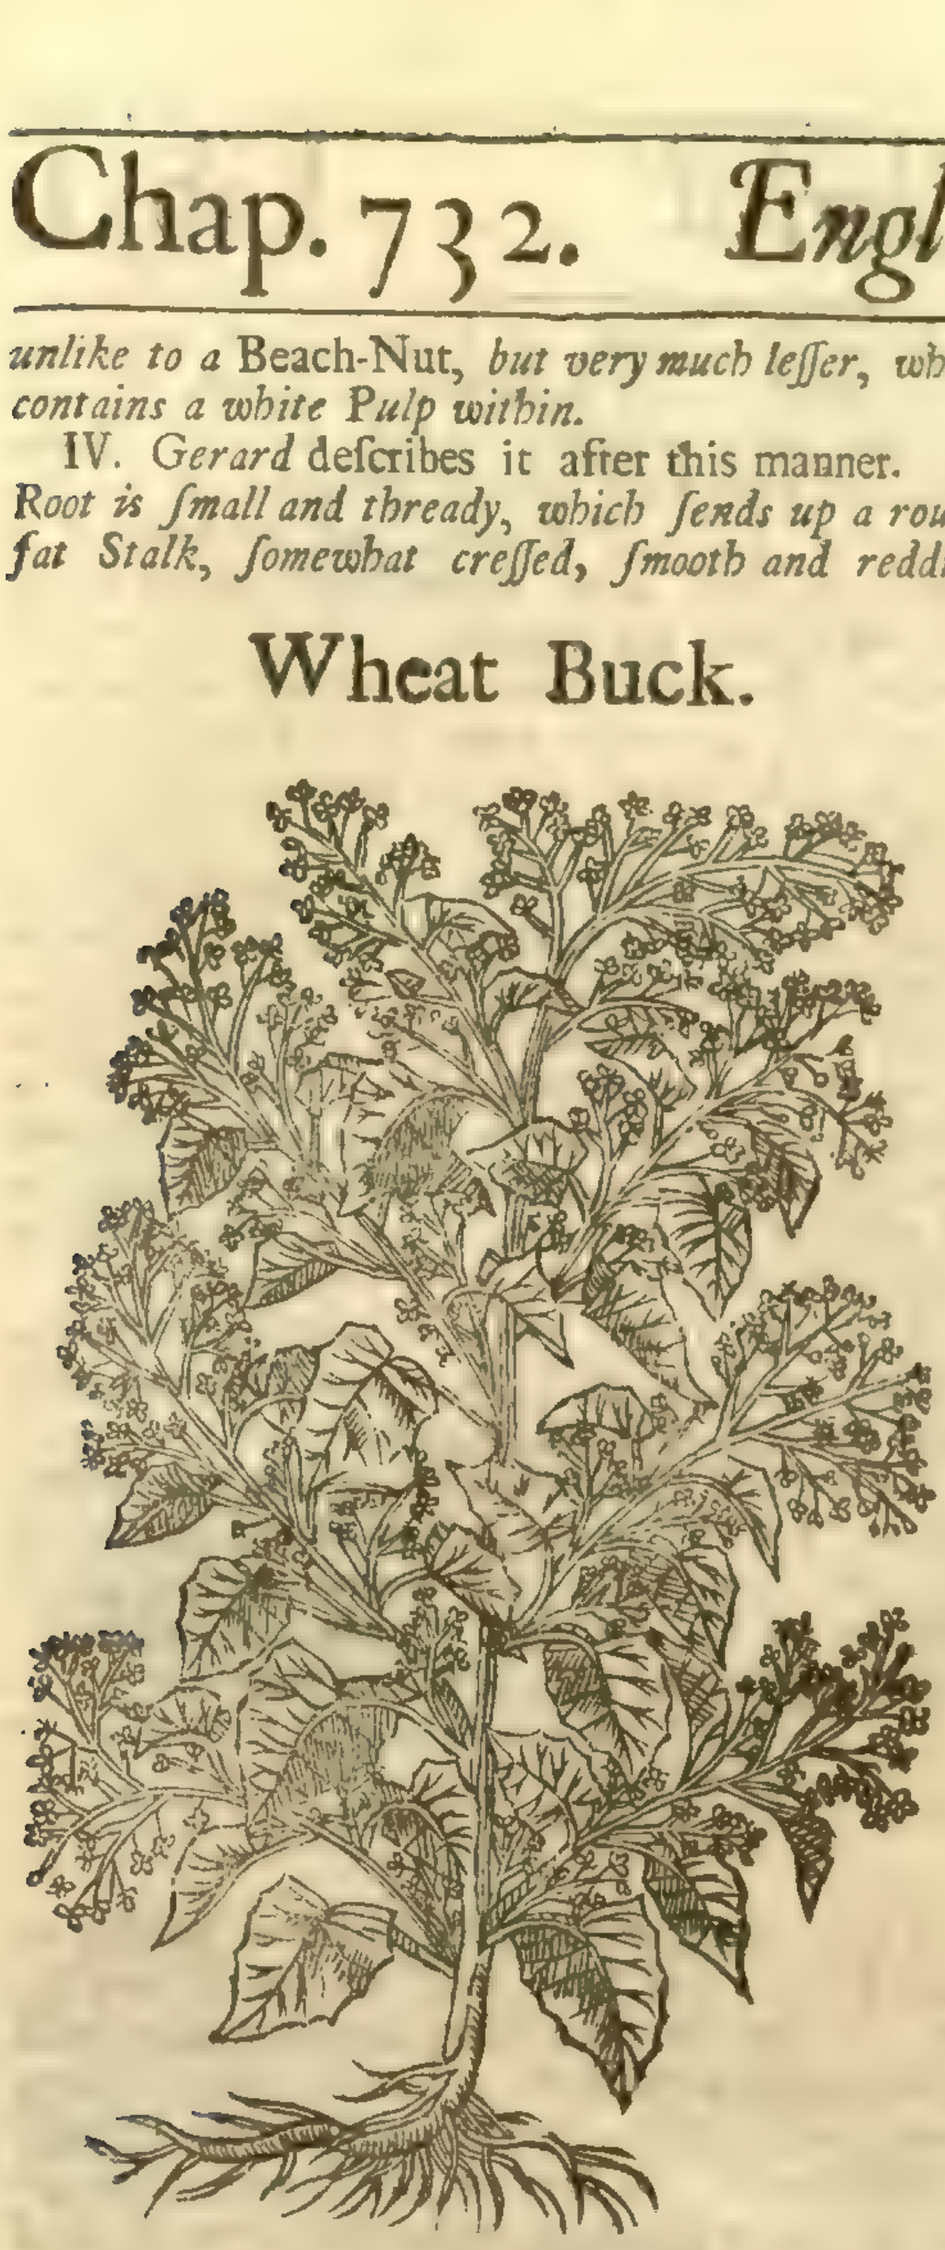
The Deſcriptions.

III. The Root of Buck-Wheat is ſmall and thready, *and riſes up with ſeveral round, hollow, brittle, reddiſh Stalks, a Yard or more high, ſet with divers Leaves, each by it ſelf on a Foot-ſtalk, which is broad and round, and biforked at the bottom, ſmall and pointed at the end, ſomewhat reſembling an* Ivy-Leaf, *but ſofter in handling. At the tops of the Stalks come forth ſeveral Cluſters of ſmall White Flowers, which turn into ſmall Triangular blackiſh Seed, (ſerving to the ſame uſe of other Eatable Grains) not much unlike*

unlike to a Beach-Nut, *but very much leſſer, which contains a white Pulp within.*

IV. *Gerard* deſcribes it after this manner. *Its Root is ſmall and thready, which ſends up a round fat Stalk, ſomewhat creſſed, ſmooth and reddiſh,*

Wheat Buck.



Wheat Buck.

which is ſpread out into many Arms or Branches, on which do grow ſmooth and ſoft Leaves, in ſhape like to Ivy-Leaves, *or one of the* Bindweed,s *or not much unlike to* Baſil, *(whence* Tabernæmontanus's *Name of* Ocymum Cereale.) *The Flowers are ſmall, white, and cluſter'd together in one or more Tufts or Umbels, ſlightly daſht over here and there with a light Carnation color. The Seed is of a dark blackiſh color, and Triangular, like the Seed of* Black Bindweed, *which is uſed (in places where it grows plentifully) in times of Scarcity to make Bread of, or to be mixed with other Corn for that purpoſe.*

V. *The Places.* It is thought to be firſt brought out of *Africa*, but now is generally Sown in moſt of our *Northern Countries*, where for the Uſe and Profit is made of it, whole Fields are Sown therewith. It proſpers well in any Ground, be it never ſo dry or barren, and is many times Sown, to ſerve as it were inſtead of a Dunging. It quickly comes up, and is ſoon ripe, and is very common about *Namptwich* in *Cheſhire*, where they Sow it as well for Food for their Cattel and Poultry, as for the uſe of making Bread aforeſaid. It grows likewiſe in *Lancaſhire*, and in ſome of the Southern parts of *England*, in *Eſſex*, *Kent* and *Middleſex*.

VI. *The Times.* It is Sown in *April*, and beginning of *May*, and will be ripe in *Auguſt* following.

VII. *The Qualities.* It is hot and dry in the firſt degree, Abſterſive and Nutritive, but Nouriſhes leſs than Wheat, Rye, Oats or Barley; but more than Millet or Panick: And Bread which is made of the Meal thereof, is eaſie of Digeſtion, and ſoon paſſes through the Stomach and Belly; for which reaſon, it becomes very cleanſing to the Bowels.

VIII. *The Specification.* It keeps the Body open, and prevents the growing too Fleſhy or Fat, but is a little Flatulent or Windy.

IX. *The Preparations.* The Meal of it for Mans uſe, is by the Country People in *Germany*, *Italy*, and ſome other places, made into Bread, Cakes, Puddings and the like, which are pleaſant enough to eat.

The Virtues.

X. *Bread, Cakes, Puddings*, &c. made hereof, make thoſe People very Strong, and able for Labour, who daily feed on them. *The Pultage* thereof provokes Urine, increaſes Milk, looſens the Belly; and being eaten mixt with Wine (as you do *Flummery*,) it is good againſt Melancholy. The whole Grain, as alſo the Meal, is uſed generally to Fatten Cattel and Poultry of all ſorts; and it is obſerved, that they are quickly made Fat therewith; and ſo Fat, that if they be not Kill'd in a ſhort time after, they will Dye of themſelves, being Suffocated therewith.

Of COW-WHEAT.

XI. *The Names.* It is called in Greek Κεγχρὶς ἡ χόνδρος: and Μελάμπυρον, (*Triticum nigrum*) ſee *Theophraſtus*, *lib.* 8. *cap.* 5. and *Dioſcorides*, *lib.* 4. *cap.* 17. in Latin *Triticum Vaccinum*, vel *Bovinum*: *Cratægonum* Lobelij: *Melampyrum Camerarij*, *Bauhini & Thalij*: *Milium Sylvaticum Tragi*; and in Engliſh *Cow-Wheat*.

XII. *The Kinds.* There are many kinds of this Plant, but moſt of them are abſolutely Strangers with us, ſo that we ſhall only take notice of two the moſt common, *viz.* 1. *Cratægonum vulgare Lobelij*;

belij; *Satureia lutea Dalechampij*; *Milium Sylvaticum Tabernæmontani*; *Melampyrum Bauhini & Thalij*; Our Common Cow-Wheat. 2. *Cratæogonum Flore vario*; *Melampyrum Camerarij*; *Triticum Vaccinum Dodonæi, Lugdunenſis & Tragi*; *Melampyrum Cæruleum Gerardi*, Party colored, or Blew Cow-Wheat.

The Deſcriptions.

XIII. The firſt, or our Common Cow-Wheat, *has a Root compoſed of ſmall Threads, which ſends up an Hairy ſquare Stalk, branched almoſt from the bottom, half a Yard high or more, very weak and ſlender, and ſuſtained by the Buſhes among which it grows, having two long and narrow Leaves ſet at each Joint, broadeſt next to the Stalk, a little dented ſometimes about the edges, and pretty ſharp pointed at the end, ſomewhat rough alſo on the underſide, if it be drawn downwards. The*

Wheat Cow.

tops of the Stalks and Branches are ſet with Tufts of Leaves and Flowers together, which being grown, are ſeparated, two Flowers only ſtanding at a Joint, with the like Leaves ſet with them, but ſhorter and ſmaller. The Flowers are long, round and hollow, gaping open at the end, almoſt like thoſe of a Dead Nettle, *and ſtand all looking one way, of a pale yellow color and white together, but grow yellower in time; yet in ſome of a blewiſh or purpliſh color, either deeper or paler, each ſtanding in a ſmall green Husk, wherein afterwards, grow round Cups or Veſſels, containing browniſh Seed, not much unlike to* Wheat.

XIV. The ſecond, or Party-colored, or Blew Cow-Wheat. *This grows like the former, but the Stalk is more reddiſh, and ſo are the Leaves alſo, and more finely dented upwards, where the Spikes or Tufts of Flowers, are in ſome of a reddiſh or bluſh color before they ſpread open, and then ſhew the Flowers to be of a yellowiſh Purple, ſometimes about the Mouth or Gaping place, and the other parts of a Purpliſh red: but in ſome others they are Blew, or of a Purpliſh Blew.*

XV. *The Places.* They grow among Buſhes, Brakes and the like, upon Barren Heaths, as at *Hampſtead* near *London*; alſo in Fertil Paſtures, Buſhy Copſes, and low Woods, and ſuch like places in many parts of this Land. But the firſt of them *Gerard* ſays, grows upon *Hampſtead Heath*, among the *Juniper Buſhes* and *Bilberry Buſhes*, in all parts of the ſaid *Heath*, and in every part of *England* he found it where he Travelled.

XVI. *The Times.* They Flower from the beginning of *May*, thro' *June* and *July*, and their Seed ripens in *July* and *Auguſt*.

XVII. *The Qualities.* They, *viz.* the Grains, are hot and dry in the firſt or ſecond degree, of thin and ſubtil parts, and abound with a great quantity of Volatile Salt. They are Hyſterick, Spermatogenetick, and excite to Venery.

The Virtues.

XVIII. Authors have ſaid little or nothing of their Virtues, but ſome ſmall matter of their Vices, as that the Seed being taken inwardly, will affect the Head and Brain, as *Darnel* will, troubling them, and cauſing a kind of Drunkenneſs, Vertigo, or Giddineſs. *The Seed in fine Pouder*, being given to half a Dram or more, for ſome ſpace of time, in ſtrong Broth or Wine, is ſaid to provoke Luſt.

XIX. *As Cow-Wheats* generally in all places where they grow among Corn thrive; ſo if they be not Weeded out, but ſuffer'd to grow till the Corn is Reaped, their Seed mixes with the Wheat in Thraſhing, whereby when Ground, the Meal is browner or darker colored; and ſo the Bread which is made thereof, will be blacker than otherwiſe it would be.

CHAP. DCCXXXIII.

Of WHEAT *Common*; *Red, White, Grey.*

I. *THE Names.* It is called by the Arabians *Henta*, and *Hencha*; in Greek Πυρὸς: alſo Σῖτος, (*Frumentum â Fruendo:*) in Latin *Triticum*, (*quod tritum ex Spicis ſit, ut dicit Varro:*) alſo *Siligo*, which is the Name of the fineſt and moſt pure Wheat; and in Engliſh *Wheat*.

II. *The Kinds.* Wheat if we reſpect the Ear only, is either Naked and not Bearded; or Bearded; but if we reſpect the color chiefly, it is threefold, *viz.* 1. *Triticum ariſtâ rubrâ*, vel *Spicis rubris*, Red Wheat, which is accounted the fineſt and beſt of all Wheat, and this is twofold, *viz.* either *ariſtâ ſpicatâ*, with Bearded Ears; or *Triticum muticum*, *Triticum rubrum ſpicâ muticâ*, or

Wheat

Wheat Naked without Beard or Awns. 2. *Triticum album*, *Triticum ariſtis albis*; *Siligo*, White Wheat; and this is alſo twofold, *viz.* *Triticum album Ariſtis Munitum* vel *Ariſtis Spicatis*, White Wheat with Bearded Ears, or Ears with Awns; or *Triticum album muticum*; *Siligo*, vel *Triticum album Spica mutica*, or White Wheat without Beard or Awns; and theſe white Wheats ſome think to be as fine a Grain as the former, and ſome will have them to be the fineſt and beſt Wheat of all; without doubt, the difference in Goodneſs between them is ſo little as not to be diſcerned. 3. *Triticum Griſeum*, vel *Cinereum*, *Triticum Griſeum ariſtis munitum*, and this is that which I take to be the *Zeia*, or *Zéa Zea* of the Ancients, which they called *Spelta* or *Spelt-Corn*; and *Adoreum*, alſo *Ador*, which the Ancient *Romans* made to be a kind of *Far*, or *Bread-Corn*, being a courſer ſort of Wheat: This with us, is generally through the Nation called *Gray Wheat*, and is a very good and profitable ſort of Grain, tho' not ſo abſolutely fine and choice as the former *Red and White Wheats*. To theſe let me add, 4. *Triticum Spica multiplici*, *Triticum ramoſum*, the Branched, or manifold Eared Wheat, which *Tabernæmontanus* calls *Triticum Tiphinum Spica multiplici*, which for all that I know may be a Species of the *Tipha*, or *Tipha Cerealis* of *Dodonæus*, their Deſcriptions are ſo nearly alike.

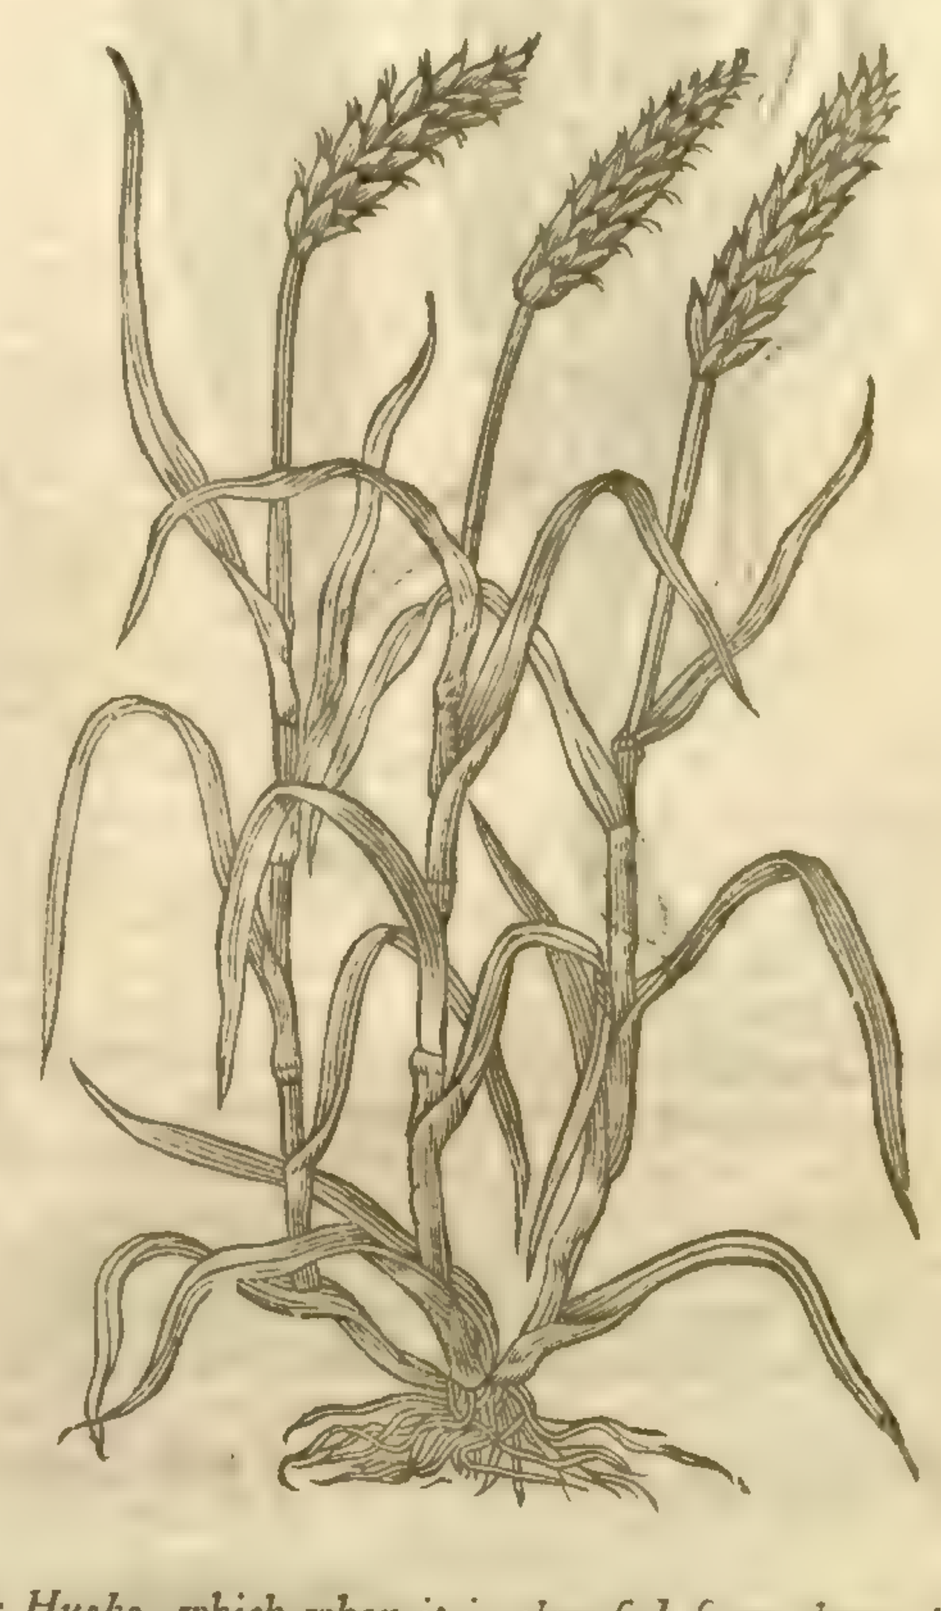
The Deſcriptions.

III. The firſt, or Red Wheat, *Its Root is very Fibrous, and towards its Head as it were jointed,*

Wheat *Red or White, Bearded.*

from whence riſe 3, 4, 6, *more or leſs Stalks, with fair long and green Graſs-like Leaves, and as the Stalks grow up higher, at every Joint one Leaf, and at the fourth Joint uſually comes forth the long Ear, or Spiked Head, one on a Stalk, without any Branches, which while the Head ſtands upright, blooming ſmall yellow Agnets, which when it is ripe, a little bows down or bends its Head, by reaſon of its weight, which is ſet with two double rows of Grain or Corn, within ſeveral Chaffy Coats*

Wheat White or Red, not Bearded.



or Husks, which when it is cleanſed from them, is of a firm compact Subſtance, which is of a Dun reddiſh color; and the whole Ear is of a kind of reddiſh color when it is perfectly ripe; which is either Bearded with Awns, or not Bearded, but plain and ſmooth, that being all the difference, which yet makes no Difference in the Goodneſs of the Corn.

IV. The ſecond, or White Wheat. *This in its Roots, Leaves, Stalks, Ears, Flowers, Corn, Magnitude, and manner of growing, differs nothing from the former or* Red Wheat, *but only in the color, the Stalks and Ears being whiter, and the Grain or Corn of a clear yellowiſh white color This is alſo twofold,* viz. *either Bearded with Awns, or plain and ſmooth without Awns, in like manner as the* Red Kind. *Some, and the Generality of* Farmers, *maintain the* Red Wheat *to be the fineſt and beſt Wheat, and to make the Sweeteſt and Whiteſt Bread: Whilſt others again maintain this* White Wheat *to be the chiefeſt of all, and to make truly the Beſt and Whiteſt Bread. I indeed know them both very well, and have eaten Bread, Cakes, and other things made of the fine Flower of them both; yet I muſt ſay, by all that I could obſerve, that I could find no difference between the Sweetneſs, Whiteneſs and Goodneſs of the one and the other; but that to me, the one appeared as good as the other; and*

Wheat White Bearded.

without doubt, the difference is little or none; or if there be any, it would puzzle the Wiſeſt of Men to find on which ſide the Whiteſt and beſt would ſtand

V. The third, or Gray Wheat. *This in its Roots, Leaves, Stalks, and manner of growing, is like the former, but the Stalk is larger and ſtronger, higher,*

Wheat Gray; Zea, or Spelt Corn.

and of a brown color; and the Head or Ear hereof, is much larger, of a brown color alſo, with four Sides or Rows of Grains or Corn, ſo that it ſeems to be four ſquare, which is contained in double brown Husks, all which are Armed with Awns; ſo that the whole makes a large Bearded Ear; and

Wheat Gray, *or Greek Wheat.*

the color of the Grain within, is almoſt of the color of the Red Wheat, *but much paler, the Corn it ſelf being much of the ſame faſhion, but plumper, or fuller and larger. The Meal or Flower of this, makes admirable good White Bread, Cakes,* &c. *but it is ſcarcely ſo White as the others, nor yet ſo Sweet.*

VI. The fourth, or Branched, or manifold Eared Wheat. *This in its external form of Roots, Leaves and Stalks, is much like the* Red Wheat, *ſaving that the Stalk ſeems to be ſhorter, and the Ear in color, with its Husks or Chaff, Awns and Grain within it, is exactly like to the Ear of the* Red Wheat, *ſaving that the Ear of this has ſeveral other ſmaller Ears, as 2, 4, 6, or more, growing out of the ſides thereof. This ſeems to be a Species of* Dodonæus's Tipha, *or* Triticum Tiphinum, *which by the Deſcription thereof, can be no other than our* Bearded Red Wheat. *It is thus Deſcribed.* Tipha *riſes up with a ſingle and ſlender Stalk or Straw, the Ear is long and round, Bearded with long, hard, ſharp Awns, ſomewhat cloſely ſet together, and the Grain is ſmall and light, but hard, and of a redder color than other Wheat, encloſed in divers Chaffy Husks.* This ſeems to me to, be *Our Red Wheat* before Deſcribed.

VII. Some may Object againſt me, That *Our Gray Wheat* is not, nor can be the *Zea*, or *Spelta*, of the Ancient *Greeks* and *Romans*, becauſe ſay they, that *Zea*, *Spelta*, or *Greek-Wheat*, had its Ear Naked, without Beard or Awns, in proof (of which, they bring the Teſtimonies of *Camera-*

rius,

rius, *Gerard*, *Lobel* and *Tragus*;) whereas our *Gray Wheat* has a Bearded or Awned Ear; to which I anſwer, that *Lugdunenſis* has Deſcribed and ſet forth his *Zea* with a Bearded Ear; and *Matthiolus* has given us his *Spelta* with Awns, or a Bearded Ear alſo: 'Tis true that *Theophraſtus*, from whom the *Zea* or *Spelta* is taken, in his Deſcription has ſaid nothing of the Awns or Beard of the Ear; but let us take all the reſt of his Deſcription, as it is in his *Hiſtoria Plantarum*, *lib.* 8. *cap.* 9. and compare it with *Camerarius* and *Tragus* their *Zea Spica mutica*, or any others who maintain the ſame, and you will find that they are none of *Theophraſtus*'s Plant: That of *Theophraſtus* is thus deſcribed. *Its Roots are many, or buſhy, and ſtrongly faſtned in the Ground, out of which they draw much Nouriſhment, and it riſes up with many ſtrong, jointed, and high Stalks, with Leaves on them moſt like to* Wheat; *the Ear is plentiful in Corn or Grain, which are encloſed in many Chaffy Husks, being the lighteſt of others, and not ſo eaſily beaten out, as out of other* Wheat; *and is very pleaſant to every one.* Now ſetting aſide the *Awns of the Ear*, which are here omitted, *Our Gray Wheat* is the moſt like it of any thing in the World, and if that be not the *Zea* or *Spelta* of the Ancients, I can find no other Grain in the World to which it will, or can agree. As for *Camerarius* and *Tragus*, their *Zea* or *Spelta*, can be none of this of *Theophraſtus*; for theirs has no ſuch Buſhy Root, no ſuch ſtrong nor tall Stalks, nor yet ſo many growing from one and the ſame Root: And as the Stalks of theirs are low, and fewer, ſo the Ears are ſmaller, and not orderly ſet in Rows; by all which it is evident, that they had no true Knowledge of *Zea*, or *Greek Wheat*, which is without doubt, what we call *Gray Wheat* here in *England*.

VIII. *The Places.* All theſe Grains are not only Sown almoſt in all Counties through all the Iſlands of *Great Britain*, but alſo in moſt parts of the Habitable World. 'Tis true, that not long ſince they were Strangers in *America*, but ſince our *Engliſh* have Planted and Inhabited almoſt all the Eaſtern Coaſt of *Florida*, from the North of *Nova-Scotia*, to the South of *Carolina*, they have been made Denizons of thoſe Countries, and are now become Natives of the ſame, and proſper with the ſame increaſe and goodneſs, which they have here with us.

IX. *The Times.* They are Sowed after Harveſt in *Autumn*, before Winter, and tho' they preſently Spring up, are ſo hardy as as to endure the ſharpeſt Seaſons, and the Ears come to their ripeneſs in *July* and *Auguſt* following.

X. *The Qualities.* All theſe ſorts of Wheat are temperate in reſpect of heat or cold, drineſs or moiſture, are Aſtringent, Vulnerary and Nutritive.

XI. *The Specification.* They ſtop Fluxes of the Bowels, Nouriſh much, and reſtore in deep Conſumptions.

XII. *The Preparations.* You may have therefrom, 1. Pollen & Siligo, *Meal and Flower.* 2. Alica vel Chondrus, *Pultage.* 3. *Bread and Cakes.* 4. *Puddings.* 5. Athera, Panada, *or Pap.* 6. Far, *or Boiled Wheat.* 7. Tragus, *or Flummery.* 8. Amylum, *Starch.* 9. Fermentum, *Leven.* 10. *Mault.* 11. *Sweetmeat Wafers.* 12. *A Gelly.* 13. Sanguis, Extractum Tritici, *Blood of Wheat.* 14. *A Coſmetick.* 15. *A Balſam.* 16. *A Cataplaſm.* 17. *An Oil by Expreſſion.* 18. *A Clyſter.* 19. *Mum, or Strong Drink.* 20. *A Spirit.* 21. *Frumety*, or *Frumenty.*

The Virtues.

XIII. Pollen & Siligo, *Meal and Flower.* Tho' *Siligo* be the Name of the fineſt and beſt Wheat, and of the *White Wheat* in particular; yet *Siligo* with them did alſo ſignify the pureſt and fineſt Wheat-Flower. Theſe are of uſe to make *Bread*, *Cakes*, *Puddings*, *Pultage*, *Panada*, *Flummery*, *Starch*, *Leven*, *Wafers*, *Gelly*, *Cataplaſm*, &c. Outwardly applyed to Simple Wounds newly made, in a large quantity, it preſently ſtops the Flux of Blood, and a Spoonful of them mixed with a Glaſs of fair Water, and ſwallowed down, is good againſt Heart-burnings, and Acidities of the Stomach.

XIV. *Pultage.* It is called *Alica*, *ab Alendo*, from Nouriſhing, and ſo all *Latin* Authors have Tranſlated *Chondrus*, which is taken to be the moſt excellent *Pultage* uſed in thoſe Ancient times: If made of Milk only, or Milk and Water, it is properly a *thick Milk*; if of Water only, it is *Pultage*. It is good to ſtrengthen the Stomach and Bowels; it nouriſhes very well, and ſtops Fluxes of the Belly.

XV. *Bread and Cakes.* Theſe are as it were the Staff of Life; for with Bread and Water alone, a Man may live many Years. If the Paſte be Fermented with *Leven* or *Yeſt*, the *Bread or Cakes*, will be much more wholeſom, and more eaſie of digeſtion; and with *Bread*, the *Panada* or *Pap* for Children, and new Born Infants is made, and for them it is better to be made with Water, than with Milk, becauſe then it is not Stuffing. If eaten dry, or alone, it abſorbs the Watery humor in the Stomach and Bowels, and is prevalent againſt Fluxes of the Belly.

XVI. *Puddings.* They have the Virtues of Bread, are good againſt Weakneſſes and Fluxes of the Bowels, and if made with Milk and Eggs, ſtrengthen much, and reſtore in deep Conſumptions, being alſo very eaſie of Digeſtion: If they are made of pure White Bread, they will be yet pleaſanter, lighter of Digeſtion, more Nouriſhing, and better for the Stomach; by reaſon the Bread is a Fermented Subſtance.

XVII. *Panada, or Pap.* It is made with Water, Milk and Water, and ſometimes with Milk alone, of the pureſt and fineſt White Bread, and chiefly for Infants and Children, and ſuch Elder People as have been long Sick, and have ſuch weak Stomachs as that they can ſcarcely digeſt any thing. It is eaſie of digeſtion, nouriſhes much, and may be made very grateful to the Stomach, by the addition of *White Sugar*, *Wine*, *Juice of Oranges*, as the Sick likes beſt, and may moſt *quadrare* with the nature of the Diſeaſe.

XVIII. *Far*, or *Boiled Wheat.* I know *Far* has been thought to be a peculiar Grain, or a mixture of ſeveral kinds of Corn among the Ancients; but what particular Corn, or Corns it ſhould be, I know no Author has determined. But *Archigenes* in *Ætius*, gives us the Artificial matter, *viz. The Wheat is ſteeped a while in Water, and being taken from thence, is put into a Mortar, where it is cleanſed from the Husks, by gentle beating with a wooden Peſtle, afterwards it is laid in the Sun, and then rubbed with the Hands till it is fully cleanſed; which done, it is broken a little groſsly, and being dried, is kept for uſe, to be Boiled upon occaſion in Water.* *Parkinſon* is of opinion, that this well reſembles our Boiled Wheat, which, *after it is freed from the Husks as juſt now declared, it is boiled in Water till it breaks, and becomes*

pretty thick, which Country People while it is hot, do put into Wooden Dishes, and so bring it to London, *to be Sold in the Markets, by the Name of* Dish-Wheat *and* Bowl-Wheat.

XIX Tragus, *or Flummery. It is made of the finest of the Flower, mixed with fair Water in a due proportion, and Boil'd up to such a thickness, as being cold, it will cut with a Knife; which whilst hot, is put into small, flat, white Earthen Dishes, in which it is kept till it is eaten.* They commonly mix with it at Eating, Wine and Sugar, and so it chears the Heart, revives the Spirits, comforts Nature, and restores in Consumptions. Some that are great Lovers of Milk, use that instead of the Wine.

XX. Amylum, *White Starch.* It is made of the finest Flower of the Wheat, by the means of fair Water. Made into a *Lohoch with Honey*, it is good against Coughs, Colds, Rheums, and Spitting of Blood, and causes an easie expectoration of Flegm.

XXI. Fermentum, *Leven.* It is made of some Paste or Dough of the Bread after Fermentation, and being made up into a round flat Ball, it is kept in a heap of Table or Bay-Salt poudered, till it grows sowre, which you may know both by the Smell and Taste. It has a power to draw and digest that which is far off; and therefore is good to be put into *Drawing Cataplasms*, to cause Suppuration in Tumors. Applyed to places affected with the Gout, it in a short time eases the pain: It is good also against Warts, and hard Knots or Kernels in the Flesh, being applyed with some Salt.

XXII. *Mault.* It is made altogether in the same manner as you make the *Mault of Barley. The Flower of it being mixed with Turpentine, Honey, and the Yolk of an Egg*, makes a good Digestive; *mixed with* Ammoniacum, *Leven, and a little Vinegar*, it discusses and softens hard Tumors; but its chief use is for making that sort of Strong Drink called *Mum.*

XXIII. *Sweet-Meat Wafers.* They are Sold at the *Confectioners*, made up into small white Rouls. Being eaten, they singularly gratifie the Stomach, and strengthen it, stop Fluxes of the Bowels, and restore in Consumptions. As they are made of the purest and finest Flower, with a small addition of Milk, Eggs and Sugar, so put into Water and drank, they cure the Bloody Flux, and are good against Ruptures in Children.

XXIV. *The Gelly. It is made of the former Wafers boiled in a sufficient quantity of Water, to the Consistency of a Gelly*; or it may be made *of the Dish-Wheat*, *at* Sect. XVIII. *by adding a little Water to it, and straining it very hot thro' a Cheese Cloth.* It is good against Spitting of Blood, Coughs, Colds, Hoarseness and the like, being daily eaten.

XXV. *Sanguis seu Extractum Tritici*, Blood of Wheat. It is made as you make the *Sanguis Satyrionis*, *Consolidæ majoris*, *Potatoes*, *Parsneps*, &c. It is an admirable thing to chear the Heart, revive the Spirits, refresh the Bowels, comfort Nature, restore in Consumptions, and recreate Languishing Nature. The finest White Bread is best to make it of.

XXVI. *The Cosmetick. Take of the Flower* 4 *Ounces*, *Honey* 1 *Ounce*, *Vinegar a Quart*; *boil them gently together, so long till the Flower will not easily settle.* It is said to be good against Scurff, Morphew, Sun-burning, Tanning, Freckles, Spots and Pimples in the Face.

XXVII. *The Balsam. Take Turpentine* 2 *Ounces*; *Yolks of three Eggs, mix them till the Turpentine is perfectly dissolved in the Yolks, then add Honey, Balsam of* Peru, *of each two Ounces*; *fine Wheat Flower enough to give it the Consistency of a Balsam.* It is Digestive, Absterfive and Healing, a good Vulnerary in all Simple Green Wounds, Plague Sores, running putrid Sores, and Old Ulcers.

XXVIII. *The Oil by Expression. It is Pressed in an Almond Press out of the whole Wheat, between two thick Iron or Copper Plates, being heat very hot.* It heals all inveterate Ring-worms, Tettars, Scabs, *Herpes*, &c. on the Face or Chin, or other parts of the Body, being laid on warm; and hereby says *Galen*, we have known many to be Cured. *Matthiolus* commends the same to be put into hollow Ulcers to heal them. The same is also used for Chaps in the Hands or Feet, by reason of Cold, as also to make a rugged Skin smooth.

XXIX. *The Cataplasm. It may be made of the Leven alone, mixed with a little Vinegar*; being applyed, it is good against the Gout, and the hard Tumors in Womens Breasts. *A Cataplasm made of New Wheat Chewed in the Mouth*, applyed to a place bitten by a mad Dog, cures it. *A Cataplasm of Bread made with red Rose-Water*, applyed to the Eyes which are hot, red, and inflamed, or are Blood-shot, heals them. *A Cataplasm made of Bread Fried in a Frying-Pan, with Wine Vinegar*, being applyed very hot for an Hour at a time, for 12 or 14 Days together, to Kings-Evil Kernels in Neck and Throat, is said perfectly to dissolve and cure them. *A Cataplasm made of Wheat-Flower, with Juice of Henbane*, being applyed, will stop a Flux of Humors to the Joints. *A Cataplasm of Wheat Meal Boil'd in Vinegar*, being applyed, will help the Contraction of the Nerves, or Shrinking of the Sinews, as *Pliny* says. *A Cataplasm of the Bran, with a little Flower, made by Boiling it in the sharpest Wine Vinegar*, being applyed, softens and discusses the Swellings of Womens Breasts; and applyed presently to the Biting of a Viper, draws forth the Poison.

XXX. *The Clyster. It is made by boiling the Bran (not too near Sifted) in the Broth made of a Sheeps Head and Gathers*; which being exhibited, does open and cleanse the Body of sharp and crude Humors, and to ease the Griping pain of the Bowels; and all this it will more effectually do, if to every Pint thereof, you add *four Ounces of Brown Sugar, and a little Salt.*

XXXI. *Mum*, or *very Strong Drink. It is made in the same manner as you make very Strong Beer of Barley Mault.* It comforts the Stomach and Bowels, strengthens the Back, and is a Restorative to such as are in a Pining and Languishing Condition; fortifying all the Natural Faculties of the Microcosm.

XXXII. *The Spirit. It is drawn off from Old or Stale Mum in an Alembick, in the very same manner as you draw off the Maulted Spirits of Barley*; *or as you draw Spirit of Wine.* Unless it be very carefully drawn, it will not taste very pleasantly, by reason it is apt to be loaded with an *Empyreuma*; but if it is drawn neat and clean, or is made so by Rectification, it will answer all the ends of *Spirit of Wine*, and perform the same things.

XXXIII. *Frumety*, or *Frumenty*; it is so called from *Frumentum*, an old Name for Wheat or Corn. *It is made of Boiled Wheat, which is that which is Sold in Wooden Dishes or Bowls, in the Markets in* London, *and called Dish-Wheat (at* Sect. XVIII. *aforegoing,) by Boiling it up with a sufficient quantity of Milk, to make a Pultage thereof, of a due thickness.* It is Stomatick, strengthens the Bowels, stops Fluxes, and restorative in Consumptions.

CHAP.

CHAP. DCCXXXIV.

Of WHEAT *Indian:* OR, MAIZE.

I. *THE Names.* We know no *Greek* Name for it; but it is called in *Latin*, *Frumentum Turcicum*, Turky Wheat; *Frumentum Indicum aliquorum, & Milium Indicum maximum:* in *English*, *Turky Wheat*, *Indian Wheat*, *Indian Corn*, and *Maize*, as the *West-Indians* call it.

II. *The Kinds.* We have but One Species thereof, but some may account them Two, by reason of their *Magnitude*, which I take to be rather from the Nature of the Soil; a rich Soil affording a very large sort; whereas a poor Soil gives you only a Dwarf kind of Plant: But there is a great Variety in the Colors of the Ears, some being all White, some all Yellow, some all Red, and some Blew. And again, some Ears have Grains of all those Colors at once; but this difference, we account makes no differing Species of the Plant.

The Descriptions.

III. *Its Root is Thick and Bushy, full of gross Fibres or Strings, from whence spring up several strong and tall Stalks, six or eight feet high, as thick as a Girls Wrist, if it grows in any rank Ground, full of great Joints, with a white Spongy Pith in the middle. The Leaves are long, twice as*

VVheat Indian: *Or,* Maize.

large as those of Millet. At the Tops come forth many Flowers in Feather-like Sprigs, bending downwards, like as the Tops of Millet, which are either White, Yellow, Red or Blew, as the Grains in the Ears will prove. These Flowers fall away without any thing of an Ear succeeding them: But whilst this Flowering is, come forth the Ears at the joints of the Stalks with the Leaves, from which in two or three of the lower Joints up, towards the Tops of the Stalks, One at a Joint, which have many Leaves enclosing them, and are smallest at the Top, with a small long Bush of Hairs or Threads, hanging down at the Ends; which when they are Ripe, are to be gathered. The Leaves enclosing the Ear being taken away, the Head or Ear appears, much like to a long Cylinder (not a Cone) set with 6, 8, or 10 rows of Grains, as large almost as Pease, and sometimes larger; not fully round, but flat on the sides which join one to another, orderly and very closely set together, of the same Color on the outside as the Bloomings were, viz. either White, Yellow, Red or Blew only, or of some or all of those Colors together; the whole Grain is hard and brittle, its external Husk being very hard almost like a Shell, but its inward Pulp, when grownd into Meal or Flower, almost as white as Snow; which Grains when Chewed, are somewhat dry, and not clammy in the Mouth, as our Wheat is.

IV. *The Places.* It is said to grow in *Turky*, and that it was first brought from thence: It is true, that it is now universally Planted almost all over the *West Indies*; but it is certain, that it was not an *aborigine* of those Countries; but was first carried thither by *Europeans*. It requires to be Planted in a rich and fat Ground, as *Millet* does; for a poor lean Soil, makes but a poor sort of Corn. It has been Planted in our Gardens in *England*, and in very hot Summers has come to perfection with us.

V. *The Times.* It is Sown in the Spring, in *March* and *April*; and the Grain is for the most part ripe in *July* and *August*.

VI. *The Qualities.* It is Temperate in respect to Heat or Cold, and dry in the first Degree, Abstersive, and very nourishing.

VII. *The Specification.* It cleanses the Stomach, Bowels, Reins, and Urinary Passages of Tartarous Mucilage; insomuch, that it is said to be very effectual to hinder the breeding of the Stone. It also nourishes well, with a thin and Abstersive Nutriment, and restores in Consumptions.

VIII. *The Preparations.* In the *West Indies* there is made thereof, 1. *The boiled Grain or Maize.* 2. *Pultage.* 3. *Homine.* 4. *Bread, Cakes, Puddings.* 5. *Parched Corn.* 6. *A Cataplasm.* 7. *The whole Grain.*

The Virtues.

IX. *The boiled Grain or Maize. The Corn is first steeped a little in warm Water, then beaten in a wooden Mortar with a wooden Pestle, till all the external hard Hull is beaten off; then it is boiled in Water till the Grain is perfectly soft and burst in the boiling, and becomes almost like to our boiled Dish Wheat.* They Eat it being seasoned with Salt, by mixing with it Butter, or Milk, Cream or Wine, and Sugar, it admirably nourishes and strengthens, and makes the Country Man able to go thro' Labour and Business.

X. *Pultage. The Grain is freed from the external hard Hull as aforesaid: then being dryed in the Sun, it is grownd in a Mill to Meal, which being Sifted, and boiled in Water till it is soft, is yet more boiled, till it becomes of the consistance of a thin Hasty Pudding.* It is Eaten as the former boiled Grain, with Butter, Salt, Milk, Cream, or Wine and Sugar, and has the same Effects in nourishing and strengthening those that Eat it.

XI. *Homine.*

XI. *Homine.* This anſwers to the *Frumenty*, made of our boiled Wheat. *They take either of the former boiled Maize, or of the Pultage, what quantity they pleaſe: to which they add a ſufficient quantity of Milk, which being boiled, may make it of the thickneſs of our* Engliſh Frumenty; *and ſome put in ſo much Milk as to make it a little thinner, according as every one likes.* They generally eat it, being made Savory with Salt and Butter, and ſome put Sugar to it. It has all the former Virtues and Effects, beſides it cleanſes the Bowels, and always keeps them Soluble, at leaſt from being Coſtive.

XII. *Bread, Cakes, Puddings. They are made of the Flower, with Water or Milk.* This Bread whilſt New, is wonderful Sweet, beyond any that can be made of *European Wheat*; but being Stale, it eats ſomething harſh, and more unpleaſing: After one is uſed to it, it is then Eaten with a Gratefulneſs to the Stomach. Some make the Bread, *&c.* with half *Flower of Maize, and half Flower of Wheat*; and ſome add to the *Flower of Maize, Eddo Roots boiled ſoft*, which makes the Bread keep moiſt a good while.

XIII. *Parched Corn.* This whether it be of the dryed Corn, or before it is ripe, is much eaten by the *Indians*, becauſe of its eaſie Preparation, and its exceeding Gratefulneſs to the Palate.

XIV. *The Cataplaſm. The Flower mixed with Leven, and brought to a Conſiſtency with Oil of the Seeds* Ricinus *or* Palma Chriſti, *or freſh Butter*; being applyed, is ſaid to ripen Apoſtems.

XV. *The whole Grain.* It is given to Cows, Oxen, Horſes, Hogs, Poultry, *&c.* to Nouriſh and make them Strong, and alſo to Fatten them.

CHAP. DCCXXXV.

Of WHITLOW-GRASS: *OR, NAIL-WORT.*

I. *THE Names.* It is called in Greek Παρωνυχία: in Latin *Paronychia*; and in Engliſh *Whitlow-Graſs*, or *Nail-Wort.*

II. *The Kinds.* There are 1. *Paronychia vulgaris Dodonæi, Paronychia communis folio Alſines Lobelij, Lugdunenſis, & Camerarij; Thlaſpios minima ſpecies Thalij; Myoſoris altera ſpecies Lugdunenſis; Burſa Paſtoris loculo oblongo Bauhini*; Our Common Whitlow-Graſs. 2. *Paronychia folio rutaceo Lobelij*; *Paronychia folijs inciſis, Paronychia altera Dodonæi*; *Paronychia tertia Tabernæmontani*; Jagged, or Rue like Whitlow-Graſs. 3. *Paronychia major*; *Piloſella Siliquata major Thalij*; *Aizoon Telephium Delechampij Lugdunenſi*; The Greater Whitlow-Graſs. 4. *Paronychia altera minor, Piloſella Siliquata minor Thalij*; *Paronychia altera folijs Myagri Geſneri*; The Leſſer Whitlow-Graſs.

The Deſcriptions.

III. The firſt, or our Common Whitlow-Graſs. *Its Root conſiſts of a Bunch of ſmall* Fibres; *from whence proceed many ſmall and long Leaves lying next to the* Ground, *ſomewhat like to thoſe of* Chickweed, *but ſomething longer and whiter; from among which, ſeveral ſlender naked Stalks, not above* 4, 5, *or* 6 *Inches high, bearing many white Flowers one above another, exceeding ſmall; after which, come ſmall flat Pouches, leſſer than any of* Thlaſpi; *in which is contained very ſmall Seed, of a ſharp Taſte.*

IV. The ſecond, or Jagged, or Rue-like Whitlow-Graſs. *Its Root is ſmall and Fibrous like the former, which ſends forth ſome pale or reddiſh green Leaves, cut in on the edges into* 2 *or* 3 *ſmall parts, almoſt in faſhion like to the Leaves of* Rue; *from among which, grow up divers almoſt*

Whitlow-Graſs *Common.*

VVhitlow-Graſs *Common.*

Whitlow-Grafs Jagged.

moſt naked Stalks, each ſpread out into ſeveral Branches, all of which, have at every Joint, one ſingle but ſmaller Leaf, much like the former; which Stalks towards the tops, bend a little downwards, with ſome white Flowers at the tops, greater than the former, and Husks which hold the Seed, which is greater alſo.

V. The third, or Greater Whitlow-Grafs. *This from a ſmall Fibrous Root, has very many Leaves ſpringing forth, and lying on the Ground in a round Compaſs, one by another, about 3 Inches long, and an Inch broad apiece; rough, hairy, of a dark green color, and a little dented about the edges, growing on ſhort Footſtalks; from the middle of which, riſe up one or two, rarely three, ſmall round naked Stalks, with few, or rather no Leaves thereon, ſo weak as ſcarcely to ſtand upright, but bending downwards; at their tops come forth ſeveral ſmall white Flowers, after which, come ſmall long* Pods, *containing ſmall reddiſh Seed, but nothing ſo hot or ſharp as the Seed of the firſt.*

VI. The fourth, or Leſſer Whitlow-Grafs. *It has a Root which is ſmall, hard and woody; the Plant is ſmaller than the former, having divers Leaves lying on the Ground, leſſer than the Greater aforegoing, like unto the leſſer* Mouſe-Ear, *called* Cats-Foot, *but not ſo hoary, yet a little hairy, of a yellowiſh green color; from among which, grow up ſeveral ſmall, ſtrait, and creſted Stalks, 6 Inches or more high, branching forth at the tops, where come forth ſeveral white Flowers, after which follow very ſlender long* Pods, *like thoſe of* Flixweed, *full of ſmall reddiſh Seed, as ſharp and hot in Taſte as* Creſſes.

VII. *The Places.* The two firſt are often found to grow upon Brick and Stone Walls, and upon old Tiled Houſes which are come to have much Moſs upon them; and ſometimes they are found growing upon ſhadowy and dry Mud Walls. The two laſt are found growing upon Open Hills, and other like dry Grounds.

VIII. *The Times.* They Flower very early in the Spring, ſometimes in *January* and *February*, if the Weather be mild; for about the end of *April*, when the Weather begins to grow warm, they dye away, and are no more to be ſeen all the Year after.

IX. *The Qualities.* They are all of them hot and dry in the third or fourth degree, Attractive and Suppurative.

X. *The Preparations.* You may make, 1. *A Balſam or Ointment of the whole Herb.* 2. *A Cataplaſm thereof.*

The Virtues.

XI. *The Balſam, Ointment or Cataplaſm*, are applyed to thoſe Apoſtems at the Fingers ends, called *Felons*, and by the Roots of the Nails called *Whitlows*, which it is ſaid they effectually cure.

CHAP. DCCXXXVI.

Of WHORTLE-BERRIES:

OR,

BILLBERRIES *Heath* and *Marſh.*

I. *THE Names.* It is called in Greek Ἀμπελος Ἰδαία: in Latine *Vitis Idæa*; i. e. *exparte Idæa quam vocant Phalacras*; *Vitis Idæa Theophraſti*: in Latine *Vaccinia*, *Vaccinium Frutex*; and in Engliſh *Whorts*, *Whortle-Berries*, and *Bilberries*.

II. *The Kinds.* Authors make 9 or 10 Species of them, or more; we ſhall deſcribe thoſe only which are moſt known and common to us, which are the four following, *viz.* 1. *Myrtillus exiguus Lugdunenſis, Matthioli, & Tragi*; (but certainly it is no Myrtle, nor Species of a Myrtle.) *Vitis Idæa vulgaris baccis nigris, Camerarij, Cluſij, & Geſneri*; (but it is not the *Vitis Idæa* which bears *Currans*, for that Noble Vine grows not on ſo high, or Snowy Mountains, but in the Plains and Open Hills, being a Cultivated Vine.) *Vaccinia nigra, Dodonæi & Lobelij*; *Bagolæ primum genus Cæſalpini*; Our Common Black Whorts or Bilberries. 2. *Vitis Idæa rubra* (by all Writers thereof) *Vitis Idæa ſolijs buxeis Cluſij*, *Radix Idæa fructu rubro Anguilaræ*, (as he called the other *Radix Idæa fructu nigro*:) *Radix Idæa Dioſcoridis Lugdunenſi*; and *Vaccinia rubra* by almoſt all Authors; Our Red Whorts, or Bilberries with Box-Leaves. 3. *Vitis Idæa tertia Cluſij*; *Myrtomalis, Petromelis, Pyrus Cervina, Pyraſter Idæa Geſneri*, Sweet Whorts or Bilberries. 4. *Vaccinia paluſtria Dodonæi & Lobelij*; *Acinnaria paluſtris Geſneri in hortis*; *Oxycoccum Cordi Vitis Idæa paluſtris Bauhini*; *Vitis Idæa tertia Cluſij*; *Vaccinium paluſtre*; Marſh Whorts, or Bilberries.

The Deſcriptions.

III. The firſt, or Our Common Black Whorts, or Bilberries. *Its Root grows aſlope under Ground, ſhooting forth in ſeveral places as it runs. It is a ſmall Buſh, which creeps as it were upon the Ground, ſcarce riſing a Foot and half high, with ſeveral ſmall dark green Leaves, ſet on the green Branches, which it ſpreads abroad on both ſides,*

but

but not always one against another, somewhat like unto the smaller Myrtle Leaves, *yet not so hard, and a little dented about the edges. At the Foot of the Leaves come forth small, hollow, pale, blush colored Flowers, the Brims ending in five points, with a reddish Thread in the middle, which pass into small round Berries, of the bigness and color of* Juniper-Berries, *but full of a purple Sweetish sharp, or sowre Juice, which does give a sad purplish color to their Hands and Lips who handle and eat them, if breaking them, containing within them several small Seeds. This abides all Winter, but looses its Leaves.*

VVhortle-Berries: OR, *Billberries Black.*

IV. The second, or our Red Whorts, or Billberries. *Its Root runs under Ground like the former, and rises up to a small Bush in the same manner, but has harder Leaves, in form and shape almost like to those of the* Box-Tree, *green and round pointed, standing on its several Branches, at the tops whereof only, and not from the sides (as in the former) come forth several round, and somewhat long hollow* Flowers, *of a pale red color. After which, succeed round reddish sappy Berries, when they are ripe, of an acid Astringent Taste. Its Leaves fall not away (as the former do) in Winter.*

V. The third, or Sweet Whorts, or Billberries, (which some call *French* Whortle-berries.) *This rises up with several thick, smooth, woody Stems or Stalks, to* 5, 6, *or* 7 *Feet high, their lower parts being something rough, and covered with a blackish Bark, the upper Branches being green, stored with many Leaves thereon, set without order, which are somewhat long with their roundness, and a little dented about the edges, of a sad green color above, and very hoary underneath. At the Joints with the Leaves, come forth many white Flowers, consisting of five Leaves apiece; after which, come small round Berries, somewhat bigger than* Haws *of the* Haw-Thorn, *and black when they are ripe, having a small Crown as it were of five small points, and are sappy, of a sweet Taste, containing blackish Seed within them.*

VVhortle-Berries: OR, *Billberries Sweet.*

Whortle-Berries, or *Bilberries Marsh.*

VI. The

VI. The fourth, or Marſh-Whorts, or Billberries. *Its Root is long and white, running aſlope under the Earth, and not down right; whence ſpring up ſeveral ſlender browniſh Branches, like unto Strings, ſcarcely exceeding a Foot in length, creeping upon the Ground, beſet with many ſmall Leaves like unto thoſe of* Thyme, *at certain diſtances, green on the upperſide, and oftentimes hoary underneath. The Flowers come forth at the tops, growing upon long threddy Footſtalks, conſiſting of five reddiſh Leaves, with an Umbone or Pointle in the middle, which turn into round reddiſh Berries, having a ſowriſh Aſtringent Taſte.*

VII. *The Places.* The firſt grows on many Heaths, and in Woods, and on Barren Hilly places in many parts of *England*. It has been found on *Hampſtead-Heath*, *Finchley-Common*, and St. *Johns Wood*, not far from *London*. It proſpers beſt in a Lean Barren Soil, and in Untill'd Woody places; and are now and then found on high Hills ſubject to the Wind, and upon Mountains. They grow in many other parts of *England*, as on the Hills in *Cheſhire*, called *Broxen-Hills*, near *Beeſton-Caſtle*; and ſeveral other places. The ſecond in the North-parts of this Land, as in *Lancaſhire* and *Yorkſhire*; on the Hills in *Lancaſhire*, upon *Pendle-Hills*; and in *Weſtmoreland*, at *Crosby Ravenſwaith*, &c. The third grows as *Lobel* ſays, on every Hill in *Provence*; and ſome ſay they have found it growing in the Southern part of our Iſland. The fourth grows only in Mooriſh places, which are often covered over with Moſs; in Bogs, Watery and Fenny places, eſpecially in *Cheſhire* and *Staffordſhire*, where it is found in great plenty.

VIII. *The Times.* The firſt three Flower in *March* and *April*, and ſometimes in *May*, and the Fruit of the Black is ripe in *June* and *July*, but of the other two later. The *Marſh* kind Flower in *July*, and their Fruit is ripe in *Auguſt*.

IX. *The Qualities.* The Berries of them all are cold and dry in the ſecond degree, Aſtringent, and Anti-Emmenagogick.

X. *The Specification.* The Juice of the Berries ſtop Womens Courſes, and all ſorts of Bleedings; and are good againſt all Fluxes of the Belly. It quenches Thirſt, ſtops Vomiting, extinguiſhes the heat of Burning Fevers; ſtops Coughs; and is good againſt a *Phthiſis*, and other Diſeaſes of the Lungs.

XI. *The Preparations.* You may have, 1. *The ripe Berries.* 2. *A* Rob, *or Syrup of their Juice.* 3. *A Conſerve.* 4. *A Purple Blew Dye.* 5. *A Crimſon color or Dye.*

The Virtues.

XII. *The ripe Berries.* The Black Whorts are eaten in the Countries where they grow, with Cream or Milk, and ſometimes with Wine, as we eat *Strawberries*, and ſo they cool and refreſh the Stomach, ſtop Vomiting, allay the heat of Choler, and bind the Belly.

XIII. *The Rob, or Syrup.* They are good againſt the Heat of burning Fevers, cool a hot Stomach and Liver, reſiſt Vomiting and Nauſeouſnes, quench Thirſt, are good againſt the Bloody-Flux, and ſtop all other Fluxes of the Belly, as alſo Cholerick Fluxes in particular; and are good to cure all inward Fluxes of Blood, as Spitting and Vomiting Blood, Piſſing Blood, Bloody Stools, or Hepatick Flux; the overflowing of the Loches, as alſo of the Terms in Women, *&c.* and are profitable for ſuch as are troubled with an old Cough, and Obſtructions of the Lungs; and are ſaid to be good againſt a *Phthiſis*, or an Ulceration of that Bowel.

XIV. *The Conſerve of the Berries.* It has all the Virtues of the Rob and Syrup, and may be given Morning, Noon and Night, to the quantity of a large Cheſtnut.

XV. *The Purple color'd Dye.* *Tragus* ſays, that the Country People *take a Pot full of the Juice of the black Berries ſtrained, into which they put* 4 *Spoonfuls of good Wine Vinegar*; *an Ounce of Alum, and a quarter of an Ounce of Copper Filings, or Forgings, or Scales of Copper*; *which they boil altogether, and make a Dye thereof.* Into this Dye or Liquor, they put Cloth, Wool, Thread, Yarn, *&c.* letting them lye in it for a good while, which afterwards they take out and dry, and then waſh them with cold Water, ſo will they have a *Turky Blew color*; and if they would have it deeper, they put into it an *Ounce of broken Gauls.* Alſo with the *Juice of the Berries*, Painters color Cards, Paper, Maps of Countries, of a Purple blew color, putting thereto ſome *Alum and Gauls*, by which they make it lighter or deeper, as they pleaſe.

XVI. *The Crimſon Dye. It is made of the Juice of the* Red Whortle-berry, *by adding thereto a little Alum.* The Juice of theſe Red Whortle-berries, when of an excellent red color, and the Berries are full of Juice, is of ſo Orient and Beautiful a Purple to Limne withal, that *Indian Lacca* is not to be compared to it; eſpecially when this Juice is prepared with Alum according to Art, as I my ſelf (ſays my Author) have proved by Experience.

CHAP. DCCXXXVII.

Of WILLIAMS *and* JOHNS *Sweet, Garden* and *Wild.*

1. *THE Names.* They have no known *Greek* Name, but are called by this general Name in *Latin*, *Armerius:* Of ſome *Superba*, and *Caryophilius Sylveſtris*: In Engliſh, *ſweet Williams* and *ſweet Johns.*

II. *The Kinds.* They are either *Latifolius*, broad Leav'd, which are called *Sweet Williams*; or *Anguſtifolius*, narrow Leav'd, which are called *Sweet Johns.* Of theſe there are theſe following Varieties, *viz.* 1. *Armerius latifolius ſimplex flore albo*, ſingle white Sweet Williams. 2. *Armerius latifolius ſimplex flore rubro*, ſingle red Sweet Williams. 3. *Armerius latifolius ſimplex verſicolor, ſive Variegatus*, ſingle ſpeckled Sweet Williams, or London Pride. 4. *Armerius latifolius ſimplex flore rubro ſaturo holaſericeo*, ſingle deep red, or Murry colored Sweet Williams, or Velvet Williams. 5. *Armerius latifolius flore rubro multiplici*, double red Sweet Williams. 6. *Armerius Anguſtifolius rubens ſimplex*, ſingle red Sweet Johns, or ſingle red narrow leav'd Sweet Williams. 7. *Armerius anguſtifolius albus ſimplex*, ſingle white Sweet Johns, or narrow leav'd white Sweet Williams. 8. *Armerius anguſtifolius duplex*, double Sweet Johns, or double narrow leav'd Sweet Williams. *Gerard* ſays, that doubtleſs Sweet Williams are a kind of wild Gilliflower.

The Deſcriptions.

III. The firſt or ſingle white Sweet Williams. *From a ſmall Fibrous Root, ſpring up many long trailing or weak Stalks, with Leaves lying on the Ground, broader than thoſe of the Sweet Johns, of a freſh green color, the Leaves not being Brown at all; at the tops of the Stalks or Branches, are tufts of ſingle white Flowers, growing pretty thick and cloſe together, and in good numbers, having many ſmall pointed Leaves among them.*

IV. The ſecond, or ſingle red Sweet Williams. *They all of them ſpread into many trailing Branches, with long broad Leaves lying upon the Ground, in the ſame manner that the Sweet Johns following do. The chief differences between them are, that theſe have broader and darker green Leaves, ſomewhat browniſh, eſpecially towards the points; and that the Flowers ſtand thicker and cloſer, and a great many more in number together in the Head or Tuft, having ſmall pointed Leaves among them, but with prickles unhurtful. The color of the Flower is of a deep red, without any mixture or ſpot at all.*

Williams Sweet Red.

V. The third, or ſingle ſpeckled Sweet Williams, or London Pride. *The Roots are ſome long, and ſome ſmall and thready, running under the uppermoſt cruſt of the Earth. Theſe ſpotted Williams are very like the former red Williams, in their form and manner of growing, having Leaves as broad and brown, ſometimes as they: The Flowers ſtand as thick or thicker, claſtering together, but of very variable colors; for ſome Flowers will be of a fine delayed Red, with a few marks or ſpots upon them, others will be full ſpeckled or ſprinkled, with white or Silver ſpots, circlewiſe about the middle of the Flowers: And ſome will have many ſpecks or ſpots diſperſed upon them. All theſe Flowers do not blow at one time, but ſome will be flowering, when others are decaying: ſo that abiding long in their Pride, they become Flowers of ſome value and reſpect. The Seed is black, as is all the reſt, and not to be diſtinguiſhed one kind from another.*

VI. The fourth, or ſingle deep red, or Murry color'd Sweet Williams, or Velvet William. *The Leaves of this ſeem to be a little larger, and the Joints a little redder than the former; but in the Flower conſiſts the chief difference, which is of a deep red, or Murry Purple color, like unto Velvet of that color, without any ſpots, but ſmooth and ſoft as Velvet in handling, having an Eye or Circle in the middle at the bottom of the Leaves.*

VII. The fifth, or double red Sweet Williams. *This double kind differs nothing from the ſingle kind, of the ſame color (at* Sect. IV. *aforegoing) but in the duplicity, or doubleneſs of the Flowers, which are with two rows of Leaves in every Flower.*

VIII. The ſixth, or ſingle red Sweet Johns, or ſingle red narrow Leav'd Sweet Williams. *Its Root is diſperſed ſeveral ways, with many ſmall Fibres adjoining to it. Its Leaves are broader, ſhorter and greener, than any of the Gilliflowers, but narrower than the Sweet Williams afore deſcribed, ſet by pairs at the Joints of the Stalks, which are ſhorter than moſt of the Gilliflowers, or Pinks, and not above a foot and a half high. At the tops whereof grow many ſmall Flowers, like unto ſmall Pinks, but ſtanding cloſer together, and in ſhorter boſe or husks, conſiſting of 5 Leaves, ſmaller than moſt of the Pinks, and more deeply jagged than the Williams; of a red color in the middle, and white*

Johns *White* and *Red Double.*

Belonging to Sect. 10.

at the edges, having but a ſmall ſcent or ſmell, and not all flowering at once, but by degrees. The Seed is black, ſomething like to the Seed of Pinks.

IX. The ſeventh, or ſingle white Sweet Johns, or ſingle white narrow Leav'd Sweet Williams. *This differs not in any thing from the former, but only that its Leaves do never change browniſh, and that the Flower is of a fair white color, without any mixture.*

X. The Eighth, or double Sweet Johns, or double narrow Leav'd Sweet Williams. *Theſe double Johns are both of the red kind, and of the white kind, and in their form and manner of growing, are exactly like the ſingle red and white kinds, there being no difference between them, but in the duplicity of the Flowers, ſome conſiſting of two rows of Leaves, and ſome of three, the edges of which Leaves of the Flowers are not ſo deeply jagged, as are the ſingle kinds.*

XI. *The Places.* Theſe grow wild for the moſt part in *Italy*, and other warmer Climates; but they are only Nurſt up in *Gardens* with us, for their Beautiful variety.

XII. *The Times.* They flouriſh or bring forth their Flowers in *April* or *May*, before the *Gilliflowers* and *Pinks*, and bear their Flowers a great part of the *Summer*, their Seed being ripe in *June* and *July*. They are hardy Plants, and will endure the extremity of our Coldeſt VVinters.

XIII. *Nota.* From the ſowing of their Seed many pretty Varieties are raiſed; but every ſlip of them ſet in the Spring, will grow and abide the Winter. The *Velvet Williams*, and the *Double Johns*, are worthy the reſpect of the greateſt Ladies, who are Lovers of Flowers. They who have room enough, and are pleaſed with, may by ſowing their Seeds, have great and fine Diverſities, even of double Flowers.

XIV. As to their *Qualities*, *Specifications*, *Preparations*, or *Virtues*, Authors have ſaid nothing, and having Experimented nothing concerning them, we are Silent. Their great uſe with us in *England* is, to entertain them as an Ornament to our Gardens, for their Variety and Beauty ſake.

WILLIAMS *Wild*:
OR,
CROW-FLOWER.

XV. *The Names.* It is called in Latin, *Armeria Armeracia*, *Armoraria Sylveſtris*, *Armerius flos primus Dodonæi*, *Tunix*, *Cariophyllus minor Sylveſtris foliis latioribus*, *Flos Cuculi*, *Flos Cornicis*: In Engliſh, *Wild Williams Crow-Flowers*, and *Marſh Gilliflowers.*

XVI. *The Kinds.* *Gerard* ſays theſe are a *Species* of the *Gilliflowers*, or of the *Sweet Williams*, and are taken by ſome to be the true *Flos Cuculi*; but he eſteems it to be a kind of *Wild Gilliflower*: Of theſe we have, 1. The *Male Wild William*, or *Crow-Flower*. 2. The *Female Wild William*, or *Crow-Flower*. 3. The *Double Wild William*, or *Crow-Flower.*

The Deſcriptions.

XVII. The Firſt, or Male Wild William, or Crow-Flower. *It has Stalks of 9, 10, or 12, Inches high, with Leaves thereon by couples at every Joint, which are ſmall and bluntly pointed, very rough and hairy. The Flowers are at the tops of the Stalks many in one Tuft, finely and carefully ſnipt on the Edges, leſſer than thoſe of Gilliflowers, but well reſembling Sweet Williams, which are of a light Red or Scarlet color.*

WILLIAMS Wild:
OR,
Crow-Flower.

XVIII. The Second, or Female Wild William, or Crow-Flower. *It differs not from the former Male, but in its Magnitude this being leſſer, and the Flowers more finely jagged, like the feathered Pinks, of which this is ſaid to be a kind.*

XIX. The Third, or Double Wild Williams, or Crow-Flower. *This differs nothing from the firſt Crow-Flower, ſaving that that is ſingle Flowered, whereas this is double flowered, having many fair double Flowers.*

XX. *The Places.* They grow all about in *Meadows* and *Paſtures*, and in low *Moiſt Grounds:* but the double kind has been brought into *Gardens*, where it grows very fair and pleaſant; I ſuppoſe from the goodneſs of the Soil.

XXI. *The Times.* They begin to flower in *May*, and continue flowering till towards the latter end of *June.*

XXII. *Of their Virtues.* Authors are ſilent; they only ſerve as Ornaments for Gardens, Walks, Houſes, and other places.

CHAP. DCCXXXVIII.

of WIND-FLOWERS:

OR,

ANEMONES.

I. *THE Names.* This Plant is called in Greek Ἀνεμώνη, ἀπὸ τῦ ἄνεμος, *quaſi Herba Venti:* in Latin *Anemòne*; alſo *Herba Venti*, and *Flos Venti*; and in Engliſh we call them *Anemones* and *Wind-Flowers.*

We have already in *Chap.* 13. and 14. of this Work aforegoing, briefly diſcourſed of the *Garden and Wild Kinds* of this Plant, not then intending to make this our Herbal a *Florilegium*; but afterwards upon ſecond Thoughts, conſidering how acceptable it might be to *Florilegiſts*, to *Perſons of Quality*, *Gentlemen and Ladies*, whoſe Curioſity might lead them that way, and were very inclinable and Induſtrious in improving themſelves in the *Knowledge and Culture of Flowers*, we then reſolved to make it as uſeful to them as we could; and therefore in all the following Diſcourſes, where we have treated of *Flowers*, we have been very careful to give the Curious and Induſtrious that way, if not a plenary Satisfaction; yet ſuch an *Introduction to the Knowledge and Culture of them*, as we hope may gratifie all the Lovers of thoſe admirable Curioſities. And ſo in order to the ſame Reſolutions, ſeeing we had been ſo brief in the ſaid *Chap.* 13. *and* 14. under the Title of *Anemones*, we ſhall now plentifully ſupply here, what we were defective in there.

II. *The Kinds.* There are 1. *The Wild Kinds*, of which we have already treated in *Chap.* 14. and *Chap.* 543. aforegoing, of which we ſhall ſay no more. 2. *The Garden or Manured Kinds*, of which we ſhall treat more fully in this Chapter, and they are, 1. *Anemone latifolia flore ſimplici*, Broad Leav'd Anemone Single Flower'd. 2. *Anemone latifolia flore multiplici, ſive flore pleno*, Broad Leav'd Anemone double Flower'd. 3. *Anemone tenuifolia flore ſimplici*, Narrow Leav'd Anemone Single Flower'd. 4. *Anemone tenuifolia flore duplici, vel flore pleno*, Narrow Leav'd Anemone double Flower'd; of all which in order. Of each of theſe principal kinds, there are a great number of Varieties, too many to be ſpecified in this *Section*; and therefore avoiding that trouble here, we will give you their ſeveral and various, or particular Appellations in Courſe, as they ſhall be Deſcribed.

The Deſcriptions.

I. Of Broad Leav'd Single *ANEMONES.*

III. 1. *Anemone latifolia flore ſimplici*; Broad Leav'd Anemones with Single Flowers. Its Root is tuberous, with ſome Fibres adjoining to it. Its Flowers are all Single, with one row of Leaves, and a hairy Head in the middle, of a color differing from that of the Leaves. It is of divers ſorts and colors, ſome bigger, others leſſer, ſome taller, others lower; and the Flowers are of divers Reds, Purples, Scarlets, deeper or paler, even to *Pink*, or *Peach* color, white, Silver, or *aſh* color; ſome

Wind-Flower *Garden Single.*

of the beſt ſorts of which, are kept by *Floriſts* for their Seed ſake, from whence many diverſities are raiſed, and ſome Double Flowers as well as Single; and of differing colors, as well plain as ſtriped. In all theſe Single Flowers, and ſome of thoſe leſs Double, than the Double kinds, the Head in the middle, after the Flowers are fallen, grows bigger and full of Down, in which the Seed is encloſed, which muſt be carefully gathered as ſoon as it is ripe, elſe it will be all blown away with the Wind. Theſe Single kinds are to be Sown and ordered after the ſame manner as thoſe with the narrow Leaves.

IV. 2. *Anemone latifolia flore luteo ſimplici Hortenſis:* The Garden broad Leav'd Single yellow *Anemone*, or Wind-Flower. Its Root grows downward into the Ground, diverſly ſpread with Branches here and there, of a browniſh yellow on the outſide, and whitiſh within, ſo brittle that it can hardly be touch'd without breaking. It has divers broad round Leaves, ſomewhat divided, and indented withal on the edges, browniſh at the firſt riſing out of the Ground, and almoſt folded together; and after, of a ſad green on the upperſide, and reddiſh underneath. Among which, riſe up ſmall ſlender Stalks, beſet at their middle with two or three Leaves, more cut and divided than thoſe below, with ſmall yellow Flowers at their tops, conſiſting of ten or twelve Leaves apiece, having a few yellow Threads in the middle, ſtanding round a ſmall green Head, which in time growing ripe, contains ſmall flat Seed, encloſed in a ſoft Wooll or Down, which is eaſily blown away with the Wind.

V. 2. *Ane-*

V. 3. *Anemone latifolia Purpurea Stellata*, five *Papavaracea flore ſimplici*; The broad Leaved Single Purple Star *Anemone*, or VVind-Flower. Its tuberous Root is blackiſh on the outſide, and white within, knobby, with many Fibres growing from it. Its firſt Leaves, which always ſpring up before VVinter, (if the Root be not kept too long out of the Ground,) are ſomething like the Leaves of *Sanicle*, or *Self-Heal*; but the reſt which follow, are more deeply cut in or Jagged. Among which, riſe up divers round Stalks, beſet with jagged Leaves, (as all other *Anemones* are,) above which Leaves, the Stalks riſe up about 2 or 3 Inches, bearing one Flower a piece, compoſed of 12 Leaves or more, narrow and pointed, of a bleak Purple, or whitiſh Aſh color, ſomewhat ſhining on the outſide, and of a fine Purple color tending to a Murry, on the inſide, with many blackiſh blew Threads or Thrums in the middle of the Flower, ſet about a Head, in which grows the Seed, which is ſmall and black, incloſed in ſoft VVooll or Down, which flies away with the VVind, carrying the Seed with it, if not carefully gathered.

VI. 4. *Anemone latifolia flore purpurea Stellata altera ſimplici*; another broad Leav'd ſingle Star Flower'd Purple Anemone or VVind-Flower. This differs not from the former in Leaf or Flower, ſaving that this is of a more pale or dull color on the outſide, and of a paler purple color on the inſide.

VII. 5. *Anemone latifolia Viola purpurea flore ſimplici*, broad Leav'd ſingle Violet colored Anemone or VVind-Flower. This has but 8 Leaves, (as many of them which follow have) and is of a Violet Purple color, whence its Name: Of theſe 3 laſt ſorts, there are ſome which differ only in having white bottoms, ſome ſmaller and ſome larger.

VIII. 6. *Anemone latifolia flore ſimplici, purpurea ſtriata*; Broad Leav'd ſingle, purple, ſtriped Anemone, or Wind-Flower. The Purple is the ſame with the former, but a little paler, tending more to redneſs, whoſe Flowers have many white Lines and Stripes thro' the Leaves.

IX. 7. *Anemone latifolia flore ſimplici Carnea vivaciſſima*; Broad Leav'd ſingle Flower'd, freſh bluſh colored Wind-Flower. Its green Leaves are ſomething larger, and ſo is the Flower likewiſe, conſiſting of 8 Leaves, and ſometimes of more, of the color of *Carnation Silk*, ſometimes pale, and ſometimes deeper, with a whitiſh Circle about the bottom of the Leaves; which Circle in ſome is larger, and more to be ſeen than in others, when the Flower lays it ſelf open with the heat of the Sun; having blewiſh Threads in the middle. This may be called the *Carnation Anemone*, or Wind-Flower.

X. 8. *Anemone latifolia flore ſimplici Perſici Violacea*; The broad Leav'd Gredeline color'd ſingle Wind-Flower. This Gredeline color is between a Peach color and a Violet.

XI. 9. *Anemone latifolia flore ſimplici Cochinelle*; Broad Leav'd ſingle Cochinele Wind-Flower. This is of a fine reddiſh Violet, or Purple, or Cochinele color.

XII. 10. *Anemone latifolia flore ſimplici Cardinalis*: Broad Leav'd ſingle Flower'd Cardinal Wind-Flower. It is of a rich Crimſon red color. There is another ſort of it which is deeper, called *Sanguinea*, or *Blood red Anemone*, but it is not of ſo lively a color: And another called *Crameſina*, called the *Crimſon Anemone*, which is of an ordinary Crimſon color.

XIII. 11. *Anemone latifolia flore ſimplici Coccinea*; Broad Leav'd ſingle Stamel colored Wind-Flower. This is near unto a Scarlet color.

XIV. 12. *Anemone latifolia flore ſimplici incarnata*; Broad Leav'd ſingle incarnate Wind-Flower. It is of a fine delay'd red, or Fleſh color. There is another called *Incarnata Hiſpanica*, or Spaniſh Incarnate Wind-Flower, which is of a lively Fleſh color, ſhadowed with yellow: And another called *Rubeſcens*, or *Bluſh Anemone*, of a fair whitiſh red.

XV. 13. *Anemone latifolia flore ſimplici Moſchatella ſtriata*; Broad Leav'd ſingle Nutmeg Wind-Flower. This conſiſts of 8 Leaves of a dark whitiſh color, ſtriped all over with Veins of a fine bluſh color, the bottoms being white.

XVI. 14. *Anemone latifolia flore ſimplici Enfumata*; Broad Leav'd ſingle, ſmoaky Wind-Flower. It is of a pale whitiſh color, tending to gray, and is called *Monks Gray Wind-Flower*.

XVII. 15. *Anemone latifolia flore ſimplici, ſive Pavo major*; The greater Peacock Wind-Flower, or greater ſingle Orange Tawney *Anemone*. Its Leaf is ſomewhat broader than many, or moſt of the *Anemones*, coming near unto the Leaf of the *Great double Orange color'd Anemone*, conſiſting of 8 large or broad Leaves, very near unto the ſame Orange color which is in the Double Flower, but ſomewhat deeper. There is alſo *Pavo minor*, or leſſer Orange Tawney Anemone, whoſe Flower is leſſer.

XVIII. *Nota.* There are beſides theſe expreſſed, ſo great Varieties of mixt colors in the Flowers of this *Broad Leav'd Single kind*, ariſing every Year from Sowing of the Seed of ſome of the choiceſt for that purpoſe, that it is admirable to obſerve as well in the great Variety of Simple colors, where there is but one only, as in the mixture of two or three colors in one Flower; beſides the diverſity of the bottoms of the Flowers, ſome having white or yellowiſh bottoms, ſome having none, and yet both of the ſame color or colors; and likewiſe in the Thrums or Threads in the middle. But the moſt admirable Beauty is in the *Double Flowers*, which ariſe from the Seed of the other *Single ones*, ſome having two or three rows of Leaves in their Flowers; and ſome as thick of Leaves as a *Double Marigold*, or *Double Crow foot*; and of the ſame ſeveral colors as are in the *Single Flowers*; ſo that it would be almoſt impoſſible to expreſs them all ſeverally, ſome falling out to be Double in one Year, which may prove leſs Double or Single in another; yet very many abiding conſtantly Double as at firſt.

II. *Of Broad Leav'd Double Flower'd* ANEMONES.

XIX. 1. *Anemone latifolia maxima verſicolor vulgaris*, *Anemone Chalcedonica maxima verſicolor*. The common broad Leav'd double variable Anemone or Wind-flower, or greateſt double Wnid-flower of *Conſtantinople*, by ſome called the *Spaniſh* Marigold. Its Root is tuberous, large and thick, of a blackiſh color on the outſide and yellowiſh within, not ſhooting out any long ſlender Roots as others do. It ſprings up before Winter, with broader and greener Leaves than any of the former kinds, not ſo much divided or cut in on the edges, yet ſo cut in, as that the edges are folding, ſeldom lying ſmooth and plain, of a freſher green color than many which follow, and a little hard in handling, and therefore called by ſome Hard-Leaf: From among theſe Leaves riſe up one or two Stalks (ſeldom more from one Root) having ſome Leaves about their middles jagged (as all the Anemones have)

have) each Stalk bearing at its top one large Flower apiece, which is large and double; conſiſting of many narrow, long, ſharp pointed Leaves, the outmoſt of which, are broadeſt and greeniſh at firſt, but afterwards reddiſh, with ſome ſtripes of Orange Tawney; the middle Leaves within theſe are ſmaller, and of a red color, or of an Orange Tawney; the innermoſt being ſmalleſt, are wholly of the ſame color, but turned ſomewhat inward, covering the Head or Button, which is uſual in the midſt of the Flowers of moſt of this kind; theſe having no Thrums or Threads in the middle as the former have, nor bearing any Seed.

XX. 2. *Anemone latifolia Chalcedonica altera, ſive Pavo major flore duplici.* The great broad Leav'd double Orange Tawney Wind-flower. The Root of this is like the former, and its large Leaves are ſo like the laſt, that one can hardly diſtinguiſh them aſunder: The Stalk alſo has ſuch like Leaves upon it, bearing at the top a fair large Flower, conſiſting of many Leaves, ſet in two or three of large round pointed Leaves, of a light Scarlet Orange Tawney color. Theſe Leaves ſtand not ſo thick or double as the former, ſeeming to be but one thick row, of many ſmall long Leaves, of an excellent Crimſon color, wherein ſome yellow is mixed, which makes that color we call an Orange Tawny. The bottoms of the Leaves are red, with a whitiſh Circle; the thrummy Head in the middle, being beſet with many dark blackiſh Hairs or Threads. This Flower and the former, are moſt common, and beſt known of all the ſorts of double broad Leav'd Anemones.

XXI. 3. *Anemone latifolia flore pleno coccineo variegata Anemone Cypariſſia*: The broad Leav'd double Anemone, with a Scarlet Flower; the double Cyprus Anemone or Wind-flower. Its Root differs not from either of the former, and has Leaves very like the laſt double Anemone, but not altogether ſo large; the Flower conſiſts of ſmaller Leaves, and of color very near unto the laſt Double Orange Anemone, but thicker of Leaves, full as double as the firſt, altho' not ſo great a Flower, without any head in the middle, or thrums about it, as in the laſt. Mr. *Rea* ſays, that the Stalk is tall, and that it bears a gallant large double Flower, of a rich Scarlet color, and every Leaf thereof finely ſtriped and variegated with white; and that it far ſurpaſſes any of the former.

XXII. 4. *Anemone latifolia Cacumeni Margini, ſive Perſica:* The broad Leav'd double Perſian Wind-flower. It came out of *Perſia* to *Conſtantinople*, and from thence to us. In its Root and Leaf, it is very like to the former double Anemones; only the Flower hereof, is rather like unto the ſecond great double Orange colored Anemone, at Sect. XX. above, uſually called *Pavo major flore pleno*; being compoſed of three rows of Leaves, the outermoſt row conſiſting of 10 or 12 larger Leaves; and thoſe more inward, leſſer and more in number, but all of them variably marked with white, red, and yellow, having their bottoms white. But inſtead of a middle Head with Thrums about it, as the other has; this has a few narrow Leaves, of a deep yellow color in the middle, the Flower ſtanding upright.

XXIII. 5. *Anemone latifolia flore luteo duplici:* The broad Leav'd double yellow Wind-flower. Its Root is Tuberous, and like the Root of the ſingle; and has ſuch broad round Leaves as the ſingle, but ſomewhat larger or ranker. The Stalks are beſet with larger Leaves, more deeply cut in on the edges. The Flowers are of a more pale yellow, with ſome purpliſh Veins on the outſide, and a little round pointed: but they are all on the inſide of a fair yellow color, conſiſting of two rows of Leaves, of which the innermoſt is the narrower, with a ſmall green Head in the middle, encompaſſed with yellow Threads, as in the ſingle. This has little or no Smell, and ſprings up and flowers later than the ſingle kind.

XXIV. 6. *Anemone latifolia flore pleno Coccineo:* The broad Leav'd double Scarlet colored Wind-flower. The Leaves are green, but ſmaller than thoſe of *Pavo major*, at Sect. XX. the Flower is thick and double, conſiſting of many round pointed narrow long Leaves, which are wholly of rich Scarlet color. There is *Coccinea altera*; another of this ſort of double Scarlet Flowers, the Leaves whereof are narrow, ſharp pointed, and of a light Scarlet color. And this is that ſort, which is called *Super-Rich*. There is alſo another which bears double Flowers, almoſt as large as the firſt, which are of the color of *Minium*, or *Red Lead*.

XXV. 7. *Anemone latifolia flore pleno rubro*: The broad Leav'd double red Wind-flower. It has dark green Leaves, and a ſmall double blood-red Flower, conſiſting of many narrow Leaves. And of this kind there is another like unto it, only the Leaves of the Flowers are tipt, and a little edg'd with white.

XXVI. 8. *Anemone latifolia flore pleno purpureo variegata*: The broad Leav'd double purple variegated Wind-flower. It differs from the next following, chiefly in Nobleneſs of the Flower, which is very large, thick, and double, of an excellent reddiſh Purple color; and every Leaf thereof, liſted about with white.

XXVII. 9. *Anemone latifolia flore pleno purpureo*: The broad Leav'd double Purple Wind-flower. It has broader Leaves than the 7*th* aforegoing, and of a browniſh green color. The Flower is ſomething larger, and the Leaves thereof not ſo numerous, but broader, of a Murry Purple color. There are divers ſorts like unto this, which only differ in the color of the Flowers; ſome being deeper, ſome lighter, and ſome of a pale Purple, which by long ſtanding before they fall, almoſt ſeem white.

XXVIII. 10. *Anemone latifolia flore duplici variegata:* The broad Leav'd double variouſly color'd Wind-flower. This is almoſt like to the firſt, at Sect. XIX. aforegoing; but leſſer, whoſe Flowers are very thick and double, ſome being white, or whitiſh, ſome purple, deeper or paler, ſome of a bluſh or fleſh color, and ſome of a reddiſh color tending to Scarlet, or Carnation, with ſeveral other varieties not eaſy to be Named, which all of them continue conſtant in their ſeveral appearances or colors.

III. Of Narrow Leav'd Single *ANEMONES.*

XXIX. The *Single narrow Leav'd Anemo* are of greater rarety, varity and eſteem, than the *Latifolia's*. Formerly we had but few of theſe Flowers, and ſuch as were little worth, but now of late Years we are become Maſters of a great Variety of them, admirable in their kinds, of divers colors, plain, edged, ſtriped or marked, *Reds*, *Scarlets*, *Purples*, *Whites*, *Peach color'd*, *Roſe color'd*, *ſimple and variegated with White.* And ſome others raiſed from the Seeds of theſe, which produce gallant Double Flowers of ſeveral colors, as *Red*, *Scarlet*, *Purple*, &c. both plain and ſtriped, which have more reſembled the Flowers of the *Double Latifolia's*, than thoſe with narrow Leaves; theſe

theſe conſiſting of many ſomething broad Leaves, having no Bruſh or Thrum of Leaves, but a ſmall Head or Button in the middle, ſome having but two rows of Leaves, ſome three, and ſome ſo thick and double, that the Head in the middle is not to be ſeen, until the Flowers fall. And yet theſe kinds, (eſpecially the thinner ſorts) perfect their Seeds, from whence many fine Flowers may be produced. Theſe are called *Hermaphrodites*; for that they partake of both kinds, as having the Roots and Leaves of the Narrow, and the Flowers of the *Broad Leav'd Anemones*.

XXX. In the handling and ordering of the rarer ſorts of theſe excellent Flowers, ſome particular care is to be taken; for if the Soil, Scituation, Time, and *Modus* of Planting and taking up, be not exactly obſerved, the Flowers will neither be fair, nor will the Roots proſper and increaſe; but on the contrary rot and conſume; more eſpecially all the beſt Double kinds with narrow Leaves; but the ordinary, and thoſe with Single Flowers, are more hardy.

XXXI. 1. *Anemone tenuifolia flore ſimplici vulgaris*; The Common Narrow Leav'd Single Wind-Flower. Its Root is much bigger than the Double kind, and apter to increaſe, and the green Leaves are larger, ranker, and more in number than in the Double kinds. The Stalks are tall, and bear plentifully fair large bluſh colored Flowers, commonly conſiſting of one row of broad Leaves, with a hairy Head or Button in the middle; which after the Flowers are paſt, grow big and long, yielding ſtore of ſmall flat brown Seed, involved in Down.

XXXII. 2. *Anemone anguſtifolia, ſive Geranifolia cærulea flore ſimplici:* Narrow Leav'd blew ſingle Flower'd Anemone or Wind-Flower. The Root is blackiſh without, and extends it ſelf in long tuberous pieces, ſomewhat like to thoſe of the *Broad Anemones*. It ſprings not out of the Ground, till the great Winter Froſts be paſt, *viz.* about the middle of *February*, when thin cut Leaves come forth, ſomewhat browniſh at their firſt appearing; but afterwards ſpread out into winged green Leaves, ſomething broader than the reſt which follow, divided into three parts, and each part into three Leaves, every one cut in about the edges, one ſtanding againſt another upon a long ſlender Foot-ſtalk, and the end-Leaf by it ſelf. Among theſe, riſe up two or three green Stalks, garniſhed with ſuch like thin Leaves as are ſet at the bottom; from above which riſe the Flowers, but upon one Stalk, conſiſting of 14 or 15 ſmall pale watchet, or blew Leaves, leſſer than any of the Single Kinds which follow, which encompaſs many whitiſh Threads, and a ſmall green Head in the middle, ſomething like the Head of the *Wild Crowfoot*, in which is contained ſuch like Seed.

XXXIII. 3. *Anemone anguſtifolia flore ſimplici alba*; Narrow Leav'd white Single Flower Anemone. This is a Species of the laſt deſcribed, but with this difference, That the Leaves of this are not brown at their firſt riſing, but green; and that the Flowers in this are white, in that blew.

XXXIV. 4. *Anemone anguſtifolia purpurea vulgaris*; The common narrow Leav'd Single Purple Wind-Flower. Its Root is ſmaller, and more ſpreading every way into ſmall, long, flat, Tuberous parts, than any other kinds of *Single or Double Anemones*. This is one of the moſt common Wind-Flowers, and therefore leaſt regarded; it has many winged Leaves ſtanding upon ſeveral Stalks, cut and divided into divers Leaves, much like unto the Leaves of a *Carrot*. Among which, riſe up Stalks with ſome Leaves thereon, (as is uſual to the whole Family of the *Anemones*, *both Wild and Manured*,) at the tops of which ſtand the Flowers, conſiſting of ſix Leaves commonly, but ſometimes they will have 7 or 8, being very large, and of a perfect Purple Violet color, very fair and lively. The middle Head has many blackiſh Thrums or Threads about it; but I never heard that it was ever found to bear Seed.

XXXV. 5. *Anemone anguſtifolia flore ſimplici, Carnea pallida*: Narrow Leav'd Single, pale Bluſh colored Wind-Flower. This in its Root and Leaf is like the former, but the Flower is nothing ſo large, but is whitiſh tending to a Bluſh color, and of a deeper Bluſh towards the bottom of the Flower, with blackiſh blew Thrums in the middle, never being obſerved to give Seed.

XXXVI. 6. *Anemone tenuifolia flore ſimplici, Carnea virida unguibuſque albis*: Narrow Leav'd Single lively Bluſh colored Wind-Flower, with white bottoms. This is like the laſt in Leaf and Flower, but that the Flower of this is larger, and its Nails or bottoms are white.

XXXVII. 7. *Anemone anguſtifolia flore ſimplici, alba venis purpuris*: Narrow Leav'd Single white Anemone, with Purple Veins. This is a leſſer Flower than the other, and being white, has Purple colored Veins and Stripes running through every Leaf.

XXXVIII. 8. *Anemone tenuifolia Coccinea ſimplex*; thin Leav'd ſingle Scarlet Anemone. Its Root is tuberous, but conſiſting of thicker pieces, ſomewhat like unto the Roots of the *broad Leav'd Anemones*, but ſomewhat brown, and not ſo black, moſt like unto the Root of the *Double Scarlet Anemone*. The Leaves are ſomething like unto the former, but a little broader, and not ſo finely cut and divided; the Flower conſiſts of ſix reaſonable large Leaves, of an excellent bright Red or Scarlet color: the bottoms of the Leaves are large and white, and the Thrums or Threads in the middle, of a blackiſh Purple color.

XXXIX. 9. *Anemone tenuifolia ſimplex Coccinea abſque unguibus*; Narrow, or thin Leav'd ſingle Scarlet colored Wind-Flower. This is very near to the color of the laſt deſcribed, and without any white bottom in its Leaves.

XL. 10. *Anemone tenuifolia ſimplex flore Holoſericeo:* thin Leav'd ſingle Crimſon Velvet VVind-Flower. This has as large a Flower as any of the Single Kinds, and is of an Orient deep red Crimſon Velvet color.

XLI. 11. *Anemone tenuifolia ſimplex flore Sanguinea*; thin Leav'd ſingle Blood red Wind-Flower. This is of a deeper red color than the former, to wit of a deep Blood red. And there is *flore rubra fundo luteo*, another ſort of the Same Blood red, with a yellow bottom.

XLII. 12. *Anemone tenuifolia ſimplex Coccinea dilutior*; thin Leav'd ſingle bright Crimſon colored VVind-Flower. Its Flower has ſome Leaves round pointed, and others ſharp pointed; and it is of a perfect Crimſon color, ſome lighter or more diluted, ſome more red than others.

XLIII. 13. *Anemone tenuifolia ſimplex alba Staminibus purpureis*; thin Leav'd ſingle white Flower'd Anemone. Its Flower is pure white, with blewiſh Purple Thrums in the middle. And there is one of this kind *flore alba venis Carneis*, which has bluſh Veins running through every one of its white Leaves. Alſo another white Flower'd, *unguibus purpureis*, which has the bottoms of all its white Leaves of a purple color.

XLIV. 14. *Anemone tenuifolia ſimplex flore Carnea Hiſpanica*; Thin Leav'd ſingle Spaniſh bluſh VVind-Flower. This has a very great Flower, of a kind

kind of dead, dull, or ſullen bluſh color, but yet pleaſant, with blewiſh Thrums or Threads in the middle.

XLV. 15. *Anemone tenuifolia ſimplex purpuraſcens*; thin Leav'd ſingle pale Purple colored VVind-Flower. This conſiſts of many ſmall narrow Leaves, of a pale Purple or Bluſh color on the outſide, and ſomewhat deeper on the inſide.

XLVI. 16. *Anemone tenuifolia ſimplex Facie Pomi florum*; thin Leav'd ſingle Apple Flower'd Anemone. This in its Root and Leaf is like unto the firſt *Scarlet Anemone*, but its Flower conſiſts of ſeven large Leaves, without any bottoms, of a white color, having edges, and ſome large Stripes alſo of a Carnation or Fleſh color to be ſeen in them, marked ſomewhat like an Apple Bloſſom, and thereupon it is called in Latine, *Anemone tenuifolia ſimplex alba inſtar facie Pomi Florum.*

IV. *Thin or narrow Leav'd double flower'd* ANEMONES.

XLVII. 1. *Anemone tenuifolia flore pleno rubro vulgaris:* Common narrow Leav'd double red Wind-flower. Its Roots are thick and tuberous, ſomething reſembling ſmall Races of Ginger, of a yellowiſh brown color, and neither ſo big nor ſo black, as thoſe of the other kind with broad Leaves. It has many winged Leaves, divided into many and ſeveral Branches, each Leaf being cut and parted into many diviſions, ſmaller, and more divided than thoſe of Parſly, and ſome of them like thoſe of a Carrot. Among which riſes up one, two, or more Stalks, according to the bigneſs of the Root, with ſome ſmall green Leaves about the middle of each of them, and bearing at the top, one great double Flower, conſiſting of 6 or 7, and ſometimes of more, broad outer Leaves, of a deep red color, having in the middle a large Thrum of ſmall Leaves, of a lighter and much paler red color. Out of the middle of which, comes many larger and broader Leaves, of a lighter red than the outward Leaves, and deeper than thoſe of the Thrum, which warmed by the Sun, ſpread themſelves over it.

XLVIII. 2. *Anemone tenuifolia flore Coccineo pleno vulgaris:* Common narrow Leav'd double Scarlet VVind-flower. Its Root is tuberous and thick, very like to the Root of ſingle Scarlet Anemone: And its Leaves are very like to the ſame, but not ſo ſmall cut and divided, as that with the purple Flower. The Flower when it firſt opens it ſelf, conſiſts of 6, and ſometimes of 7 or 8 broad Leaves, of a deep red, or excellent Scarlet color, the middle head being thick cloſed, and of a greeniſh color, which after the Flower has ſtood blown ſome time, does gather colors, and opens it ſelf into many ſmall Leaves, very thick, of a more pale red color, and more *Stamel* like than the Leaves.

XLIX. 3. *Anemone tenuifolia flore pleno verſicolor:* The narrow Leav'd double variable Wind-flower, or double Apple-bloſſom. It is in all things like the firſt (*at* Sect. 47.) but only in the color of the Flowers, which in this, will be of a pale bluſh color, the tops of the Leaves almoſt white, and the bottoms Peach color. And ſometimes the Flower will be red like the firſt, but ſtriped and variegated, with pale bluſh, almoſt white, and ſometimes without any marking at all. All theſe diverſities are found in this one kind, all proceeding from one Root.

L. 4. *Anemone tenuifolia flore Coccineo ſaturo pleno*: The Double Carnation Velvet Wind-Flower. Its Flower is of a deep Orange Tawney Crimſon, near unto the color of the outer Leaves of the *French or African Marigold*, and not differing from the next following in any thing elſe.

LI. 5. *Anemone tenuifolia flore Coccineo pleno variegata:* the Parti-colored Double Crimſon Wind-Flower. This varies not neither in its Root, Leaf, or form of its Flower, from the ſecond at (*Sect.* XLVIII.) but in the color, in that this will have ſometimes the outer broad Leaves parti-colored, with whitiſh or bluſh colored great Streaks in the red Leaves both inſide and outſide; as alſo divers of the middle or inner Leaves, ſtriped in the ſame manner. Its Root gives fairer Flowers in ſome Years than in others; and ſometimes gives Flowers all red again.

LII. 6. *Anemone tenuifolia Elegantior flore pleno rubro.* Narrow Leav'd more Elegant Double red Wind-Flower. Its Root is as great and thick as that of the *Common Red*, but flatter, and more ſpreading than it. It has narrower and more divided Leaves than any of the former; the Stalk is taller, and the outer Leaves of the Flower more in number, and ſharper pointed, of a good Crimſon color; the Thrum in the middle is of a pale red, out of whoſe middle comes other Leaves, large and ſpreading themſelves almoſt quite over the Flower, of a deeper color than the Thrum. Many times two Flowers will be joined together on one Stalk, which happens more frequently than in any other.

LIII. 7. *Anemone tenuifolia flore pleno ſuave rubente:* The Greater Double Bluſh Wind-Flower. There is almoſt no difference in the Roots or Leaves of this, from the *Common Double Scarlet Anemone*, (at *Sect.* XLVIII.) ſaving that the Leaves hereof are a little broader, and ſeem to be of a little freſher green color. The Flower of this is as large almoſt, and as double; and the inner Leaves likewiſe almoſt as large as they, being of a whitiſh or fleſh color at their firſt opening; but afterwards become of a moſt lively bluſh color: the bottoms of the Leaves abiding of a deeper bluſh; and with long ſtanding, the tops of the Leaves will turn almoſt white again.

LIV. 8. *Anemone tenuifolia flore pleno Coccineo.* Narrow leav'd double Scarlet Anemone, or Wind-Flower. This is like that at *Sect.* LII. above, but that the Stalks grow not ſo high, and the Flowers are ſomething ſmaller, which are thick and double, and of an excellent rich Scarlet color, uſually called the *Incarnadine de Spain.*

LV. 9. *Anemone tenuifolia flore pleno Coccineo variegata coma albeſcente*: Narrow leav'd double Scarlet variegated Wind-Flower, with a whitiſh middle or thrum. This is in all things like the laſt, but only in the color of the Flower, which in this is of the ſame Scarlet color, but finely ſtriped and marked with white; and the Thrum ſeeming to be almoſt all white. Sometimes alſo, the broader Leaves will come out of the middle thereof, of a bright Scarlet ſtriped with white, like unto the outer leaves.

LVI. 10. *Anemone tenuifolia flore pleno coma Scarlato:* Narrow leav'd double Scarlet thrumed Wind-flower. This differs from the laſt, in that the outer leaves hereof are white, and the Thrum is of a Scarlet color.

LVII. 11. *Anemone tenuifolia flore pleno, dicta Nacara:* Narrow leav'd double VVind-flower, called Nacara. This is like unto the Scarlet; ſaving that the Flower is of a deeper and yellower Scarlet color, reſembling that of the leſſer *French*,

or

or *African Marigold*, but not ſo deep: the Thrum is inclining to an Orange color.

LVIII. 12. *Anemone flore pleno Sulphureo:* Narrow leav'd double Sulphur colored Wind-flower. This differs from the laſt, in that the outer leaves of the Flower are of a pale greeniſh yellow, or Brimſtone-like color; and the Thrum more green.

LIX. 13. *Anemone tenuifolia flore pleno viridante:* Narrow leav'd double green Wind-flower. This is like the laſt, ſaving that the outer leaves are of a greeniſh Orange tawney color, and the middle Thrum of a yellowiſh green.

LX. 14. *Anemone tenuifolia flore pleno albo majore*; Greater narrow leav'd double white Wind-flower. This differs little either in the green leaves, or faſhion of the Flower, from the former; being as large and double as any of them, and of a Milk white color.

LXI. 15. *Anemone tenuifolia flore pleno albo maxima:* the Greateſt Narrow leav'd double white VVind-flower. This in faſhion is like the firſt, but much larger, and fairer, and of a pure white color.

LXII. 16. *Anemone tenuifolia flore pleno albo minor:* The leſſer narrow leav'd double white Wind-Flower. It bears a ſmall double Snow white Flower, having ſix outer leaves, and a thrum in the middle made of ſmall hairy leaves, ſtanding even at the top, as if they had been clipt with a pair of Sciſſars.

LXIII. 17. *Anemone tenuifolia flore pleno albicante:* Narrow leav'd double bluſh Wind-flower. This differs very little from the laſt, but only in the color of the Flower; for they are both much about the ſame bigneſs; the middle Thrum likewiſe being as ſmall and ſhort, and as even above, as if it was ſhorn ſo; only the Flower at firſt opening is almoſt white; but afterwards the outer leaves have a more ſhew of bluſh in them, and the middle part a little deeper than they.

LXIV. 18. *Anemone tenuifolia flore pleno purpureo Violaceo:* Narrow leav'd double Purple VVind-flower. This double *Purple Anemone*, is of the ſame kindred with the *Double Scarlet*, at *Sect.* XLVIII. aforegoing, having the ſame form and doubleneſs of the Flower, conſiſting but of ſix or ſeven leaves at the moſt (in our Country, tho' in the hotter Climates, it has 10, 12, or more as large leaves) for the outer Border, and as large ſmall leaves for the inner and middle alſo, and almoſt as double, but of a deep Purple, tending to a Violet color; the outer leaves being not ſo deep as the inner. Its Root and Leaf comes near to the *Single Purple Anemone* before deſcribed, but its Root ſpreads not ſo much.

LXV. 19. *Anemone tenuifolia flore pleno purpureo Cæruleo:* Narrow Leav'd double blew Wind-Flower. This differs not in any thing from the former double Purple; but only that this Flower is paler, and more tending to a blew color.

LXVI. 20. *Anemone tenuifolia flore pleno Columbina:* Narrow leav'd double bluſh Columbine Wind-flower. It has a larger Flower than any of the former, the outer Leaves being long and broad: the Thrum is compoſed of ſhort narrow Leaves, putting forth a great Tuft of longer and broader Leaves, which ſpread over the Flower, almoſt to the points of the outer Leaves. The whole Flower is of a bluſh or fleſh color, like to that which is ſeen in the Flowers Columbines, whence came the Name.

LXVII. 21. *Anemone tenuifolia flore pleno Roſeo:* Narrow leav'd double Roſe colored Wind-flower. It has ſmaller Flowers than the laſt, but very thick and double, of a more lively color, like that of a new blown Damask Roſe. It differs in nothing from the Columbine Anemone, at Sect. 66. above, but only in the Flower, which is ſomething ſmaller, and not ſo thick and double as that is; this being of a reddiſh color, near to the color of a pale red Roſe, or of a deep colored Damask.

LXVIII. 22. *Anemone tenuifolia flore pleno Roſeo variegata:* Narrow leav'd double variegated Roſe colored Wind-flower. This differs from the laſt only in this, that the Flowers hereof are ſtriped and variegated with white, eſpecially in the outward Leaves.

LXIX. 23. *Anemone tenuifolia flore pleno Carneo Vivaciſſimo:* Narrow leav'd double Carnation Wind-flower. This in its Root, Leaf and Flower, comes neareſt to the former double white Anemone, at Sect. 62. above: in reſpect to the magnitude and duplicity of the Flower; and in the ſmallneſs of the middle Thrums, and their evenneſs at the Tops: it is not ſo large and great a Flower as the Double Purple, at Sect. 64. either in its inner or outer Leaves, but yet it is very fair, thick and double, and of a moſt lively Carnation Silk color, very deep both the outer Leaves, and middle Thrums; and withal ſo bright, that as well as it delights the Mind of the beholder, ſo it fills it with a kind of amazement, by reaſon of its excellent appearance: Yet by long ſtanding in the Sun, it grows paler, and ſo paſſes away, as do all the other Beauties of this kind.

LXX. 24. *Anemone tenuifolia flore pleno rubante maculato:* Narrow leav'd double ſpotted bluſh colored Wind-flower. It riſes up with a tall Stalk bearing a large Flower: the outer Leaves whereof are almoſt white, marked with ſmall reddiſh ſpots and marks, eſpecially on the outer ſide. The Thrum is large and thick, compoſed of many long narrow, ſharp pointed Leaves, of a reddiſh or Peach color, poudered with ſmall ſpecks of a deeper red color. This is called by thoſe who brought it out of *Flanders*, *The Perfect Courtizan.*

LXXI. 25. *Anemone tenuifolia flore rubrofuſco pleno coma Amarantina:* Narrow leav'd double purple Velvet Flower. It is in all things like to the double Carnation, at Sect. 69. above, but ſomething larger. The difference conſiſts chiefly in the color of the Flower; which in this is of a deep or ſad Crimſon red color, for the outer Leaves; and of a deep purple Velvet color in the middle Thrums, reſembling the color of the leſſer *Amaranthus purpureus*, or purple Flower-Gentle, (from whence it took its Name:) which middle Thrum is as fine and ſmall, and as even at its top, as the double white or Carnation Anemones, at Sect. 62. and 69. aforegoing.

LXXII. 26. *Anemone tenuifolia flore pleno tricolor:* Narrow leav'd double three colored Velvet Wind-flower. This is very like the laſt deſcribed; ſaving, that in the middle of the purple Thrums, there comes forth a tuft of Threads or Leaves, of a more light Crimſon color.

LXXIII. 27. *Anemone tenuifolia flore pleno purpureo:* Narrow leav'd double purple Wind-flower. It comes up with green Leaves commonly before Winter, and many times with Flowers; and therefore for the prevention of ſuch forwardneſs, the Roots are to be kept out of the Ground, and not to be ſet till *November*, which cauſes them to bear the fairer Flowers in the Spring following, which will be very large, thick, and double, of a ſad dark Violet purple color.

LXXIV. 28. *Anemone tenuifolia flore pleno Lavendulæ colore:* Narrow leav'd double Lavender colored Wind-flower. It is in all things like the laſt, but the Flower is leſſer, and of a pale heavy

blew color, like unto the Flowers of *Lavender:* there is alſo another of this ſort, which is ſtriped with white, eſpecially the outer Leaves of the Flower.

LXXV. 29. *Anemone tenuifolia flore pleno Cæruleo:* Narrow leav'd double blew Wind-flower. It is in its faſhion or form like the laſt, differing only in the color of the Flower, which in this, is of a fine bright blew color, more delightful to the Eye than any of the *Purple Anemones.*

LXXVI. 30. *Anemone tenuifolia flore pleno coma Purpureo:* Narrow leav'd double Wind-flower, with a Purple Thrum. This differs chiefly from the other Purples in the color of the Flower, the outer leaves of this being white, and the Pluſh or Thrum, of a beautiful Purple: this Flower by reaſon of its excellency, is called *The Perfect in Beauty.*

LXXVII. 31. *Anemone tenuifolia flore pleno coma Amarantina:* Narrow leav'd double Wind-flower with a dark Purple Thrum, called *Amarant.* It has broad green leaves as the firſt common Red, (at *Sect.* XLVII.) and the Flower is of the ſame faſhion; the outer leaves of ſuch a red color, and the middle Thrum of a dark Murry Purple color, like the Flower of the leſſer *Amaranthus Purpureus*, and therefore called the *Amarant Anemone.* Sometimes there will come a Tuft of bright red Leaves out of the middle of the Purple Thrum, and then ſome have called ſuch Flowers *Amaranthus tricolor*, as if it were a diſtinct Kind, which in ſome Years happens in moſt Flowers, and in other Years few or none.

LXXVIII. 32. *Anemone tenuifolia flore pleno coma Amarantina variegata:* Narrow leav'd double variegated Amarant Wind-flower. This is in all things like the laſt, ſave only the outer leaves, and thoſe which come out of the middle of the Purple Thrum, are variegated with white, much fairer in ſome Years than in others. There are two ſorts of this Flower, one from *Flanders*, another from *Paris*, the latter being the better, as more conſtantly marked, and more diſtinctly than the *Flemiſh.*

LXXIX. 33. *Anemone tenuifolia flore pleno quinque coloris:* Narrow leav'd double Wind-flower of five colors. It is like the *Amarant*, but that the Stalk is taller, and the Flower larger: the outer leaves are red, the Thrum of a deep Murry Purple, out of whoſe middle comes one or two rows of leaves, of a light Crimſon color from the ends half way, and the reſt a pale yellow: in the middle of theſe leaves, comes forth a ſmall Tuft of ſhorter leaves, of a pale Silver color. This is an uncertain Flower, and does not often come well.

LXXX. 34. *Anemone tenuifolia flore pleno Purpureo nigreſcente:* Narrow leav'd double dark Purple Wind-flower. It has fair large Flowers, of a dark Purpliſh color, finely ſtriped with white; its Roots are tender, and apt to periſh, unleſs the Soil be very agreeable, as all the other *Narrow Leav'd ſtriped Anemones* are.

Beſides theſe Thirty Four, Mr. *Rea* has given us brief Notices of Diſtinction of half a Hundred more, called by particular Names, and that in an Alphabetical Order, which that you might not want the Knowledge of, we ſhall here exhibit them to you in the following Eighteen *Sections.*

LXXXI. *Albonoiſe:* white, with a little Carnation in the bottoms of the Leaves and Thrum. *Albertine*, or *Paſs Scala*, Fleſh color with Carnation. *Angelica*, white Leaves, and a pale gredeline Thrum. *Aſian*, white and Carnation Leaves, with a Scarlet and white Thrum. *Aſtrea*, white and Carnation. *Auguſtine*, white and Carnation Leaves, with a Scarlet Thrum.

LXXXII. *Boulonoiſe:* white leaves with Carnation bottoms; the Thrum white Carnation and Limon. *Briote*, white and Carnation leaves, the Thrum all Carnation. *Bugie*, it is an ill White, mixt with Carnation.

LXXXIII. *Candiote:* Gray leaves with Carnation bottoms, and Thrum Carnation tipt with a greeniſh Hair color. *Cazertuen*, the leaves Crimſon, bordered with a yellow Brimſtone color, and the Thrum deep Scarlet. *Celeſtine*, the leaves white, and the Thrum white tipt with Limon. *Celide*, the leaves white and Carnation, the Thrum Roſe color. *Clitia*, it conſiſts of Bluſh, or Fleſh color and Carnation.

LXXXIV. *Damaſine:* Carnation and White perfectly marked. *Doriſmene*, the leaves are Carnation and white, and the Thrum of a reddiſh color.

LXXXV. *Extravagant:* Its Leaf is variegated with white, red and green colors; its Thrum being of a ſtrange form.

LXXXVI. *Gabriel:* It has white leaves, and a Thrum green, mixed with White and Carnation. *Gallipoli* of *Tholouze*; the whole Flower is all Scarlet and White. *Gayetane*, the firſt Flowers are white and Purple, the latter Dove color and Peach.

LXXXVII. *Hereſſee:* Its leaves are of a Crimſon color, ſometimes marked with white, and the Thrum is Scarlet.

LXXXVIII. *Foliwet*, the leaves are Fleſh color and Crimſon, and the Thrum of a Brick color. *Judique*, the leaves are of a Bluſh or Fleſh color and Carnation, and the Thrum reddiſh. *Juliane*, the leaves are a Carnation and White, and the Thrum Carnation color only.

LXXXIX. *Limoſine*, it is very much like to the *Extravagant*, at Sect. LXXXV. aforegoing. *Lidnoiſe*, the outer leaves and the Ruff within, are of a whitiſh Gray, with Dove-colored bottoms; and the Thrum is Dove color tipt with green.

XC. *Mantuane*, the leaves are Limon color, with Carnation bottoms. *Melidore*, the leaves are a deep Scarlet with white bottoms. *Meteline*, the leaves are all of a dirty Gray, mixt with Green and Carnation. *Moreſque*, the Flower is all gray, mixt with Carnation. *Morette*, the leaves are of a Bluſh or Fleſh color, and the Thrum white tipt with red.

XCI. *Natolia*, the leaves are Carnation and White, and the Thrum the ſame. *Noiron*, its leaves are of a Crimſon color, and the Thrum Crimſon and almoſt black.

XCII. *Oriental*, its leaves are of an unuſual color, *viz.* a blew Gray, much like the color of our *Common Slates* with which they cover Houſes.

XCIII. *Pariſien*, It has white leaves with red bottoms, and the Thrum is Limon color, which at laſt is almoſt white. *Parmeſan*, its leaves are white with red bottoms, and the Thrum is a mixture of Roſe color, Carnation, and light Hair color. *Picard* or *Juno*, the Flower is all white, and Peach color. *Provinſallee*, the whole Flower throughout is Green and Peach color.

XCIV. *Quatri Color*, or *Amaranthe Regale*, it is of four ſorts, *viz.* 1. One with Crimſon leaves ſtript with White, and its Thrum a ſad Murry, with a red Tuft in the middle. 2. One with Crimſon leaves, a ſad Murry Thrum, and a Scarlet Tuft tipt with white. 3. One with white leaves, mixt with ſome Crimſon, its Thrum Murry, and its Tuft in the middle Carnation. 4. One with Crimſon leaves well ſtrip'd with white, the Thrum Murry, and the Tuft Carnation.

XCV. *Regate:*

XCV. *Regate*, the whole, both Leaves and Thrum, are a well mark'd Flower with Crimſon and White.

XCVI. *Saint Charles*, the Leaves are of an ill or poor white, with red bottoms. *Scala*, its Leaves are alſo of a dirty white, and its Thrum Scarlet. *Sermonetta*, the whole Flower is all Scarlet and a pale yellow. *Scirien*, its Leaves are a pale *Iſabella*, clouded with Bluſh or Fleſh color, and the Thrum is a light Green ſo clouded.

XCVII. *Teſcana*; The whole Flower is of a faded Red, ſometimes mixed with a little Hair color. *Torquoiſe*; The whole Flower, both its Leaves and Thrum are White, but the bottoms of the Leaves are Carnation.

XCVIII. *Victorius*; Its Leaves are of a Bluſh or Fleſh color mixt with Carnation; and its Thrum Hair color and Carnation. Theſe *Anemones*, with many others not here named, are all fine *Narrow Leav'd Double Flowers*, notably differing from each other, and thrive very well in our Gardens.

Beſides all theſe, many more Varieties may be produced by the Sowing the Seed of ſome of the beſt Single ones, not poſſible to be accounted for, of which any one may make Tryals at pleaſure; what we have further to do, is to ſhew the manner and way of Sowing and Planting them, and the managing and ordering them to the beſt advantage.

The CULTURE.

I. *Of the Preparing the Earth.*

XCIX. In the managing of the rarer ſorts of theſe Beautiful Flowers, very great Care is to be taken, that the Soil or Earth, Scituation or Place, Time or Seaſon, and the way and manner of their Planting and taking up, be exactly obſerved; otherwiſe your Flowers will neither be fair, nor the Roots proſper and increaſe, but rather rot and conſume away; eſpecially all the beſt *Double Kinds* of the *Tenuifolia*'s; the ordinary Flowers, and Single Flower'd, are more hardy.

C. The Soil is then firſt to be conſidered, which muſt be Fat and Rich, and not too light; a Rich Sandy Loam Earth is ſaid to be beſt, in which ſome Neats and Sheeps Dung, with a little Lime has been tempered, and lain long on a heap, and often turn'd over, ſo that the Dung be fully rotted, and well mixed with the Earth; which being firſt Sifted thro' a Wier Sieve or Skreen, you may then make a Bed thereof half a Yard deep at leaſt, in ſome place which is not in too hot a Sun, but a little ſhadowed.

CI. Or, make five equal Heaps of yellow Sand, three others as large of Kitchen Garden Earth, and four others of Bed-Mould well mellowed; then mix them altogether with a Shovel; make as much of this Earth as you ſhall have occaſion for, which let be a Year old before you uſe it; during which time, paſs it once every Month thro' a Skreen, that it may thereby be throughly mixed and perfected, leſt its too Subtil parts (which might hurt the Beauty of your Flowers) ſhould be retained, which by this means will in ſome meaſure vaniſh.

CII. But if you cannot well ſtay ſo long as a Year for the well fitting your Earth or Mould, you may then provide the Earth as in the former *Section*, and after a Months time uſe it for the firſt time; but then you ought always to have a good quantity more of it in reſerve, ready prepared as aforeſaid, a Year before hand. The more this Earth paſſes thro' the Skreen, the lighter it will be, and more agreeable to the Nature of *Anemones*.

CIII. Before this Artificial or made Earth be laid upon the Natural Soil of your Garden, the Ground ought to be before-hand prepared. If the Earth of your Garden be naturally light and ſandy, or Gravelly, you need do no more but dig it up, and cover it about half a Foot thick with this your Artificial Mould; but if your Garden Ground is Wet or Moiſt, (both which are Inimical to theſe Flowers) you muſt dig the Bed you deſign for theſe Flowers, and take out about a Foot and half deep of the Earth, and then fill up the hollow Capacity thereof, with a Compound of half Sand and half Artificial Mould; in which you ſhall Plant your *Anemones* as ſhall anon be directed.

CIV. Inſtead of Mould, you may make your Beds of rotten Herbs, Leaves and the like, which mixed as is before directed, and paſt ſeveral times thro' the Skreen, will make a *Compoſt* or Earth, as fit for *Anemones* as can be deſired; which you may lay upon your *Compartments* or Beds, after it has been well Sifted or Skreen'd.

II. *Of the Times of Planting of* ANEMONES.

CV. The beſt Seaſon for Planting *Anemones*, is from the middle of *September* to the middle of *October*; but if you have a mind to have them in Flower a great part of the Year, you muſt Plant them in *March* and *April*, but you are not to expect ſuch fair Productions from theſe laſt as from the firſt, where the Sap has had a primary advantage.

CVI. And this ſeems to be *Parkinſon*'s Secret, to teach us how we may ſo order *Anemones*, that after all others are commonly paſt, we may have them in Flower for 2 or 3 Months longer than they are otherwiſe to be ſeen. The ordinary time (ſays he) to Plant *Anemones*, is in *Auguſt*, which will have Flowers, ſome *per* chance before Winter, but moſt commonly in *February*, *March* and *April*, few or none of them abiding until *May*; but if you will keep ſome Roots out of the Ground unplanted, until *February*, *March* and *April*, Planting ſome at one time, ſome at another, you will have them bear Flowers according to their Planting.

CVII. Thoſe (ſays he) which you Plant in *February*, will Flower about the middle or end of *May*, and ſo the reſt accordingly after that manner. And thus you may have the pleaſure of thoſe Plants out of their Natural Seaſons, which is not permitted to be enjoyed in any other Flower that I know of; Nature being not ſo prone to be furthered by *Art* in other Plants as in this.

CVIII. But this is to be obſerved, that when you keep your Roots out of the Ground for this purpoſe, that you muſt be very careful in laying them up and preſerving them; that you keep them neither too dry nor too moiſt, that they may neither ſprout nor rott; and then in Planting them, that you ſet them not in too open or Sunny a Place, but where they may be a little ſhadowed.

CIX. The *Latifolia*'s are generally Planted earlieſt or firſt, as in *Auguſt* and in *September*. The *Anguſtifolia*'s or *Tenuifolia*'s, are ever Planted after them, later in the Year, being kept out of the Ground (in ſome proper dry place) till the end of *October*, and the Purples a Month longer, and then ſet in the ſame manner as the others. The *Latifolia*'s or Broad Leav'd, will come up before Winter. The *Anguſtifolia*'s or *Tenuifolia*'s, the Nar-

row Leav'd, about the end of *February* or ſooner, if the Winter is mild, otherwiſe in *March* or *April*. If the Seaſon is dry, they ought to be Watered, which will cauſe them to thrive much the better, and to bear the fairer Flowers.

III. *Of the manner of Planting* ANEMONES.

CX. The Beds or other places being prepared, and made even and ſmooth with the Rake; take a Cord, and extending it long-ways, draw a Rill, or littie hollow Line or Gutter, from one end of the Bed to the other: This done, extend your Cord, and do in like manner again, a ſecond, third, and a fourth time, or more, according to the bredth of your Bed, at 5 Inches diſtance, (Mr. *Rea* ſays 6 or 8 Inches) aſunder from each other.

CXI. This done, take up your Cord again, and place it in like manner, to draw Rills or Gutters croſs all theſe Beds from one end to the other, and all of them equally at the aforenamed diſtance, of 5, 6, or 8 Inches, by which means you will form a regular oblong Parallellogram; in which, either in the middle of each Square, or in the points where the Lines croſs one another, you are to Plant your Anemone Roots, which being at an equal diſtance; they will when they come to blow give you a ſingular pleaſure, which will ariſe from their great variety of colors, and their regular order of Planting.

CXII. When you are a going to Plant the Roots, make a hole fot every one of them with your Finger, or an Iron made for that purpoſe; which let not be above 3 Inches deep in the Ground, and place the Root always upon the largeſt ſide of it, with the ſlit downwards, to the end that the *Pabulum*, or nouriſhing Juice, may riſe directly into the Root, to cauſe it to ſpring, ſo as to anſwer your Expectations.

CXIII. Or as Mr. *Rea* ſays, put the Root into the hole with that ſide of it upwards, where you perceive ſmall Eminencies to put forth Leaves. The *Latifolia*'s and *Anguſtifolia*'s, or *Tenuifolia*'s, are all of them to be handled in the ſame manner, only differing in the Times of their Setting or Planting, as we have ſhewn in *Sect.* 109. aforegoing.

CXIV. Anemones are not Planted in open Grounds, but they are ſometimes put into Pots, one or two or more Roots into each Pot, (according to the magnitude of the Pot) and this becauſe, that if any of the Roots ſhould chance to fail, there may be found in theſe Pots wherewithal to fill up the vacancies.

CXV. This failure (if any be) will be perceived about three Weeks after you have put your Roots into the Ground, and which does not always proceed from a corrupted Root; but ſometimes is occaſioned by the *Pabulum* or Sap's not riſing ſo kindly as it ought: You are ever to look for ſuch a Root in leſs than a Month; and you will ſometimes find them in your Pots alſo, as well as in your Beds.

CXVI. The Flowers require to be Planted in an open place, and by no means in a ſhady: becauſe, ſending forth a great many fibrous Threads or Strings, and large tufts of Leaves, they would be apt to ſpend themſelves too much, if ſo placed; and ſo cauſe a weakneſs in their Stems, and hazard their proving Abortive, or otherwiſe to yield but a very few Flowers. And the Stalk being thus tender, would certainly be killed by the Cold, which they would be too ſuſceptible of in this caſe; or elſe be broken with the Wind, which would do a great damage to the Root it ſelf.

CXVII. If the Autumn be dry, you muſt take care to Water them well: but contrariwiſe, if it Rains very much, you muſt then defend them from too much moiſture, (which agrees not with them) with skreens of Straw. They may be water'd from the Month of *February*, to the times of their Flowering, which how much, or how often it is to be done, experience only muſt tell you.

CXVIII. Tho' Cold is no mortal Enemy to them; yet when it happens to be very ſevere, the Plants ought to be covered with long dry Dung, or long Straw: and your Pots ought to be alſo Planted or Placed, where they may be moſt ſafe from the Weather.

CXIX. Then again when the Weather grows mild, you may uncover them; but withal, you muſt be ſure to cover them again, if it changes to be Cold again. In ſum, your prudence and experience muſt excite your induſtry, and direct you, when, how often, and long, you muſt beſtow this trouble upon them.

CXX. If at any Seaſon of Planting or Setting your Roots, you put a little Willow Earth under and over the Roots, it will cauſe them ſoon to put forth Fibres; and thereby make them able to abide or endure the Winter. Yet in Froſt and hard Weather, it will be good to cover them which are ſprung up (as aforeſaid) with Mats or Peaſe Straw, which you may take off for two or three hours, every other day, (if fair, and the Sun ſhines, and there be no nipping North, NorthEaſt, or Eaſtwardly Winds) to give them Air, and prevent Mouldineſs (which is apt to happen to them, and) which has been the ruin and deſtruction of many a fine Plant, from which you might have expected very admirable Flowers.

IV. *Of Chuſing Plants for Seed.*

CXXI. There is ſome ſpecial choice to be made of ſuch Flowers whoſe Seed is fitteſt to be taken: of the *Latifolia*'s, the double Orange Tawny Seed being Sown, yield many pleaſant varieties; but the Purples, Reds, or Crimſons, whether *Latifolia*'s or *Tenuifolia*'s, yield ſmall or few varieties, but ſuch chiefly as draw neareſt their Original, tho' it may chance that ſome may be a little deeper or lighter than others.

CXXII. But the light colors are thoſe, which are to be choſen for this purpoſe; as White, Aſh-color, Bluſh or Carnation, light Orange, ſimple or parti-colored, ſingle or double, (if they bear Seed, as ſometimes they do.) Theſe are they whoſe Seed you are carefully to gather, but not before it is throughly ripe, which you may know by the head.

CXXIII. For when the Seed with its Woolineſs begins to riſe a little of it ſelf at the lower end, it muſt then be quickly gathered, leſt the Wind carry it all away. After it is thus carefully ſaved, it muſt be laid to dry for a Week or more, which then being gently rubbed with a little dry Sand or Earth, it will cauſe the Seed to be ſomewhat better ſeparated, altho' not throughly, from the Woolineſs or Down which encompaſſes it.

CXXIV. If there remains any Woolineſs in the Seed, pull it aſunder as well as you can, that they may be perfectly ſeparated; for unleſs this be done, it will be impoſſible to Sow them in that due

due order, which the Nature and Quality of this Plant requires.

CXXV. For the raiſing of new Varieties of *Anemones* from Seed, choice muſt be made of the Flowers (as Mr. *Rea* ſays) as in *Tulips*; ſome of the *Double Latifolia*'s bring Seeds, the richeſt Scarlets, paleſt Purples, Pink colored, White and Sky colored are the beſt.

CXXVI. But in the Single *Anguſtifolia*'s, or *Tenuifolia*'s, there is more choice; as Red and Scarlets with deep white edges; all that are variegated or ſtriped with White; and in theſe, the deepeſt Velvet Purples are the beſt: But above all others, thoſe which have 2 or 3 Rows of Leaves, and that excellent *Single Velvet Blew*, are chiefly to be prefer'd.

CXXVII. In ſhort, to have good Seed, you ought to pitch upon *Single Anemones* which have ſtrong Stalks, and proportioned in height to the largeneſs of the Flower, and which have long and round Leaves, for theſe kinds of Flowers never degenerate; and therefore it may be in a manner certain, that if Nature, the Seaſon, and the Soil favour us, they will give us a produce of very fine Flowers.

V. *Of Sowing the Seed.*

CXXVIII. The Seeds of theſe Flowers will be ready to be gathered in *May*, which muſt be done as the Down riſes, elſe they will be all blown away; and having gathered all your Seed, dryed and cleared them from their Down, as directed at *Sect.* CXXIII. above, or by mixing with them a ſufficient quantity of dry fine Sifted Earth, and in a Bowl, Trey or Baſon, ſtirring and mixing them with your Fingers ſo long, till none of the white Down appears; you are then (not to ſtay till *Auguſt* as ſome *French* Gardiners direct,) but to Sow them about a Month after as *Parkinſon* adviſes, or not exceeding 6 Weeks, or the middle of *July* at moſt, as Mr. *Rea* ſays.

CXXIX. Then be ſure the Earth in which you Sow them be good, and finely Sifted, and let the Ground be made into Beds as before directed, or put into Boxes or Pots, if you deſign them: This Ground muſt not be a too ſtiff Clay, nor too light a Sand; but if not fit for the purpoſe, it muſt be prepared, and may be compounded thus. *The Clay Earth is to be mixed with Brook Sand and Pearl Sand, and good freſh fat Earth, taken from next under the Turf of ſome good Paſture, which with ſome old Neats Dung well rotted to Earth, and ſome Lime, are to be well mixed together, and being dry, to be often Sifted or Skreen'd over, that the Mould may be made very fine.*

CXXX. With this Mould thus prepared, you may make Beds, *&c.* as aforeſaid; upon which you are to Sow your Seed reaſonably thin, and not too thick; (ſo alſo in Boxes or Pots,) let the top of the Bed, *&c.* be firſt made very plain and ſmooth, then your Seed being Sown upon the ſame, gently ſtrew or Sift over them, ſome fine good freſh Mould, covering them about an Inch thick at moſt for the firſt time.

CXXXI. About a Month after their firſt Springing up, ſtrew or Sift over them again another Inch thickneſs of fine Earth; and in the mean time, if the Weather proves dry, you muſt Water them gently and often, but not to overglut them with moiſture. And thus doing, you will have them Spring up before Winter, and grow pretty ſtrong, able to abide the ſharp Seaſon in this their ſo tender Age; eſpecially if you take a little care to cover them looſely with ſome Fearn, Straw, Peaſe-Straw, Hay or the like, which muſt not lye cloſe upon them, nor yet too far off, being laid over them upon Sticks.

CXXXII. But in your Sowing the Seed, tho' you are not to Sow them too thick, yet you ought not to err on the other Hand neither, in Sowing them too thin, becauſe many of them may miſcarry, and never Spring up, which being covered as aforeſaid, about an Inch thick with fine Sifted rich Earth, and ſo to be farther ordered as in the former *Section*, will not fail to anſwer your Expectations.

CXXXIII. Some in Sowing the Seed, do it after this manner, (the Bed being before hand prepared) they take the Seed and put it into a Leather Bag, and cloſing up the whole, ſo as only three Fingers may enter in, you may preſs the Bag with one Hand, and Jerk, or a little ſhake it with the other, ſo will the Seed ſpring out; in ſuch a manner as it ought to be Sown, moving the Bag up and down over the Bed, both long ways and croſs ways, that each part may have its ſhare of Seed.

CXXXIV. Which done, and fine Earth being Sifted over it as aforeſaid, immediately ſtrew the whole Bed thinly over with long Straw, and forthwith Water it with a Watering-Pot, which let be pretty conſiderable, but afterwards leſs; becauſe too great a Quantity of Water would rot the Seed, and ſo totally deſtroy it.

CXXXV. After 15 or 20 days, take off this thin ſtrewed Straw. It may be the Seed may begin to ſprout in that ſpace of time, or ſooner: but if they ſhoot not for 5 or 6 Weeks time, be not concern'd, for they may yet grow well enough.

CXXXVI. The *French* Gardiners ſay, that if the Seed be well Sown, and great care be taken in Cultivating it, that you will not fail of Flowers in *March* following, or in *April* at fartheſt; becauſe in *June*, when the Stalks begin to wither, and their Roots are diſplanted, the Bed where they are is to be digg'd thro' three Inches deep, and the Earth as ſoon as it is caſt up, to be laid upon a Linnen Cloth or Canvaſs, till ſuch time as the hole be dug, which is then to be crumbled, and ſifted, or ſearc'd on a hollow Bed, till ſuch time as there remains above Ground only the *Fangs* of theſe young Anemones, which are then called Peas, becauſe they reſemble that Pulſe in form and magnitude.

CXXXVII. *Parkinſon* ſays, the Seed being thus ordered, that the Plants will bear Flowers the ſecond Year after Sowing; and moſt or all of them the third Year, if the place where you Sow them be not annoy'd with Smoak of Brewers, Dyers, Malt Kilns, or other inconveniencies, which if they be, they will never thrive well.

CXXXVIII. Mr. *Rea* in his *Flora*, page. 128. ſays, that ſome report that they have had Anemones bear Flowers the next Year, and others, the ſecond Year after Sowing. But I (ſays he) can expect few or none that are good before the third Year, and many will not bear until the fourth Year. But the agreeableneſs and goodneſs of the Earth and Air, for bringing them forwards is moſt conſiderable; therefore you ought to be ſure to make it as rich (for the kind) and as good as you can, taking heed of not putting or mixing with the Mould too much Dung.

CXXXIX. Theſe *Peaſe* aforenamed, at *Sect.* 136. above, being gathered, are to be carried and kept in a dry place, as carefully as poſſibly may be till *September* next, when (new Beds being made for Planting Anemony Roots) they are to be

be Replanted, after the method before preſcribed.

CLX. This way of *Multiplying Anemones*, is as it were a Nurſery, where Nature from ſingle Flowers which were Sown, gives double ones, according as ſhe is pleaſed to Act. When the favourable chance does ſo happen, you ought to ſet a mark of diſtinction on ſuch as deſerve it; to the end, that in the third Year when you take them up, you may put them in Beds by themſelves.

VI. *Of the taking up the Roots.*

CXLI. *Parkinſon* ſays, that the next Spring after Sowing, you may if you will remove them; but he alſo ſays, that it is better to ſtay till *Auguſt*, and then make the Remove, when you may ſet them in order by Rows, with ſufficient diſtance one from another, as is before directed; where they may abide until you ſee what manner of Flower each Plant will have, which you may afterwards better diſpoſe of according to your Mind.

CXLII. As to the *Anemones* raiſed from the Planting of their Roots, if they like their Entertainment grow Strong, bear fair Flowers on tall Stalks, and proſper well, you may forbear to take up their Roots until the end of *June* or *July*. But on the contrary, if the green Leaves are few, the Stalks ſhort, and the Flowers ſmall, it is a manifeſt ſign of their diſlike, and that the Soil is too cold and poor, or elſe too hot and rank, which is far more dangerous.

CXLIII. In this caſe, they muſt be taken up as ſoon as the green Leaves turn yellow, and the Roots are to be put into Sand, and ſo kept in ſome dry place for a Month at leaſt, and then taken out and put into Papers, in ſome cool dry place, until the time of Re-planting: For ſhould they remain in the Ground any time after they have loſt their Fibres, the Earth being unſuitable, they would all or moſt of them rot and conſume away, eſpecially if any ſtore of Rain ſhould fall upon them.

CXLIV. In taking up their Roots, you muſt take care that they be not broken, eſpecially the *Latifolia*'s; which muſt not be divided nor broken, until they part of themſelves. The *Anguſtifolia*'s or *Tenuifolia*'s, may be broken or parted with leſs prejudice; but the wholer they are kept, the better they will thrive.

CXLV. And tho' the Times mentioned in ſome of the former Sections, be beſt for planting or ſetting theſe Roots, of both kinds of the more excellent and rare of theſe Flowers, yet the more ordinary kinds, may be kept out of the Ground till the end of *February*, which ſome do, to cauſe them to flower late, after the other finer and rarer kinds are gone.

CXLVI. In this caſe, it will be good to ſteep theſe long kept Roots 24 hours in warm Water, before you Plant or Set them: and then to Plant them with ſome Willow Earth under and over them, and in a more ſhady place than ordinary; becauſe the heat of the Sun, in the time of their flowering, will much diminiſh their beautiful appearance.

CXLVII. If then you have two Beds ſtored with choice varieties of Anemones, let the latter which are Set, be more ſhady than the firſt; and ſo gradually as they are later in Planting: and then if the aforementioned Rules be obſerved, you will be ſure to have admirable Flowers in part of *March*, and all *April*, and the greateſt part of *May*; unleſs your Garden ſtand in ſome Smoaky or ill natured place, where neither *Art* nor *Induſtry* can make them proſper; unleſs they be Set in a hot Bed, as ſome in and about *London* commonly do.

VII. *Of the Choice of Plants and Flowers.*

CXLVIII. The Beauty of this Flower conſiſts in its largeneſs, roundneſs, and fine colors, to which in the double kind add its duplicity compleat; eſpecially with its great Leaves, exceeding a little the bigneſs of its Tuft: and the extremities of its largeſt Leaves are round, as well as thoſe of its Stalks, which ought to be large and not narrow.

CXLIX. That is a fine Plant whoſe Stem is proportioned in height to the largeneſs of its Flower, and is ſtrong enough to bear it up without bending: alſo when its Leaves are curl'd, its Tuft low and buſhy, repreſenting a kind of Cupulo; and withal has a great many Stalks or Flowers.

CL. Its Pointel in the middle ought to appear a little, and be as it were upon a level, with Leaves of the Flower, of an indifferent thickneſs, for if it is too thick it is a defect; and it ought to be alſo of ſomething a different color, from the great Leaves and the Tuft.

CLI. There are ſome Anemones which are apt to ſhoot up into height, ſo that inſtead of Flowers, they only produce Leaves; and this comes from having ſuch a great number of productions on every ſide, which draw away the ſucculent and nutritive Juices and Salt of the Earth. This great abundance of Leaves you muſt rectify, by clearing the Plants of ſuch as are ſuperfluous, whereby the reſt of the Plant receiving ſo much the more of that ſucculent Nutriment, will make it the better to produce its Flowers.

CLII. If the Anemones ſhould grow mouldy at that part of the Root from which they ſhoot, (which is their Oldeſt part) give them a fillip with your Finger on that part, and if they found hollow, or have little holes therein; then you may take a Knife and pare away that decayed part to the quick, ſmoothing the place where you make the Inciſion, for fear that if any hole ſhould remain, ſome of the putridity may lurk behind, which may make the Root fall into the ſame Diſeaſe again; which when the decayed part is cut quite away, new Roots will ſhoot forth, which will give you Flowers in great abundance.

CLIII. In doing this work, many Roots or ſegments of Roots you may cut off; theſe you ought not to throw away, but to Re-plant them again; for many times thoſe off cuts being Replanted, will admirably revive, grow ſtrong, and bear very good Flowers.

CLIV. But in the Roots where you have made the Inciſion, ſo ſoon as ever they are dry, you muſt rub them in the wounded place with a mixture of melted Roſin and Wax, which being well fixed on them, will hinder them from farther corrupting.

CLV. And as it is to be obſerv'd, that the Seed only, or chiefly of the *Single Anemones*, bring forth Double ones; ſo the *Double Anemones* ſeldom or never multiply, but by the Fangs of their Roots, which are conſtant in their production, and never found to degenerate.

CLVI. We have given you the Names of the principal kinds of above four ſcore various ſorts of theſe Flowers; and 'tis poſſible, there are an hundred other ſorts, with Names impoſed upon them,

them, which indeed can signify very little to insert here, being given them purely from Whimsie, Fancy, and Fantasticalness, many of which, when the Flowers Die, their Names Die with them: for which reason we forbear, thinking it sufficient what is already said, and that we have given you enough Signs and Manifesto's to discover and know all such, as you are to set a good value and estimation upon.

CLVII. What remains, has relation to their *Qualities*, *Specification*, *Preparations* and *Virtues*; but they being the same with the most vulgar and *Common Anemones*, of which we have treated in *Chap.* XIII. and *Chap.* XIV. aforegoing, we shall say no more in this place, but will refer you thither.

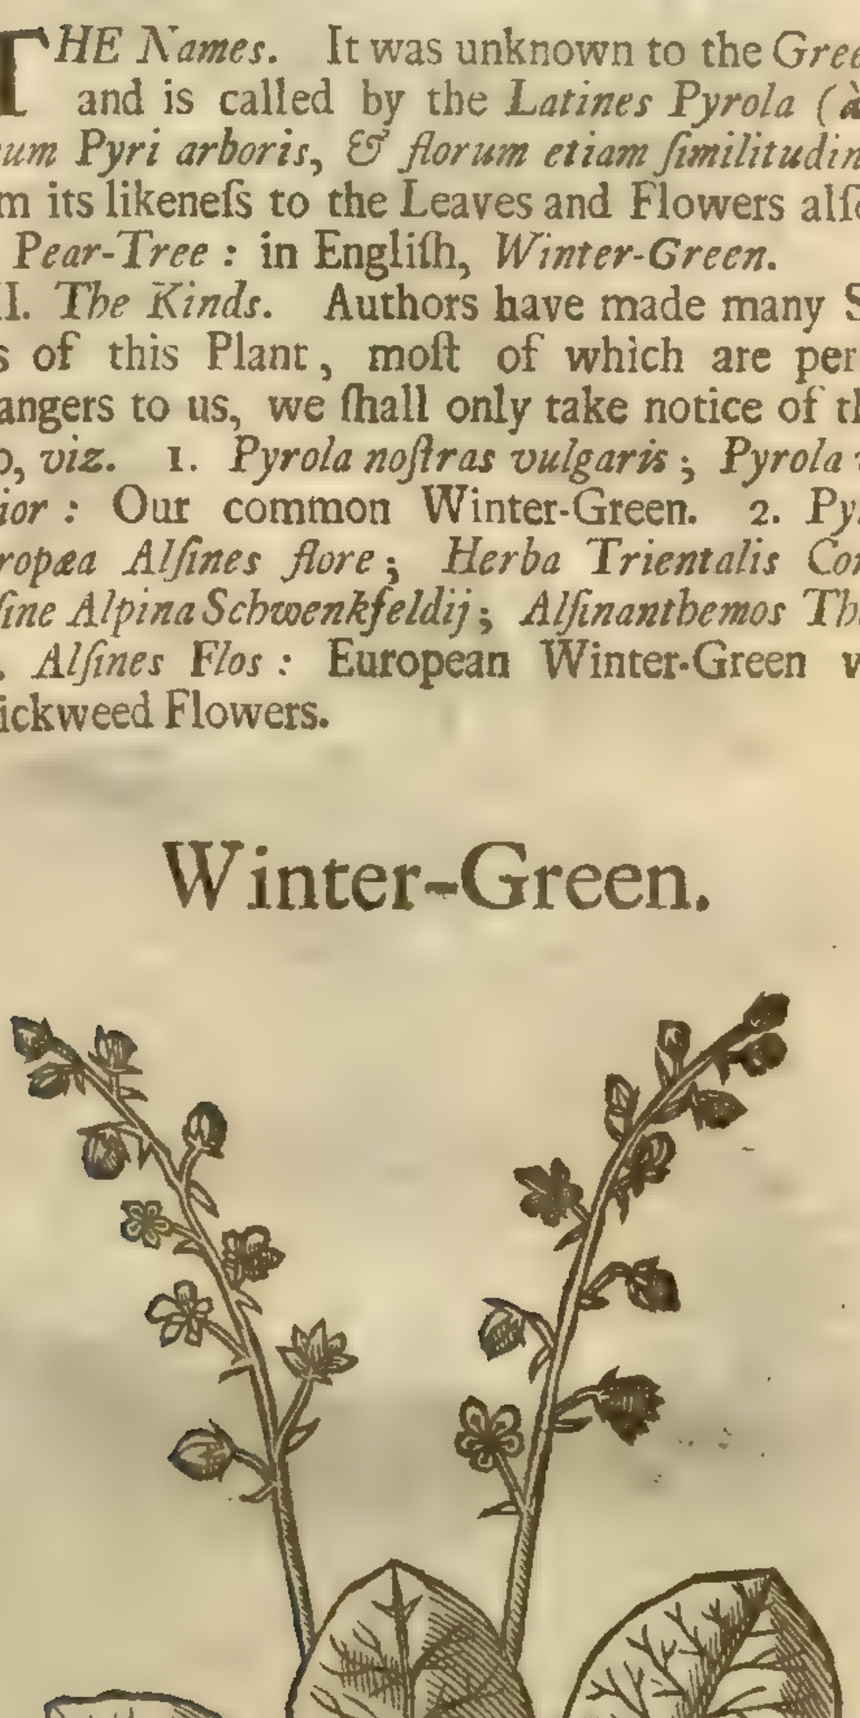
CHAP. DCCXXXIX.

Of WINTER-GREEN.

I. *THE Names.* It was unknown to the *Greeks*; and is called by the *Latines Pyrola* (*à foliorum Pyri arboris, & florum etiam similitudine:*) from its likeness to the Leaves and Flowers also of the *Pear-Tree*: in English, *Winter-Green.*

II. *The Kinds.* Authors have made many Species of this Plant, most of which are perfect Strangers to us, we shall only take notice of these two, *viz.* 1. *Pyrola nostras vulgaris*; *Pyrola vulgatior*: Our common Winter-Green. 2. *Pyrola Europæa Alsines flore*; *Herba Trientalis Cordi*; *Alsine Alpina Schwenkfeldij*; *Alsinanthemos Thalij*, i. e. *Alsines Flos*: European Winter-Green with Chickweed Flowers.

Winter-Green.



The Descriptions.

III. The First, or our Common Winter-Green. *Its Root is slender, small, creeping, compact of many small Fibres, or thready Strings; from which shoot forth* 7 *or* 8, *or* 9 *Leaves, standing on a long foot Stalk, which are almost as broad as long, round pointed, of a sad green color, hard in handling, and something like to a Pear-Tree Leaf, (whence the Name) or as some will have it like to the small Leaves of Wild Beets; whence comes forth for the most part but one (but sometimes two) slender weak Stalks, yet standing upright, bearing at the Top many small white Flowers, smelling as sweet as those of the Lilly Convally, and open like a Star, consisting of* 5 *round pointed Leaves, with many yellowish Threads in the middle about a green head, and a long stile with them, which in time grows to be the Seed Vessel, which when it is ripe, is quinquangular, or five sided, with a small point at it, in which is contained Seed as small as dust it self.*

IV. The Second, or Winter-Green with Chickweed Flowers. *Its Root is made of many small Fibres, proceeding from a small round head. It rises up with one or more, strait round Stalks,* 6, 7, *or* 8 *inches high, almost bare of Leaves for a space next to the Root; or at most with but* 2 *or* 3 *very small Leaves, set one a little above another: but at the top thereof, grows* 5, 6, 7, *or* 8 *Leaves, something long, and pointed at their ends, something like to a Pear Tree Leaf, but longer and not so round; being many of them an Inch and half long or more, tender, smooth, green, having one middle Rib, with divers Veins in the Leaf, finely dented about the edges: From among which Leaves, rise up weak foot Stalks, rather than Stalks, about* 3 *inches long, sustaining* 3 *or* 4 *Flowers, each by it self, made of six white pointed Leaves apiece, Star fashion, something like a Chickweed Flower, but larger; with several small yellowish Threads in the middle; which being past, there comes in place a small round head, smaller than a Coriander Seed, containing within it divers small black Seed, covered with a thin white Skin.*

V. *The Places.* The first grows in several of the Northern Parts of *England*, as *Lancashire*, *Yorkshire*, and in other places farther North, and in a place called *Crag-Close*; and in the *Woods* in *Scotland*, almost every where, but rarely in Fields. The second in the *Woods* in *Germany*, in divers places; as also in the *Beechwood* in *Scotland*, as *Bauhinus* says, and likewise on the Mountains in *Wales*.

VI. *The Times.* They both grow *Winter* and *Summer*, and Flower in the Months of *June* and *July*.

VII. *The Qualities.* They are Cold in the second degree, and dry in the third; Absterstive, Astringent, and Vulnerary.

VIII. *The Specification.* The first which is only or chiefly used, as it is exceedingly Astringent and Glutinous withal, so it is a speedy Cure for Green Wounds; as also for all inward Wounds and Bleedings: it stops all Fluxes of the Belly, whether of Blood or Humors, the Bleeding of Wounds, and the overflowing of the Terms in Women: It also Cures old running Sores, putrid Ulcers, Fistula's, and the like.

IX. *The Preparations.* You may have therefrom, 1. *A Liquid Juice.* 2. *A Decoction in Wine and Water.* 3. *A Balsam or Ointment.* 4. *A Cataplasm of the Green Herb.* 5. *A Distilled Water.* 6. *The Pouder of the Herb.*

The

The Virtues.

X. *The Liquid Juice.* It conſolidates Green Wounds, uniting their Lips ſpeedily together; and taken inwardly 2 or 3 Spoonfuls at a time in Wine and Water, it ſtops inward Fluxes of Blood, and Cures inward Wounds: it ſtops the overflowing of the Terms in Women, Cures Spitting and Vomiting of Blood, the Hepatick Flux, Bloody Flux, and all other Fluxes of the Bowels. It is ſaid to Cure Ulcers and Wounds in the Reins and Bladder, Womb, and other ſecret parts, as alſo Ulcers and Fiſtula's in any other part of the Body, being inwardly taken and outwardly applyed: not being inferior to *Agrimony*, *Avens*, *Betony*, *Burnet*, *Comfry*, *Daiſies*, *Golden Rod*, *Horſetail*, *Knotgraſs*, *Ladies Mantle*, *Mouſe Ear*, *Madder Roots*, *Periwinkle*, *Sanicle*, *Tormentil*, or other Herbs of like kind.

XI. *The Decoction in Wine and Water.* It has all the former Virtues, but not altogether ſo powerful; and may be given Morning and Night, from 3 Ounces to 6, ſweetned with Syrup of the Juice of the ſame. It heals inward Ulcers in the Reins and Bladder, and hinders Inflamations, being fomented upon any part affected.

XII. *The Balſam or Ointment.* It is made with Hogs Lard, or with Oil Olive, Bees Wax, and a little Turpentine. It heals all manner of Wounds, and Sores: the *Germans* uſe it very much, and extol it beyond any other Balſam made of a ſimple Herb. It is no leſs helpful for foul Ulcers and Fiſtula's, hard to be Cured in what part of the Body ſoever, and heals Cankers of the Mouth and Gums.

XIII. *The Cataplaſm of the Green Herb.* It is Aſtringent and Glutinous withal, and a ſingular remedy to be preſently applyed to ſimple Green Wounds, to conſolidate them. It alſo gives eaſe in the Gout, and abates the Tumor.

XIV. *The Diſtilled Water.* It has all the Virtues of the Juice and Decoction, but much inferior in Virtues and Effects; and therefore may be uſed as a Vehicle to convey the other Medicines down in. But it may be given of it ſelf for the ſame purpoſes from 4 to 6 Ounces, ſweetned with Syrup of Comfrey, or Syrup of ſome of the other Conſolidatives.

XV. *The Pouder of the Herb and Flowers.* It may be given for all the ſame purpoſes in the Decoction, Diſtilled Water, or ſome proper Syrup, or in Honey, from 2 Scruples to a Dram, or Dram and half, Morning and Night.

CHAP. DCCXL.

Of WOAD, *Garden* and *Wild.*

I. *THE Names.* It is called in *Greek*, Ἰσάτις: in *Latin*, *Glaſtum* and *Iſatis* alſo; and by ſome *Guadum:* and in *Engliſh*, *Woad.*

II. *The Kinds.* We have but two Kinds hereof, viz. 1. Ἰσάτις ἥμερος: *Glaſtum ſativum*, *Iſatis ſativa:* Our Manured Woad. 2. Ἰσάτις ἀγρία: *Glaſtum ſylveſtre*, *Iſatis agria:* Wild Woad.

The Deſcriptions.

III. The Firſt, or our Common Manured Woad. *Its Root is white and long, growing downwards: it*

Woad Garden.

Woad Garden.

has

has divers large, long, and ſomething broad Leaves, not much unlike to thoſe of Ribwort Plantane, *but larger, thicker, and of a darker blewiſh green color. From among which riſe up, one or two ſtrong Stalks* 3 *or* 4 *Feet high, and ſometimes more, with divers ſuch Leaves ſet thereon, but ſmaller as they approach up to the top; where they ſpread themſelves out into many Branches: at the ends whereof grow ſmall yellow Flowers; in whoſe places come long flattiſh Cods or Pods like Tongues, black when they are ripe, and pendulous, or hanging downwards, wherein lye the Seed, which if it be a little chewed or broken with moiſture, will give a blew color.*

IV. The Second, or Wild Woad. *It is very like unto the former, in its Root, Stalks, Leaves, manner and faſhion of growing, ſaving that the Stalk is*

Woad Wild.

ſlenderer, tenderer, and browner, the Leaves leſſer, and the Husks or Cods not ſo great, and narrower, and the whole Plant ſmaller.

V. *The Places.* The Manured Woad is Sown in *Gardens*, and whole Fields are Sown with it in *England*, *France*, *Germany*, *Italy*, and *Spain*, as alſo in the Iſlands of *Terceras*, belonging to *Spain*. The Wild in Fields and Untill'd Places in *England*, *Germany*, &c. where the Manured has been Sown.

VI. *The Times.* They Flower in *June* and *July*, and the Seed is late Ripe, *viz.* in *September* or *October*.

VII. *The Qualities.* The *Manured Woad* is hot in the firſt Degree, and dry in the ſecond, bitter withal, but not ſharp. The *Wild* is as hot, but more drying, *viz.* in the third Degree, and is more ſharp and biting, exceeding the Manured in all its properties: they are Abſterſive, Aſtringent, and Vulnerary.

VIII. *The Specification.* It is good againſt the Obſtruction, Pain, and Tumor of the Spleen; and is proper for the Cure of ſimple Green Wounds, and Ulcers.

IX. *The Preparations.* You may have therefrom, *viz.* from the Herb, 1. *A Liquid Juice.* 2. *A Decoction in Wine or Water.* 3. *A Balſam.* 4. *A Diſtilled Water.* 5. *A Powder of the Herb.*

The Virtues.

X. *The Liquid Juice.* It is binding and very drying, reſiſts Putrefaction, ſtops Bleedings of all ſorts, whether inward or outward, by the Mouth, Noſe, Fundament, or private Parts; and therefore is profitable to ſtop the overflowing of the Terms and Loches in Women: uſed to Green Wounds, it ſodders up their Lips and quickly heals them; and is no leſs profitable to cleanſe and correct the putridity and malignity of old running Sores, and eating Ulcers, rebellious Fiſtula's, pernicious Cancers, and the like, being outwardly applyed and inwardly taken, from 1 Spoonful to 6, (according to the Advice of the Phyſician) Morning and Night, mixt with a little Wine, or Wine and Water, or other fit Vehicle; and ſo taken, it is good to open the Spleen, eaſe its Pain, and to diſcuſs all hot Tumors thereof.

XI. *The Decoction in Wine.* It has all the former Virtues, tho' not altogether ſo powerful, and therefore may be taken Morning and Night, from 3 to 6 Ounces; and outwardly applyed to ſimple Green Wounds, old running Sores, foul Ulcers and Fiſtula's, to waſh and foment them therewith, it Abſterges or cleanſes, and induces their healing: but particularly helps the hardneſs of the Spleen being Drank, and the Region thereof being alſo fomented therewith.

XII. *The Balſam.* It is of ſingular uſe (being applyed) for the Curing of ſimple Green Wounds, and cleanſing, incarnating, drying and healing, of old running Sores, malign and putrid Ulcers, and rebellious Fiſtula's, *&c.*

XIII. *The Diſtilled Water.* It has all the Virtues of the Juice or Decoction; but as it is much weaker, ſo it muſt be taken in much greater quantities, and is beſt to be uſed mixed with either the Juice or Decoction.

XIV. *The Pouder of the Herb.* It may be given from half a Dram to a Dram, Morning and Evening in a Glaſs of Wine, or Wine mixed with the Diſtilled Water, or in the Decoction aforementioned, to all the purpoſes ſaid. It is good againſt the Bloody-Flux, as alſo all other Fluxes of the Belly, or Defluxions of Humors upon any part, vehement Catarrhs, and the like.

XV. *The Decoction in Water.* It is uſed by Dyers to Dye Cloth, Wooll, Yarn, *&c.* of a blew color, by Boiling the matter to be Dyed therein.

CHAP. DCCXLI.

Of WOODROOF:

OR,

WOODROWEL; *Common, Blew,* and *Break-Stone.*

I. THE *Names.* It has no known Greek Name, but in Latine it is called *Aſperula*, and *Aſpergula*; and in Engliſh *Woodroof.*

II. *The Kinds.* Thoſe which are moſt known to us, are the three following, *viz.* 1. *Aſperula Dodonæi & Lobelij*; *Aſperula odorata Cluſij*; *Aſpergula odorata noſtras* Penæ; *Aparine Sylveſtris quædam Cordi*; *Rubia Sylveſtris alia minor Geſneri Hepatica Stellata Tabernæmontani*; Our Common Woodroof. 2. *Aſperula Flore Cærulea Dodonæi, Camerarij*; *Lobelij & Lugdunenſis*; *Aſperula Cærulea arvenſis Bauhini*; Woodroof with a Blew Flowet. 3. *Aſperula repens, Funcaria Salmaticenſis Cluſij*; *Synanchicæ Species Lugdunenſis*; *Funcaria Tabernæmontani*; *Rubia linifolia aſpera Bauhini*, Small Break-Stone Woodroof, or Woodroof Stone-Break.

The Deſcriptions.

III. The firſt, or our Common Woodroof. *Its Root runs and creeps under Ground, and ſhoots up new Stalks round about it every where. It ſends forth ſeveral ſquare Stalks half a Foot high or more,*

Woodroof Common.

full of Joints, and every Joint, 7 *or* 8 *fair green ſhining Leaves, broader than thoſe of* Clavers *or* Gooſe-Graſs, *in a manner ſmooth, or but little rough at all. At the tops of the Stalks, ſtand* 4 *or* 5 *white ſweet Smelling* Flowers, *made of* 5 Leaves *apiece, laid open like a* Star; *after which, comes ſmall round Seed, a little rough, or cleaving to whatſoever it touches.*

IV. The ſecond, or Woodroof with a blew Flower. *Its Root is ſmall, ſomewhat yellowiſh and Fibrous, periſhing every Year. It has ſeldom more than one round Stalk ariſing from its Root, ſet full of Joints, at every one of which ſtand ſeveral ſmall and ſomething long green Leaves encompaſſing it, not ſo ſmooth and green as the former; which ſpreads it ſelf out into ſmall Branches, from the bottom almoſt up to the top, ſet with the like Leaves, but ſmaller; where the Flowers ſtand* 3 *or* 4 *together, each upon a ſmall* Footſtalk, *which are of the ſame Magnitude with the former, or rather ſomething leſs, and of a fair blewiſh Purple color,*

VVoodroof Blew Flower'd.

without any Smell at all. After they are paſt, in their places grow ſmall round browniſh Seed, not rough at all. From this Seed when it falls, ſpring up freſh Plants the next Year.

VVoodroof Break-Stone.

V. The

V. The third, or ſmall Stone-Break Woodroof. *Its Root is white and thready: It is a very ſmall Plant, growing upright, with ſquare, rough, ruſh-like Branches, ſpreading it ſelf out into many ſmall Diviſions, almoſt like unto an* Horſe-Tail, *full of Joints, with two Leaves, and ſometimes more at a Joint, ſomewhat long and narrow, like unto* Line *or* Flax, *but rough. At the tops of the Branches come forth many ſmall white Flowers, ſet in Spikes, and 4 or 5 ſtanding upon a ſhort Foot-ſtalk together, which ſtand in rough Husks, in which is contained the Seed, which is black and ſmall.*

VI. *The Places.* The firſt is found growing Wild in the Woods in *Germany*; but both firſt and ſecond are Planted and Nurſt up with us in Gardens. The third *Cluſius* ſays grows about *Salamantica* in *Spain*, but *Parkinſon* ſays he found it on the right hand of *Bradford-Bridge*, at the lower end of *Grays-Inn Lane*, near *London*, by the Water Courſe which paſſes along there; and for that reaſon, may poſſibly be found in many other parts of this Kingdom beſides.

VII. *The Times.* The two firſt Flower about *May*, and their Seed ripens in the mean Seaſon, while they are in Flower, or preſently after. The third Flowers in the end of Summer, the Seed ripening in ſome ſmall time following.

VIII. *The Qualities. Woodroof* is temperate in reſpect of heat or cold, dryneſs or moiſture; and is very like in Qualities to our *Ladies-Bedſtraw*. They are Aperitive, Abſterſive and Vulnerary, Cardiack and Hepatick, chearing the Heart, and making it merry. *The Break-Stone Woodroof* is temperate alſo, hot and dry in the firſt degree, Aperitive, Abſterſive, opens Obſtructions of the Bowels, is Diuretick and Nephritick.

IX. *The Specification.* The *Woodroofs* chear the Heart, reſiſt Melancholy, make a Man lightſom and pleaſant, and induce the Curing of Wounds. *The Breakſtone* opens Obſtructions of the Urinary Paſſages, provokes Urine powerfully, and gives eaſe in the Strangury, and is an excellent thing for that Diſeaſe in the Throat called a *Quinſie*.

X. *The Preparations.* From the *Woodroof* you may have, 1. *A Liquid Juice.* 2. *An Infuſion or Decoction in Wine.* 3. *A Cataplaſm.* 4. *A Diſtilled Water.* From the *Break-Stone* you have, 1. *A Liquid Juice.* 2. *A Decoction in Water or Wine*; wnere Note, that of the *Woodroofs*, the firſt is only or chiefly uſed.

The Virtues.

XI. *The Liquid Juice of Woodroof.* If it be Clarified, it may be given from 1 Spoonful to 2 or 3 at a time, againſt Hypochondriack Melancholy, and Paſſions of the Heart, for it very much chears the Heart, and revives both Vital and Animal Spirits, making the Patient merry. It ſtrengthens the Stomach, and rectifies its depraved Tone; cauſes Appetite, and is good againſt Nauſeouſneſs and Vomiting. It is both a Preſervative and Curative of the Plague, and is good againſt all kinds of Malign and Peſtilential Diſeaſes.

XII. *The Infuſion or Decoction of* Woodroof *in Wine.* They have all the former Virtues, but not altogether ſo powerful, but admirably open Obſtructions of Liver, Spleen and Meſentery; preſerving the Vital and Animal Spirits from Infection, and the power of any Contagious Diſeaſe.

XIII. *The Cataplaſm of Woodroof.* It is made of the green Herb bruiſed. Being applyed, it is ſaid to diſcuſs hard Tumors, and to heal Simple green Wounds in any part.

XIV. *The Diſtilled Water of Woodroof.* It is effectual for all the purpoſes aforeſaid, and may be given alone, *(Dulcified with Syrup of Citrons, either of Juice or Peels)* from 4 Ounces to 8; or it may be uſed as a Vehicle for other things.

XV. *The Liquid Juice of Break-Stone.* Given from an Ounce to 3 Ounces, in White Port Wine, or mixt with *Parſley* or *Hydropiper* Water, it potently opens all Obſtructions of the Urinary paſſages, expels Sand, Gravel, Stones, and Tartarous Mucilage out of the Reins and Bladder. And being uſed vehemently hot, it helps ſuch as are troubled with the *Quinſie*, the Throat being gargled therewith, and outwardly Bathed very hot upon the afflicted parts; Stuphs alſo wet therein being applyed very hot thereto.

XVI. *The Decoction of Break-Stone in Wine.* It has all the Virtues of the Juice, but by reaſon it is not full out ſo ſtrong, it muſt be taken in a larger Doſe, as from a quarter of a Pint, to half a Pint, againſt Diſeaſes of the Urinary parts. And *Quinſies* muſt be often Gargariſed therewith, as hot as can well be endured.

CHAP. DCCXLII.

Of WOLFS-BANE *Deadly.*

I. *THE Names.* The *Arabians* call it *Chanach Adip*, or *Adib*, (i.e. *Stranglatorem Lupi:*) in *Greek* Ἀκόνιτον: in Latin *Aconitum*, *Luparia*; as alſo, *Lycoctonon*, and *Cynoctonon*, (becauſe it kills both Woolves and Dogs:) in Engliſh *Woolfs-Bane*.

II. *The Kinds.* Authors make many ſorts of this Plant, we ſhall treat only of the Principal, ſuch as we Plant and Nurſe up in our Gardens, viz. 1. *Aconitum Hymeale:* The Winter Woolfs-bane. 2. *Aconitum Hymeale flore pallido:* Pale Flower'd Winter Woolfs-bane. 3. *Aconitum luteum ponticum præcox:* The earlier whitiſh Woolfs-bane. 4. *Aconitum flore albido ſerotinum Ponticum, Aconitum primum flore albido Geſneri:* Late Flowering Woolfs-bane. 5. *Aconitum Lycoctonum flore Delphinij majus Sileſiacum Cluſij*; *Aconitum flore Delphinij Camerarij*; *Aconitum Cæruleum aliud Geſneri*; *Aconitum Cæruleum hirſutum, flore Conſolidæ regalis Bauhini:* The greater Woolfs-bane with Larks heel Flowers. 6. *Aconitum flore Delphinij minus, Dodonæi & Lobelij*; *Aconitum Lycoctonum Cæruleum majus Dalechampij*; *Aconitum quartum Matthioli*; *Aconitum Cæruleum glabrum flore conſolidæ regalis Bauhini:* The finer Leav'd, or leſſer Woolfs-bane, with Larks heel Flowers.

The Deſcriptions.

III. The Firſt, or Winter Woolfs-bane. *Its Root is Tuberous, ſo like both for ſhape and color unto Anemone Roots, that they may eaſily deceive One not well vers'd in them; but that this is browner and ſmoother without, and yellow within, if it is cut or broken. This little Plant thruſts up divers Leaves oftentimes in the deep of Winter in* January, *if the weather is any thing mild, but moſt commonly after the deep and long Froſts, bearing up many*

times the Snow upon the heads of the Leaves; which, like unto the Anemones, do every Leaf rise from the Root, upon several short foot Stalks, not above 4 Fingers high, some having Flowers in the middle of them, (which most commonly come up first) and some none: which Leaves stand as it were round, the Stalk rising up under the middle of the Leaf, deeply cut in, and gasht almost to the middle Stalk, of a very fair deep green color: in the middle whereof, close unto the Leaf, stands a small yellow Flower, consisting of 5 or 6 Leaves, very like a Crow-foot, with yellow Threads in the middle. After the Flower is fallen, there rise up divers small Horns or Cods set together, in which are contained whitish round yellow Seed.

IV. The Second, or Pale Flower'd Winter Woolfs-bane. *This in its Root, Stalks, Leaves, Flowers and Seed, manner and form of growing, is in all respects like the former; saving only, that the Flowers of this are of a pale yellow color, and in some Plants almost white.*

V. The Third, or earlier whitish Woolfs-bane. *Its Root consists of a number of dark brown Strings, which spread and fasten themselves strongly in the Ground. It springs not out of the Earth till the Spring is well begun, and then it sends forth great broad green Leaves, deeply cut in about the Edges, and not much unlike the Leaves of the great Wild*

VVoolfs-bane whitish early.

Crow-foot, but much greater: From among which Leaves, rises up a strong stiff Stalk 3 Feet high, having here and there Leaves set upon it, like unto them which are lower, but smaller. The Top of the Stalk is divided into 3 or 4 Branches, on which grow several pale yellow Flowers, which turn at last to be almost white; in fashion almost like the Helmet Flower, but much smaller, and not gaping so wide open: which being past, divers short Pods come up in their place, in which is contained black Seed.

VI. The Fourth, or late Flowering Woolfs-bane. *Its Root differs not from the former: it has as large Leaves as the other last described, and is much divided, cut also on the Edges somewhat deeply, but of a fresher green color, and not rising or springing out of the Ground, for almost a Month after the former is come up. The Stalk with Leaves thereon rises to be 4 or 5 Feet high, and with a long Branched head, of pale yellow color'd Flowers, almost whitish, but Flowers later almost by a Month than the third aforegoing. The Cods and Seeds are like the former.*

VII. The Fifth, or greater Woolfs bane, with Larks heel Flowers. *Its Root is something thick, long, and blackish, with several Fibres and long Strings adjoining to it, by which it takes strong hold in the Ground: From which shoot forth several green Leaves, of a very sad or dark green color, standing upon pretty long foot Stalks, cut in on the Edges into 5 deep divisions or parts, even to the Stalk, and somewhat rough or hairy; each part whereof is also dented about the Edges: From among which rises up a reasonable great and strong round hairy Stalk, about 2 Feet high, having some such Leaves thereon as grow below; at the Top whereof is growing many Flowers Spike fashion, one above another, which are fashioned something like those of Larks heels, but larger and thicker, with a short thick crooked heel behind them, of a very dead or sad blewish purple color, seeming as if they were rugged or crumpled withal, which adds a greater ill-favor'dness to them on the outside; but of a little fresher or more lively blew color, and smooth on the inside. After which come several small rough Cods standing together, like as other* Aconites *and* Columbines *also do, in which is contained a rugged black Seed.*

VVoolfs-bane Larks heel'd, *Greater* and *Lesser*.

VIII. The Sixth, or lesser Woolfs-bane, with Larks heels. *Its Root differs from the last, this having 3 or 4 thick short blackish Roots, ending in small long points, fastned together at the head. It has*

has divers ſmooth green Leaves, upon very long foot Stalks, but not altogether ſo large, or of ſo ſad a green color, much more finely cut in and divided, in many jags or parts than the former. The Stalk alſo riſes not up ſo high, and bears ſome ſmaller and finer Leaves thereon, which ends in a ſmall ſpike or head, of almoſt as large Flowers, with a ſhort ſpur or heel behind as the other has; but of a fairer blewiſh purple color, and more lively, as well on the outſide as inſide. The Cods and Seed are alſo like the former.

IX. *The Places.* They all grow Wild in *Germany*, *Italy*, and other Countries, in Woods and ſhady places: but with us they are only Nurſt up in *Gardens*.

X. *The Times.* The two firſt ſorts bring forth their Flowers with their green Leaves, commonly in *January*, for which they are only eſteemed. The others Flower later, as in *May* and *June*, and the Seed is ripe commonly in the following Months. The Roots of the two firſt may be Set in any of the Summer Months, and almoſt in any place, for they are hardy Plants, and will thrive almoſt any where.

XI. *The Qualities.* They are all hot and dry in the extremity of the fourth degree, burning and deleterious, or deadly, and therefore are not to be given inwardly. The Heads of Arrows being dipt into the Juice thereof, ſo Empoyſons them, that they kill all Living things who are Wounded therewith.

XII. *The Specification.* Woolfs-bane is profitable to kill Lice and Vermin in Childrens Heads, and to cleanſe them from Scurf, *&c.* to conſume dead Fleſh in Ulcers and Sores; and to clear the Eye-ſight from any Haw, Pin and Web, Cloud or Film, *&c.* which may obfuſcate the Sight.

XIII. *The Preparations.* You may have therefrom, 1. *A Pouder of the Roots and whole Plant.* 2. *A Decoction of the ſame.* 3. *A Diſtilled Water from the whole Plant.*

The Virtues.

XIV. *The Pouder.* Either alone, or made into an Ointment with Hogs Lard, and applyed to Childrens Heads troubled with Lice, Scurf, Morphew, Dandriff, running Sores, *&c.* it kills the Lice, and cures the Head of the other Maladies.

XV. *The Decoction of Roots, Leaves, Seed in Water.* It is good for all the purpoſes aforeſaid. Both *Decoction* and *Pouder* are uſed, as *Galen* ſays, in foul Sores and putrid Ulcers, to conſume the dead Fleſh, and cleanſe them; but they are not to be applyed to Sores in the Mouth or Privities, which are too tender Parts for any ſuch violent Medicaments.

XVI. *The Diſtilled Water.* Being dropt into the Eyes, it is good to take away the Inflamation, as alſo Specks, Spots, Haws, Clouds, Films, *&c.* which may grow in them, or trouble the Eye-ſight.

XVII. *Nota.* If any one ſhould by accident be Poiſoned, by taking inwardly Woolfs-bane, he ought immediately to ſeek for Cure, the method of which, we have laid down in the Cure of Poiſon by *Helmet-Flower* or *Monks-Hood*; which (to avoid Tautology or vain Repetition) be pleaſed to have Recourſe to Chap. CCCLIII. Sect. XVI. aforegoing of this Work, where it is plainly expreſſed.

CHAP. DCCXLIII.

Of WOOLFS-BANE *Antidote:* OR, DORONICUM.

I. *The Names.* The *Arabians* call it (as is ſuppoſed) *Doronigi* or *Durungi*, (whence the Name *Doronicum* is ſuppoſed to be derived, becauſe it is not to be found in any of the Ancient *Greek* or *Latine* Writers:) Our Modern Authors call it in Latine *Doronicum*: and we in Engliſh *Woolfs-bane Antidote*, *Wholſom Wooiſs-bane*, and *Doronicum.*

II. *The Kinds.* Authors have made eleven or twelve Species hereof, many of which may not in ſome Ages be ſeen by us: we ſhall therefore take notice only of 4 or 5 ſorts, which are either Nurſt up in our *Gardens*, or grow Wild in our *Country*, or the Roots of which are Sold in the *Druggiſts-Shops.* 1. *Doronicum Vulgare*, *Doronicum Romanum*; by all Writers, our common Woolfs-bane Antidote or Doronicum: I call it ours, becauſe it is common as well in our Gardens in *England*, as in the Gardens of other Countries. 2. *Doronicum minus Cluſij aliorumque*; *Doronicum Plantaginis folio Baubini:* The leſſer Woolfs-bane Antidote, or Doronicum. 3. *Doronicum brachiata radice penæ & Lobelij*; *Doronicum auſtriacum ſecundum Cluſij:* The Scorpion Rooted Doronicum, or Woolfs-bane Antidote. 4. *Doronicum Germanicum Cluſij*; *Aliſma ſeu Damaſonium Matthioli & Dioſcoridis*; *Caltha Alpina Geſneri*; *Nardus Celtica altera Penæ, Lobelij, Rondeletij*; *Ptarmica montana Lugdunenſis*; *Doronicum Pannonicum, & Doronicum ſextum Cluſij:* German, or our Engliſh Woolfs-bane Antidote. 5. *Doronicum officinarum*; *Radices Doronici*; *Radices Mechini*; *Doronicum antiquorum Penæ:* Doronicum of the Shops. 6. *Doronicum Arabum genuinum*: The true Arabian Doronicum.

The Deſcriptions.

III. The firſt, or our common Woolfs-bane Antidote, or Doronicum; *(ſo called ours, becauſe it has been longeſt known unto us, and kept in our Gardens.) Its Roots are Tuberous, ſmall, thick and ſhort, creeping or lying under the upper cruſt of the Earth, with divers ſmall Fibres ſhooting from them down into the Ground, and encreaſing divers ſuch like tuberous Roots round about it, which are tender and not hard, ſomewhat whitiſh, with ſome Joints therein, and greeniſh on the upper ſide next to the upper face of the Ground. Some would make theſe Roots to reſemble a Dead Scorpion, becauſe of the Joints, which are like Scales thereon: The former part next the Leaves, being thick, to be the Body, and the other parts being ſmall to be the Tail, which is ſomething ſweet in Taſte, and a little bitter, and a little auſtere clammineſs withal. From this Root ſpring up divers Leaves, each ſtanding by it ſelf upon a long foot Stalk, which are ſomewhat round, greater than the Roman Sowbread Leaves, ſoft and gentle in handling, ſomething hairy, and of a freſh green color. From among which riſes up ſeveral green roundiſh Stalks, about a Yard high or more, parted at the Top, ſometimes into one or two Branches, every one carrying a large Flower, ſomewhat like the Corn Marigold, but much larger, having many narrow long yellow*

Leaves,

VVoolfs-bane Antidote: OR, *Doronicum.*

Leaves, as a Border ſet about a middle Thrum, ſomewhat yellower; which when it falls away, turns into ſmall whitiſh Down, with very ſmall blackiſh Seed, which is carried away with the Wind.

IV. The ſecond, or leſſer Woolfs-bane Antidote, or Doronicum. *Its Root is ſmall, not like the former, being without thoſe Joints ſo plain in them. It has divers Leaves longer and narrower than the firſt, ſomewhat like unto Ribwort Plantane, but hairy, and of a yellowiſh green color. The Stalks are ſlender, and riſe nothing ſo high, nor are much Branched, but carrying the like yellow Flowers as the former, but ſomewhat paler.*

V. The third, or the Scorpion Rooted Doronicum, or Woolfs-bane Antidote. *Its Root creeps not ſo much, but is ſomething longer thruſt down into the Ground, with Joints growing upwards, Branched (as it were) on each ſide, with young Roots, and ending in a ſmall point, having divers long Fibres adjoining to them. It has large round hairy Leaves like the firſt, ſomewhat waved or unevenly dented about the Edges, of a ſadder green color, and ſomething bigger: the Stalks have divers narrow Leaves thereon. The Flowers are yellow, and their Leaves dented at their ends; and the Seed is like unto the other.*

VI. The fourth, or German, or our Engliſh Woolfs-bane Antidote. *Its Root is ſmall, yet Jointed withal, not much unlike the firſt, but not ſo plainly to be diſcerned, of a ſweet Smell, and a bitter biting Taſte, having many Fibres underneath it, giving many off-ſets, by which it is encreaſed. It has ſeveral broad hairy Leaves, of a yellowiſh green color on the upper ſide, but whitiſh and ſmooth underneath, lying on the Ground, ſomething like unto broad Plantane Leaves, or rather like unto the Croſs-wort Gentian, having ſome long Ribs therein. Among theſe Leaves riſes up a Stalk, and ſometimes many, bearing long Leaves at every Joint. At the Top, it Branches forth into 2 or 3, or more parts ſometimes, bearing every one a fair large Flower, ſet as it were in a rough Cup, which conſiſts of many pale yellow Leaves, dented at their ends, as a pale or border about the middle; which is made up of many ſmall Flowers of 4 Leaves a piece, of a deep yellow color, as it were the Thrum, which being paſt, the head turns into Down, which with the ſmall black Seed therein, is carried away with the Wind.*

VII. The fifth, or Doronicum of the Shops. *That which is Sold in the Shops, is the* Doronicum quartum Cluſij, vel Stiriacum; Doronicum latifolium flore magno Bauhini: *The broad Leav'd Doronicum with a large Flower. Its Root is ſomewhat long, blackiſh on the outſide and Jointed, but not ſo plainly to be diſcerned, the Joints riſing upwards, and not downwards, (as they do in moſt of the reſt) ſpreading it ſelf, by means of certain ſtrings, very far about, with other tuberous Roots of like form, many in number, each Tuber having many long white Fibres underneath it. It is a low Plant, but has many large, and ſomewhat longiſh round Leaves, dented about the Edges, like unto the third ſort before Deſcribed, ſtanding upon high foot Stalks. The Stalk has ſome Leaves thereon, longer and narrower than thoſe below; and at its Top (not having any Branches) one Flower, larger than any of the former, but elſe like unto them, having many long yellow Leaves, ſet about a middle browniſh yellow Thrum. The Root of this is all that we have in the Shops, which is Sold for the True* Arabian Doronicum; *but truly is not it: however, our Modern Phyſicians generally agree, that it Anſwers the End, and has the Virtues of the True* Arabian Kind, *tho' it has no agreement therewith in form.*

VIII. The ſixth, or True Arabian Doronicum. Avicen Lib. II. Cap. CC. *and* Serapio *in his Book of Simples,* Cap. CCCXXV. *have Deſcribed it to be,* A Root of the bigneſs of ones Thumb, of a hard and heavy Subſtance, of a yellow color on the outſide, and brown within, with ſome white Veins, and that it is hot and dry in the third Degree. Parkinſon *ſeems to be of Opinion, that it is a kind of* American Mechinus, *(often found among the* Mechinus, *or Black Ginger) brought chiefly from* Brazil, *which* Lobel *calls* Mechini rara varietas, which has divers circular knotted Lines, as it were like Joints on the outſide, is firm and heavy, and full of white Veins when it is broken, is alſo very ſharp, quick, and biting, and Aromatical in Taſte. *This ſays he, having all the Notes of the* Arabian Kind, *can be no other than the* Legitimate and True Doronicum; *however he ſays, he leaves it for every one to judge as his reaſon ſhall direct him.*

IX. *The Places.* The firſt grows on the Mountains in *Savoy*, beyond the Lake *Leman*, and in other places in *France* and *Germany*; but with us only in *Gardens.* The ſecond grows in *France.* The third on the Woody Mountains in *Auſtria*, and about *Trent*; as *Cluſius* ſays: but both of them with us, only in *Gardens.* The fourth in many places in *Germany*, in Medows and elſewhere; and with us on the Hilly Grounds in *Northumberland.* The fifth, *Cluſius* ſays, grows near *Newberg* in *Stiria*; the Root of which is brought to us dryed, and Sold at the Druggiſts-Shops. The ſixth, is an abſolute Stranger with us, and unleſs the *American Mechinus* be it, which by Accident as it were, is now and than brought hither, we know nothing at all of it.

X. *The*

X. *The Times.* They all Flower early for the moſt part, *viz.* in *May*, and their Seed is Ripe in ſome ſhort time after.

XI. *Nota.* *Cortuſus* of *Padua*, and *Matthiolus*, calls that which is Sold in the Shops, *Pardalianches*, and refer it to the *Poiſonous Aconites*, defaming and railing againſt it, as a Poiſon not fit to be uſed inwardly in Mans Body; and that thoſe Phyſitians who put it into Cordial Medicines, as *Elect. de gemmis*, *Elect. ex Aromatibus*, *Diamoſchum Dulce*, and other *Cordial Compoſitions*, do very ill, and have little reſpect to the Life or Health of Man; becauſe they both upon Tryal found it to be true, and that being mixed with Fleſh and given to Dogs, it killed them: *to which it is anſwered*, that many things which will kill Fowls, Dogs, and other Beaſts, may notwithſtanding be ſafely given to Mankind: And many things which are wholſom to Man, and are often uſed without Scruple, or the leaſt danger, will yet quickly kill other Creatures. So *Aloes* and *Bitter Almonds*, given to Dunghil Fowls, or to Foxes, will quickly kill them; and the *Chamæleon Thiſtle*, will kill Dogs and Swine, whilſt all theſe things being given to Man, are not only innocent, and abſolutely free from any deleterious or deadly quality, but are even Antidotes againſt Poiſon, and Soveraign Cordials; and the Root of the *Chamæleon* being Drank in Wine, is good againſt the Poiſonous Bitings of Vipers, and other Venemous Creatures. But on the contrary, ſome other Phyſitians ſay and affirm, that this *Doronicum of the Shops*, is a perfectly innocent thing, and without the leaſt danger in it. *Geſner* ſays, that he had taken much of it, and oftentimes a good quantity, even to 2 Drams in Pouder, that he might find the Operation of it, yet found no harm thereby; and that he had given it to others, without any danger or hurt. And *Pena* and *Lobel* report, that *John de Vrode*, did Eat many Roots thereof without any danger, or Senſe of ill thereby; and therefore they adviſe others, not to abdicate the uſe of this Plant to Mankind. *Dodonæus* was once of the ſame mind with *Cortuſus* and *Matthiolus*, but afterwards he found his Error, and reclaimed it. By what has been ſaid on this matter, I think it is manifeſt, that the dangerous Qualities ſaid to be in this Plant, are raiſed only from Ignorance of Fact, Scruples and Suppoſitions, and not from any real Grounds; foraſmuch as Experience has ſufficiently proved the contrary.

XII. *The Qualities.* Doronicum of the Shops, is hot and dry in the end of the ſecond Degree; Cardiack, Sudorifick, and Alexipharmick.

XIII. *The Specification.* It is a peculiar Antidote againſt the Poiſon of Woolfs-bane, and Helmet-flower or Monks-hood: It alſo reſiſts the Poiſon cauſed by the Bitings of venomous Creatures, opens Obſtructions of the Lungs, and ſtops the Defluxions of Humors into the Throat and Eyes, eaſing their pain, and taking away the Inflamation of the Parts.

XIV. *The Preparations.* Our Diſcourſe now, and preſently of the Virtues, has chiefly reſpect to the fifth Species aforegoing; tho' ſome Authors think that the ſame may be ſaid and applyed to all the other Kinds, ſeeing that they are all in Form, and places of growing one ſo like to another; and poſſibly if Tryal be made, would perform the ſame Effects. You may have therefrom, when freſh Gather'd, 1. *A Juice from the Roots and Leaves.* 2. *A Decoction of the Root.* 3. *A Pouder of the Root.* 4. *A Decoction of the Engliſh or German Woolfs-bane Antidote,* (at Sect. 6.) 5. *A Pouder of the Root and Herb of the ſame Plant.*

The Virtues.

XV. *The Liquid Juice of the Roots and Leaves.* It is ſaid to be found good to be put into Eyes which are hot, red, and inflamed, to take away their prickings and eaſe their pain.

XVI. *The Decoction of the Root in Wine or Water.* It is an excellent Cordial, reſiſts and Cures the Poiſon of Aconitum, Monks-hood, and other poiſonous Plants; as alſo the poiſonous Bitings of Vipers, Mad Dogs, and other venomous Creatures; it cleanſes the Breſt and Lungs of thick tough Humors, ſtops the Cough, and gives eaſe in Pleuritick Pains and Stitches in the Sides, Head-achs, Vertigo's, *&c.* Doſe half a Pint at at a time Morning and Evening, a little Dulcified with Sugar.

XVII. *The Pouder of the Root.* It has all the Virtues of the Decoction, and may be given Morning and Night, from 2 Scruples to 2 Drams, made up into an Electuary with ſome proper Syrup, or Conſerve; or mixed in Syrup of Citron Peels, or of Juice of Citrons, and ſo given in a Glaſs of Canary, Sherry, or Madera Wines, *&c.*

XVIII. *The Decoction of the Engliſh or German Woolfs-bane Antidote in Wine.* It provokes the Terms in Women, eaſes the Pains and Diſeaſes of the Womb, is effectual againſt Poiſon, eſpecially the Poiſon of the Fiſh called *Lupus Marinus*, as alſo the venomous Biting of Shrew Mice and Toads. It reſiſts the mighty Potency of *Opium*, in ſuch as have taken too much of it: and is given with good ſucceſs to thoſe who have a Bloody-Flux, or any other Pains, or Gripings in the Stomach or other Bowels, by reaſon of ſharp Humors offending them. It is profitable againſt Convulſions, Cramps, Weakneſſes, and other pains and diſaffections of the Nerves, Tendons, and Joints: and if it is given with the fine Pouder of *Carrot Seed*, or rather of *Daucus Seed*; it potently expels Gravel, ſmall Stones, and Tartarous Slime, from the Reins, Ureters and Bladder. It is applyed alſo outwardly to eaſe Inflamations, and take away the pains of old running Sores, putrid and eating Ulcers, and the like.

XIX. *The Pouder of the Root of the ſame Plant.* It may be given Morning and Night, from a Dram to two Drams, mixt with ſome proper Syrup, and then to be ſwallowed down with ſome of the former Decoction; or with a Glaſs of Canary, Sherry, or ſome other like generous Wine, for all the purpoſes and intentions the aforeſaid *Decoction* is appropriated to. It is uſed alſo as an Errhine, or rather a Sternutatory, by which way it cleanſes the Head and Brain of cold and moiſt Recrements, which cauſe Dullneſs, Drowſineſs, and other ill habits of thoſe Parts.

CHAP. DCCXLIV.

of WORMWOOD *Common.*

1. THE *Names.* It is called by the *Arabians* *Affinthium*; by the *Greeks* Ἀψίνθιον: and in Latin *Abſinthium:* and in Engliſh *Wormwood.* *Dioſcorides* calls it Βαθύπικρον, *à profundo amarare*; from its exceeding Bitterneſs.

II. *The Kinds.* Authors make a great many Kinds of this Plant; we ſhall take Notice of four ſeveral ſorts, *viz.* 1. *Abſinthium vulgare, Abſinthium*

thium latifolium, & Latifolium vulgare: Our common Wormwood, of which we ſhall Treat in this preſent Chapter. 2. *Abſinthium Romanum, Abſinthium Ponticum*, of which in the next Chapter DCCXLV. 3. *Abſinthium marinum, Abſinthium Belgicum; Abſinthium Anglicanum; Abſinthium Seriphium, ſive Maritinum Anglicum:* Marſh or Sea Wormwood; of which in Chap. DCCXLVI. 4. *Abſinthium ſantonicum; Abſinthium ſementina:* Wormſeed Wormwood; of which in Chap. DCCXLVII. following.

The Deſcriptions.

III. The Root of our common Wormwood is *hard and Woody, with many Strings adjoining to it. It has many large whitiſh green Leaves, ſomewhat more hoary underneath, much divided or cut into many parts; from among which, riſe up ſeveral hard, woody, and hoary Stalks, two or three*

VVormwood Common.

Feet high, beſet with the like Leaves as grow below, but ſmaller, divided at the Tops into many ſmaller Branches, whereon grow many ſmall Buttons, with pale yellow Flowers in them; wherein afterwards is contained ſmall Seed. The Stalks hereof Die down every Year, but the Root holds a Tuft of green Leaves all the Winter, ſhooting forth anew again; which are of a ſtrong but pleaſing Smell, and of a very bittter Taſte.

IV. There is in hot Countries, nearer the *Tropick* of *Cancer*, a Tree Wormwood, very like to this our *Common Wormwood*, which grows conſiderably greater and higher, and ſeems to be a kind of *Frutex*, but it will not thrive in our Colder Climates.

V. *The Places.* It grows plentifully Wild almoſt throughout the whole Kingdom; and is beſides often found in Gardens, coming up of its own accord.

VI. *The Times.* It Flowers and Seeds in *July* and *Auguſt*, which when it is in the height of its Flowering, ought to be gathered, dryed, and carefully laid up for Medical uſes.

VII. *The Qualities.* It is hot and dry in the third Degree; Aperitive, Abſterſive, Aſtringent, Stomatick, Nephritick, Hyſterick, and Cathartick.

VIII. *The Specification.* It Cures the Scurvy in a cold Conſtitution; rectifies the Tone of the Stomach and Bowels, is good againſt nauſeouſneſs, ſtops Vomiting, ſtrengthens the Ventricle, provokes Urine and the Terms, Cures Surfeits, and helps againſt the hard Swellings of the Belly; cauſes a good Appetite, and a ſtrong Digeſtion, and is profitable againſt the Yellow Jaundice. It is alſo an Antidote againſt many Vegetable Poiſons, diſcuſſes Quinſies or Tumors in the Throat, and is a good Coſmetick, taking away Wheals, Pimples, Worms, Roughneſs, and other deformities of the Skin: It helps the dimneſs of the Eyes, ſore and running Ears, and eaſes their Pains: It is good againſt the ſwelling and hardneſs of the Spleen; it purges Cholerick Humors downwards, both by Stool and Urine. It alſo kills Worms in Children being inwardly taken, and outwardly applyed; it is good againſt the Colick, Bloody-Flux, and all other Fluxes of the Belly: And being conſtantly uſed, it is ſaid to Cure a ſtinking Breath. It is commended againſt Tertian and other lingering Agues, by opening Obſtructions, purging by Urine, ſtrengthening the Stomach and Liver, and altering the whole habit of the Body.

IX. *The Preparations.* From Common Wormwood you may have theſe, 1. *A Liquid Juice.* 2. *An Eſſence.* 3. *A Decoction.* 4. *Wormwood Beer.* 5. *An Infuſion in Wine.* 6. *A Pouder:* 7. *An Eſſential Salt.* 8. *Camerarius*'s *mixture.* 9. *Syrup of Wormwood Simple.* 10. *Syrup Compound.* 11. *An Inſolated Oil.* 12. *A Cataplaſm.* 13. *Troches.* 14. *A Simple Diſtilled Water.* 15. *A Simple Spirit.* 16. *A Water and Spirit Compound.* 17. *A Diſtilled Oil.* 18. *Poteſtates or Powers.* 19. *A Spirituous Tincture.* 20. *An Acid Tincture.* 21. *An Oily Tincture.* 22. *A fixed Salt.*

The Virtues.

X. *The Liquid Juice.* If it be given to 2, 3, 4, or 5 Spoonfuls, according to Age and Strength, it is Cathartick, and Purges the Body of Cholerick and Pituitous Humors, ſtrenghtening the Bowels at the ſame time; and Snuff'd up the Noſtrils as an Errhine, it purges the Head and Brain of Pituitous Recrements. If it is inſpiſſated and made up into Pills, 10 Grains being taken at a time, admirably ſtrengthens the Stomach.

XI. *The Eſſence.* If taken in due Doſe in Broth or Wine, it gently Purges the *Viſcera* of Cholerick and Flegmatick Humors, kills Worms in the Stomach and Belly, provokes Urine and the Terms, opens Obſtructions of Stomach, Liver, Spleen, Meſentery, Reins and Womb; is good againſt the Jaundice, Dropſie, Gout, and Scurvy, creates a good Appetite and Digeſtion, ſtrengthens the Stomach and Bowels, Cures Fluxes of the Belly, and is good againſt Tertian Agues, and other like Chronick Diſeaſes: it ſtops Vomiting, is good againſt a Stinking Breath and Loathings, and reſtores the Tone of the Stomach. Doſe from a quarter to half a Spoonful in Canary, or other generous Wine, Morning, Noon, and Night: but if it is to Purge withal, it may be taken from a Spoonful to 2 or 3, or more, in any proper Vehicle.

XII. *The*

XII. *The Decoction in Water or Wine.* It has all the former Virtues, and may be given Morning and Night a quarter of a Pint at a time, in any proper Vehicle. It is said to be peculiarly good against the Yellow Jaundice.

XIII. *Wormwood Beer.* It is Stomatick, comforts and warms a cold Stomach, takes away loathing of Meat, and causes a good Appetite and Digestion; it alters a Cold habit of Body by long taking it, and purifies the Blood.

XIV. *An Infusion in Wine, or Wormwood Wine. Take Choice Rhenish Wine a Gallon; dried Wormwood Leaves and Tops of Flowers, a good handful: mix them, and stop them up close for a Month or more, shaking the Vessel once or twice a Day; and all the while it is used, let it remain upon the Herb or* Fæces. It is taken at any time mixt with choice Canary; it warms a Cold Stomach, causes a good Appetite and Digestion, expels Wind, kills Worms, and being Drank alone without mixture, Cures the Green-Sickness, being taken in the Morning Fasting; and frequently used, it prevents the Cachexia and Dropsy.

XV. *The Pouder of the Herb and Heads of Flowers.* It heats, cleanses, drys, and strengthens the *Viscera*: It has all the Virtues of the Essence, and kills Worms in Children, being taken from 10 Grains to a Dram, (according to Age and other Accidents) mixt with Honey, or Pulp of an Apple, or some such like, and washt down with a Glass of Canary, Morning and Evening; it is good against Surfeiting and Drunkenness, and the Putridity of the Stomach, and helps against a stinking Breath.

XVI. *The Essential Salt.* It has all the Virtues of the Liquid Juice, Essence, Decoction, Wine and Pouder, and that in an exalted measure. It may be given against all those Diseases, as also the Green-Sickness in Virgins; from a Scruple to a Dram, every Morning Fasting, and at Bed time, in a Glass of White Port or *Lisbon* Wines, or in Canary, with a *Continuando*, till the Patient grows well.

XVII. *Camerarius's mixture. Take the Tops or Flowers of Wormwood, Flowers of Rosemary, and Flowers of Black Thorn, or Sloe-Bush, of each* 4 *Ounces; Saffron* 2 *Ounces; Rhenish Wine* 4 *or* 5 *Quarts, mix them, and in a Vessel close covered, simmer them over the Fire for an hour or more, then Strain out and keep it for use.* It is commended for the Cure of the Yellow Jaundice, a small draught of it being taken in the Morning fasting, (the Body being prepared beforehand by Purging:) and so taken, it brings down also the Terms in Women; and if a little Wine Vinegar be added to it, it is said to help those who are Poisoned or almost Strangled, by eating Poisonous Mushrooms; and being taken mixed with Wine, it is good against the Poison of the black Chamæleon Root, Hemlock, Shrew-Mouse, and *Draco Marinus*, which is called a Quaviver.

XVIII. *The Simple Syrup. Take Clarifi'd Juice of Wormwood, Clarified Sugar, or the double Refined, of each* 4 *Pounds; mix, and in the heat of a Bath make a Syrup.* It has all the Virtues of the Juice, Essence, and Decoction, and may be given from one Spoonful to two, in a Glass of Wine: If Nitre be dissolved in it, it is then good against the Quinsey, and Inflammations of the Throat and Almonds, to Gargle with it. Dropt into the Eyes, it is good against the dimness of Sight, Clouds, Spots Films, *&c.* And dropt into the Ears, it eases their Pain, and heals running Sores therein.

XIX. *The Compound Syrup. Take dryed Wormwood, a pound; Red Roses,* 4 *Ounces; Indian Spicknard, an Ounce; Old White Port or Lisbon Wine, Juice of Quinces, of each* 5 *Pints: steep them a whole Day in a close Earthen Vessel, then Boil very gently, and Strain out without pressing: and with* 4 *Pounds of double refin'd Sugar, make it into a Syrup in the heat of a Bath.* It is good for a cold and flegmatick Stomach, eases its Pain, and strengthens it, as also the Liver and Concoctive Faculty; causes a good Appetite, expels Wind, provokes Urine, and prevails against the Yellow Jaundice. Dose from one to two Spoonfuls Morning and Night, in a Glass of generous Wine.

XX. *Oleum Absinthiacum*; Infolated Oil of Wormwood. *Take Flowers or Tops of Wormwood,* 4 *Ounces; choice Oil Olive,* 3 *Pounds: mix, and set them in a hot Sun in a Glass close stopt a whole Week, shaking them every Day then boil in a Bath; press out the Oil, and put in fresh Wormwood as before, which boil and press out: then a second and third time, adding* 4 *Ounces more of fresh Wormwood, put to it also* 4 *Ounces of Juice of Wormwood; which boil again in a Bath, till the humidity of the Juice is evaporated, then press out and keep it for use.* It heats and strengthens the Stomach, being Anointed thereon, Anointed on the Stomach and Belly, it kills Worms, the Pouder being given also at the same time: Anointed on the Back bone, it abates the shaking Fits of Agues, if done the whole length thereof, for half an hour before the coming of the Fit: Anointed on Stomach, Sides and Belly, it strengthens all the Bowels, chiefly Liver and Spleen; and is good against Cachexies and Dropsies, and Diseases arising from Coldness and Weakness of those Parts: it causes also Appetite, helps Digestion, and dissipates Wind, for which reason it is good against the Colick.

XXI. *The Cataplasm. It is made of the green Herb, by beating it in a wooden Mortar with a wooden Pestle, adding a little Ox Gall to it.* Applying it to the Stomach, it kills Worms in those parts, and strengthens them, giving ease also to pains of the Liver and Spleen.

XXII. *Troches of Wormwood Compound.* ℞ *Wormwood Leaves and Flowers in fine Pouder, Red Roses in Pouder, Anise-Seeds in Pouder, of each* 2 *Ounces: Roots of Asarabacca, Rhubarb, Spicknard, Smallage-Seed, Mace, Mastick, each in fine Pouder, one Ounce: Almonds bitter, Inspissate Juice of Maudlin, of each an Ounce also: Juice of Succory, enough to make all into a Mass for Troches.* It is a very bitter Medicament, and scarcely ever taken alone, but with some proper Vehicle. They strengthen the Stomach, Liver, Spleen, Mesentery, and other Bowels, kill Worms in the Body, opens Obstructions of the *Viscera*, and are profitable against the Yellow Jaundice. Dose a Dram Morning and Night, in Syrup of Citron Peels.

XXIII. *The Simple Distilled Water.* It heats and comforts the Stomach, is good against Loathing, stops Vomiting, expels Wind, helps Digestion and causes a good Appetite; and is said to give, ease in the Tooth-ach. It has all the Virtues of the Juice and Essence, but much weaker: Dropt into the Eyes, it clears the Eye-sight; and bathed upon the Temples, it eases the Head-ach.

XXIV. *The Simple Spirit. It is made from the fermented Juice, by Distilling it in a Copper Alembick Tinn'd within, with its Worm or Refrigeratory.* Or, *Take Leaves and Tops of dryed Wormwood,* 4 *Pounds; small Wines,* 6 *Gallons, digest* 24 *hours, then Distil in an Alembick as before; adding to every Pint of the Distilled Water, two Ounces of double refined Sugar: The first quart you may call Simple Spirit of Wormwood; what follows after, save for Wormwood Water.* These

have the Virtues of Wormwood, but more fit for Antient People, whose Natural heat is abated; it warms and comforts the Stomach, and helps Digestion, and is good for such as are troubled with Cachexy, Dropsy, and Jaundice, *&c.*

XXV. *Water and Spirit of Wormwood Compound.* *Take Tops and Leaves of dryed Wormwood*, 2 *Pounds*; *Annisseeds, half a Pound*; 6 *Gallons of small Wines: mix, and digest all together for* 24 *hours, then distil them in an Alembick as aforesaid, adding* 2 *Ounces of double refined Sugar to every Pint of the distilled Liquor. The first Quart keep for Spirit of Wormwood Compound: and all the rest for Wormwood Water Compound.* It has all the former Virtues, but more agreeable to such as have got Coughs, Cold, Wheezing, or any stuffing in the Stomach and Lungs, or troubled with the Colick.

XXVI. *Oil of Wormwood Distilled.* It has all the Specifick Virtues ascribed to Wormwood, at *Sect.* VIII. aforegoing. A Drop, or 2, or 3, of this Oil, mixt first with a little white Sugar, and then drank in a Glass of *White Port* or *Lisbon* Wine, or Canary, makes an excellent draught to strengthen the Stomach, Liver, and other *Viscera*; to help against a Cachexia, cause a good Appetite and Digestion, and make a good color in the Face: It expels Wind, provokes Urine, and is good against Hypochondriack Melancholy, and universally strengthens the whole Body.

XXVII. *Potestates Absinthij*, or Powers of Wormwood. They have all the Virtues of the Oil exalted, and so more subtil, and are also much more pleasant to be taken: you may take Morning, Noon and Night, 40 or 50 Drops in a Glass of generous Wine.

XXVIII. *The Spirituous Tincture.* 'Tis a Noble Medicament, and has all the Specifick Virtues enumerated, at *Sect.* VIII. aforegoing; it resists Vomiting and Nauseousness, and strengthens the Stomach above all other Preparations of Wormwood. You may take 20, 30, or 40 Drops, or more at a time, in a Glass of Canary; the more the Wine is, the greater number of Drops may be given at a time.

XXIX. *The Acid Tincture.* It is an Antidote against all hot, burning, and malign Fevers, and is an excellent thing against the Plague or Pestilence it self, and all other Contagious and Pestilential Diseases: it provokes Urine and the Terms, and carries off the Morbifick cause of Internal disaffections, by the Urinary passages.

XXX. *The Oily Tincture.* It is good to provoke Urine, and cleanse the Urinary passages from Sand, Gravel, Stones, and Slimy and Tartarous matter infesting those Parts: it is an excellent thing against the Colick, Palsy, Convulsions of the Bowels, and Gout affecting the Stomach. Dose from 8 to 16 or 20 Drops, first Dropt into and mixt with Sugar, and then to be taken in a Glass of *White Port* or *Lisbon* Wine: outwardly, it is good to Anoint parts afflicted with the Gout, Sciatica, Rheumatism, *&c.* As also to help the Headach, proceeding from a cold and moist cause, being Anointed upon the Part. And applyed to the Piles or Hemorrhoids, it gives present ease, and in a short time after Cures them.

XXXI. *The Fixed or Elementary Salt, made by Incineration and Elixiviation.* Taken from 10 Grains to a Scruple, or half a Dram, it is an Antidote against the Scurvy, and purifies the whole Mass of Blood and *Lympha*, effectually carrying off the Recrements of those Fluids by Urine. It may be given in Wine, in a cold and moist habit of Body: but in a hot and dry Constitution, it ought to be given in a thin sort of Water Gruel. If a Scruple or half a Dram of it be mixed with a large Spoonful of Juice of Limons, and so given to one that is affected with an extream Vomiting, it stops it upon the spot: It gives ease in the Strangury, provokes Urine potently, and expels Sand, Gravel, and Tartarous Mucilage, from the Reins, Ureters, and Bladder.

CHAP. DCCXLV.

Of WORMWOOD *Roman:* *OR,* *PONTICK.*

I. *THE Names.* It is called in *Greek* Ἀψίνθιον πεντικὸν: in *Latin Absinthium Romanum*; *Absinthium Ponticum*, by almost all Writers. In *English*, *Roman Wormwood*, and *Pontick Wormwood.*

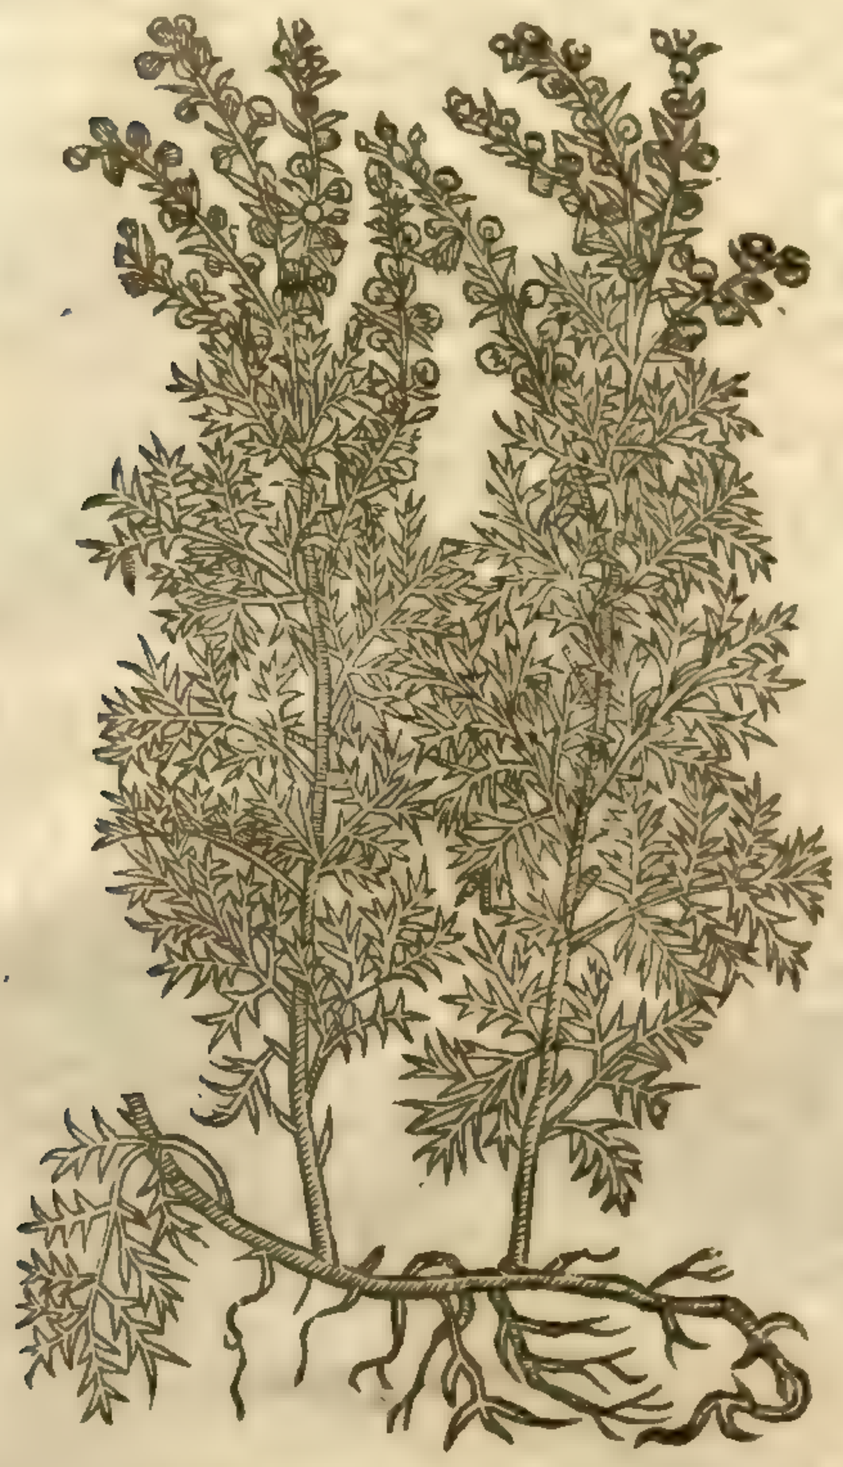
II. *The Kinds.* We observe but three Species, viz. 1. *Absinthium Romanum vulgare*; *Absinthium Ponticum commune:* Our common Roman, or Pontick Wormwood. This by many is judged to be the true *Absinthium* of *Pontus*, which *Dioscorides* and *Galen* do so much commend. 2. *Absinthium Ponticum verum*; *Absinthium Ponticum Montanum Baubini*; *Absinthium Montanum Camerarij & Tabernæmontani*: who also calls it *Romanum Absinthium commune, sive Alpinum Gesneri*; *Absinthium tenuifolium Ponticum Galeni Gerardo*: The true Roman Wormwood. 3. *Absinthium tenuifolium Austriacum Clusij, & Italicum*, (because it has been found to grow in several Parts in *Italy.*) *Absinthium Ponticum Tridentinum Herbariorum Lobelio & Lugdunensi:* Fine Leav'd Pontick Wormwood, or Austrian Wormwood.

The Descriptions.

III. The first, or our common Roman or Pontick Wormwood. *The Root from a short Head, shoots forth many long Fibres into the Earth, by which it is nourished; and sends forth divers Sprouts round about it, by which it much encreases. It is a small low Herb, with much more slender and short Stalks than the next: on which grow very small and fine short hoary white* Leaves, *smaller and finer than those of the fine* Southernwood; *which grow at several Joints, many coming forth together: at the tops of the Stalks grow small yellowish* Flowers, *neither so many nor so great, as those of the next. The smell hereof is faint, and far weaker than in the next to be Described; and the Taste thereof much less bitter.*

IV. The second, or true Roman Wormwood. *Its Roots are smaller, less Woody, and fuller of Fibres, than those of our* Common Wormwood *in in the last* Chapter: *It has also more slender and shorter Stalks, by a Foot at least, than that of our* Common Wormwood, *and reasonable large* Leaves, *yet smaller, and more finely cut in and divided than it, but as white and hoary both* Leaves *and Stalks. The* Flowers *are also of a pale yellow color, standing upon the small Branches in the same manner: so that excepting it is smaller every way, and in each part, it is altogether like to our* Common broad

Wormwood { Roman: / *Or,* / Pontick } true.



broad Leav'd Wormwood. *Its ſmell is ſomething Aromatical ſweet, and its bitterneſs is not ſo great.*

V. The third, or fine Leav'd Pontick, or Auſtrian Wormwood. *It has a long ſlender, and Fibrous Root, ſpreading it ſelf under Ground, which ſends up many ſmall, hard, ſtiff, and hoary Stalks, on which are ſet, without order, ſmall and ſomewhat long, and hoary Leaves, very like to the Leaves of* Marſh Wormwood; *which Stalks are divided towards their tops, into many other ſmall and ſlender Branches, riſing from the Joints where the Leaves do grow, with many ſmall Heads, which give forth many ſmall whitiſh Flowers.*

VI. *The Places.* They are *Italian*, *Auſtrian*, and *Hungarian* Plants; but for their excellent Virtues ſake, have been Tranſplanted into our Country, where now they are Nurſt up in *Gardens.*

VII. *The Times.* They all Flower in *July* and *Auguſt*; in which Times they ought to be Gathered, and carefully laid up for Medical uſes.

VIII. As to their *Qualities*, *Specification*, *Preparations* and *Virtues*, they are the ſame with thoſe of our *Common Wormwood*, in the former *Chapter*; and therefore no more need be ſaid of them here. But this is to be Obſerved, that our *Common ſort* in the former *Chapter*, is the moſt Potent and Effectual to all the Purpoſes to which any of thoſe may be applyed.

Wormwood Pontick *fine Leav'd.*

CHAP. DCCXLVI.

of WORMWOOD, *Sea* or *Marſh.*

I. *THE Names.* It is called in *Greek* Ἀψίνθιον θαλάσσιον; Ἀψίνθιον Σηρίφιον, & Σηρίφιον: in Latine *Abſinthium Seriphium*, and *Seriphium*; *Abſinthium Maritimum, & Marinum*: in Engliſh, *Marſh Wormwood*, and *Sea Wormwood.*

II. *The Kinds.* Authors give us 4 or 5 ſorts of this Plant, but not being Common with us, we ſhall only Treat of ſuch as Grow in our Salt Marſhes, or are Nurſt up in our Gardens, *viz.* 1. *Seriphium Anglicum*, *Abſinthium Seriphium*; *Abſinthium Maritimum vel Marinum*: Our common Engliſh Marſh Wormwood. 2. *Seriphium album*, *Abſinthium Marinum album*: White Marſh Wormwood.

The Deſcriptions.

III. The firſt, or our Engliſh Marſh Wormwood. *Its Root runs ſomething deep, yet ſpreads it ſelf in the* Ground, *being compoſed of many large Strings and ſmall Fibres. It riſes up with many hoary round woody Stalks, two* Feet *or more high, being well furniſhed and repleat with a vaſt number of white hoary long and narrow Leaves, rather broader and longer than any* Southernwood *Leaves, having a ſmall bitteriſh Taſte, and a very pleaſing ſtrong Smell. The Flowers are ſmall and yellow, ſtanding at the tops of the Leaves and Branches, which afterwards give very ſmall Seed.*

IV. The ſecond, or white Marſh Wormwood. *Its Root is tough, woody and ſtringy, creeping far abroad, by which means it very much encreaſes. It has tough hoary white Stalks* 2 *or* 3 Feet *high, which a little ſpread out into Branches. The Leaves are winged, ſeveral ſmall narrow ones (not very long) ſet upon one middle Rib, which ſeem to be divided as it were into many jags, not altogether ſo large as the* True Roman Wormwood, *of a bitter Taſte and pleaſant Smell, of a very white hoarineſs:*

Wormwood Marſh.

Belonging to Sect. III.

hoarineſs: on the tops of theſe Stalks and Branches, grow ſmall yellow Flowers not much unlike the former.

Wormwood Sea *or* Marſh, *white.*

V. *The Places.* The firſt grows in the Salt Marſhes in many places of *England.* I found it growing in the Salt Marſh by the Rivers ſide, running along the South ſide of the Town of *Lyn Regis* in *Norfolk*, on the South of that Field called the *Fryers*; and in ſeveral other Salt Marſhes near that Town. And is plentifully found in the Salt Marſhes in *Holland*, *Flanders*, and other of the *Low Countries.* The other is found on the Sea Coaſts of *Germany* and *Italy*; and in ſome of the Salt Marſhes of *England:* Thoſe Salt Soils overflowed by the Sea, are their Native places of growth; but being Tranſplanted into our *Gardens*, they thrive as well as if they were Natural to them.

VI. *The Times.* They Flower and Seed in the ſame Times, in which all the other *Wormwoods* do.

VII. *The Qualities.* They are hot and dry in the ſecond degree, Aperitive, Abſterſive, Stomatick and Alexipharmick.

VIII. *The Specification.* They have all the Virtues of the *Common and Roman Wormwoods*, but not half their ſtrength and force in their Effects. But by reaſon they are not altogether ſo bitter, they are more acceptable to the Nicer ſort of Palates. They reſiſt and expel Poiſon, and gently Purge the Belly.

IX. *The Preparations.* All the Preparations which are made of *Common Wormwood*, may be made of the *Marſh* Kinds; yet theſe three are the moſt uſual, *viz.* 1. *A Liquid Juice.* 2. *A Decoction in Wine.* 3. *A Cataplaſm.*

The Virtues.

X. *The Liquid Juice.* Taken to 2 or 3 Ounces in Veal Broth in the Morning, it gently looſens the Belly, and kills ſmall Worms in the Stomach and Guts.

XI. *The Decoction in Wine.* Taken from a quarter of a Pint to half a Pint, it reſiſts and expels Poiſon, chiefly that of Hemlock: but the Juice given in Wine for that purpoſe, much exceeds the Decoction: But the Decoction is good againſt all Pains of the Stomach and Liver; for which purpoſes the *Marſh*, exceeds even the *Common Wormwood.*

XII. *The Cataplaſm.* The green Leaves made into a Pultiſe by beating them with Figs, Nitre finely poudered, and Darnel Flower; and applyed to the Belly, Sides, and Flanks, are ſaid to be good for ſuch as are Splenetick, or are troubled with the Dropſy.

CHAP. DCCXLVII.

of WORMSEED.

I. *THE Names.* I find not by what *Greek* Name it has been called; but in *Latin* it is called *Sementina*, *Semen ad Lumbricos*; *Semen Lumbricorum*; and in Engliſh *Wormſeed.*

II. *The Kinds.* We make two ſorts hereof, *viz.* 1. *Semen Tranſmarinum*, Foreign Wormſeed; and this is called *Santonicum*; *Semen Sanctum*; *Semen Santonicum*, *Abſinthij Santonici Semen*; *Sementina*; *Abſinthium Santonicum Alexandrinum*, *Abſinthij peregrini Semen*, Shop Wormſeed, and Wormſeed Wormwood. 2. *Sementina Anglica*; *Semen ad Lumbricos Anglicum*; *Camelina*; *Myagrum alterum amarum*, Engliſh Wormſeed. To theſe

these I think good to add, 3. *Myagrum Sylvestre, Pseudomyagrum*; *Linaria quinta Tragi*; *Sesama Tragi*, Wild Gold of Pleasure, or Oily Seed. The Seed of this 'tis true, when perfectly ripe and dry, has no Bitterness in it, but is Sweet and very pleasant, and a most acceptable Food to small Birds, as *Finches*, *Linnets*, and the like; but both Herb and Seed while they are green, have an unaccountable Bitterness beyond Expression, and therefore whilst it is Green, it is used as *Wormseed*, and will indeed do the same thing.

The Descriptions.

III. The first, or Shop Wormseed. *It has a plentiful Stringy and Fibrous Root, spreading it self far and deep in the Ground; from whence rises up a little short Stock, which afterwards spreads it self out into many Stalks, and smaller*

Wormseed *Transmarine*: Or, *Santonicum.*

Ramifications, insomuch that it is very full of Branches, but with very few Leaves, and those very small, and finely cut at the bottom, of an Ash color; but stored so plentifully with Seed upwards, that it seems to be there without Leaves, and wholly to consist of Seed, which as Rauwolfius *says, are somewhat bitter in their Natural Places, and of a reasonable lively and quick Smell with us, especially if they be fresh and not old; but are indeed much stronger where they grow, and are but newly gathered.*

IV. The second, or English Wormseed, (which *Gerard* calls Treacle Wormseed.) *Its Root is small and Woody, perishing every Year after Seed time, and then rising again of its own Seed. It grows with pretty tall upright Stalks, branching themselves out towards the top, and thicker set with long narrow green Leaves than the next, somewhat like to those of the* Single Wall-flower, *but smaller, and of a whiter green color, and at the tops of the Stalks and Branches, come forth many very small*

Wormseed English.

pale yellow Flowers, consisting of 4 Leaves apiece, very like to those of Leucoium Sylvestre, *or* Wild Single Wall-flower, *but much smaller, even by more than half; which being past away, after them come small long Cods, containing within them a very pale colored Seed, of a very bitter Taste.*

The other Wormseed English.

V. The

V. The third, or Wild Gold of Pleaſure, the other Engliſh Wormſeed. *It has a long ſlender Root, with ſome Strings and Fibres adjoining to it. It comes up with but one round Stalk almoſt a Yard high, which ſpreads it ſelf out into Branches or Arms, which have long and ſomewhat narrow Leaves, yet almoſt twice as broad as the former, ſharp pointed, ſomething reſembling thoſe of* Woad, *but that theſe are longer, and broad at bottom, where they compaſs the Stalk about, with two points ſticking out on either ſide, at whoſe tops come forth ſeveral whitiſh Flowers, very like to thoſe of* Flax, *after which come forth ſmall round Heads, with a ſmall point at the top, very like in faſhion to the* Myagrum *with one Seed; but theſe are full of ſmall yellowiſh Seed, like to that of* Creſſes, *which whilſt it is green and freſh, is exceeding bitter, tho' not ſo after it is full ripe and dry.*

VI. *The Places.* The firſt grows in *Arabia, Syria* and *Paleſtina*, from which places the Seed is brought to us. The ſecond grows Wild in many places of *England*, which being brought into a Garden, and there ſuffer'd to Sow its Seed, it will come up again Yearly of its ſelf. The third grows in *Germany*, and is much found in all their Flax-Fields and Grounds, which being in Stalk like it, is accounted a Weed, and caſt away; but ſome ſave the Seed to give to ſmall Birds, on which they will feed when it is perfectly ripe, and peck it from the Stalk.

VII. *The Times.* The firſt Flowers late in the Year, but I think the certain time is not ſet down by any Author: The other two Flower in *June* and *July*, and their Seed is ripe in *Auguſt* and *September.*

VIII. *The Qualities.* They are all hot and dry as Authors ſay, in the third degree.

IX. *The Specification.* They are only, or chiefly uſed to kill Worms in the Belly, for which they have been found very effectual.

X. *The Preparations.* The Seeds of theſe Plants are only uſed, being taken either whole, or a little bruiſed.

The Virtues.

XI. *The Seed of the Santonicum.* It is given a Scrúple at a time Evening and Morning to Children, either in a few Raiſons ſtoned, or in the Pulp of a Roaſted Apple or Pear, or in a Stew'd Prune, or in Honey. It kills Worms in the Stomach and Belly; but if a little *Aloes* or *Rhubarb* be mixed with it, the Worms will then not only be killed, but they will likewiſe be expelled withal. And if the *Seed be mixed with Aloes, and brought to the form of an Emplaſter with Ox-Gall*, and applyed to the Stomach and Navel, it is ſaid to do the ſame thing.

XII. *The Engliſh Wormſeed.* If it is bruiſed, and given from a Scruple to a Dram, Night and Morning as the former, in any proper Vehicle, and then waſht down with a Draught of Water-Gruel, Broth or Poſſet-Drink, it is ſaid effectually to kill Worms in the Stomach and Entrails, of what kind ſoever, it being often enough repeated.

XIII. *The other Engliſh Wormſeed, or Seed of the Wild Gold of Pleaſure.* This is to be taken bruiſed whilſt it is Green, and whilſt its inherent Bitterneſs is yet with it. It may be given from a Scruple to a Dram, as the former are given, and is much more effectual than them both, being continued Morning and Night for ſome time. This by reaſon of its exceeding Bitterneſs, I am afraid few Children can be obliged to take it.

CHAP. DCCXLVIII.

Of WOUNDWORT.

I. *THE Names.* All the *Woundworts* being *All-heals*, they have one and the ſame common Greek Name, which is Πάναξ, ἢ Πανακὴς; in Latin *Panax*, or *Panaces*; and in Engliſh *All-heal*, or *Woundwort.*

II. *The Kinds.* There are ſeveral ſorts of theſe *Woundworts*, many of which we have already treated of in *Chap.* IX, X, and XI. CL. and CLI. aforegoing of this Work; there are ſome few remaining, which we ſhall diſcourſe of in this *Chapter*, and they are, 1. Πάναξ ἡράκλειον ἀληθὲς: πανάκης ἡρακλεια ἀληθὴς: *Panax Heracleum verum, Panaces Heraclea vera*, The true All-heal or Woundwort of Hercules. 2. Πανάκης τῦ Χείρωνος, *Panaces Chironis*; *Panax Chironis: Panax Aureum, Panaces Aurea, Panax Chironium Theophraſti, Herba Doria vulgaris*, (from one *Doria* a General of an Army, who ordered it to be applyed to the Cure of his Soldiers Wounds;) All-heal, or Woundwort of Chiron. 3. *Panax Chironium Americanum minor, Herba Doria Americana minor*, The leſſer American Woundwort. 4. *Panax Aureum Nemorum, Panaces Aurea Nemorum*; *Conſolida Aurea Nemorum*; The Golden All-heal or Woundwort.

The Deſcriptions.

III. The firſt, or true Hercules All-heal or Woundwort. *Its Root is very thick, fat, and full of Juice, of a white color, ramified into ſeveral great or conſiderable Branches. It has many broad green Leaves*

Woundwort, or All-heal *of* HERCULES.

ſpread

ſpread upon the Ground, or growing near to it, very rough and hairy, but of an over-worn green color, deeply cut in, into 3 or more parts, not much unlike a Fig-Leaf, *or thoſe of the* Cow-Parſnep, *each ſtanding on a long Footſtalk, which as well as the Leaf is ſomewhat rough or rugged. From among which, riſes up a very ſtrong Stalk, covered over with a rough hairineſs, 4 or 5 Feet high,* (Gerard *ſays 4 or 5 Cubits high, which may be in a Rich Soil, and its Native Climate,) having upon it ſuch like Leaves as grow below, but leſſer and leſſer. It is divided (in ſome Plants) into ſeveral Branches, and ſometimes it has only but one Head, the tops or top of which Branches or Stalk, have upon them one large Tuft or Umbel of yellow Flowers, ſet together in a Rundle, like thoſe of* Dill, *which turn into Seed, large, flat, and of a Straw color, ſharp and hot in Taſte, and of a pleaſing Flavour. From this Plant being Wounded, it is probable that that valuable Gum called* Opopanax, *does proceed, which is brought to us out of* Syria, *and the Parts adjacent, to their* Mart Towns, *as* Alexandria, Cairo, Damaſco, *and ſome others. But others ſay, that the Gum* Opopanax, *is produced from the* Panax Heracleum alterum, *deſcribed in Chap.* X. *of this Book aforegoing. I will not diſpute the contrary, 'tis probable that they may both produce a like Gum, difficult to be known aſunder, (becauſe their Juices ſeem to be of one and the ſame color,) and both called by the ſame Name.*

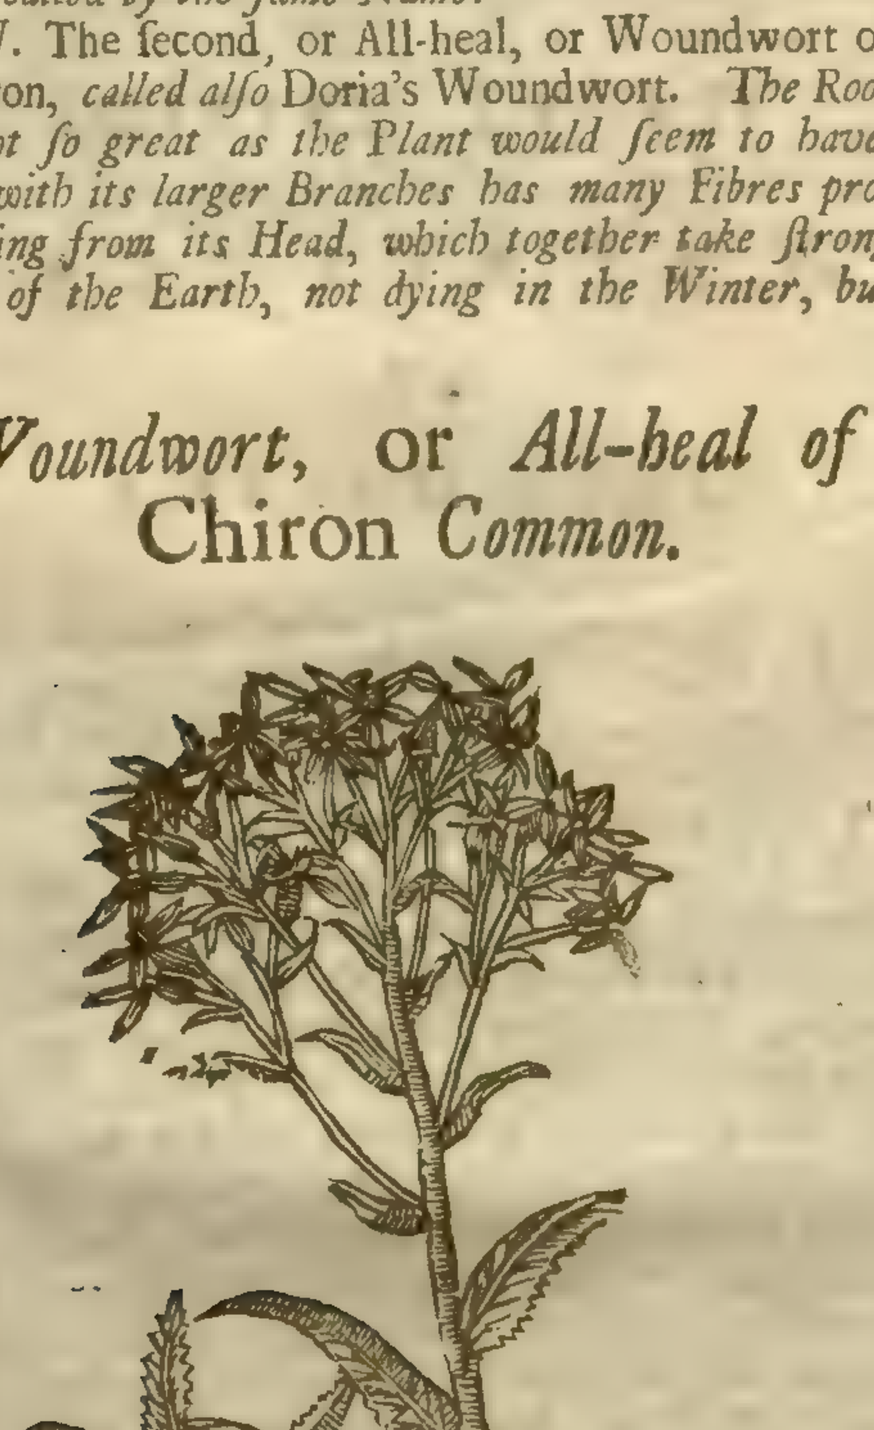
IV. The ſecond, or All-heal, or Woundwort of Chiron, *called alſo* Doria's Woundwort. *The Root is not ſo great as the Plant would ſeem to have, but with its larger Branches has many Fibres proceeding from its Head, which together take ſtrong hold of the Earth, not dying in the Winter, but coming up freſh again every Spring. It has many great, thick, fleſhy, long, deep green Leaves, almoſt as long as* Dock Leaves, *but thicker, ſharper at the points, ſmaller at the lower ends, and broader in the middle, ſomewhat harſh or hard in handling. From among which, riſes up but one great furrowed Stalk for the moſt part, about a Mans height, on which grow very ſparingly, two or three ſuch Leaves as grow below, but ſmaller. At the tops of which, and of its Branches, come forth a great many yellow Flowers, in green ſcaly Heads, like thoſe of* Knapweed, *greener than thoſe of* Golden Rod, *or of* Saracens Confound, *which when they are ripe, are blown away with the Wind.*

V. The third, or leſſer American Woundwort. *Its Root is compoſed of many blackiſh Fibres, long and ſpreading in the Ground. This Plant is ſo like the former in appearance, that it cannot but be accounted a Species thereof: It abides green all the Winter, (as the former does.) Its Leaves are thick, ſomewhat long and narrow, but not half ſo great as the former, and of a paler green color, elſe for the Faſhion, very like them. The Stalks which are many, not riſing to half that height, are round, and for the moſt part lean a little on one ſide, not being able, by reaſon of the multitude of Flowers to ſtand upright; which Flowers ſtand upon longer and greater green ſcaly Heads, than thoſe of* Chirons *aforegoing, and are alſo greater, and more laid open, with many ſmall, long, narrow Leaves, which turn into a white Moſſy Down, and are carried away with the Wind.*

Woundwort American.

VI. The fourth, or Golden All-heal, or Woundwort. *Its Roots are many ſmall white Fibres, like unto the* Daiſies, *whoſe Taſte is ſomewhat ſharp and Aromatical, and Aſtringent or Binding withal.*

Woundwort, or *All-heal of* Chiron *Common.*



This

This Golden Herb, has ſeveral long, narrow, and ſharp pointed Leaves, coming forth from the top of the Root, very like to Chirons, *or* Doria's Woundwort, *but not ſo great, yet thick like them, and of a darker green color. The Stalks riſe not to much above a Foot high, having here and there narrower long Leaves on them than below. The Flowers which ſtand at the tops, are larger than thoſe of the former, having many narrow, long, yellow Leaves, and when open, like a Star-Flower, with Thrums in their middles.*

VII. *The Places.* The firſt is a Native of *Syria*, and was brought from thence to *Italy*: It grows in the Kingdom of *Naples* as *Matthiolus* ſays, on the *Alpine Hills*, and on the Sea Coaſt of *Siena*, but with us is Nurſt up in Gardens. The ſecond grows as *Lobel* ſays, near the Banks of Rivers in *Provence*, and *Narbone* in *France*. The third in ſome parts of *Florida* in *America*. The fourth in thick Woods near *Orleance* in *France*; but with us, theſe three laſt are Garden Plants.

VIII. *The Times.* The firſt Flowers in *September*, and ſometimes towards the end of that Month. The ſecond and fourth Flower in *June* and *July*, and the third in *Auguſt*, none of them much earlier or later.

Hercules's *Woundwort*, or *All-heal.*

IX. This Plant, as to its *Qualities, Specification, Preparations and Virtues*, as alſo the *Opopanax* proceeding therefrom, have the ſame with thoſe of the other *Hercules*'s *All-heals*, diſcourſed of at large in *Chap.* X. of this *Hiſtory of* PLANTS aforegoing; ſo that the *Properties* being every way the ſame, we ſhall ſay no more of them here, but refer you thither.

Of Chirons, *and Golden Woundwort*, or *All-heals.*

X. *The Qualities.* It is hot and dry in the third degree, Abſterſive, Aſtringent, Vulnerary and Alexipharmick.

XI. *The Specification.* Its chief uſe is for the curing of Green Wounds, and to expel the Poiſon, and cure ſuch as are bitten by Vipers, Mad Dogs, and the Spider *Phalangium*, and other Venomous Creatures.

XII. *The Preparations.* You may have therefrom, 1. *A Liquid Juice.* 2. *A Decoction in Wine or Water*, 3. *An Inſolated or Decocted Oil.* 4. *A Balſam.* 5. *A Pouder.* *Parkinſon* ſays, that this is in a *Medium* between the *Conſounds*, as *Saracens Conſound*, and the *Golden Rod*, and therefore that this needed no farther Repetition or Amplification of its Virtues. However, we think fit for the Publick Good, to add the following *Sections.*

The Virtues.

XIII. *The Liquid Juice.* Given inwardly, from 2 Spoonfuls to 4, or more, in a Glaſs of Red Styptick Wine, it is good againſt inward Bleedings, Bruiſes, or Ulcers in the Bowels, Reins or Bladder; and continued for ſome time Morning and Night, it contributes to the healing of all recent Wounds, running Sores and Ulcers; as alſo the Bitings of Vipers, Mad Dogs, *Phalangium*, or of any other Venomous Creature, in what part of the Body ſoever. It is profitable againſt Spitting and Piſſing of Blood, the Bloody Flux, and all other Fluxes of the Bowels whatſoever.

XIV. *The Decoction in Water or Wine.* It has all the former Virtues, but as it is weaker, ſo it may be given Dulcified from a quarter of a Pint to half a Pint. Injected into Fiſtula's, it cleanſes them, and induces their healing. Sweetned with Honey, and injected into the Yard, it cures a Gonorrhœa in Men, *&c.*

XV. *The Inſolated or Decocted Oil.* Anointed upon the Bitings of Vipers, Mad Dogs, the *Phalangium*, or other Venomous Creatures, it cures them, provided the Patient at the ſame time, takes the *Liquid Juice*, or *Decoction* inwardly.

XVI. *The Balſam.* It heals ſimple green Wounds many times at once dreſſing; it alſo digeſts old Sores and eating Ulcers, cleanſing, incarnating, and drying them, thereby inducing a ſpeeedy healing.

XVII. *The Pouder of the Herb.* It has all the Virtues of the Juice and Decoction, and may be given from 2 Scruples to 2 Drams, Morning and Night, in a Glaſs of the *Decoction*, for all the purpoſes aforeſaid. Outwardly applyed in a plentiful manner, upon old running Sores or Ulcers, it cleanſes them, drys up the Flux of Humors, incarnates, and cauſes a ſpeedy healing.

CHAP. DCCXLIX.

Of WRACK-SEA: *OR, ALGA MARINA.*

I. *THE Names.* It is called *in Greek* φύκος θαλάσσιον: in Latin *Phycos*, or *Phucus*; and *Fucus marinus*, to diſtinguiſh it from *Fucus herba* which is *Anchuſa*, or *Alkanet*; and *Alga marina*: in Engliſh *Sea Wrack*, or *Sea Weed.*

II. *The Kinds.* Tho' Authors make near 20 ſorts of theſe Plants; yet we ſhall Diſcourſe only of theſe 6 following, *viz.* 1. *Fucus marinus gramineus*, *Alga marina graminea*; *Fucus marinus alter Dodonæi*; *Palea marina* by thoſe of *Montpelier*, being uſed by them for Litter for their Cattle, and the beſt ſort of Dung for their Fields; *Alga anguſtifolia vitrariorum Bauhini:* (becauſe in the *Levant* or *Mediterranean*, they Burn it for Pot-aſhes, whereof they make Glaſs.) Graſs Wrack or Sea Weed. There is alſo a broader ſort of it, called *Fucus giganteus*, and *Palmifolium giganteum*, by *Imperatus.* 2. *Fucus marinus Craſſus latifolius:* Broad thick Sea Wrack or Girdle. 3. *Fucus marinus latiſſimus tenuifolio:* Broad and thin Sea Wrack, or Girdle. 4. *Fucus marinus anguſtifolio, vel ſecundus Dodonæi*; *Alga marina anguſtifolia*; *Fucus Zoſter Lugdunenſis*; *Fucus longo Anguſto & Craſſo Folio Bauhini:* Narrow long and thick Sea Wrack, or Girdles. 5. *Fucus marinus Ferulaceus Lobelii*; *Muſcus marinus Ferulaceus*, *Alga marina Ferulacea:* Long Fennel-like Sea Wrack, or Sea Moſs. 6. *Alga tinctoria Lugdunenſis*, *Fucus marinus tinctoribus Lugdunenſis*; *Muſcus marinus tinctorius*: Dying Sea Wrack, red Dying Sea Moſs; the Dyers Wrack, with which they Dye deep Crimſon, or reddiſh Purple, which will laſt long.

The

The Descriptions.

III. The first, or Grass Wrack, or Sea Weed. *Its Roots are roundish and hairy, and blackish on the outside: From whence rise up small round and white hairy Heads, breaking out at the sides as it were into Branches; on the tops whereof, stand* 3 *or* 4 *very long and narrow soft green Leaves, some*

WRACK-SEA *Grass:*
OR,
Sea Weed Grass.

being 4 *or* 5 *Feet or more long, and about an Inch more or less broad. It has neither Stalk nor Seed, but lyes on the* Ground *till the* Tide *raise it on the top of the Water; which being broken off by the force of the Waves, is carried to the Shore, where it is Gather'd, and kept for many things.*

IV. The second, or broad thick Sea Wrack, or Girdle. *This differs from the former, in that the Root is wholly* Fibrous; *the Stalk rising from thence thick and round,* 2 *or* 3 *Inches high, and the Leaf, which is sometimes but one, (very seldom two) of a very great length, sometimes* 6, 8, *or* 10 *Feet, or divers Ells long, and above* 4 *Inches broad; equal from a little above the setting on to the end, but somewhat waved or crumpled on the edges, being thick, and of a deep green color: so soft or moist whilst it is fresh, that it is almost like to soft Glew; and will hardly dry, unless it lies long in the Sun; and will not be fit to be kept, till after many Days drying.*

V. The third, or broad and thin Sea Wrack, or Girdle. *This is in all things like the last, saving that the* Leaves *are thinner, broader, and shorter; yet crumpled or waved on the edges, and of a paler green color; which when dryed, is almost like unto thin Parchment.*

VI. The fourth, or narrow long and thick Sea-Wrack, or Girdles. *Its Root is round and flat; from whence spring* 2 *or* 3 *narrow thick Leaves, about a Foot and half long, divided into several flat, thick Thongs like Leather, some long, and some shorter; and they again divided into other smaller and longer ones, almost like a Bush.*

VII. The fifth, or long Fennel like Sea Wrack, or Sea Moss. *The Leaves hereof are very long and fine, like to those of the* Ferula, *or* Fennel Giant, *growing from Stalks near a Foot long, which*

Wrack or *Moss* Sea *Fennel like.*

are divided into many Branches, at whose tops, white Flowers *and the said* Fennel like Leaves *grow. Its Root is manifold, sometimes a Yard,* 2, *or* 3 *long, and slender, extending and creeping much about.*

VIII. The sixth, or Dying Sea Wrack, or red Dying Sea Moss or Alga; the Dyers Sea Wrack. *It rises up with* 4, 5, 6, *or more Stalks,* 4, 5, *or* 6 *Inches high, each Stalk spread out into some few Branches, each of which are well repleat with a sort of fine* Leaves *on them, not much unlike to* Fennel, *of a reddish color, but with some whiteness mixed together. This is used by divers sorts of Mechanicks, to strike a deep Crimson color, or reddish Purple Dye; which will not quickly nor easily decay, but last long.*

IX. *The Places.* Most of these are found on our *English* and *Scotch* Coast; but they are also found in the *Levant* or *Mediterranean* Seas; and Coasts of other warmer Climates.

X. *The Times.* They perish not in Winter; but their chiefest time of Beauty, Use, and Gathering, is in the Summer Season, and latter end of Summer.

XI. *The Qualities. Sea Wrack* is cold in the first Degree, and dry in the second; Astringent, and Anodyn.

XII. *The Specification.* Being Applyed whilſt they are freſh, they allay Heat and Inflamations, eaſe the Gout, ſtop Vomiting, and ſtrengthen the Stomach; and to cleanſe, dry, and heal, old running Sores, and old Ulcers.

XIII. *The Preparations.* You have, 1. *The Sea Wrack in ſubſtance, either green or dryed.* 2. *A Decoction of the Dying Sea Wrack.* 3. *A Pouder of the ſame.*

The Virtues.

XIV. *The Sea Wrack in ſubſtance of the firſt five Kinds.* Whilſt freſh and green, being Applyed as a Cataplaſm to the Gout, they abate the Inflamation, eaſe the Pain, and remove the Diſeaſe, and withal ſtrengthen the Part; but when dry, their chief uſe, by the *Venetians*, our Selves, and others, is, inſtead of Hay or Straw, to pack up Glaſſes, and other tender VVares, to keep them from breaking: they are alſo uſed as Litter for Horſes. And being made into a Compoſt, are an excellent good Manure for Barren and worn out Lands. *The firſt of them*, which is found in the *Mediterranean* Sea, is alſo of uſe to make a kind of *Pot Aſhes*, of which *Glaſs* is made in thoſe Countries; as alſo *Soap*: But the ſame *Wrack*, found in our *Northern* Seas, will do no ſuch thing; as not containing ſo excellent a Salt, nor ſo large a quantity of it, as that does which is Gathered in the *Levant*.

XV. *The Decoction of the red Dying Sea Wrack, or Sea Moſs.* It ſtrengthens the Stomach, is good againſt the Poiſon of Vipers, mad Dogs, and other venemous Creatures, and to reſiſt the Longings of Women with Child: It cools, drys, binds, and is good againſt all Fluxes of the Belly, and alſo kills Worms in Children: and in the Gout, being fomented therewith hot, it eaſes the Pain: dropt into the Eyes, it eaſes their Pain, and allays their heat and inflamation. If it is made with Wine, it ſtops Vomiting, and admirably ſtrengthens the Stomach. Injected up the Womb, it is good againſt the Overflowing of the Terms, and the Whites in Women; and after due Purging, cures a *Gonorrhœa* in Men; and injected into the Bladder in Men, it is good to cleanſe and heal Ulcers in the Neck thereof: doſe from a quarter to half a Pint, Morning and Evening. *The Decoction in Water*, makes an admirable Dye, whereby Silk, Linnen, Leather, and many other things, may be Dyed and Stained of a moſt glorious deep Crimſon, or a ſingular reddiſh Purple, which will not eaſily fade, or become dull, but abide in its Beauty for a long time.

XVI. *The Pouder of the red Dying Sea Wrack, or Sea Moſs.* It has all the Virtues of the aforegoing Decoction, being taken inwardly Morning and Night, from half a Dram to 2 Drams; mixed firſt with a little Syrup of *Clove Gilliflowers*, or of *Citron Peels*, or ſome ſuch like, and then mixed with a Glaſs of *Red Port* Wine, and ſo drank. Taken alſo with Wine mixed with Vinegar, or Syrup of Limons, it is a ſingular thing againſt Vomiting, Loathing of Food, and weakneſs of that Bowel, for it ſtrengthens it after a ſingular manner: Applyed alſo outwardly, to old running Sores and putrid Ulcers, it cleanſes them, drys up the Afflux of Humors, and induces their healing. And given in VVine, it is ſaid to be good againſt the Stone in the Reins: Injected with *Red Port Wine* into the Yard and Bladder, it is good to heal Ulcers in the Neck thereof, and to cure a virulent *Gonorrhœa*, Univerſals being firſt Premiſed.

CHAP. DCCL.

Of YARROW *Land*, or *Milfoil.*

I. *THE Names.* The *Arabians* call it *Egilos*: but in Greek it is called Στρατιώτης ὁ Χιλιόφυλλος, *Stratiotes Chiliophyllos*: Ἀχιλλεῖος σιδηρίτης *Dioſcoridis*; *Achillea Sideritis* of *Dioſcorides*: in Latine, *Milleſolium*; *Milleſolium Militaris*; *Achilea*, *Achilea Sideritis*: and in Engliſh, *Yarrow*, *Millfoil*, and *Achilles Woundwort*. Many Authors ſay that *Milleſolium* and *Achillea*, are one and the ſame Plant, and the ſame Herb which one Author calls *Milleſolium*, another calls *Achillea*: Others ſay, that *Chiliophyllus*, or *Milleſolium*, is the general Name, and that *Achillea* is the proper Name to one of the particular Species; but be that how it will, it is certain that all the *Yarrows* have been called by many Authors, by both the Names indifferently; tho' the Name *Achillea*, has by late Writers, been chiefly applyed to our *Fifth Species* following.

II. *The Kinds.* It is not our buſineſs here, to enumerate all the Kinds of *Yarrows*, entreated of by Authors, for as much as the greater part of them are perfect Strangers here, we ſhall only diſcourſe of ſuch as are familiar with us, moſt known, and which are only or chiefly uſed in Phyſick, which are the five following, *viz.* 1. *Milleſolium album vulgare*, *Milleſolium album minor*; *Stratiotes Milleſolia*, *Stratiotes terreſtris*, *Achillea*, *Achillea Militaris*: Our Common White Yarrow. 2. *Milleſolium album majus Bauhini*, *Lugdunenſis & Matthioli*: The Greater White Yarrow. 3. *Milleſolium rubrum vulgare*, Our Common Red Flowered Yarrow. 4. *Milleſolium Flore rubro maximum Cluſij*; *Milleſolium maximum*; The Great Red Yarrow. 5. *Milleſolium Nobile Tragi*; *Stratiotes vera*; *Stratiotes*, *& Stratiotes Milleſolia Geſneri*; *Milleſolium Nobile*, *& Achillea Tabernemontani*; *Achillea Cordi*, *Lacunæ*, *Matthioli*; *Achillea Nobilis odorata*; Achilles's Noble Woundwort, ſo called from *Achilles* the General of an Army, who applyed it for the Curing of his Soldiers Wounds.

The Deſcriptions.

III. The firſt, or our Common White Flower'd Yarrow. *Its Root conſiſts of many long white Fibres or Strings, ſpreading far about and deep. It has many Leaves ſpread upon the Ground, which are long and winged, finely cut into many ſmall parts, exceeding the fine Leaves of* Tanſie. *From among which, riſe up 2 or 3 round green Stalks, with ſuch like winged Leaves upon them as grow below, but ſmaller and finer as they approach up to the tops; where come forth many ſmall Flowers which are white, and ſet in a Tuft or Umbel cloſe together, each Flower conſiſting of 5 ſmall round pointed Leaves, with a little yellowiſh Thrum in the middle, ſmelling ſomewhat ſtrong being rubbed in the Hand, but not unpleaſant. Where Note, That there is ſome Varieties obſerved in the Flowers, ſome being more white than others; ſome alſo thicker ſet together; and ſome either greater or ſmaller than others.*

IV. The

Yarrow Common.

IV. The ſecond, or Greater White Yarrow. *This in its Roots, form of the Leaves and Flowers, and manner of growing, differs not much from the former; ſaving that the Stalks and Leaves of it are larger, its green Leaves being as large almoſt as thoſe of* Tanſie; *the Flowers alſo being greater, and ſtanding in a larger Umbel; the Smell of which is a little ſtronger than ordinary.*

V. The third, or our common Red Flower'd Yarrow. *This differs in nothing, neither in Root, Stalks, Leaves, Flowers, nor manner of growing from the firſt, or our* Common White *ſort, but only in the color of the Flowers; theſe being of a deeper or paler red, or almoſt of a bluſh color, the Thrum in the middle being yellow.*

VI. The fourth, or Great Red Yarrow. *It has as great, and as large Winged Leaves, as the great* White Yarrow, *(at* Sect. IV. *above,) but more finely cut in on the ſides. The Stalks are as great and as high, Branching forth at their tops, and ſtored with large Umbels of red Flowers like unto them, ſaving that they are of a fair, bright, reddiſh color, and in ſome paler, with pale yellow Thrums in their middles, which have a pleaſing, but ſmall Smell.*

VII. The fifth, or *Achilles*'s Noble Woundwort. *This Woundwort,* or Yarrow of Achilles, *has a long, thick, and creeping Root under Ground, which periſhes every Year after Seed time. It has many large, thin, or fine cut Leaves lying next the Ground, more finely and deeply cut in, into the middle Rib, and each part divided alſo, which makes it to differ ſomething from our firſt* Common Yarrow. *From among theſe Leaves, riſe up more and taller Stalks, with divers finer Leaves ſet thereon; and at their tops many Flowers in Tufts together, being both more in number, and larger than our firſt* Common Yarrow, *of a whitiſh or reddiſh color, with a yellow Thrum in the middle. The whole Plant Smells very ſweet.*

VIII. *The Places.* The four firſt grow all in *England*; the firſt and third of which, are very common. The fifth is a Stranger with us, being only Nurſt up in Gardens, and requires a fat Ground and rich Soil.

IX. *The Times.* They all Flower from the beginning of *June*, to the end of Summer, *viz.* till near *Bartholomew-Tide.*

X. *The Qualities.* They are cold in the firſt degree, and dry in the end of the ſecond, or beginning of the third, Aſtringent, Glutinative, Anodyn, and Vulnerary.

XI. *The Specification.* They ſtop Bleeding at Noſe or other parts; the Bleeding of Wounds, Piſſing Blood, Bloody Flux, and all other Fluxes of Blood, inward or outward. Stop the Courſes in Women, and are good to Cure all Simple Green Wounds in a very ſhort time, by drying them, and conſolidating their Lips. They eaſe the Tooth-ach, give help in the Colick, and cure the Gonorrhœa in Men, and Whites in Women, Univerſals being premiſed.

XII. *The Preparations.* You may have therefrom, 1. *The Cleanſed Green Root, or Green Leaves.* 2. *A Liquid Juice.* 3. *An Eſſence.* 4. *A Decoction in Wine or Water.* 5. *A Pouder of Leaves and Heads of Flowers.* 6. *An Oil by Inſolation.* 7. *A Balſam.* 8. *A Cataplaſm.* 9. *A Diſtilled Water.*

Yarrow White, Great.

The Virtues.

XIII. *The Cleanſed Green Root, or green Leaves.* Being chewed in the Mouth, and held againſt the Teeth for ſome time, it is ſaid to give eaſe in the Tooth-ach.

XIV. *The Liquid Juice.* It ſtops all inward Bleedings what ever, as Spitting and Vomiting Blood, Bloody Flux, Piſſing of Blood, the Overflowing of the *Loches* and Terms in Women; and all Fluxes of the Belly whatſoever, being taken from 1, to 3 or 4 Spoonfuls at a time, Morning and Night, in a Glaſs of Red *Spaniſh* or *Port-Wine.* Outwardly alſo applyed, it ſtops the Bleeding at Noſe, and Bleedings of Wounds. Taken to the quantity aforeſaid, in ſome of the *Diſtilled Water*, (Univerſals being premiſed,) it cures a *Gonorrhœa* in Men, and the Whites in Women, and other Weakneſſes of the Womb. If dropt into the Eyes, it takes away their Inflamation, eaſes their Pain, and cures their Redneſs, being Blood-ſhot. Injected into Fiſtula's, it cleanſes them, and induces their healing. Taken to three or four Ounces in Wine, it is a good Remedy againſt Agues, and for ſuch as are troubled with Nauſeouſneſs or Vomiting, and cannot retain their Food in the Stomach: It ought to be given 2 or 3 Hours before the Fit, to be continued till the Ague is gone, and yet ſtill to be repeated for 5, 6 or 7 times afterwards: It ſtops Bleeding at Noſe alſo, being Snuffed or Injected up.

XV. *The Eſſence.* It has all the Virtues of the Juice exalted, and therefore may be given in a leſſer Doſe, *viz.* from 1 to 2 Ounces, or two Ounces and a half, Morning and Night, in any proper Vehicle. If given in a *Gonorrhœa*, or the Whites, a little *Pouder of Amber*, or *Catechu*, or both of them may be added; and ſo it may be given againſt Piſſing of Blood, and the Overflowing of the Terms in Women.

XVI. *The Decoction in Wine or Water.* It has all the Virtues of the Juice or Eſſence, and therefore may be given from a quarter to half a Pint. It is a good Lotion for old running Sores, putrid Ulcers, and inveterate Fiſtula's.

XVII. *The Pouder of the Leaves, and Heads of Flowers.* It has the Virtues of the Juice, Eſſence and Decoction. Doſe from half a Dram, to a Dram and half, in ſome proper Vehicle, as *Mithridate*, *Venice Treacle*, &c. Outwardly applyed, it preſently ſtops the Bleeding of Wounds, *&c.* If the Pouder inwardly given, be mixed with half a Dram or 2 Scruples, of fine *Bole* or *Catechu*, it will be ſo much the more effectual againſt inward Bleedings, *&c.*

XVIII. *The Inſolated Oil.* It gives eaſe in the Gout, and other Neurotick pains; and anointed upon the Head, comforts the Roots of the Hair, and hinders its ſhedding or falling.

XIX. *The Balſam.* It digeſts, cleanſes, incarnates, glutinates and drys, and therefore is of ſingular uſe, not only to heal and cure ſimple Green Wounds, but alſo old running Sores, putrid Ulcers, and rebellious Fiſtula's, being ſeaſonably and Artfully applyed.

XX. *The Cataplaſm.* Applyed immediately upon a ſimple recent Contuſion, it diſcuſſes it, and preſently eaſes the pain. Applyed to a Bleeding new Wound, it ſtops the Flux of Blood; and in the Gout of Hands or Feet, it preſently gives eaſe.

XXI. *The Diſtilled Water.* It has the Virtues of the Juice, Eſſence and Pouder, but nothing near ſo effectual; and tho' it may be uſed in all thoſe caſes alone, or Dulcified, yet it is more often uſed as a Vehicle, to convey ſome of the other Preparations in down the Throat. Mixt with Honey, it is a good Ophthalmick, helps redneſs and Inflamations in the Eyes, and cures Sores or Ulcers in the ſame.

CHAP. DCCLI.

Of YARROW *Water.*

I. *THE Names.* It is called in *Greek* Μυειόφυλλον, *Muriophyllon*, from the vaſt abundance of Leaves which it has, as it were a *Million*, as the word imports: in Latin *Myriophillum*, and *Milleſolium Aquaticum*: in Engliſh *Water Yarrow*, and by ſome *Water Fennel.*

II. *The Kinds.* Authors have made near a dozen Species of this Plant; but we ſhall only preſent you with what are Common to us, which are, 1. Μυειόφυλλον *Dioſcoridis & Galeni*; *Milleſolium aquaticum vulgatius*; *Milleſolium aquatile Dodonæi*; *Milleſolium aquaticum umbellatum Capillaceo brevique folio Bauhini*: Our common VVater Yarrow. 2. *Milleſolium aquaticum Violare*; *Myriophyllum alterum Matthioli & Lugdunenſis*; *Myriophyllon equiſetifolium fluviatile Lobelij*; *Viola aquatilis Dodonæi*: The Violet VVater Yarrow, (by ſome the VVater Gilliflower, and VVater Violet.) 3. *Milleſolium aquaticum flore albo Cluſij*; *Milleſolium aquaticum fæniculatum, vel fæniculifolio*; *Milleſolium aquaticum Ranunculi flore & Capitulo*; *Milleſolium Maratriphyllon flore & ſemine Ranunculi aquatici Hepatice facie Lobelij*: Crowfoot, or Fennel Leav'd Water Yarrow.

The Deſcriptions.

III. The firſt, or our Common VVater Yarrow. *Its Root is ſomewhat long, white, and ſlender, with divers Fibres adjoining to it. It riſes up with a round ſtraight Stalk, having divers long winged*

Yarrow Water, Common.

Leaves,

Leaves at the bottom of it, cut and divided into many fine small Leaves, set on both sides of a middle Rib, like unto the Land Yarrow, *but much tenderer, and with as fine Leaves almost as* Fennel *it self. At the Stalk likewise grow such fine Leaves up to the top; where stand on Branches, large tufts of small white Flowers set close together.*

IV. The second, or the Violet VVater Yarrow. *Its Root is very small and creeping, shooting forth Fibres in many places, and a Bunch of Fibres at its end: From which rise up several long winged Leaves, consisting of many small Leaves, set on each side of a middle Rib, which are larger and greater than those of the former, of a sad green color. The Stalk, or Stalks, which rise up among them, are bare of Leaves from the bottom to the upper Joints,*

Yarrow Water Violet.

whereabout grow divers small whitish and sweet Flowers, something like to Stock Gilliflowers, *or* Violets; *of 5 Leaves apiece, one row above another, with yellowish Threads in the middle. There is another sort hereof very like it, but that it has larger Wings, and finer jagged Leaves.*

V. The third, or Crowfoot, or Fennel Leav'd VVater Yarrow. *It has a long slender Root, with a Fibrous bush or tuft at its end. It is a lesser Herb than any of the former, growing only in shallow Waters, where it seldom rises above an handful high, with very many, and very fine short Leaves, as small as* Camomil, *and of a yellowish green color. The short Stalks among them, bear single small white Flowers, resembling the* VVater Crowfoot, *both in the Flowers, and in the finer Leaves, but has no broad Leaves at bottom, as the* VVater Crowfoot *has: it bears also a head of Seed after the Flower is past, very like to those of* Crowfoot, viz. *a small bunch of Seeds set close together.*

VI. *The Places.* The first grows very plentifully about *London*, even in the VVater, and in

Yarrow Water *Crowfoot.*

Belonging to Sect. 5.

many other Parts of *England*: and so do the other two, in Plashy and VVatery places; but the last grows only in the VVater, especially being shallow.

VII. *The Times.* They all Flower from the middle of *Summer* to the end, *viz.* from the middle of *June* to the middle of *September*, if the Season is warm.

VIII. *The Qualities.* They are all cold in the first Degree, and dry in the end of the second, Astringent, Glutinative, and Vulnerary.

IX. *The Specification.* They cool, allay inflamations in VVounds and Ulcers, are good against inward Falls and Bruises, help the Strangury, and give ease in the Tooth-ach.

X. *The Preparations.* You may have therefrom, 1. *A Liquid Juice.* 2. *A Decoction in Wine.* 3. *A Mixture.* 4. *A Balsam.* 5. *A Cataplasm.*

The Virtues.

XI. *The Liquid Juice.* Given from 1 Spoonful to 2 Spoonfuls or more, mixt with a little Vinegar, it is good against inward Bruises coming by a fall from some high place; and so mixt, being held in the Mouth, it eases the Tooth-ach.

XII. *The Decoction in Wine.* It has the Virtues of the Juice; and fomented upon inflamed VVounds, it abates the Inflamation, and eases the Pain: Taken with a Scruple, or half a Dram of Salt of Tartar, it opens Obstructions of the Urinary Passages, and gives ease in the Strangury.

XIII. *The Mixture.* Take of the Decoction 8 Ounces; Spirit of VVine, an Ounce and half; Nitre in fine Pouder, 3 Drams: mix and dissolve. Used as a fomentation, and as a Wash, or Lotion, it

gives

gives eaſe in old painful running Sores and Ulcers, allays their Inflamations, digeſts, cleanſes, incarnates, and heals them.

XIV. *The Balſam.* It digeſts and cleanſes admirably all running, putrid or filthy, and foul running Sores and Ulcers; and with the Mixture aforegoing, quickly incarnates and heals them.

XV. *The Cataplaſm.* Beaten up with Nitre in fine Pouder, adding thereto a little Wine Vinegar, and bringing it to a conſiſtency with Barley flower, and ſo applyed to a Simple recent Contuſion, it diſcuſſes it, hinders the Inflamation, and takes away a hot Fluxion if preſent: It diſcuſſes hot Tumors alſo, eaſes Pain, and is truly profitable againſt the Gout.

CHAP. DCCLII.

Of YUCCA; HIUCCA; *OR,* *CAZAVI.*

I. *THE Names.* It being to us a Plant of new Invention, it cannot be ſuppoſed to have any *Greek* or *Latine* Name, but it is called by the *Indians Hiucca*, *Jucca* and *Yucca*; alſo *Mandioca*, *Manihot*, and *Cazavi*; many, or all of which Names, are brought into the *Roman* Tongue; and the laſt, *viz. Cazavi*, or *Caſavi*, is made *Engliſh.*

II. *The Kinds.* It is divided into the True and Suppoſititious. The *True Yucca*, or *Cazavi*, is 1. *Hiucca*, ſive *Yucca*, ſive *Mandioca Genuina Mexicana, folijs Cannabinis*, The True Indian *Cazavi* or *Yucca*, Hemp-Leav'd. 2. *Hiucca*, ſive *Yucca*, ſive *Hetich Americanum*; The Mallow-Leav'd Indian *Cazavi*, or Potatoe-like *Cazavi.* 3. *Yucca, folijs Aloes*, ſive *Jucca India putata*, The Suppoſititious Indian *Cazavi*: This is not the True *Yucca*, or *Cazavi* of *Oviedus*, *Thevet*, and others, of which the Bread *Caſavi* is made, as *Monardus* has plainly demonſtrated; for the *True Yucca* is the *Hemp-Leav'd Yucca*, firſt Named, its Leaves being divided into 7, 8, or 9 parts, ſtanding on long Footſtalks, as immediately will be declared.

The Deſcriptions.

III. The firſt, or True Indian Yucca, or Cazavi. *It has a pretty great long Root, as great as that of a large* Carrot, *brown on the outſide, and very white within, alſo Sappy, and full of a Juicy Fleſhy Subſtance. This Root is Planted every Year, or every other Year, and quickly grows to be very great or large, and long withal. From this Root Springs forth one or more woody Stalks, of* 4, 5, *or more Feet high, growing up to be as it were a ſmall Shrub. Upon the Stalks grow many fair broad Leaves, each upon a long* Footſtalk, *and divided into* 5, 6, 7, *or more parts, or ſingle Leaves as it were, not much unlike to* Helleboraſter, *or* Hemp-Leaves, *(whence it has part of its Name,) which* Leaves *are about* 6 *Inches long, two Inches or more broad, not indented, but even about the edges, and abiding always* Green. *The Stalk is divided into divers unequal Branches, bearing many pretty large Flowers, Spotted a little; they are narrow at their bottoms, long and ſharp pointed, and are in number ſix, white on the inſide, but of a dead browniſh white color on the outſide; ſo that it is a* Flower *of no great Beauty, and is only to be eſteemed as an* Exotick *rarity.*

IV. The ſecond, or Mallow-Leav'd Indian Cazavi, *or* Potato-like Caſavi, *or* Yucca. *This has a Root* 5, 6, 7, 8, *or* 9 *Inches long, and ſometimes longer, great and thick at its top, and ſharp pointed at the bottom, very like to thoſe of the great long* Turneps: *This Plant is of two ſorts,* viz. *one which is yellowiſh, and another which is white, when they are Boiled or Baked into Bread. From the top of this Root, ſprings forth many long, ſlender, tender weak Branches of Leaves, ſome of them being very long, and ſome much ſhorter; ſome not a half, and ſome not a third part of the length of the longer Stalks of Leaves. Theſe Stalks have each of them at their extremities, one large Leaf, much larger than thoſe which grow below them, about the middle, or other parts of the Stalk, which are not a quarter part, and many times not an eighth part, or tenth part of the Magnitude of the great Leaf at the end of the Stalk; all which, both greater and ſmaller, are roundiſh, with ſome reſemblance of a* Mallow-Leaf, *whence come part of the Name. Theſe Stalks of Leaves are ſo weak, that the longer of them never grow upright, but always trail upon the Ground, and the very ſhorteſt of them lean much, never growing perfectly upright, but in a declining poſture.*

V. The third, or Suppoſititious Indian Caſavi. *It has a great thick, and withal long tuberous Root, ſpreading it ſelf out in time, into many other Tuberous Heads, from whence ſhoot forth many long, hard, and hollow, or narrow guttered Leaves, of a*

Yucca Suppoſititious.

thick Subſtance, ſharp edged, and ſharp pointed, encompaſſing one another at the bottom, of a grayiſh green color, abiding freſh continually, or ſeldom falling away, with ſeveral hard Threads running in or thro' them length-ways, which when withered, become pliant withal, to bind things up with. From the middle of this Bunch of Leaves, ſprings up a ſtrong round Stalk, and that every

Year,

Year, in the Native Places of its Growth, (but not every Year with us, in our Colder Climates;) which Stalk spreads its self out into several Branches, on which grow divers Flowers, somewhat large, and hanging downwards, consisting of six Leaves, with divers Veins, of a weak reddish or blush color, spread on the back of the three outward Leaves, from the middle to the bottom, but not reaching to the edge of any Leaf. These Flowers abide not long, but quickly fall away, without bearing any Seed in our Cold Countries.

VI. This Plant is thus described by *Gerard*. *It has a great Root, thick and Tuberous, very knotty, and full of Juice, which is somewhat sweet in Taste, but of a Pernicious Quality. From which Root, rises up immediately very many Leaves round the head thereof, the Stalks of which are about a Cubit long, hollowed like a Gutter or Trough, very smooth, and of a green color, like unto that of* Woad. *The edges of the Leaves are sharp, like the edge of a Knife, and of a brown color. The point of the Leaf is a Prickle, as sharp as a Needle; and the whole thereof being well viewed, is not much unlike to a Wherry, or some such like Boat. These Leaves are also very tough, hard to break, and not easie to be cut, except the Knife be very sharp. To this Description,* Johnson *upon* Gerard *also farther adds, In some Years (says he,) it puts forth a pretty stiff, round Stalk, some three Cubits high, divided into divers unequal Branches, carrying very many pretty large Flowers, shaped somewhat like those of* Fritillaria, *but that they are narrower at their bottoms; the Leaves of the Flower are six in number, which are of a white color on their inside, but on the outside, of an overworn reddish color, from the Footstalk to the midst of the Leaf; so that it is a Flower of no great Beauty, but is only esteemed for its rarity.*

VII. *The Places.* The two first grow in most places of *America*, from *Florida* to *Peru*, and about the Straights of *Magellan*, as also in the Islands of the *Ocean*, as in *Jamaica*, *Barbadoes*, and others of the *Caribbee* and *Leeward Islands*, even in those places where they had *Maize*, or *Indian Wheat*. The third or last of them, grows also in all, or most places in the *West-Indies*, where the two former grow, from the Southern parts of *Brazil* and *Chili*, to the Cape of *Florida*; and in most of the *Canabal Islands*, and other Countries near adjacent to them; as likewise in our *English Plantations*, as in *Virginia*, *Maryland*, *New-England*, &c. as it is constantly affirmed.

VIII. *The Times.* The Seasons wherein the first and second Flower and Seed are uncertain, and thereof Authors have said nothing. The third or last, Flowers about the middle or latter end of *July*, the Flowers falling away within a little time after they have been blown open; but as for its Seed, it has never been observed to come to perfection with us. As to its Leaves, *Gerard* says that they kept Green both Winter and Summer, in his Garden, without any covering upon them to defend them, notwithstanding the injury or infelicity of our cold Climate.

IX. *The Qualities.* Of these sorts of Plants, the Roots are only of use. *The Juice of the first* is hot and dry in the fourth degree; Volatile in the highest degree, and Deleterious or Poisonous; and so is the Root it self, if eaten whilst it is fresh and moist; but when dry, or reduced into Flower, it is temperate in respect to heat or coldness, dryness or moisture, being perfectly free from any *Venene* or malign Quality, and fit for Food and Nourishment of the Body. *The Juice of the second*, is affirmed by some to be free from any Poisonous or hurtful Qualities, whereas others say, it has the same *Deleterious* Qualities with the first. I know nothing of it by Experience, but if the Root is of the nature of *Spanish Potatoes*, as is affirmed, it must be Innocent enough; and the Root it self, answers to all the Intentions of the first Plant. *The raw Juice of the third*, is said to be Deadly, or very dangerous, like to the Juice of the first. *Aldinus* relates, that a Wound made in his Hand by the sharp Prickle or point at the Leafs end, gave him such intollerable Pains as almost Distracted him, (which shews the Malignity of its Subtil and Volatile parts,) and that he could have no ease till he applyed his own Balsam thereto, which cured it. But the dryed Root, or the Flower thereof, is innocent, temperate as to heat or cold, and dry in the first degree, fit to make Food of, in like manner as the former.

X. *The Specification.* Authors have ascribed no Virtues to these Plants; but if we may make an Estimate of them, from the consideration of their Roots being received as Food, and nourishing Mankind, making him to increase in Substance and Strength; it is rational to believe that they are restorative in Consumptions, comfort and refresh weak and decayed Nature, accordingly as they may be applyed to those purposes: And as they are of a drying Quality, so they may be Astringent, and so be profitable to stop Fluxes of the Bowels; this we speak as to the Root it self. And as to the Juice, when it is well prepared, so as to be divested of its Deleterious and Poisonous Qualities, it may be of excellent use to allay the heat of Fevers, quench Thirst, cure sore Mouths and Throats, and the like; as also to chear and refresh the Vital Spirits, when oppress and weakned thro' Cares, Afflictions, Melancholy, Perturbations of the Mind, or any present Heterogene matter depressing them.

XI. *The Preparations.* You may prepare from the Juices of all these Plants, but especially from the Juice of the first of them, 1. *A Drink.* 2. *A Vinegar.* 3. *A Rob or Sapa.* And from the dryed Root, 1. *A Flower.* 2. Cazavi, *or a Fine White sort of Bread*; the like of which may be prepared from both the second and third sorts also.

XII. *An Observation.* That the Juice of the first of these Plants, (if not of the other two) is an Egregious Poison, Experience, as well as the Testimony of Authors, has sufficiently ascertain'd; and that it is a Poison of that indubitable Efficacy, that it certainly Kills in a very short time after the taking of it; whilst the Root it self when dryed, and the Juice when sufficiently boiled, have not the least of any such Qualities in them; the daily Eating and Drinking of them for many scores of Years, have assur'd us that they have no malign or hurtful Qualities in them, but absolutely on the contrary, are Conservatory to the Health, Strength and Life of Mankind, which seems to be a kind of Paradox; since other Poisons, neither drying, boiling, nor even burning, can alter their innate Properties. The like is to be said of *Opium*, that the Pouder of that Succulent Gum being gradually dryed, has not the least *Deleterious* property in it, (what ever it had before) but on the contrary, instead of making Sick at Stomach, causing Vomitings, Convulsions, Faintings and Swoonings (as it has done in multitudes of People,) does restore and comfort the Tone of the Stomach, chear and enliven the Patient, and profligates the present Evil beyond all that possibly it could do, whilst it retained within it, its Native *Deleterious* humidity; this is a *Note* worthy of Observation.

XIII. It

XIII. It may then be demanded how theſe things come to be freed from thoſe their Deadly Qualities? To which I anſwer, That their Poiſons are Volatile, highly Volatile, Volatile even in the higheſt degree; which by the means of the heat of the Fire, or Subtil Attractive properties of the Air, are made to evaniſh, and fly away, and ſo clear the remaining parts of the matter, and make it abſolutely free from any hurtful or evil Quality; whereas had that Poiſon been fixt, and eſſentially incorporated into the ſubſtance of the matter, every Particle thereof would have had the ſame Properties, nor could any Evaporation, drying, or even burning it ſelf, have alter'd it, but that it would have been inviolably the ſame, as long as it could conſerve it ſelf in the World; of which Truth, and matter of Fact, many Examples are eaſie to be given.

The Virtues.

XIV. *The Drink. It is made of the expreſſed Juice of the Root*; which when it is new preſt out, has an evil Smell, and of ſuch hurtful Qualities, that whoſoever ſhould taſte of it, whether Man or Beaſt, dies without Remedy, and that quickly. *The rind of the Root is firſt pared away, then the Root it ſelf is either ſcraped, or broken into ſmall bits, and bruiſed; after which, it is put into a Hair Cloth or Bag, or ſome other proper Strainer, and is expreſſed by the help of a Preſs*, &c. *This Juice they take, and boil it half away, which afterwards by a very gentle Fermentation, becomes a good, wholeſom, and pleaſant Drink, like to a middle ſort of Ale.* It quenches Thirſt admirably, cools in Fevers, more eſpecially if the Juice of a *Limon* or *Orange* is ſqueez'd into it: It chears the Spirits, refreſhes the *Viſcera*, and reſiſts the malignity of putrid and peſtilential Diſeaſes. *If made very ſweet with Honey*, it makes an excellent Gargariſm for a ſore Mouth or Throat, and to cleanſe and heal Ulcers in thoſe parts.

XV. *The Vinegar. It is made of the expreſſed Juice, by ſetting it in the Sun till it becomes acid, and as ſharp as the beſt Wine Vinegar.* Authors ſay, that the Vinegar made hereof, is full as good as that which is made of Wine. It cools in Fevers, and quenches Thirſt, and is admirable againſt malign and Peſtilential Diſeaſes. It may be made into a *Syrup with Honey, or double refined Sugar*, which drank mixt with Water, or other proper Liquid, cools ſingularly, any heat or Inflamation of the *Viſcera*, opens Obſtructions of the Lungs, and cauſes free breathing. It likewiſe heals all ſorts of Sores, Cankers, and Ulcers of the Mouth and Throat, cleanſing and drying them; and alſo alleviating any Inflamation in thoſe places.

XVI. *The Rob or Sapa. It is made of the Juice boiled to the thickneſs of new Honey.* When it is ſo Boiled, to ſuch a Conſiſtency of a *Quiddony*, it is (as Authors ſay) as ſweet as Honey. Of this, a kind of *Mead may be made, by mixing it with Water in the ſame proportion, as you uſe of Honey, when you make Mead thereof.* But if the quantity of this *Rob* or *Sapa*, be half as much more, it will make the Drink ſo much the ſtronger, and more pleaſant withall. It is a pleaſing ſort of Liquor, to drink in hot Weather, to refrigerate or cool, and quench Thirſt.

XVII. *The Flower of the Root. It is made by expreſſing the Juice, and then drying the remainder; after which, it is reduced to a fine and Subtil Flower, either by Grinding it in a proper Mill, or by beating it in a Mortar, and continually Sifting it, till the whole Maſs is reduced to ſuch a Subtil Conſiſtency. Some only ſlice the Root into very thin Slices, which they ſet edge-ways, ſo that the Juice may drain out of its own accord, and continue it ſo ſtanding till it is thro' dry; after which, they break it into ſmall bits with their Fingers, and then either by a proper Mill, or by beating in a Mortar, reduce it to fine Flower as aforeſaid.* Of this Flower with Milk, Eggs, *&c.* they make Cakes, Pan-Cakes, Puddings, Cheeſe-cakes, *&c.* as 'tis uſually done with Wheat Flower, which are very ſweet, Palatable, good and nouriſhing, and very ſuitable to the Bodies of Human kind.

XVIII. Cazavi, *or the Bread. It is made of the aforegoing fine Flower with Water, or rather New Milk, either alone, or adding Yeaſt, Eggs, or whatever may make the Bread light and pleaſant; which they form into little, thin, ſmall Loaves at Pleaſure, and ſo gently Bake them; which Bread ſeems to be almoſt as white as Snow.* This whilſt it is New, is very pleaſant, palatable, and agreeable to the Stomach, and what the niceſt Appetite will not refuſe. And when Stale, very good and pleaſant, tho' not ſo taking as when it is New: But I have eaten of it when Stale, (being about 5 or 6 Months old,) and to me it ſeemed to be full as good as any of our Wheat-Flower Bread, of four or five days old. This Bread Authors ſay, will abide and keep good for a very long time. Some make their Bread thus. *They take the Maſs of the Root, from whence the Juice is preſs'd, which they put into an Earthen Pan, and ſet it over the Fire to make it grow thick; then being dry, they beat it into Pouder: This Pouder they moiſten with Water, and form it into ſmall Cakes or Loaves, which they dry in the Sun, and then keep them for uſe.* Theſe little Cakes or Loaves, will keep good for a long ſeaſon, even twenty Years without corrupting, and give good Nouriſhment to the Body.

XIX. Of this Root, the *Americans*, or *Weſt-Indians* in many places, (tho' they had *Maiz*, or *Indian-Wheat* in great plenty,) did make their Bread, on which they Lived, after the former manner, and that (as they ſay,) for ſome hundreds of Years; which Bread was uſed by all the People of *America*, from the moſt Southern parts of *Chili* and *Peru*, even to the Northern parts of *Florida*, or *New-England*.

XX. *The way and manner of Planting and Propagating it, is this. Of the firſt ſort or kind*; they cut off a Stalk about a Foot long, which they put more than half way into the Ground, where it ſuddenly takes Root, and within a Year or little more, the Root comes to be ſufficiently great, and fit to be taken up for the uſes aforementioned. *The ſecond kind is Planted* from the Root cut into many pieces, each piece having ſome of the outſide thereon: Theſe pieces they put each into a hole in the Earth, made fit for them, which in a Years time or leſs, grow to their juſt Magnitude, and are fit for taking up, and to be prepared for Food.

Finitur, 25 Decemb. 1708.

THE END.

Index PLANTARUM.

Note, The *Number* denotes the *Chapter*.

Thyme, *Epithymum.*
Wormwood, *Epabsinthion.*
Dogs-Bane, *Apocynum, Periploca*, 225.
Climing, —— *repens.*
Upright, —— *latifolium*, —*non repens.*
Willow Leav'd, — *folio angusto salicis.*
American, —— *Americanum.*
Virginian Silk, —— *rectum latifolium, majus Americanum.*
Dogs-Rib, Ribwort, *Quinquenervia, Plantago* —— *Angustifolia*, 566.
Dogs-Stones, *Cynosorchis, Testiculus vel Testiculi Canis*, 226.
Dogs-Tooth, *Dens Caninus, Satyrii Species, Dentali Clusij*, 227.
Dogs-Tongue, Hounds-Tongue, *Cynogloss*, 382.
Doves-Foot, *Geranium Columbinum, Pes Columbinus*, 228.
Jagged, —— *Laciniatum.*
Stone or Rock, —— *Saxatilis.*
Dragons Greater, *Dracontium, Serpentaria major*, 229.
Small, *Dracunculus*, —— *minor.*
Water, *Dracontium Aquaticum, Dracunculus Aquaticus, vel palustris*, 230.
Dragon-wort Water, *idem* 230.
Drop-wort, *Filipendula, Oenanthe*, 231.
Narrow Leav'd, —— *Angustifolia, Oenanthe Apij folijs*, 232.
Hemlock-like, —— *Cicutæ facie, Oenanthe Cicutæ facie*, 233.
Water, *Filipendula Aquatica, Oenanthe Aquatica*, 234.
Ducks-Meat, *Lens Palustris, Lenticula Aquatica*, 235.
Dwale, Nightshade Deadly, *Solanum Lethale, Solanum Deleterium*, 521.
Dyers-Weed, Weld, Wold, *Herba Lutea, Luteum Vitruvij, Lutea Plinij, Luteola*, 236.
Dyers Green Weed, *Genista Tinctoria, Genistella Infectoria, vel Tinctoria*, 237.

E.

Earth-Balls, *Tuber, vel Tubera Terræ*, 238.
Deers, *Tuber Cervinum.*
Earth-Nuts, Ground-Nuts, *Agriocastanum, Bulbocastanum, Nucula Terrestris*, 239.
Pease, *Pseudoapios, Terræ Glans*, pl. *Glandes*; *Glandes Terrestris, vel Pisanæ*, 240.
Wood, *Lathyrus Sylvestris, Astragalus Sylvaticus.*
Eddo of Carolina, *Aron Ægyptium, Pseudocolocassia*, 241.
Elder Dwarf, Danewort, *Ebulus, Chamæacte, Sambucus Humilis*, 242.
Elecampane, *Enula, Enula Campana, Helenium*, 243.
Endive Garden, *Intubus, Endivia, Endivia Hortensis*, 244.
Wild, —— *Sylvestris*, 245.
Broad Leav'd, — *Campestris latifolia.*
Eryngo, Sea-Holly, *Eryngium, Centum Capita*, 246.
Eyebright, *Eufragia, Eufrasia, Ocularia, Ophthalmica*, 247.
Woody, —— *Lignosa*, —— *Pratensis rubra*, 248.

F.

Featherfew, *Febrifuga, Matricaria, Parthenium*, 249.
Wild, — *Agrestis*, — *Sylvestris*, 250.
Fel-wort, Gentian, Bitterwort, *Gentiana*, 311.
Fenny-Stones, Marsh-Palms, *Serapias, Orchis Palmata, Orchis Palmata palustris*, 251.
Fennel Common, *Fœniculum, Marathrum*, 252.
Sweet, —— *Dulce*, 253.
Wild, Horse-Fennel, —— *Sylvestre*, —— —— *Agrestis, Hippomarathrum*, 254.
Sea, *Crithmum Fœniculum Marinum*, 616.
Hogs Sulphur-wort, —— *Porcinum, Pencedanum*, 255.
Fennel Flower, Gith, *Nigella, Melanthium*, 410, 519.
Fœnugreek, *Fœnum Græcum, Siliqua, Silicula Varronis*, 256.
Wild, — *Sylvestre*, 257.

Fern

Index Plantarum.

Fern Male, *Filix mas*, 258.
Female, Brake, —— *Fœmina*, *Nymphæopteris*, 259.
Oak, — *Querna*, *vel Quercina*, 260.
Oak Creeping —— *Repens*, *Dryopteris repens*.
White, *Dryopteris alba*.
Black, *Onopteris mas*.
Rock or Stone, —— *Saxatilis*, *Chamæfilix Filix pumila*, 261.
Water, Osmundroyal, *Filix florida*, *Filix Aquatica*, *vel palustris*; *Osmunda Regalis*; *Filicastrum*, 262.
Fig-Bean, Lupine, *Lupinus*, 459.
Field Cypress, Ground Pine; *Chamæpitys*, *Iva Arthritica*, *Abiga*, 330.
Figwort, *Scrophularia*, *Ficaria*, *Millemorbia*, 263.
Great Foreign, —— *major peregrina*.
—— *absque Tuberculis*, 264.
Filipendula, Dropwort, *Filipendula*, *Oenanthe*, 231.
Finger Orchis, Serapias Stones, *Orchis Serapias*, 298.
Fitch, Vetch, Tare, *Aphace*, *Vicia*, 683, 732.
Five Leav'd Grass, Cinkfoil, *Pentaphyllum*, *Quinquefolium*, 130.
Flag, Corn Flag, *Gladiolus Segetalis*, *Viftoralis rotundus*, 154.
Flag Sweet Smelling, True Acorus, *Acorus verus*, *Acorum*, 265.
Water, Skeg, *Acorus palustris*, *Pseudoiris*; *Iris lutea palustris*; *Acorus Adulterinus vel nothus*; *Gladiolus luteus*, 266.
Flax, Line Manured, *Linum*, *Linum Sativum*, 267.
Wild, —— *Agreste*, —— *Sylvestre*, 268.
Purging, Mil Mountain, *Linum Catharticum*, —— *Catharticum Anglicum*.
Flax-Weed, Toad-Flax, *Linaria*, *Pseudolinum*, 269.
Besom, *Osyris*, *vel Scopiaria Italorum*.
Bastard, *Pseudolinaria*.
Broad Leav'd, *Linaria*, *vel Osyris Latifolia*, 270.
Creeping, *Pseudolinum repens*; *Linaria pumila*, 271.
Fleabane Greater, *Conyza major*, 272.
Lesser, *Conyza minor*, —— *Fœmina*, 273.
Dwarf, *Conyza pumila*, *Chamæconiza*, 274.
Water, —— *palustris*, —— *Aquatica*, *Consolida palustris*, 275.
Fleawort, *Psyllium*, *Pulicaria*, *Herba-pulicaris*, 276.
Flixweed, *Sophia Chirurgorum*, —— *Paracelsi*, *Thalictrum*, 277.
Flower of Constantinople, *Lychnis Byzantina*, —— *Chalcedonica*, —— *Constantinopolitana*, 280.
Flower Gentle Great, Velvet-Flower Great, *Amaranthus magnus*, 278.
Small, —— *parvus*, 279.
Variable, —— *Tricolor*, *Gelosia*.
Golden, *Chrysocome*, *Stœbas Citrina*.
Flower-de-Luce Bulbous unmatchable; *Iris Bulbosa impar*, 281.
Bulbous English, *Iris Bulbosa Anglica*, 282.
Bulbous broad Leav'd, —— *Bulbosa Latifolia*, 283.
Bulbous Narrow Leav'd greater, *Iris Bulbosa Angustifolia major*, 284.
Bulbous Narrow Leav'd small, —— *Bulbosa Angustifolia minor*, 285.
Flower-de-Luce Tuberous Turkey, *Iris Tuberosa Chalcedonica*, 286.
Tuberous white Florentine, Florentine Orrice; *Iris Tuberosa Florentina*; *Iris alba Florentina*, 287, 533.
Tuberosus broad Leav'd —— *album*; Flag-Flower-de-luce broad Leav'd; *Iris Tuberosa latifolia*, 288.
Tuberous Narrow Leav'd Greater; *Iris Tuberosa Angustifolia major*, 289.
Tuberous Narrow Leav'd smaller, *Iris Tuberosa minor*, 290.
Dwarf Greater, *Chamæiris major*; *Iris pumila major*, 291.
Dwarf Lesser, *Chamæiris minor*; *Iris pumila minor*, 292.
Dwarf Grass, or Narrow Leav'd, *Chamæiris Angustifolia*, 293.
Flower-de-Luce Wild, Stinking Gladwin; *Xyris Iris Agrestis*, *Spatha Fœtida*; *Gladium Fœtidum*, 294.
Fluelin, Speedwell Female, *Elatine*, *Veronica fœmina*, 295.
Fly-Bane, Catch-Fly, *Muscipula*, *Viscaria*, 112.
Fly-Stones, Fly Orchis, Bee-Flower, *Orchis Muscaria*, 296.
Foal-Foot, Colts-Foot, *Bechium*, *Farfara*, *Tussilago*, 147.
Fool-Stones, *Orchis Morio*; *Orchis Morionis*; *Testiculus Morionis*; 297.
Fox-Stones, *Testiculus Vulpinus*; *Orchis Serapias*, 298.
Fox-Glove Garden, Fox-Finger; *Digitalis*, *Damasonium*; *Campanula Sylvestris Tragi*, 299.
Common or Field, *Digitalis purpurea vulgaris*; *Digitalis Sylvestris*, 300.
Fox-Tail, Fox-Tail Grass, *Alopecuros*, *Cauda Vulpis*, *vel Vulpina*; 301.
Frank, Spurry, *Spergula*, 662.
Friers Cowle, Wake-Robin Hooded; *Arisarum*, 303.
Fritillary, Daffodil Chequered, *Lilio-Narcissus Variegatus vel Tessalatus*, 293.
Frogbit, Water Lilly smallest, *Morsus Ranæ*, *Nymphæa minima*, 302.
Fumitory Common, *Fumaria*; *Capnos Plinij*, 304.
American or Indian, —— *Americana*, 305.
Furze-Bush, Broom Thorney, *Genista Spinosa*.
Fuss-Balls, Puck-Fists, *Caput*, pl. *Capita Terræ*; *Tuber*, pl. *Tubera Terræ*; *Fungus Odoratus*; *Lupi Crepitus*, 306.

G.

GAlingal, *Cyperus*, *Juncus quadratus*, *Aspalathum*, 187.
Garlick Garden, *Allium*, *Allium Hortense*, 207.
Vipers, *Ophioscoridum*, *Allium Viperinum*, 308.
Leek, *Scorodoprassum*, 309.
Crows, Wild Garlick, —— *Sylvestre*, 310.
Gaul Bush, Gaul Sweet, *Rhus Sylvestris*, —— *Anglicus Myrtus Anglica*, —— *Brabantica*, *Pseudo Myrsine Gerardi*; *Elæagnus Cordi*, 679.
Gentian Great, Fel-wort Great, *Gentiana major*, 311.
Small, *Gentianella*, *Gentiana minor*, 312.
Cross-Wort, *Cruciata*, *Gentiana minor Cruciata*.
Autumn, —— *Autumnalis*.
Germander Garden, *Chamædrys*, *Quercula minor*, *Trixago*, 313.
Wild, *Chamædrys Sylvestris*, 314.
Tree, *Teucrium*, *Quercula major*, 315.
Water, *Scordium*, *Scordotis Plinij*; *Trixago palustris*; *Chamædrys Aquatica*, 316.
Gilliflower Garden, Carnation, *Caryophyllus Hortensis*, 317, 318.
Gith, Fennel-Flower, *Nigella*, *Melanthium*, 410, 519.
Gladdon Stinking, Flower-de-Luce Wild, *Iris Agrestis*; *Gladium Fœtidum*, 294.

Gladiolus,

Index Plantarum.

Gladiolus, Corn-Flag, *Gladiolus Segetalis, Villoralis rotundus*, 154.
Glass wort, Kali, Salt-wort, *Salicornia, Salsicornia Kali*, 411.
Glaux, Milkwort Sea, *Polygala Marina, Glaux Marina*, 489.
Goats-Beard, Noon-Flower, *Tragopogon, Barbi Hirci*, 319.
Goats Rue, Goats Herb, *Galega*; *Ruta Capraria*, 220.
Goats Stones, Hares-Stones; *Tragorchis, Sincophora, Testiculus Hircinus*; *Orchis Saurodis*, 321.
Gold Locks, Golden Tufts, *Chrysocome*; *Coma Aurea*, 322.
Gold Cups, Crowfoot, *Ranunculus*, 172, 173, 176.
Golden Flower, Cudweed Golden, *Gnaphalium Aureum*, 180.
Gold of Pleasure, Oily Seed, *Myagrum, Melanpyrum*, 324.
Wild, *Pseudomyagrum.*
Golden Rod, *Virga Aurea*; *Leucographis Plinij*, 323.
Goose-Foot, Arach Wild Broad Leav'd; *Pes Anserinus*; *Atriplex Sylvestris latifolia*, 325.
Goose-Bill, Clivers, Cleavers; *Aparine Asperugo*, 136.
Goose-Grass, Cleavers; *Aparine, Asperugo*, 136.
Gourd, *Cucurbita.*
Goutwort, Herb Gerard, *Herba Gerardi, Angelica Sylvestris*, —— *Erratica, Herba Podagraria*, 326.
Grass, Herbage, *Gramen, Agrostis*, 327.
Bent Grass, *Gramen arvorum* —— *Scopulæ.*
Canary Grass, *Phalaris, Phalaroides.*
Cats-Tail, *Gramen Typhinum.*
Corn or Wheat Grass, —*Segetum*—*Triticeum.*
Cocks-Foot, —*Ischæmon* —— *Dactyloides.*
Capons-Tail, —— *Murorum.*
Cotton, — *Tomentosum* — *Tomentarium.*
Cock-Comb, or Crested —— *Crisatum.*
Cyperus, —— *Cyperoides.*
Darnel, — *Phœniceum, Phœnix Graminea.*
Dogs-Grass, —— *Caninum.*
Dwarf, —— *Pumilum*, —— *Nanum.*
Feather, —— *Plumosum.*
Fern, —— *Filiceum, Polyanthum.*
Fox-Tail, —— *Alopecuros, Cauda Vulpis.*
Hairy, —— *Hirsutum.*
Hairy Wood, — *Hirsutum Nemorosum.*
Havergrass, *Festuca*; *Oculus Caprinus.*
Hedge-hog, —— *Echinatum.*
Kneed, —— *Geniculatum.*
Meadow, —— *Pratense.*
Mountain, — *Montanum*, — *Paniculatum.*
Millet, —— *Miliare vel Miliaceum.*
Oat, —— *Avenaceum.*
Panick, — *Paniceum*, —— *Melinoides.*
Quaking, or Maiden-Hair; — *Tremulum.*
Reed, — *Arundinaceum, Calamogrostis.*
Rush, —— *Funceum.*
Sea, —— *Marinum*, —— *Maritimum.*
Silver, —— *Argenteum.*
Spiked, or Eared, —— *Spicatum.*
Toad, — *Bufonum*, — *Funceum parvum.*
Water, —— *Aquaticum.*
Way, or Wall, — *Semitale*, — *Muriale.*
Wood, —— *Nemorale*, — *Nemorosum.*
Woolly, —— *Lanatum*, — *Bombycinum.*
Gromwel, Greater, *Lithospermum majus*; *Milium Solis*, 328.
Creeping, —— *repens.*
Small, or Lesser, —— *minus*, —— *Sylvestre*, 329.
Ground Pine, Gout Ivy, Field Cypress; *Chamæpitys, Iva Arthritica*; *Abiga*, 330.
Sea, —*Maritima, Anthyllis Herbariorum, Anthyllis altera, vel Chamæpityoides*, 331.
Heath, *Coris Matthioli*, 332.
Heath Purple, *Coris Purpurea.*
Groundsel, *Erigerum, Senetio, Senescio*, 333.
Cotton, —— *Tomentosum*; *Senecio Tragi*, 334.
Ground-Needles, Cranes-Bill Musked; *Geranium Moschatum*; *Acus Moschatum*, 160.
Guinny Corn, Panick, *Panicum*; —— *Indicum*, 537.
Gut-wort, Herb Terrible; *Alypum, Herba Terribilis, Alypias*, 368.

H.

HAres-Bells English, Hyacinth English; *Hyacinthus Anglicus*, 335.
Ears, *Buplurum*; *Auricula Leporis*; *Herba Vulneraria*; 336.
Hares-Foot, Trefoil Spiked; *Lagopus, Lagopodium*; *Pes Leporis*; *Trifolium Humile*; *Trifolium Triticeum*, 337.
Hares-Stones, Goat-Stones; *Tragorchis, Testiculus Hircinus*, 321.
Hartichoak Garden, Artichoak; *Cynera, Cinera*; *Cinera Hortensis*, 338.
Wild, —— *Sylvestris, Scolymus*, 339.
Jerusalem, *Canada Potato*; *Aster Peruanus Tuberosus*; *Battatas de Canada*, 340.
Flos Solis Fernesianus, 717.
Harts-horn, Bucks-horn; *Coronupus, Cornu Cervi, vel Cervinum*, 91.
Harts-Tongue, Deers-Tongue; *Phyllitis, Lingua Cervina*, 341.
Finger, —— *Laciniata.*
Bastard, Mules Fern; —— *Notha, Hermionitis, Splenium*, 342.
Hartwort, *Seseli*; *Sile*, 343.
Hawkweed Common; *Hieracium, Accipiter*, 344.
Rare, — *rarum*, — *incommune*, 345.
Heal-wort, Sanicle; *Sanicula*, 617.
Hearts-Ease Garden, Pansie; *Viola Flammea*; — *Tricolor, Herba Trinitatis*, 346.
Wild, — *Sylvestris*, — *Nemoralis*, 347.
Hellebor Black True, Christmas-Flower; *Elleborus, Helleborus*; *Veratrum nigrum*, 348.
Bastard, Bears-Foot, —— *Nothus, Helleborastes*, 349.
Wild, —— *Niger Sylvestris, Helleborine nigra*, 350.
White, Sneeze-Root; *Helleborus albus, Veratrum album*, 351.
Wild, —— *Sylvestris*, —— *Agrestis*; *Elleborine alba agrestis*, 352.
Helmet-Flower, Monks-Hood; *Napellus, Thora, Cappa Monachi, Luparia*, 353.
Alexipharmick, Antidotal; *Antithora, Anthora; Napellus Alexipharmicus*, 354.
Hemlock Common; *Cicuta*, 355.
Parsly Leav'd, — *minor*, — *fatua*; *Cicutaria fatua*, —— *Apiifolia*, 356.
Water, Marsh, — *Palustris, Aquatica*, — 357.
Hemp Manured, *Cannabis Sativa*, 358.
Bastard or Wild, —— *Spuria*, —— *Sylvestris*, 359.
Water, Agrimony Water; *Agrimonia*, —— *Aquatica*, —— *Cannabina*, 4, 5.
Henbane Black, Common; *Hyoscyamus vulgaris* —— *niger*, 360.
White, *Hyoscyamus albus*, — —— *major*, 361.

Henbit,

Index Plantarum.

Henbit, Chickweed Ivy Leav'd; *Hederacea, Morſus Gallinæ, Alſine Hederula*, 362.
Herbage; Graſs; *Gramen, Agreſtis*, 327.
Herb Bennet, *Avens, Caryophyllata, Sanamunda*, 41.
Bane, *Hemodoron, Limodoron, Cauda Leonis*, 447.
Carpenter, Self-Heal, *Conſolida minor, Solidago minor, Prunella vulgaris*, 629.
Chriſtopher; — *Chriſtophorana*, —— *Chriſtophori*, 363.
Frankincenſe Narrow Leav'd, *Libanotis*, —— *Cervina alba, Cervicaria Anguſtifolia*, 364.
Frankincenſe Broad Leav'd, Frankincenſe All-heal, *Libanotis latifolia*, 365.
Gerard, Gout-wort, *Herba Gerardi, Podagraria*, —— *Angelica Sylveſtris*, 326.
Grace, Rue, *Ruta, Peganum*, 604.
Ivy, Ground-Pine, *Chamæpitys, Iva Arthritica, Abiga*, 330.
Paris, True Love, One Berry; *Herba Paris*, —— *Triphyllos*, 527.
Maſtich, *Marum, Maſtiche Marum*, 366.
Robert, Robin's Cranes-Bill; *Herba Roberti, Geranium Robertianum*, 367.
Terrible, Gut-wort; *Alypum, Alypias, Herba Terribilis*, 368.
Trinity, Hearts-Eaſe, Panſie, — *Trinitatis Viola Flammen*, —— *tricolor*, 346.
True Love, Herb Paris, One Berry, *Herba* —— *Paris, Triphyllos*, 527.
Two-Pence, *Numularia, Centum Morbia*, 496.
William, Biſhops-weed, *Ammi, Ameos*, 74.
Willow, Looſeſtrife, *Lyſimachia*, 454, 455.
Hercules's All-heal, *Panax Heracleum*, 9, 10.
Panax verum Herculeum, 748.
Higtaper, Mullein, *Tapſus Barbatus*, 507.
Holly-hock. Tree Mallow, *Malva Arborea*, —— *Roſea*, — *Hortenſis*, — *major*, 369.
Hollow-Root, Caveous Fumiterry; *Radix Cava, Fumaria radice Cava*, 370.

Seggron, Ragwort, James-wort, *Jacobea, Herba Jacobea, Jacobea Senetio*, 587.
Self-Heal, *Prunella, Consolida minor, Solidago minor*, 629.
Sengreen, Houseleek ; *Sedum, Sempervivum*, 384.
Senvie-Field, Mustard, *Sinapi Sylvestre*, 511.
Serapias Stones, Orchies Flies, *Testiculus Muscarius*, 520.
Serpents Tongue, Adders Tongue, *Ophioglossum, Lingua Serpentis*, 1.
Sesamoides, Strange Gum Succory ; *Chondrilla, peregrina, Sesamoides, Sesamoides parva*, 675.
Setfoil, Tormentil, *Septifolium, Tormentilla, Consolida rubra*, 701.
Setwall, Valerian Garden, *Valeriana Hortensis, Thericaria, Herba Benedicta.* 719.
Setwall Mountain, Spickrard Celtick, *Nardus Celtica, Spica Celtica*, 647.
Setterwort, Hellebor Black, *Elleborus, Helleborus niger, Veratrum nigrum*, 249.
Share-wort, Star-wort, Bubo-Grass ; *Aster, Bubonium. Inguinalis*, 664.
Shave Grass, Horse-Tail ; *Equisetum, Cauda Equina Aquatica*, 379.
Shepherds Needle, Venus Comb ; *Scandix, Acus Veneris. Pecten Veneris, Acula, Scanaria*, 630.
Shepherds Purse, Pick-Purse, Caseweed ; *Bursa Pastoris, Pera pastoris*, 631.
Shepherds Rod, *Virga Pastoris*, 632.
Silk Grass Virginian, *Periploca Virginiana*, 729.
Skirret Garden, *Sisarum, Siser*, 633.
Wild, *Siser vel Sisarum Sylvestre.*
Smallage, Water Parsly ; *Apium, Apium Aquaticum*, ——*Palustre, Paludapium.* 634.
Garden. or Sallary, *Apium hortense, Apium Crispum.*
Sweet, *Apium dulce.*
Small Honesty, Pinks, *Caryophylli Sylvestres, Caryophylli nothi.* 564.
Smilax Garden, Beans Kidney ; *Phaseolus, Smilax Hortensis*, 56.
Snakes Buglos, Buglos Vipers ; *Buglossum*, —— *Viperinum, Echium*, 95.
Snake-weed, Bistort, *Bistorta*, 76.
Snap Dragon, Calves Snout, *Anturrhinum*, 635.
Wild, —— *Sylvestre.*
Sneeze-Root, Hellebor white, *Helleborus albus, Veratrum album*, 351.
Sneeze-wort, *Ptarmica, Sternutamentaria*, 636.
Solomons Seal, *Sigillum Solomonis, Polygonatum, Scala Cæli.* 637.
Soldier Water, *Stratiotes Aquaticus, Stratiotes Potamios, Sedum Aquatile*, 638.
Sope-wort, Bruise-wort ; *Saponaria, Viola agrestis Tragi, Struthium*, 639.
Sorrel Garden, *Oxalis, Acetosa, Lapathum acidum, Rumex acidus*, 640.
Wild, —— *Sylvestris*, —— *minor, Acetosella, Lapathiolum acidum.*
Sorrel Wood, Sour Trefoil, *Oxytriphyllum, Trifolium acetosum, Alleluja, Lujula, Oxys*, 641.
Southernwood, *Abrotanum, Abrotanum mas*, 642.
Female, Tree Southernwood, —— *Abrotanum Famina* — *arborescens.*
Sow-Bread, *Cyclamen, Cyclaminus, Artanita, Panis Porcinus*, 643.
Sow-Thistle, *Sonchus*, 644.
Smooth, — *Levis.*
Prickly, —— *Asper.*
Spear-wort, Bane-wort, *Flammula, Ranunculus Flammeus*, 645.
Speedwell, Pauls Betony, *Veronica mas, Veronica Pauli, Betonica Pauli, Veronica Paulina*, 646.
Spicknard European, — Celtick, *Nardus Celtica, Nardus Spuria, Pseudonardus*, 647.
Spicknard Plowmans, *Baccharis, Paccharis*, 648.
Spiderwort, *Phalangium, Phalangitis*, 649.
Spignel, Meum, *Athamanticum, Anethum Sylvestre, Meum Antiquorum*, 650.
Spinage, *Spinachia, Spanachia, Olus Hispanicum, Tragi*, 651.
Spleen-wort, Milt-waste, Scale Ferne, *Splenium, Asplenium, Scolopendrium*, 652.
Smooth, True, *Scolopendrium, Splenium, Ceterach.*
Rough, Bastard, *Lonchitis aspera, Asplenium Sylvestre, Pseudolonchitis Maranthæ.*
Spoon-wort, Scurvy-Grass ; *Cochlearia*, 628.
Sea, English, — *Marina* — *Anglicana.*
Garden, Dutch, — *hortensis*, — *Belgica.*

Spongie

Index Plantarum.

Sponge, *Sponga, Sponchus*, 653.
Spurge Garden, *Lathyris, Cataputia minor*, 654.
Small, *Pityasa, Esula, Esula minor*, 655.
Great, *Cherva, Cici, Croton, Picinus, Palma Christi*, 656.
Olive, *Mezereon, Chamælea Germanica, Thymelæa*, 657.
Wood, *Tithymalus, Tithymalus Characias*, i. e. *Vallaris*, 658.
Marsh, *Tithymalus paluſtris, Esula major Germanica*, 659.
Sea, *Tithymalus paralicis, Lactaria, Herba Lactaria*, 660.
Laurel, *Daphnoides, Laureola, Cneorum nigrum Theophrasti*, 661.
Spurry, Frank-Spurry; Spur-wort, *Spergula*, 662.
Star Flower, Star of Bethlehem, *Ornithogalum, Bulbus Esculentus*, 663.
Star-wort, Bubo-Grass, *Aster, Bubonium, Inguinalis*, 664.
Greek, Athenian, *Aster Atticus.*
Fleabane, *Aster Conyzoides.*
Star-wort Water, *Stellaria Aquatica*, 665.
Sea, *Tripolium, Anthyllis.*
Stavesacre, Louse-wort; *Staphis agria, Pedicularis, Peduncularis, Pituitaria*, 666.
Stitch-wort, *Gramen Leucanthemum*, 667.
Stœchas, Cassidony, French Lavender; Stechadore, *Stœchas, Stœchados*, 668.
Stœchas Yellow, Gold Locks, Golden Tufts; *Chrysocome, Coma Aurea,* —— *Lutea*, 322.
Stock-Gilliflower Garden, *Leucoium hortense*, 669.
Single, *Leucoium Sativum simplex.*
Double, —— *flore pleno.*
Stock-Gilliflower Sea, *Leucoium Marinum, Tripolium Anguilare*, 670.
Stob-wort, Sorrel Wood; *Oxytriphyllum, Trifolium acetosum, Lujula*, 641.
Stone-break, Saxifrage, *Saxifraga,* —— *pratense,* —— *Anglicana*, 623.
Stone-Hore, Stone-Crop, Wall-Pepper; *Illecebra, Illecebra minor Lobelij, Sedum Causticum, Vermicularis, Vermicularis Dasyphyllum*, 671.
Stonnard, Stone-Crop, Wall-Pepper, *idem.*
Strawberry, *Fraga, Fragaria*, 672.
Garden, —— *Hortensis.*
Wood, —— *Nemorensis, Sylvestris.*
Great White, —— *alba maxima.*
Green, —— *Viridis.*
Wild, Barren, —— *Vesca,* —— *Sterilis.*
Succory Garden, *Cichorium, Cichoreum, Cichorea,* —— *Hortense*, 673.
Wild, ——. *Sylvestre.*
Bastard, —— *Nothum, Pseudo Cichorium*, 674.
Bastard, Smooth Yellow, *Hedypnois, Cichorium pratense.*
Wart, *Cichorium Verrucarium, Zacyntha, Chondrilla Verrucaria.*
Swines, *Hypochæris Porcellia, Cichorium Porcinum.*
Gum, *Chondrilla*, 675.
True, *Chondrilla Græca.*
Gum Succory Strange, *Sesamoides,* —— *Sesamoides Parvum, Chondrilla,* —— *Sesamoides.*
Sun-Dew, *Ros Solis, Rorella, Rorida, Rosa Solis, Ros Solis*, 676.
Sun-Flower of Peru, Marigold of Peru, *Chrysanthemum Peruvianum,* —— *majus, Flos Solis major,* —— *maximus*, 677.
Smaller, *Flos Solis minor, Chrysanthemum Peruvianum minus.*
Sun-Flower Creeping, *Helianthemum repens, Flos Solis repens, Cistus repens*, 678.
Sweet-Gaul, *Rhus Sylvestris Anglicus* — *Belgicus, Myrtus Anglica,* —— *Brabantica, Dryophenon, Elæagnus, Chamælæagnus*, 679.
Swallow-wort, Silk-wort; *Asclepias, Vincetoxicum, Hirundaria Antiqua*, 680.

T.

TAnsie Garden, *Tanacetum* —— *hortense,* — *Athanasia Vulgaris*, 671.
Crisped, *Tanacetum Sativum Crispum.*
Woolly, —— *Lanuginosum.*
Party Colored, —— *Versicolor.*
Tansie Wild, Silver-weed; *Potentilla, Argentina, Tanacetum Sylvestre,* —— *agreste, Argemone, Argemonia*, 682.
Tare Manured, *Vicia Sativa,* —— *vulgaris*, 683.
Wild Great, *Cracca magnus, Vicia maxima Dumetorum,* —— *Sylvestris.*
Wild white, —— *flore albo, Galega altera Dodonæi, Onobrychidis flore, Vicia Sylvestris Nemorum.*

Tormentil, Setfoil, *Tormentilla*, *Septifolium*, *Heptaphyllum*, *Consolida rubra*, 701.
Touch-wood, Tree Mushroom, *Fungus Ignarius*, *Arboreum*, 702.
Touch-me-not, Cress Impatient; *Nasturtium*, —— *Impatiens*, *Noli me tangere*, 163.
Touch-me-not, Cucumber Wild; *Cucumis Asininus* —— *Sylvestris*, *Noli me tangere*, 179.
Touch-me-not, Mercury Wild Codded; *Mercurialis Sylvestris Siliquosa*, *Herba Impatiens*, *Noli me tangere*, 488.
Toy-wort, Shepherds Purse; *Bursa Pastoris*, *Pera Pastoris*, *Thlaspi fatuum*, 631.
Travellers-Joy, Wild Climer, *Clematis Sylvestris*, *Vitalba Dodonæi*, *Viorna Gerardi*, *Vitis Sylvestris Plinij*, —— *Caustica Gesneri*, 703.
Trefoil Spiked, Hares-Foot, *Lagopus*, *Lagopodium*, *Pes Leporis*, *Trifolium humile*, *Trifolium Triticeum*, 337.
Trefoil Sweet, Garden Claver, *Trifolium Odoratum*, *Lotus Urbana*, —— *Sativa*, *Lotus Hortensis*, *Odora*, 704.
Strong Scented, *Trifolium Asphaltites* —— *Bituminosum*.
Trefoil Meadow, Field Claver, Clover Grass, Meadow Honey Suckles, *Trifolium pratense*, 705.
Purple Common, —— *vulgare Purpureum*.
White Common, —— *album vulgare*.
Purple Great, —— *Purpureum magnum*.
White Great, —— *album magnum*.
Purple Small, *Purpureum minus*.
White Small, —— *album minus*,
Heart, *Trifolium Cordatum*.
Yellow Small, —— *luteum minus*.
Yellow Smallest, —— *luteum minimum*.
Hares-Foot Common, *Lagopus vulgaris minor*.
Trefoil Codded, Claver Trefoil, *Trifolium Siliquosum*, 706.
Trefoil Marsh, Buck-Bean, *Trifolium palustre*, —— *Paludosum*, —— *Hircinium*, 707.
Trefoil Pease, *Lotus*, *Lotus Sylvestre*, *Lotopisum*, *Lotus Pisatus*, —— *Siliquosus*, 708.
Trefoil Strawberry, *Trifolium Fragiferum*, —— *Vesicarium*, 709.
Starry, —— *Stellatum*, *Capitulis Stellatis*.
Trefoil Tree True, Cytisus; *Cytisus verus*, —— *Dioscoridis*, 710.
Common, *Cytisus vulgaris*.
Bean, *Anagyris*, *Laburnum*.
Tufts Garden, *Thlaspi hortense*, — *Umbellatum*.
Sea, *Thlaspi Marinum*, 711.
Tuberose, *Hyacinthus Indicus*, *Tuberosa*, *Radix Tuberosa*, *Lis Indicus radice Tuberosa* 712.
Tulip, Turks Cap, the True Satyrion, *Tulipa*, 713.
Early White, *Tulipa præcox alba*.
Early Purple, —— *præcox purpurea*.
Early Red, —— *præcox rubra*.
Early Yellow, —— *præcox lutea*.
Mean White, —— *media alba*.
Mean Purple, —— *media purpurea*.
Mean Red, —— *media rubra*.
Mean Yellow, —— *media lutea*.
Mean Green, —— *media viridis*.
Late Flowering, —— *Serotina*.
Tulip Bastard, *Tulipa nothа*. 714.
Turnep Garden, *Rapum* —— *hortense*, 715.
Round White Common, — *rotundum album*
Round Red, —— *rotundum rubrum*.
Long Common, *Longum vulgare*.
Yellow, *Rapum Luteum*.
Turnep Wild, *Rapum Sylvestre*, *Rapistrum*, *Lampsana Matthioli*, 716.
Greater, Cole Rape, *Rapum non Bulbosum*, —— *majus Sylvestre*.
Smaller, *Rapum Sylvestre minus*, *Rapistrum minus*.
Turnep Oaken, Lions Foot, *Leontopetalum*, 446.
Tunhoof, Alehoof, Ground Ivy. *Hedera Terrestris*. 6.
Turnsole, Wartwort, *Heliotropium*, *Verrucaria*, *Solisequium*, *Scorpioides album Gesneri*, 717.
Dying, *Heliotropium Tricoccum Plinij*.
Tutsan, Park-Leaves, *Androsæmum*, *Chymenum Italorum*, *Herba Sicula*, 718.
Tutsan Johns-wort, *Androsæmum foliis Hyperici*, —— *Hypericoides*, 718.
Twablade, Bifoil, *Ophris*, *Bifolium*, 67.
Marsh, —— *Palustre*.
Two-Penny Grass, Money-wort, *Nummularia*, 496.

V.

Valerian Garden, Greater Setwall; *Valeriana Hortensis*, — *Terdina Paracelsi*; *Phu majus hortense*, *Valeriana major hortense*, 719.
Garden Lesser, *Phu minus hortense*, *Valeriana minor hortensis*.
Greek, — *Græca*, — *Peregrina*, — *Cærulea*.
Candy, — *Cretica Tuberosa*.
Indian, —— *Indica*, —— *Mexicana*, *Tripolium Dioscoridis*.
Red, —— *rubra*. *Phu peregrinum*, *Valerianthon*, *Ocimastrum Lobelij*.
Valerian Wild, *Valeriana Sylvestris*, *Phu Sylvestre*, *Valeriana palustris*. 720.
Venus Bason, Teasle Garden, *Dipsacus*, *Labrum Veneris*, *Cardinus Veneris*, *Dipsacus vel Cardinus Fullonum*, 686.
Venus Hair, Maiden Hair; *Adianthum*, *Capillus Veneris Anglicus*, 462.
Venus Comb, Shepherds Needle, *Scandix*, *Acus Veneris*, *Pecten Veneris*, *Acula*, 622.
Venus Looking Glass, Corn Violet, *Viola arvensis*, *Viola Segetum*, *Carophyllus Segetum*, *Onobrychis*, *Campanula arvensis*, 726.
Vervain, *Verbena*, *Verbenaca*, *Hercularia Matricalis*, 721.
Vetch not Bitter, *Vicia*, pl. *Vicia non amara*, 722.
Yellow Wild, *Aphaca*, *Aphaca Sylvestris*, *Orobanche Theophrasti Lugdunensi*, *Vicia lutea folijs Convolvuli*.
Milk Vetch, *Astragalus*, *Astragaloides Herbariorum*, *Astragalus verus*.
Hatchet Vetch, *Hedysarum*, *Securidaca*.
Horse Shooe, *Ferrum Equinum*, *Solea Equina*.
Birds Foot, *Ornithopodium*, *Pes Avis major* [illegible] *ana minor*.

Vetch Birds-Foot Knotted, *Ornithopodium radice nodosa.*
Kidney Common, *Anthyllis Leguminosa vulgaris* — *Lentisimilis Lobelij.*
Star Codded, *Stella Leguminosa.*
Liquorice like, — *Glycyrrhizata.*
Vetch Bitter, *Orobus, Ervum, Vicia amara,* 723.
Garden, *Orobus hortensis, Orobus vulgaris, Ervum, Mochus.*
Candy, — *Creticus.*
Wild, — *Sylvestris, Ervum Sylvestre, Catenance Gesneri, Lathyrus Sylvestris minor.*
Wood, *Orobus Sylvarum, vel Sylvaticus.*
Wood Broad Leav'd, — *latifolius, Phaselus Lobelij, Phaseolus Sylvarum, Arachus Dodonæi.*
Wood Narrow Leav'd, — *Angustifolius, Orobus Sylvaticus minor.*
Crimson Flowered, Scarlet Grass Vetch; *Orobus Gramineus rubens, Lathyrus Sylvestris Gramineus,* — *rubras.*
Vine, *Vitis, Vitis Vinifera, Vitis Sativa,* 724.
Parsly, *Vitis folijs laciniatis.*
Wild Barren, *Vitis Sylvestris* — *Sterilis.*
Vine white, Bryony white, *Bryonia, vel vitis alba,* 89.
Violets Garden, *Viola hortensis,* — *purpurea* — *Martia,* 725.
Wild Upright, *Viola Surrecta purpura,* — *arborescens,* — *fruticosa,* — *Elatior Martia Cauliculis Surrectis.*
Wild Common, — *Sylvestris vulgaris.*
Wild Jagged, or Carolinian, *Viola folio laciniato Caroliniana.*
Violet Toothed, Corallwort, *Viola Dentaria, Coralloides,* 152.
Violets Corn, *Viola arvensis,* — *pentagonia,* — *Segetum Onobrychis, & Campanula arvensis,* 526.
Dames, *Hesperis, Viola Matronalis,* — *Hyemalis,* — *Damascena,* — *Muschatella.*
Dames Purple Double, *Hesperis flore pleno purpurante.*
Vipers Grass, *Serpentaria, Viperaria, Viperina, Scorzonera,* 727.
Vipers Buglos, Buglos Vipers, *Echium, Buglossum, Viperinum,* 95.
Virginia Creeper, — Climer, *Vitis vel Hedera Virginiana,* 728.
Virginia Silk-Grass; *Periploca Virginiana,* 729.
Greater or Upright, — *recta,* — *major.*
Smaller, *Periploca Virginiana minor.*
Virgins Bower, Ladies Bower, or Climers, *Clematis,* 420.
Burning or Caustick, *Clematis Urens.*
Red Flowered, *Clematis peregrina:*
Purple, — *peregrina flore purpureo.*
Purple Double, — *purpureo pleno.*
Sea Creeping, — *Maritima repens.*
Virginian, — *Virginiana.*
Upright, *Flammula Jovis Surrecta.*

W.

Wake Robin, Cuckow Pint, *Sacerdotis Penis Arum,* 730.
Not Spotted, *Arum non Maculatum.*
Spotted, *Arum Maculatum.*
Hooded, Friers Cowle, *Arisarum,* 303.
Wall-Flower, *Keiri, Cheiri, Leucoium luteum,* 731.
Single Flowered, — *flore simplici.*
Double Flowered, — *flore pleno.*
Wall Penny-wort, Navel-wort, *Cotyledon, Umbilicus Veneris, Acetabulum,* 515.
Wall Rue, Maiden Hair white, *Adiantum album, Polytrichum album, Capillus Veneris albus,* 463.
Wart Turnsole, Turnsole Wartwort; *Helitropium, Verrucaria,* 717, Sect. 3.
Wartwort, Succory Bastardwart, *Cichorium Verrucarium, Chondrilla Verrucaria,* — *Zacyntha,* 674. Sect. 8.

Albinum, *Gnaphalium*, Cudweed.
—*Impium*, VVicked Herb, VVicked Cudweed.
—*Marinum*, Sea Cudweed.
—*Americanum*, American Cudweed.
Albucum, *Aſphodelus*, Aſphodel.
Alcanna, *Anchuſa*, Alkanet.
Minor —— *altera*, Leſſer Alkanet.
Alcea, *Malva Verbenaca*, Vervain Mallow.
Alchymilla, *Stellaria Matthioli*, *Sanicula major*, *Pes Leonis*, Ladies Mantle.
Alga Marina, *Fucus Marinus*, *Muſcus Marinus*, Sea VVrack.
Alga Tinctoria, *Fucus Marinus Tinctorius*, Dying Sea VVrack.
Alica, *Far*, *Zea*, *Spelta*, Gray VVheat; alſo a Pultage made thereof, called Frumety.
Aliſma, *Primula veris major*, *Paralyſis Herba*, Cowſlip.
Alimonia, *Acetoſella Nemoralis*, *Trifolium Acetoſum*, VVood Sorrel
Alkakengi, *Solanum Veſicarium* VVinter Cherry.
—— *Albi*, Carolinian VVinter Cherry.
Alkali, *Kali*, *Salicornia*, *Salſicornia*, Glaſs-wort.
Alkanna, *Phillyrea*, Mock Privet.
Alkermes, *Chermes*, *Kermes*, the Juice of the Chermes Berries.
Alleluja, *Trifolium Acetoſum*, *Acetoſum Nemoralis*, *Oxytriphyllum*, *Lujula*, VVood Sorrel.
Allaria, *Alliaſtrum*, Jack by Hedge, Sawce alone.
Allium, *Allium Hortenſe*, Garlick.
—*Viperinum*, *Ophioſcoridum*, Vipers Garlick.
—*Sylveſtre*, VVild Garlick.
Alnus, Alder.
—*Niger*, Black Alder.
Aloe, *Aloes*, the Gum.
—*Succotrina*, Succotrine or Fine Aloes.
—*Hepatica*, Courſe or Ordinary Aloes.
Alopecuros, *Cauda Vulpis*, Foxtail Graſs.
Alſine, Chickweed.
—*Aquatica*, VVater Chickweed.
—*Notha*, Baſtard Chickweed.
Althæa, *Malva paluſtris*, Marſh Mallow.
Alypum Monſpelienſium, *Alypias*, *Herba Terribilis*, Herb Terrible, Gut-wort.
Alyſſum, Mad-wort.
Amara Dulcis, *Dulcamara*, *Solanum Arboreſcens*, Bitter Sweet, VVoody Nightſhade.
Amaranthus, Flower Gentle.
—*Magnus*, Great Flower Gentle.
—*Parvus*, Small Flower Gentle.
—*Tricolor*, *Geloſia*, Variable.
—*Aureus*, *Chryſocome*, *Stœchas Citrina*, Golden Flower Gentle, Yellow Stœchas.
Amarus, *Sampſucum*, Sweet Marjoram.
Amaracus, *Marjorana*, Sweet Marjoram.
—*Latifolius*, Pot Marjoram.
—*Sylveſtris*, VVild Marjoram.
Ambroſia Hortenſis, Oak of Cappadocia.
Ambroſia vera, idem.
Ambubeia, *Cichorea*, *Cichorium*, Succory.
Ameos, *Ammi*, Biſhops-weeed.
—*Aromaticum*, Aromatick Biſhops-weed.
—*Alienum*, *Cuminum Regium*, Foreign Biſhops-weed.
Amellus, *Caltha paluſtris*, Marſh Marigold.
Ammi, *Ameos*, Biſhops-weed.
Ammoniacum Gummi, Gum Ammoniack.
Anomum quorundam, the Fruit of the Clove-Berry Tree.
Ampelopraſſum, *Porrum Vitium*. Vine Leek.
Amygdalum, An Almond.
Amylum, White Starch made of Wheat.
Amyrberis, *Berberis*, Barbery Buſh.
Anagallis, Pimpernel.
—*Aquatica*, Water Pimpernel.
—*Marina*, *Anthyllis latifolia*, Sea Pimpernel.
Anagallis aquatica, Brooklime.
Anagyris, *Laburnum*, Bean Trefoil.
Anacardium, *Elephantis*, Bean of Malacca.
Anchuſa, *Alcanna*, Alkanet.
—*altera*, Leſſer Alkanet.
Andrachne. *Portulaca*, Purſlain.
Androſæmum, *Clymenum Italorum*, *Herba Siciliana*, Tutſan, Park-Leaves.
—*Hypericoides*, Tutſan Johns-wort.
Androſace, *Fungus Marinus*, Sea Navelwort.
Anemone, *Herba Venti*, Anemony, Wind-Flower.
Anethum, *Anetum*, Dill.
—*Sylveſtre*, Wild Dill.
Anetum Vaccinium, *Oculus Bovis*, *Buphthalmum*, Ox Eye.
Angelica Hortenſis, Angelica.
—*Aquatica*, *Archangelica*, Water Angelica.
—*Sylveſtris*, Wild Angelica.
Anguria, *Citrullus*, Citruls, Water Melon.
—*Amara*, *Colocynthis*, Bitter Gourd.
Aniſum, *Matabalna*, Aniſe.
Anonis, *Areſta Bovis*, *Remorum Aratri*, *Aculeata*, Reſt-Harrow.
Anſerina, *Argentina*, *Tanacetum Sylveſtre*, *Argemone*, *Argemonia*, *Potentilla*, Wild Tanſie, Silverweed.
Anthemis, *Chamemelum*, *Chamomilla*, *Camomilla*, Camomil.
Anthora, *Antithora*, *Napellus Alexipharmicus*, Helmet Flower Antidote.
Anthos, *Flos vel flores Roſmarini*, Roſmary Flowers.
Anthyllis, *Leguminoſa vulgaris*, —— *lentiſimilis Lobelij*, Kidney Tare or Vetch.
Antirrhinum, *Orontium*, Calves-Snout, Snap-Dragon.
—*Sylveſtre*, Wild Snap Dragon.
Antithora, *Napellus Antiveneficus*, Helmet Flower Antidote.
Aparine, *Aſperugo*, Cliver, Gooſe Graſs.
Aphaca, Small Yellow Vetch.
Aphace, *Vicia Sylveſtris*, Wild Vetch.
Apios, *Raphanus Sylveſtris*, Wild Radiſh.
Apiaſtrum, *Apiaſtellum*, *Meliſſophyllum*, *Melites*, *Meliſſa*, Bawm.
Apium Saxatile, *Petroſelinum*, Parſly, Stone or Rock Parſly.
Apium Sylveſtre, *Smyrnium*, *Hippoſelinum*, Alexanders, Horſe Parſly.
Apium, *Apium paluſtre*, Smallage, formerly Parſly.
—*Aquaticum*, Smallage.
Apium Riſus, *Ranunculus Aquaticus*, Water Crowfoot, Laughing Parſly.
Apocynum, *Periploca*, Dogs-Bane.
—*repens*, Climing Dogs-Bane.
—*non repens*, *latifolium*, not Climing, Broad Leaved.
Aperonia, *Vitis nigra*, *Bryonia nigra*, Black Bryony.
Aquifolium, *Agrifolium*, Holly.
Aquilina, *Aquilegia*, } Columbine.
Arabis, *Draba*, Arabian Muſtard.
Arachus, Great Wild Vetch.
Aralda, *Digitalis*, Fox-Glove.
Arantium, pl. *Arantia*, Orenge, Orenges.
Archangelica, *Angelica Aquatica*, Water Angelica.
Arbutus, Strawberry-Tree.

Areſta

Index Latinus.

Areſta Bovis, *Anonis*, *Remorum Aratri*, Reſt-Harrow, Cammock.
Argemone, Baſtard Wild Poppy, *ſome take it for* Wild Tanſie.
Argentina, *Potentilla*, Wild Tanſie.
Ariſarum, Friars Cowle, Hooded Wake Robin, or Cuckow Pint.
Ariſtolochia, Birth-wort.
Arizo, *Oryza*, Rice, *Carolina* Rice is accounted the beſt in the World
Armeria, *Armerius*, *Caryophyllus Sylveſtris*, Sweet VVilliams.
Armoraria, VVild VVilliams.
Armoracia, *Raphanus Sylveſtris*, VVild Radiſh.
Arnogloſſum, *Plantago*, *Multinervia*, Plantane,
— *Anguſtifolium*, Rib-wort Plantane.
Artemiſia, Mug-wort.
Marina, Sea Mug-wort.
Arthanita, *Panis Porcinus*, *Cyclamen*, *Cyclaminus*, Sow-bread.
Arthritica, *Primula Veris*, *Paralyſis Herba minor*, *Aliſma Sylveſtris*, Primroſe.
Arum, *Sacerdotis Penis*, Wake Robin, Cuckow-pint.
Arum Ægyptium, Eddo of *Carolina*.
Arundo, *Calamus*, Reed, Pool Reed.
— *Major*, *Calamus major*, *Arundo Donax*, Cane, or Cane Reed.
Aſarum, *Perpenſa*, *Nardus Ruſtica*, Aſarabacca.
— *Sylveſtre*, *Aſarina*, VVild Aſarabacca.
Aſcalonitis, Scallions, One of the Kinds of Onions.
Aſclepias, *Vincetoxicum*, *Hirundinaria antiqua*, Swallow-wort.
Aſcyrum, Peters-wort, Square Johns Graſs.
Aſpalathus, *Lignum Rhodium*, Roſe VVood.
Aſparagus Hortenſis, Aſparagus Garden.
— *Sylveſtris*, VVild Aſparagus.
— *Paluſtris* — *Marinus*, Marſh Aſparagus.
Aſperugo, *Aparine*, Clivers.
Aſperula, *Aſpergula communis*, Woodroof.
— *Flore Cærulea*, Blew Flowered VVoodroof,
— *Repens* — *Juncaria*, *Rubia linifolia aſpera*, VVoodroof, Break-ſtone.
Aſphodelus, Aſphodel.
Aſphodelus luteus, *Haſtula Regia*, Kings Spear.
— *Bulboſus*, *Hyacinthinus*, Onion Aſphodel.
— *Paluſter*, *Pſeudo Aſphodelus*, VVild or Marſh.
Aſplenium, *Ceterach*, Spleen-wort, Milt-waſte.
— *Verum*, *Ceterach*, True Spleen-wort, or Milt-waſte.
Aſter, *Bubonium*, *Inguinalis*, Star-wort.
Aſter Atticus Italorum, Purple *Italian* Star-wort, or Purple Marigold.
Aſtragalus nothus, Milk Vetch.
Aſtragaloides Herbariorum, idem.
Aſtragaloides, Baſtard Milk Vetch.
Aſtrantia, *Imperatoria*, Maſter-wort.
Aſterion, *Aſter Atticus*, Greek Star-wort, True or Yellow Star-wort.
Aſter Conizoides, Flea-bane Star-wort.
Aſtorea, *Stæchas*, *Stæchados*, Caſſidony, *French* Lavender.
Athanaſia hortenſis; *Tanacetum Sativum*, Tanſie.
— *Sativum criſpum*, Criſped Tanſie.
— *Lanuginoſum*, VVoolly Tanſie.
— *Verſicolor*, Party colored Tanſie.
Athara, A Pultage or Frummety made of Zea, or our Gray VVheat.
Atractylis, *Cnicus vel Carthamus Sylveſtris*, VVild Baſtard Saffron.
Atraphaxis, *Atriplex*, Arach, or Orach.
Atriplex Hortenſis, Garden Arach.
— *Sylveſtris*, VVild Arach, All-ſeed.
— *Fœtida*, ſtinking Arach.
— *Marina*, Sea Arach.
Avellana, Filberd Tree.
— *Sylveſtris*, Haſle Tree.

Avena, Oats.
— *Sylveſtris*, VVild Oats.
Avernus, *Alnus nigra*, Black Alder.
Aurantium, pl. *Aurantia*, Orenge, Orenges.
Aureum Olus, *Atriplex hortenſis*, Garden Arach.
Auricomum, *Amaranthus aureus*, *Stœchas Citrina*, Yellow Stœchas, Gold Locks, Golden Flower Gentle.
Auricula Urſi, *Sanicula Urſina*, Bears Ear.
Auricula Muris, *Piloſella Myſotis*, Mouſe Ear.
Auricula Leporis, *Bupleurum*, Hares Ears.

B.

Baccharis officin, *Aſarum*, Aſarabacca.
Baccharis Monſpelienſium, Plowmans Spicknard.
Balauſtium, Pomgranate Flower.
Ballote, *Marrubium nigrum*, Black Horehound.
Balſamina mas, *Balſamina Cucumerina*, Balſam Apple.
Balſamita major, *Mentha Græca vel Romana*, Coſtmary.
Balſamum, Balſam.
Barba Aron, *Sempervivum*, *Sedum*, Houſeleek, alſo VVake Robin, or Cuckow-pint.
Barba Hirci, *Tragopogon*, Goats Beard, Noon Flower.
Barba Jovis, *Sempervivum*, *Sedum*, Great Houſe-leek.
Barbarea, *Naſturtium Hybernum*, Bank Creſs, VVinter Creſs.
Bardana, *Lappa major*, *Perſonata*, Bur-dock Great.
Baſilica, *Gentiana*, Gentian or Fell-wort.
Baſilicum Hortenſe, *Ocymum*, Baſil Garden.
— *Citratum*, Citron Baſil.
— *Caryophyllatum*, Clove Baſil.
— *Sylveſtre*, VVild Baſil.
Batrachion, *Ranunculus*, Crow-foot.
— *Hortenſis*, Garden.
— *Arvus vel arvorum*, Field Crow-foot.
— *Nemoralis*, VVood Crow-foot.
— *Aquaticus* — *Paluſtris*, VVater Crow-foot.
Batus, *Rubus Sylveſtris*, Bramble-buſh.
Battata, *Pappa Anglicana vel Hiberniana*, *Battatas*, Potatoes Engliſh or Iriſh.
— *Hiſpaniarum*, Spaniſh Potatoes.
— *Virginiana*, Virginia Potatoes.
Becabunga, *Anagalis aquatica*, Brook-lime.
Bechium, *Farfara*, *Tuſſilago*, Colts-Foot.
Bedeguar, *Roſa Eglenteria*, *Roſa Sylveſtris*, Briar-buſh.
Behen album, *Papaver ſpumeum*, Spatling Poppy.
Bellis — *Hortenſis*, Daiſy Garden.
— *Sylveſtris minor*, ſmall VVild Daiſy.
— *Sylveſtris major*, Greater VVild.
— *Magna vel maxima*, Great Daiſy or Maudlin-wort.
Benzoin, Benjamin.
Berberis, Barbery-buſh.
Betulla, *Becabunga*, *Anagallis aquatica*, Brook-lime.
Beta alba, *Sicula*, *Sicla*, Beet VVhite.
— *rubra vel nigra*, Red Beet.
— *Romana*, Roman Beet.
Betonica, Betony.
— *Aquatica*, VVater Betony.
Betonica Pauli, *Veronica mas*, Pauls Betony, Speedwell.
Betula, Birch Tree.
Biſolium, *Ophris*, Twa-blade, or Bifoil.
Paluſtre, Marſh Twa-blade.
Bipinella, *Pimpinella*, Burnet.
Saxifraga, Burnet Saxifrage.
Biſacuta, *Gingidium*, Tooth-pick Chervil.
Biſlingua, *Hippogloſſum*, Horſe Tongue.
Bizaria, *Dracunculus*, Dragons.
Aquatica, VVater Dragons.

Index Latinus.

Blattaria, Moth Mullein.
Blecon, *Pulegium*, Penny-royal.
Blitum album, Blite VVhite.
Rubrum, Red Blite.
Bolbonach, *Lunaria major*, *Viola Lunaria vulgaris*, Honesty, Sattin-flower, Money-flower.
Boletus, *Fungus*, Mush-room, Toad-stool.
Esculentus, Eatable Mush-room.
Bombax, *Gossipium*, *Xylum*, Cotton Plant.
Bonus Henricus, *Tota bona*, *Mercurialis*, *Pes Anserinus*, English Mercury.
Borago, Borage.
Botonaria, *Aphyllanthos*, Silver Knap-weed.
Botrys, Oak of Jerusalem.
Branca Ursina, *Acanthus sativus*, Bears Breech.
Brassica, *Caulis*, *Crambe*, Cole-wort.
Brassica Capitata, Cabbage.
Rubra, Red Cabbage.
Alba, VVhite Cabbage.
Brassica florida, *Caulis florida*, Colly-flower.
Brassica Canina, *Cynocrambe*, Dogs Mercury.
Brathys, *Sabina*, Savine.
Sterilis, Barren.
Baccifera, Berry-bearing.
Britannica, *Hydrolapathum*, Great VVater Dock.
Briza monococcos, *Hordeum agreste*, Peters Corn.
Bromos, *Festuca*, VVild Oats.
Brumaria, *Leontopetalon*, *Leontopodium*, Lions Leaf.
Brunella, *Prunella*, Self-heal.
Bruscus, *Ruscus*, *Acaron*, Butchers Broom, Knee-Holm.
Bryon, *Muscus*, Moss.
Arboreus, Tree Moss.
Marinus, Sea Moss.
Bryonia alba, *Vitis alba*, *Viticella*, VVhite Briony.
Nigra, *Sigillum Maria*, Black Briony.
Bubonium, *Aster*, *Inguinalis*, Star-wort, Bubo-Grass.
Buccinum, *Consolida Regalis Sylvestris*, Larks-spur.
Bucranium, *Antirrhinum*, *Orontium*, Snap Dragon, Calves-Snout.
Buglossa, *Hispanica rubra*, *Anchusa*, Alkanet.
Buglossum Hortense, Buglos.
Sylvestre, Ox Tongue, Wild Buglos.
Bulbocastanum, Ground Nut, Earth Nut.
Bugula, *Nemorale*, *Consolida media*, Bugle, VVood Earth Nut.
Bulbonach, *Lunaria major*, *Viola Lunaria*, Honesty, Sattin Flower, Money Flower.
Bulbus agrestis, *Colchicum*, Medow Saffron.
Bulbus Vomitorius vel Emeticus, *Hyacinthus Botroides Moschatus*, *Muscari*, Vomiting Jacinth.
Bulbus Sylvestris, *Allium Sylvestre*, *Cepa Sylvestris*, Crow Garlick.
Bunias, *Napus*, Navew Gentle, Long Turnep.
Sylvestris, *Agrestis*, VVild Navew.
Bunium, *Daucus Apij folio*, A Kind of VVild Carrot.
Buphthalmum, *Oculus Bovis*, Ox Eye.
Bupleurum, *Auricula Leporis*, *Herba Vulneraria*, Hares Ears.
Bursa Pastoris, *Pera Pastoris*, Shepherds Purse.
Butomos Theophrasti, *Sparganium*, *Xiphidion*, *Ensiculas*, *Carex*, Bur Reed, Sedge.
Buxea Spina, *Lycium*, Box Thorn.
Buxus, Box.
Humilis nothus, Sharp pointed Box.
Byssus, *Gossypium*, *Xylum*, Cotton Plant.

C.

Cacalia, *Tussilago montana*, Horse-foot strange.
Cachrys vera, *Libanotis*, Herb Frankincense.
Notha, *Libanotis latifolia*, Herb Frankincense Leav'd.
Cachrys marina, *Critbmum*, Sampire.
Cactus Theophrasti, *Cinera*, Artichoke.
Sylvestris, *Scolymus*, VVild Artichoke.
Calamintum, *Calamintha*, } Calamint.
Agrestis, VVild Calamint.
Calabrina, *Lonchitis*, *Asplenium*, Spleen-wort.
Calcaris flos, *Delphinum*, *Consolida Regalis*, Larkspurs.
Calchochrum, *Fumaria*, Fumiterry.
Calcifraga, *Saxifraga*, Saxifrage, Stone-break.
Calicularis, *Hyoscyamus*, Henbane.
Chalitricum, *Adiantum*, *Trichomanes*, Maiden-hair.
Caltha, *Calendula*, Marigold.
Calamus aromaticus, *Acorus verus*, True Acorus, Flag sweet Smelling.
Calamogrostis, Reed Grass.
Calathiana vera, *Pneumonanthe*, Calathian Violet.
Calceolus Mariæ, *Helleborine*, Ladies-slipper.
Calcitrapa, *Carduus Stellaris*, Star Thistle.
Calendula, *Caltha*, Marigold.
Caltha Palustris, Marsh Marigold.
Camelina, *Sementina Anglica*, English VVormseed.
Camomilla, *Chamæmelum*, *Anthemis*, Camomil.
Campanula, Bell-flower.
Autumnalis, *Pneumonanthe*, Calathian Violet, Autum Gentian.
Camphorata, Stinking Ground-pine.
Camphora, Camphir.
Camphoratum, *Abrotonum magnum*, Great Southern-wood.
Cannabis, Hemp.
Sterrilis, Barren Hemp, Summer Hemp.
Canna, *Arundo*, Cane or Reed.
Cantabrica, *Gentianella minor verna*, The smaller Spring Gentian.
Candelaria — } *Verbascum*, Mullein.
Candela Regis, }
Capillus Veneris, *Adiantum*, *Trichomanes*, Maiden-hair.
Capparis, Capers.
Caprifolium, *Periclymenum*, VVood-bind.
Capsella, *Thlaspi*, Treacle Mustard.
Capsicum, —— *Americanum*, —— *Indicum*, Guinny or Indian Pepper.
Caput Gallinaceum, *Onobrychis*, Cocks-head.
Capillaris, *Capillus Veneris*, Maiden-hair.
Capnitis, } *Fumaria*, Fumiterry.
Capnos, }
Caput Aquila Bauhini, *Nasturtium*, Cress.
Cardamum, *Pseudobunium*, *Barbarea*, VVinter Cress.
Cardamine, *Agriocardamum*, Cuckow-flower, Ladies-smock.
Cardamomum, Cardamom.
Majus, Grains of Paradise.
Cardiaca, Mother-wort.
Carduus benedictus, Blessed Thistle.
Carduus, Thistle.
Fullonum, *Dipsacus*, Fullers Teasle.
Carex, *Sparganium*, *Xiphidion*, *Ensiculas*, Sedge, Bur Reed.
Carica, *Ficus aridus*, Dried Figs.
Carlina, Carline Thistle.
Carobe, *Ceratonia*, Johns Bread.
Carthamus, *Cnicus*, Bastard Saffron.
Carum, *Careum*, Carraways.
Caryophyllata, *Herba benedicta*, Avens.
Caryophyllus Hortensis, *Herba Tunica*, Carnations, Gilliflowers.
Sylvestris, Pinks.
Ruber profunde, Clove-gilliflowers.
Caryophyllus Indicus, Clove-tree; also the Clove it self.
Caryon, *Nux*, A Nut.
Cassebar, *Coriandrum*, Coriander.
Cassia solutiva, *vel fistula*, Purging Cassia.
Cassignete, *Pimpinella*, *Sanguisorba*, Burnet.
Cassutha, *Cuscuta*, Dodder.
Castanea, Chestnut.

Castoris

Index Latinus.

Caſtoris Trifolium, —— *Bituminoſum*, Stinking Trefoil.
Caſtrangula, *Scrophularia*, Fig-wort.
Cataputia, *Tithymalus*, *Lathyris*, *Lactaria*, Spurge.
Catanance, *Ervum Sylveſtre*, Crimſon Graſs Vetch.
Cattaria, *Nepeta*, *Mentha Cattaria*, Nep or Cat Mint.
Cathſum, *Abrotonum*, Southern-wood.
Caucalis, Hedge Parſly.
Caucaſon, *Moly Indicum*, Indian Moly.
Cauda Muris, *Holoſteum Loniceri*, Mouſe Tail.
Caulorapum, Cole Rape, Rape Seed Cole.
Cauda Equina, *Equiſetum*, Horſe Tail.
Caucan Plinij, idem.
Cauda Vulpium, *vel Vulpinum*, *Alopecuros*, Fox Tail.
Caulis, *Braſſica*, *Crambe*, Cole-wort, Cabbage.
Caulis capitulatus, Cabbage.
Cazavi, *Caſavi*, *Iucca*, *Yucca*, Indian Bread.
Cedrus, Cedar Tree.
Centaurium majus, Centory.
Minus, Leſſer Centory.
Centimorbia, *Nummularia*, Mony-wort.
Centinervia, *Plantago major*, Greater Plantain.
Cenchris, *Milium*, Millet.
Centromyrrhine, *Acaron*, *Bruſcus*, *Ruſcus*, Butchers Broom.
Centrum Galli, *Horminum*, *Sclarea*, Clary.
Centumnodia, *Polygonum*, Knot-graſs.
Minor, Knawell.
Centunculus, *Gnaphalium*, Cud-weed.
Impius, —— *minus*, VVicked Cudweed.
Marinus, Sea Cud-weed.
Americanum, *Argyrocome*, American Cudweed.
Cepa, *Cepa*, *Cepe*, Onion.
Aſcalonica, *Aſcalonitis*, Scallions.
Cepea, *Telephium*, *Craſſula*, Orpine of Matthiolus.
Ceraſus, Cherry.
Ceratonia, *Carobe*, Johns Bread.
Cerefolium, —— *Hortenſe*, Chervil.
Magnum, *Myrrhis*, Sweet Ciſley.
Sylveſtre, *Charophyllum*, VVild Chervil.
Biſacutum, *Gingidium*, Tooth-pick Chervil.
Cerinthe, *Herba maru*, Hony-wort.
Cerannia, *Craſſula*, *Telephium*, *Fabaria*, Orpine.
Ceſis, *Daucus*, Candy VVild Carrot.
Cervicaria, *Trachelium*, *Campanula folijs Urticæ*, Throat-wort.
Major, *Campanula major*, Canterbury Bells.
Cerva major, *Cherva*, *Cici*, *Croton*, *Picinus*, *Ricinus*, *Palma Chriſti*, Great Spurge.
Ceſtron, *Betonica*, Betony.
Aquaticum, VVater Betony.
Ceſtrum inorion, *Typha*, *Typha aquatica*, Cats Tail, Reed Mace.
Ceterach, *Aſplenium*, True Spleen-wort, Milt VVaſte.
Scolopendrium, True Spleen-wort.
Chamæacte, *Ebulus*, Dwarf Elder, Dane-wort.
Chamæciſtus, Dwarf Ciſtus, Engliſh Ciſtus.
Chamædrys, *Trixago*, *Teucrium*, *Quercula — minor*, Germander.
Sylveſtris, VVild Germander.
Aquatica, *Scordium*, VVater Germander.
Chamægeniſta, *Geniſta humilis*, Common Broom; a Dwarf Kind.
Chamæiris major, Dwarf Flower-de-luce Greater.
Minor, Dwarf Flower-de-luce Leſſer.
Chamamelum, *Chamomilla*, *Anthemis*, Camomil.
Chamelæa Germanica, *Thymelæa*, *Mezereon*, Mezereon, or Shrub SpurgeOlive, VVidow VVail.
Chamælea tricoccos, *Coccus cnidius*, *Oleago*, *Oleaſtellus*, VVidow VVail, Spurge Olive.
Chamælinum, *Linaria Pumila*, Dwarf Flax.
Repens, *Pſeudolinum repens*, Flax-weed Creeping.
Chamæmorus, *Rubus Trioccas*, Knot Berry Briar's Dew berry.
Chamænerium, *Lythmachia ſiliquoſa*, Codded Looſe-ſtrife, or VVillow Herb.
Chamæpitys, *Iva arthritica*, *Abiga*, Ground Pine.
Maritima, Sea Ground Pine.
Chamærhodendros, Dwarf Roſe Bay.
Chamæbaxus, Dwarf Box.
Chamæciſſus, *Hedera terreſtris*, Ground Ivy, Alehoof.
Minor, Small Ale-hoof.
Montana, Mountain Ale hoof.
Chamædaphne, *Laureola*, Lawrel, Bullard Bay.
Chamæleuce, *Farfara*, *Bechium*, *Tuſſilago*, Colts-foot.
Chamæleagnus, *Myrtus Brabantica*, *Rhus Sylveſtris*, Sweet Gaul.
Chærephyllum, *Cerefolium Sylveſtre*, Chervil VVild.
Chamæplium, *Eryſimum*, *Sinapi alterum*, Hedge Muſtard.
Verum, True Hedge Muſtard.
Chamomilla, *Chamæmelum*, *Anthemis*, Camomil.
Charta, *Papyrus*, Paper Reed.
Chatbe, *Cucumis*, *Cucumer*, Cucumber.
Chelidonium, *Hirundinaria*, Celandine.
Cheiri, *Leucoium Luteum*, VVall-flower.
Flore Simplici, Single VVall-flower.
Flore Pleno, Double VVall-flower.
Cherva, *Ricinus*, *Palma Chriſti*, Great Spurge.
Chironia, *Sigillum ſanctæ mariæ*, *Vitis nigra*, *Bryonia nigra*, Black Bryony.
Chocolate, Chocolate made of the Nut *Cacao*; that made of the *Caracca* Nuts is the beſt.
Chitini, *Althæa*, *Malva Paluſtris*, Marſh-mallow.
Chondrilla, Gum Succory.
Vera, —— *Græca*, True Gum Succory.
Chriſtophoriana Herba, *Herba chriſtophori*, Herb Chriſtopher.
Chryſanthemum Segetum, Corn Marigold.
Chryſogonon, *Leontopetalon*, Oaken black Turnep, Lions Foot, 446.
Chryſolachanon, *Atriplex ſativa*, Garden Arach.
Chryſomelon, *Malus Armeniaca*, Apricock.
Cicerbita, *Sonchus levis*, Smooth Sow Thiſtle.
Cici, *Ricinus*, *Kerva*, *Cherva*, *Croton*, *Picinus*, *Palma Chriſti*, Great Spurge.
Cicer, *Cicer Sativum*, Cich-peaſe or Chiches.
Sylveſtre, VVild Chich-Peaſe.
Cichoreum, *Cichorium*, *Cichorea*, Succory.
Hortenſe, Garden Succory.
Sylveſtre, VVild Succory.
Nothum, Baſtard Succory.
Cichoreum Verrucarium, VVart Succory.
Porcinum, Swines Succory.
Gummoſum, *Chondrilla*, Gum Succory.
Cicla, *Beta*, Beet.
Alba, VVhite Beet.
Rubra, Red Beet.
Cicuta, *Conion*, Hemlock.
Minor, —— *fatua*, —— *Apij folia*, Parſly Leav'd Hemlock.
Aquatica Paluſtris, VVater Hemlock.
Cicutaria, *Smyrrhiza*, *Smyrnium*, *Myrrhis*, Cicely.
Major, Greater Sweet Cicely.
Minor, Leſſer Sweet Cicely.
Cidromela, *Malum Medicum*, *Citrangulum*, Citron.
Turcica, Great Round Headed Citron, the Shaddock.
Criminalis, *Gentiana*, Felwort or Gentian.
Major, Greater Gentian.
Minor Gentianella, Leſſer Gentian.
Minor cruciata, Croſs-wort Gentian.
Cincinallis, *Capillus Veneris*, Maiden-hair.
Nigra, *Trichomanes*, Black Maiden-hair.
Album, VVhite Maiden-hair.
Aurea, *Polytricum aureum*, Golden Maiden-hair.
Cinamomum, Cinamon.
Cinara,

Index Latinus.

Cinara, *Cynara*, *Scolymus*, Artichoke.
Sylveſtris, *Scolymus Sylveſtris*, Wild Artichoke.
Cineraria Dodonæi, *Jacobæa marina*; Sea Rag-wort.
Circæa, *Solanum Circæum*, Inchanters Nightſhade.
Cirſium, *Carduus mollis*, Melancholy Thiſtle, Single Headed Thiſtle.
Ciſſampelos, *Helxine*, Bind weed.
Altera, Small black Bind-weed.
Nigra, Black Bind-weed.
Ciſſus, *Hedera*, Ivy.
Arborea, Tree Ivy.
Muralis, Wall Ivy.
Ciſtus, *Ciſtus mas*, Holy Roſe.
Sylveſtris, *Roſa Sylvatica*, Holy Roſe Wild.
Citrangulum, *Citrio*, *Citrium*; A Citron.
Citrago, *Meliſſa*, *Melites*, *Meliſſophyllum*; Bawm.
Notha, Baſtard Bawm.
Turcica, Turky Bawm.
Citrium, *Citreum*, *Citrio*; A Citron.
Citrullus, *Anguria*, *Citrul*; Water Melon.
Clavicula, *Hedera helix*, *Hederula*; Barren Ivy.
Clavum Veneris, *Nymphæa*; Water Lilly.
Album, *alba*, *Nenuphar*; White Water Lilly.
Luteum, *lutea*; Yellow Water Lilly.
Clavus, *Caryophyllus hortenſis*; A Clove Gilliflower.
Indicus; Clove, the Spice.
Clematis Daphnoides, *Chamædaphne Plinij*, *Vincapervinca*; Perwinkle.
Clematis, Ladies or Virgins Bower, alſo Perwinkle.
Clinopodium, *Ocimum Sylveſtre*; Wild Baſil.
Clymenum, *Androſæmum*; Tutſan, Park-Leaves.
Clymenon, *Betonica aquatica*; Water Betony.
Cnicus, *Carthamus*; Baſtard Saffron.
Cnicus Sylveſtris, *Atractilis*; Wild Baſtard Saffron.
Coagulum terræ, *Nidus avis*, *Orchis abortiva*; Birds Neſt.
Coccus Cnidius; Berries or Grains of Mezeron, Widow Wail, or Spurge Olive.
Coccygria, *Rhus*; Sumach.
Cocus Nux; The Cocus Nut, which is good Food and Drink.
Cochlearia, *Cochleariam*, *Telephium quorundam*; Scurvy Graſs.
Hortenſis; Garden Scurvy Graſs.
Anglicana, —*marina*; Engliſh Scurvy-Graſs.
Cochenele; The Grain Cochenele.
Cocculus Indi; Indian Nut.
Colchicum, *Ephemeron*; Medow Saffron.
Anglicum; Engliſh Med-Saffron.
Illyricum; Greek Med-Saffron.
Indian; Indian or Syrian Med-Saffron.
Colocynthis, *Coloquintida*; Bitter Gourd.
Colus Jovis, *Sclarea lutea*, *Horminum luteum*; Jupiters Diſtaff, Yellow Clary.
Colutea, Baſtard Sena.
Columnaris, *Campanulla lacteſcens*, *Campanula major ſive Pyramidalis*; The great Pyramidal Bell-flower, or greater Milky Bell-flower; ſome will have it to be Garden Rampion.
Colubrina, *Arum Ægyptium*, *Pſeudocolocaſſia*; Eddo of *Carolina*.
Coliandrum, *Corianum*, *Coriandrum*; Coriander.
Coloquintida, *Colocynthis*; Bitter Gourd or Citrul.
Columbaris, *Columbina*, *Verbena*, *Verbenaca*, *Hecularia Matricalis*; Vervain.
Conilaus, *Conita*, *Cicutaria*, *Myrrhis*, *Smyrnium*; Cicely.
Condiſi, *Struthium*, *Viola agreſtis Tragi*, *Saponaria*, Soap-wort.
Condrilla, *Chondrilla*; Gum Succory.
Vera; True Gum Succory.
Conion, *Cicuta*; Hemlock.
Paluſtre —— *aquatica*; Water Hemlock.
Conſolida minor, *Prunella*; Self-heal.
Conſolida quinquefolia; Butter-wort.
Conſolida ſaraſenica vel aurea, *Solidago ſaraſenica*; Conſound Saracens.
Conſolida major, *Symphytum*, *Solidago*, *Oſteocollon*; Comfrey.
Conſolida media, *Bugula*; Bugle.
Conſolida Regalis Sylveſtris, *Flos calcaris*, *Delphinum*; Larks Spur or Heel, Knights-ſpur.
Convolvulus, *Volubilis*; Bind-weed.
Minor; Leſſer Bind-weed.
Volubilis nigra; Black Bind-weed.
Marinus, *Soldanella*; Sea Bind-weed.
Coniza major; Fleabane Greater.
Minor; Leſſer.
Pumila, *Chamæconiza*; Dwarf-Fleabane.
Paluſtris —— *aquatica*, *Conſolida paluſtris*; Water Fleabane.
Copayba, *Cupayba*; Balſam Capivi.
Cophy; Coffee; the Pouder of which makes a Valuable Stomatick Liquor or Drink.
Corallina; Coralline Moſs.
Corallium; Coral.
Album; White.
Rubrum; Red Coral.
Cor Indicum, *Piſum cordatum*; Heart Peaſe.
Coriandrum; Coriander.
Corcoras Plinij, *Anagalis*; Pimpernel.
Corianum, *Coriandrum*, Coriander.
Coris; Fair Heath Ground Pine.
Cornu Cervinum vel Cervi, *Coronopus*; Harts-horn Plantain, Bucks-horn.
Corona Monachi, *Dens Leonis*, *Taraxicon*; Dandelion, Piſs-a-bed.
Corona Regia, *Pomum Spinoſum*; Thorny-Apple.
Coroneola, *Lyſimachia*; Looſe-ſtrife, Willow-Herb.
Spicata; Spiked Looſe-ſtrife.
Non ſpicata; Looſe-ſtrife not Spiked.
Siliquoſa, Codded.
Corrigiola, *Sanguinaria*, *Centumnodia*, *Polygonum*; Knot-graſs.
Corrago, *Borago*; Borage.
Cortex Winteranus, *Cinamomum Winteranum*, Winters Cinamon.
Cortex Peruanus, *ſive Jeſuiticus*; Jeſuits Bark.
Coridalium, *Calchocrum*, *Capnos Plinij*, *Fumaria*; Fumitory.
Corydalis, *Radix cava*; Hollow Root, a Kind of Fumitory.
Coronopus, *Sanguinalis*; Bucks-horn.
Marinus; Sea Bucks-horn.
Corona Imperialis; Crown Imperial Lilly.
Cortuſa, *Auricula Urſi*, *Sanicula Urſina*, Bears Ear Sanicle.
Corylus, *Avellana*, *Nux Heracleotica*; Filbert.
Sylveſtris; Haſle-Nut.
Coſtus Hortorum, *Balſamita major*, *Mentha Græca vel Romana*; Coſtmary.
Coſta canina, *Quinquenervia*, *Plantago minor*; Rib-wort Plantane.
Cotinus Plinij, *Rhus*; Sumach.
Cotula, *Cotula fætida*; May Weed.
Cotyledon, *Acetabulum*, *Umbilicus Veneris*, *Herba Coxendicum*; Navel-wort, Penny-wort.
Cotonaria, *Gnaphalium*; Cud-weed.
Aurea vel aureum; Golden Cud-weed.
Cotoneum, A Quince.
Cotonaſter; Wild Quince.
Cotum, *Xylum*, *Bombax*, *Goſſipium*; Cotton-plant.
Cracca, *Aracus*; Great Wild Vetch.
Craſſula, *Telephium*, *Fabaria*, *Ceraunia*; Orpine.
Crateogonum, *Triticum vaccinum*; Cow-Wheat.
Sylveſtre, *Milium ſylvaticum*; Wild Cow-Wheat.
Crambe, *Braſſica*; Cabbage, Cole-wort.
Crambe Thalaſſia, *Soldanella*, *Convolvulus marinus*, Sea Bind-weed.

Crepa-

Index Latinus.

Crepanella, Dentillaria, Molybdæna, Plumbago Plinij, Lead-wort.
Creſpinus Berberis; Barberry Buſh.
Crinita, Capillus Veneris, Adiantum, Trichomanes; Maiden-hair.
Crinon, Lilium; Lilly.
Convallium, —— *vernum*; Lilly Convally.
Album; White Lilly.
Luteum; Yellow Lilly.
Criſta Galli, Pedicularis, Pedicularia, Fiſtularia; Cocks or Cox-comb, Louſe-wort, Yellow Rattle.
Rubra; Red Rattle or Louſe-wort.
Crithmum, Fœniculum marinum; Sampire.
Maritimum Spinoſum; Thorny Sampire.
Chryſanthemum, Anthyllis major; Golden colored Sampire.
Crocus, Crocum; Saffron.
Nothus, Cnicus; Baſtard Saffron.
Nothus —— *Sylveſtris, Atractylis*; Wild Baſtard Saffron.
Crocus Indicus, Curcuma; Turmerick.
Croton, Cherva, Kerva, Ricinus, Palma Chriſti; Great Spurge.
Crucialis, Cruciata, Cruciata minor, Herniaria; Croſs-wort, Croſs-wort Gentian.
Cubebæ; Cubebs.
Cucumis, Sicys; Cucumber.
Aſininus —— *agreſtis*; Wild Cucumber.
Aſininus —— *ſylveſtris* —— *anguinus*, Wild Cucumber.
Cucurida, Dentillaria, Plumbago Plinij, Molybdæna; Lead-wort.
Cucullata, Pinguicula, Sanicula Eboracenſe; Butter-wort.
Cucurbita, Rotunda & oblonga, Gourd round and long.
Sylveſtris, Colocynthis; Wild Gourd, Coloquintida.
Cuminum; Cummin.
Æthiopicum, Ammi, Ameos; Biſhops-weed.
Cunita Fuchſij, Thymbra; Savory.
Æſtiva; Summer Savory.
Hyberna; Winter Savory.
Cretica; Candy Savory.
Cunilago, Coniza; Flea-bane.
Major; Greater Flea-bane.
Minor; Leſſer Flea-bane.
Pumila; Dwarf Flea-bane.
Cupayba, Copayba; Balſam Copayba or Capivi.
Cupreſſus, Cypariſſus; Cypreſs Tree.
Curcuma, Crocus Inditus; Turmerick.
Curmi Dioſcoridis; Barly Ptiſan; alſo Ale and Beer, as ſome will have it.
Cuſcuta, Caſſutha, Caſſitas Plinij; Dodder.
Cusbar, Coliandrum, Corianum, Coriandrum; Coriander.
Cyanus; Blew-bottle.
Multiflorus; Double Flowered Blew-bottle.
Minor, Baptiſecula; Leſſer Blew-bottle.
Cyamos, Cuamus, Faba; Beans.
Coccinus; Scarlet Beans.
Equinus —— *minor* —— *Agrius*; Field or Horſe Beans.
Cyclamen, Cyclaminus, Panis Porcinus, Orbicularis, Rapum Terræ; Sow-bread.
Cydonium, A Quince.
Cymbalaria Italorum; Baſtard Navel-wort.
Cyminum, Cuminum hortenſe; Cummin-Garden.
Sylveſtre; Wild Cummin.
Cyminalia, Gentiana, Fell-wort, Gentian.
Cynanthemos, Cyanthemis, Cotula, Cotula fœtida, May Weed.
Cynanchice, Synanchica, Rubia Synanchica, Quinſey Madder.
Cynara, Onara, Scolymus, Artichoke.
Agrius —— *Sylveſtris*, Wild or Thiſtle Artichoke.
Cynis, Cynocrambe; Dogs Mercury.
Cynoglossa, Lingua canina, Lingua bovis, Hounds Tongue.
Cynorrhodon, Rosa Eglanteria, Swet-Brier.
Cynosorchis, Testiculus vel Testium Canis & Caninus, Dogs Stones.
Cynosbatus, Rubus, Bramble buſh.
Cynocephalus, Corbus Ferus, Anglum Vaccinium, Basilicum, Clove.
Cynospastus, Peonia, Paleſtida, Peony.
Mas, Male Peony.
Fœmina, Female Peony.
Cyperus, Aſpalathum, Panicis quadratus & angulosus, Galingal or Cyperus.
Cypariſſus, Cupreſſus, Cypreſſus, Cypreſs Tree.
Cyprus, Ligustrum, Privet, Prim.
Cytiſus, Trifolium arborescens, Shrub Trefoil, Milk Trefoil, Tree Trefoil.
Verus, True Tree Trefoil.
Vulgaris, Common Tree Trefoil.

D.

Datura, Stramonium minus, Datroa, Datery.
Daucus, Paſtinaca Sylveſtris tenuifolia, Wild Carrot.
Creticus, Our common Daucus Seed of the Shops.
Dactylus, pl. *Dactyli*, Dates.
Damaſonium, Anagma, Herba Paralyſis minor, Primroſe.
Damaſonium, Digitalis hortenſis, Fox Glove.
Daphne, Laurus, Bay Tree.
Delta, Beta, Beet.
Alba, Sicula, Sicla, White Beet.
Rubra vel nigra, Red Beet.
Romana, Roman Beet.
Delphinium, Conſolida Regalis, Larks-ſpur.
Dens Caninus, Dentis Claſſij, Dogs Tooth, a Kind of Satyrion.
Dentaria, Dentillaria, Coralloides, Vicia dentaria, Tooth-wort, Coral-wort.
Dentillaria, Plumbago Plinij, Molybdæna, Pliny's Lead-wort.
Diagredium, Scammony prepared with Sulphur or Juice of Quinces.
Diapenſia, Cucullata, Pinguicula, Butter-wort.
Dictamnum, Dittany.
Creticum, Dittany of Creet.
Nothum, Baſtard Dittany.
Digitus Veneris, Nymphæa, Water Lilly.
Albus, White Water Lilly.
Luteus, Yellow Water Lilly.
Digitalis hortenſis, Damij minor, Fox Glove Garden.
Sylveſtris, —— *Purpura vulgaris*, Our Common or Field Fox-Glove.
Dili, Iſatis, Glaſtum ſativum, Woad.
Sylveſtre, Iſatis agrestis, Wild Woad.
Dionyſia, Hedera, Ivy.
Dioſpyros, Milium ſolis, Lithoſpermum, Gromwell.
Alajus, Greater Gromwell.
Minus, Leſſer Gromwell.
Repens, Creeping Gromwell.
Dipsacli, Muſcari, Bulbus Venetianus, Muſked Great Flower Jacinth.
Botroides —— *Muſcatus luteus*, Yellow.
Hyacinthus moſchatus griſeus, Aſh colored.
Dipſacus hortenſis, Fullers Teaſle.
Sylveſtris, Wild Teaſle.

Diſtichon,

Index Latinus.

Diſtichon, *Hordeum*, *Polyſtichon*, Barley.
Agreſte, Wild Barley.
Spurium —— *Murinum*, Way or Wall Barley.
Dochon, *Panicum*, Panick.
Indicum, Indian Panick.
Doronicum, Wolfs-bane Antidote.
Romanum vulgare, Common Roman Wolfs-bane.
Minus, Leſſer Wolfs-bane Antidote.
Brachiata radice, Scorpion Rooted.
Draba, *Arabis*, *Naſturtium Orientale*, Arabian or Turkey Muſtard.
Repens, Creeping Arabian Muſtard.
Drachontium, *Dracunculus*, Dragons.
Aquaticum —— *Paluſtre*, Water Dragons.
Minus, Leſſer Dragons.
Draco herba, *Dracunculus hortenſis*, *Tragum vulgare Cluſij*, Tarragon.
Dracontia, *Dracontium majus*, Dragons.
Minor, Leſſer Dragons.
Paluſtris —— *Aquatica*, Water Dragons.
Dracunculus, idem.
Draco ſylveſtris, *Sternutamentaria*, *Tarcon*, *Ptarmica*, Sneeze-wort.
Droſian cordi, *Alchimilla*, *Sanicula major*, *Stellaria Matthioli*, Ladies Mantle.
Drus, *Drys*, *Quercus*, An Oak.
Dryopteris, *Filix querna vel quercina*, Oak Fern.
Repens, Creeping Oak Fern.
Drypis Loniceri, *Carduus avenarius*, —— *arvenſis* —*Moſchatus*, Musk or Oat Thiſtle.
Dulcis radix, *Glycyrrhiza*, Liquorice.
Hortenſis, Garden Liquorice.
Sylveſtris, Wild Liquotice.
Dulciſida, *Pæonia*, Peony.
Mas, Male Peony.
Fœmina, Female Peony.
Dulcamara, *Amara Dulcis*, *Solanum arboreſcens*, Bitter-ſweet, Woody Nightſhade.
Durtoa, *Datura*, *Stramonium minus*, Dutroa or Dutory.

E.

EBulus, *Chamæacte*, *Sambucus humilis*, Dane-wort, Dwarf-Elder.
Echium, *Bugloſſum Viperinum*, Vipers Bugloſs.
Elaphoboſcum, *Paſtinaca ſylveſtris*, *Sphondylium*, Wild Parſnep.
Hortenſe, Garden Parſnep.
Elæagnus Cordi, *Myrtus Brabantica*, Sweet Gaul.
Elatine, *Veronica fœmina*, Female Speed-well, Fluellin.
Elæoſelinum, *Paludapium*, *Apium*, *Apium aquaticum*, Smallage.
Elaterium, *Cucumis agreſtis vel aſininus*, Wild Cucumber; alſo the Gum, dryed Juice, or Fœcula of the ſame.
Elleborus, *Helleborus albus*, *Veratrum album*, Hellebor White.
Niger verus, True Black Hellebor.
Nothus, Bears-foot, Baſtard black Hellebor.
Niger ſylveſtris, Wild black Hellebor.
Albus agreſtis, Wild white Hellebor.
Elleboraſtrum, *Helleboraſter*, *Helleborus nothus*, Baſtard Hellebor or Bears-foot.
Elleborine alba agreſtis, Wild white Hellebor.
Elenium, *Helenium*, *Enula*, *Enula campana*, Elecampane, Scab-wort.
Elephantis, *Anacardium*, Bean of Malaca.
Eliochryſon, *Gnaphalium aureum*, Golden Cudweed.
Emblicæ, *Myrobolani emblicæ*, Emblick Myrobalans.
Empetrum Tragi, *Herniola*, *Herniaria*, *Millegrana*, Rupture-wort or Burſten-wort.
Endivia hortenſis, Endive Garden.
Sylveſtris, Wild Endive.
Eneaphyllon, *Monophyllon*, *Unifolium*, One Blade.
Enula, *Enula campana*, *Helenium*, Elecampane or Scab-wort.
Ephætium, *Ranunculus*, Crow-foot.
Epibryon, Dodder of Hops.
Epibaton, Dodder of Brambles.
Epichamæacte, Dodder of Dane-wort.
Epichamædry, Dodder of Germander.
Epicannubis, Dodder of Hemp.
Epiaphace, Dodder of Tares.
Epabſinthion, Dodder of Wormwood.
Epidictamnus, Dodder of Dittany.
Epigeniſton, Dodder of Broom.
Eperyngium, Dodder of Eryngo.
Epihyſſopus, Dodder of Hyſſop.
Epilibanotis, Dodder of Herb Frankincenſe.
Epilinum, Dodder of Flax.
Epimaracon, Dodder of Marjoram.
Epimarum, Dodder of Herb Maſtich.
Epipolium, Dodder of Polimountain.
Epiſtæbe, Dodder of Knapweed.
Epitithymalus, Dodder of Spurge.
Epithymbra, Dodder of Savory.
Epithymum, Dodder of Thyme.
Epiurtica, Dodder of Nettles.
Epimetrum, Barren-wort.
Epimedium, idem.
Epipectron, idem.
Equapium, *Hippoſelinum*, *Smyrnium vulgare*, Alexanders, Horſe Parſly.
Equiſetum pratenſe, *Hippuris pratenſis*, Horſe-tail Medow, Shave-graſs.
Nudum, *Hippuris nuda*, Naked Horſe-tail.
Paluſtre, *Hippuris vel Cauda equina aquatica*, *Sanguinalis*, Marſh Horſe-tail, Shave-graſs.
Eranthemum, *Flos Adonis*, Adonis Flower, Wind-flower.
Flore rubro, Red Flowered.
Flore luteo, Yellow Flowered.
Erebinthus, *Cicer*, Chiches, Chich Peaſe.
Arietinus, Black Chiches.
Erica, *Tetralix veterum*, *Siſera varronis*, Heath; that of Jericho is called *Roſa Maria*.
Ericoides, *Euphraſia lutea*, Yellow Eye-bright.
Lignoſa, —— *pratenſis rubra*, Woody Eye-bright.
Erigerum, *Senecio*, Groundſel.
Tomentoſum, *Senecio Tragi*, Cotton Groundſel.
Erinus Caprificus, Wild Fig Tree.
Ervangina, *Cauda Leonis*, *Leimodoron*, *Orobanche*, Broom Rape.
Eruca ſativa, Rocket Garden.
Romana, *Erucula major*, *ſativa alba*, Roman.
Aquatica, Water Rocket.
Sylveſtris, Wild Rocket.
Sylveſtris notha, Baſtard Wild Rocket.
Ervilia Dodonæi, *Ochrus*, Winged Wild Peaſe.
Eruum, *Vicia amara*, *Orobus*, Bitter Vetch or Orobus.
Sylveſtre, *Catenance Geſneri*, Wild Bitter Vetch.
Sylvarum —— *Sylvaticus*, —— *Nemorale*, Woody Orobus.
Eruum rubens ſylveſtre, *Orobus rubens gramineus*, *Catenance*, Crimſon Graſs Vetch.
Eryngium, *Centum capita*, Sea Holly, Eryngo.
Eryngium trifolium, Trefoil Thiſtle, Trefoil Eryngo.
Eryſimum, *Irio Plinij*, *Sinapi alterum* —— *Sylveſtre*, Hedge Muſtard.
Verum, The true Hedge Muſtard.

Eryſi-

Index Latinus.

Eryſimum Theophraſti, *Tragopogon*, *Barba Hirci*, Goats-beard, Noon-flower.
Erythrodanum, *Rubia tinctorum*, Dying Madder.
Eſula, *Eſula minor*, *Ezula*, *Pityuſa*, Small Garden Spurge.
Eupatorium Meſues, *Ageratum*, Maudlin.
Eupatorium, *Agrimonia*, Agrimony.
Aquaticum, Water Agrimony.
Nothum, *Agrimonoides*, Baſtard Agrimony.
Euphorbium, The Gum Euphorbium.
Euphragia, Eye-bright.
Euphraſia, idem.
Lignoſa —— *pratenſis rubra*, Woody Eye-bright.
Euphroſine, *Bugloſſum*, Bugloſs.
Sylveſtris, *Sylveſtre*, *Lingula bubula*, Wild Bugloſs.
Marina, *Limonium*, Sea Bugloſs.
Muralis, *Lycopſis*, Wall Bugloſs.
Viperina, *Echium*, Vipers Bugloſs.
Exupera, *Verbena*, *Verbenaca*, Vervain.
Ezula, *Eſula*, Small Garden Spurge.

F.

Faba hortenſis, Bean Garden.
Coccina, *Phaſeolus coccinus*, Scarlet Bean.
Minor, — *Equina*, — *Agria*, Field Bean.
Hortenſis minor, *Smilax hortenſis*, *Phaſeolus*, Kidney Bean.
Faba veterum vel Græcorum, Black Bean.
Fabaria, *Craſſula*, *Telephium*, Orpine, or Live-long.
Fagopyrum, *Fagotriticum*, *Frumentum Saraſenicum*, *Tragopyrum*, *Tragotriticum*, Buck Wheat.
Fagus, Beech Tree.
Faranum, *Tuſſilago*, Colts-foot.
Farfara, idem.
Faragium, idem.
Farfarus, *Populus alba*, White Poplar.
Farfrugum, *Caltha paluſtris*, Marſh Marigold.
Farrago, *Secale*, Rie.
Far, *Spelta*, *Zea*, *Triticum Griſeum*, —— *Cinereum ariſtis munitum*, Spelt; our Gray Wheat.
Faſeolus, *Phaſeolus*, *Smilax hortenſis*, Kidney Bean.
Faſelus hortenſis, *Faba*, Bean Garden.
Equinus, —— *minor*, Field or Horſe Bean.
Febrifuga, *Matricaria*, *Parthenium*, Feverfew, Fetherfew.
Sylveſtris —— *agreſtis*, Wild Feverfew.
Fegopyrum, *Tragopyrum*, *Tragotriticum*, *Ocymum Cereale*, Buck Wheat.
Fel terræ, *Centaurium minus*, Leſſer Centory.
Feraria, *Eupatoria*, *Agrimonia*, Agrimony.
Notha, *Agrimonoides*, Baſtard Agrimony.
Ferulacoli, *Thapſia*, Great Scorching Fennel.
Ferrum Equinum, *Solea Equina*, Horſe-ſhooe Vetch.
Ferula, Fennel Giant.
Ferulago, *Ferula minor*, Small Fennel Giant.
Ferula Galbanifera, Ferula yielding Galbanum.
Ferula Sagapenifera, Ferula yielding Sagapenum.
Feſtuca, *Bromos ſterilis*, *Ægilops*, Wild Oats.
Feſtuca Italica, Haver-graſs.
Ficaria, *Chelidonium minus*, *Scrophulariâ*, Pile-wort, called alſo the Leſſer Celandine.
Ficus, A Fig, alſo a Fig Tree.
Ficus humilis, *Chamæficus*, Dwarf Fig Tree.
Filago, *Tomentum*, *Centuncularis*, *Gnaphalium*, Cud-weed.
Aurea, —— *aureum*, Golden Cud-weed.
Marina, Sea Cud-weed.
Impia, —— *minor*, Wicked Herb or Cud-weed.
Argentea, —— *Americana*, Silver Cud-weed or American.
Filipendula, *Oenanthe*, Drop-wort.
Aquatica, Water Drop-wort.
Anguſtifolia, *Apij foliis*, Narrow Leav'd.
Cicutæ facie, Hemlock like Drop-wort.
Filicula, *Polypodium*, Polypody.
Quercina, Polypody of the Oak.
Muraria, Polypody of the Wall.
Terrea, Ground Polypody.
Filius ante Patrem, *Colchicum*, Meadow Saffron.
Filix mas, *Blechron*, *Pteris*, Fern Male.
Fœmina, *Nymphæopteris*, Female Fern, Brake.
Quercina, Oak Fern.
Alba, *Dryopteris*, White Oak Fern.
Filicaſtrum, *Oſmunda regalis*, *Filix aquatica*, Water Fern, Oſmund Royal.
Filix florida, *Filix paluſtris*, idem
Fiſtularia, *Pedicularis*, *Criſta Galli*, Cocks-comb, Coxcomb, Louſe-wort, Yellow Rattle.
Flammula, *Ranunculus flammeus*, Spear-wort.
Flammula Jovis, *Clematis urens*, Virgins Bower.
Surrella, Upright Virgins Bower.
Flos Adonis, *Eranthemum*, Adonis Flower.
Flore Rubro, Red Flowered Adonis.
Flore luteo, Yellow Flower'd Adonis.
Flos Affricanus, *Caltha Affricana*, *Flos Indicus*, African Marigold, French Marigold.
Flos ambervalis, *Amarella Geſneri*, *Polygala recentiorum*, Milk-wort Common.
Maritimus, *Glaux*, Sea Milk-wort.
Flos Cardinalis, *Trachelium Americanum*, Cardinal Flower.
Flos Crucis Geſneri, *Polygala*, Milk-wort.
Flos ſolis, *Corona ſolis*, *Sol Indianus*, *Chryſanthemum Peruanum*, Sun Flower.
Major, *maximus Peruvianus*, The great Sun Flower.
Minor, *Chryſanthemum peruvianum minus*, The ſmaller Peru Sun Flower.
Flos Cuculi, *Cardamine*, Cuckow Flower, Ladies Smocks.
Flos Frumenti, *Cyanus*, Blew Bottle, Corn Flower.
Multifloras, Double Flowered.
Flos Meleagris, *Fritillaria*, Checquer'd Daffodil.
Flos Regius, *Conſolida Regalis*, *Delphinum*, *Flos Calcaris*, Larks Spur, Larks Heel, Knights Spur.
Fluida Gazæ, *Rhus*, Sumach.
Fœnum Græcum, *Siliqua Columellæ*, *Corphos Plinij*, *Silicula Varronis*, Fenugreek.
Fœnum Burgundicum, *Medica legitima*, *Trifolium Cochleatum*, Medick Fodder, St. Foin, Snail-Claver.
Fœniculum, *Marathrum*, Common Fennel.
Giganteum, *Ferula*, Fennel Giant.
Porcinus, *Peucedanum*, Hogs Fennel, Sulphur-wort.
Folium Indum, Indian Leaf.
Fontalis, *Potamogeiton*, Pond-weed.
Fragaria, *Fraga*, Strawberry.
Alba, —— *hortenſis*, White Strawberry.
Rubra, —— *Nemoralis*, Red or Wood Strawberry.
Fraxinella, *Pſcudodictamnus*, Baſtard Dittany, Fraxinel.
Fraxinus malia, Aſh Tree, its Keys are called *Lingua Avis*.
Sylveſtre, *Ornus*, Wild Aſh, or Quicken Tree.
Frangula, *Alnus nigra*, *Avornus*, Black Alder.
Fritillaria, *Lilium variegatum*, *Flos Meleagris*, Checquer'd Daffodil, Fritillary.
Frumentum, *Far*, *Spelta*, *Zea*, Our Gray Wheat or Spelt Corn; alſo a Pultage, called Frumety.
Fucus, *Fucus marinus*, Sea Wrack.
Fucus herba, *Anchuſa*, Alkanet.
Fuga Dæmonum, *Perforata*, *Sol terreſtris Paracelſi*, *Hypericum*, Johns-wort.
Fuligo, Soot.

Index Latinus.

Fumaria, *Capnos Plinij*, Fumitory.
Bulboſa, *Radix Cava*, *Corydalis*, Hollow Root.
Fumus Terræ, idem.
Fungus, *Spongiola*, Muſhroom, Toad-ſtool.
Fungus Sambucinus, *Auriculæ Judæ*, Jews Ears.
Fungus Laricea, *Agaricum*, Agarick; a Muſhroom of the Larch Tree.
Fuſus, *Atractylis*, Wild Baſtard Saffron.

G.

Galanga, *Cyperus*, *Juncus quadratus*, *Aſpalathum*, Galingal.
Galbanum gummi, Gum Galbanum.
Galega, *Ruta Capraria*, Goats Rue.
Gallæ arbor, Nut-Gall Tree.
Galeopſis, *Urtica iners fœtida*, *Lamium fœtidum*, Stinking Dead Nettle.
Gallitricum, *Horminum*, *Sclarea*, Garden Clary.
Sylveſtre, *Oculus Chriſti*, Wild Clary.
Garoſmos, *Atriplex olida*, —— *fœtida*, Stinking Arach.
Gariophyllata, *Caryophyllata*, Avens.
Gariophyllus, *Caryophyllus hortenſis*, Clove Gilliflower.
Indicus, Clove, the Spice.
Geminalis, *Horminum*, *Gallitricum*, *Centrum Galli*, *Sclarea*, Garden Clary.
Sylveſtris, *Oculus Chriſti*, Wild Clary.
Genicularis, *Lychnis ſativa*, —— *hortenſis*, Garden Campion.
Sylveſtris multiflora, Batchelors Buttons.
Geniſta, *Spartum*, Broom.
Geniſta ſpinoſa, *Geniſtella ſpinoſa*, Furze Buſh, Petty Whyn.
Geniſtæ Rapum, Broom Rape.
Geniſtella, *Geniſta tinctoria*, *Geniſtella infectoria*, Baſe Broom, Dyers Green Weed.
Gelſeminum Indicum, *Mirabilia Peruana*, *Admirabilis Peruviana*, Peru Flower, Marvel of Peru.
Genicularis, *Phu magnum*, *Valeriana magna vel hortenſis*, Great Garden Valerian.
Genecanthe, *Bryonia nigra*, *Sigillum ſanctæ mariæ*, *Vitis nigra*, Black Bryony.
Genitura, *Anethum*, *Anetum*, Dill.
Gentiana major, Greater Gentian or Fell-wort.
Minor, *Gentianella*, Small Gentian.
Minor Cruciata, —— *Cruciata*, Croſs-wort Gentian.
Autumnalis, *Gentianella autumnalis*, *Pneumonanthe*, Small Autumn Gentian, Autumn Bell-flower or Calathian Violet.
Gentianella, *Gentiana notha*, Baſtard Gentian.
Gerontopagon, *Tragopogon*, *Barba Hirci*, Goats Beard.
Geranium, *Roſtrum Gruinum*, *Gruis vel Ciconiæ*, *Gruinalis*, Cranes-Bill.
Moſchatum, Musked Cranes-bill.
Columbinum, Doves-foot.
Batrachioides, Crow-foot Cranes-bill.
Geum, *Caryophyllata*, Avens.
Gingidium, *Biſacuta*, Tooth-pick Chervil.
Gith, *Melanthium*, *Nigella*, Fennel Flower.
Romanum vel Romana, Katherine Flower.
Githago, *Lychnis ſegetum*, *Pſeudomelanthium*, *Nigelaſtrum*, Cockle or Corn Wild Campion.
Gladiolus, *Gladiolus ſegetalis*, *Victoralis rotundus*, Corn Flag.
Aquaticus, —— *luteus*, Water Flag, Skeg.
Glans Terræ, *Agriocaſtanum*, *Bulbocaſtanum*, *Nucula terreſtris*, Ground Nut, Earth Nut.
Glaſtum ſativum, *Iſatis ſativa*, Garden Woad.
Sylveſtre, *Iſatis agria*, Wild Woad.
Glans ſardiana, —— *Caſtanea*, Cheſt-Nut.
Glans unguentaria, The Nut Ben.
Glaucium, *Pomum amoris*, Apples of Love.
Glaux, *Aſtragalus*, *Polygalæ genus*, Milk Tare or Vetch.
Glechon, *Pulegium*, Penny-Royal.
Glypicron, *Dulcamara*, *Amara dulcis*, *Solanum Arboreſcens*, Bitter-ſweet, Woody Nightſhade.
Glycyrrhiza hortenſis, *Liquoritia*, Garden Liquorice.
Sylveſtris, Wild Liquorice.
Glyciſſida, *Dulciſſida*, *Pæonia*, Peony.
Mas, Male Peony.
Fœmina, Female Peony.
Gnaphalium, *Centunculus*, *Tomentitia*, *Cottonaria*, Cud-weed.
Impium —— *minus*, Wicked Herb or Cud-weed.
Marinum, *Elichryſum ſylveſtre*, Sea Cud-weed.
Aureum, *Eliochryſon*, Golden Cud-weed.
Americanum, —— *argenteum* —— *ſempervivum*, *Argyrocome*, American Cud-weed, Silver Cud-weed.
Gordilion, *Tordilium*, *Seſeli Cretenſe*, Candy Hartwort.
Goſſipium, *Xylum*, *Cotum*, *Bombax*, Cotton-Plant.
Gramen, *Agroſtis*, Graſs.
Alopecuros, Fox-tail Graſs.
Arvorum, Bent Graſs.
Avenaceum, Oat Graſs.
Arundinaceum, Reed Graſs.
Argenteum, Silver Graſs.
Aquaticum, Water Graſs.
Bromoides, Hairy Oat Graſs.
Bufonum, Toad Graſs.
Bombycinum, Woolly Graſs.
Criſatum, Cocks Comb or Creſted.
Cyperoides, Cyperus Graſs.
Caninum, Dogs Graſs, Quitch Graſs.
Cauda Vulpis, Fox-tail Graſs.
Calamogroſtis, Reed Graſs.
Dactyloides, Cocks-foot Graſs.
Echinatum, Hedge-Hog Graſs.
Filiceum, Fern Graſs.
Feſtuca, Haver Graſs.
Geniculatum, Knee'd or Jointed Graſs.
Hirſutum, Hairy Graſs.
Hirſutum Nemorale, Hairy Wood Graſs.
Holoſtium, Stitch-wort, alſo Sea Thrift.
Iſchæmon, Cocks-foot Graſs.
Junceum, Ruſh Graſs.
Junceum parvum, Toad Graſs.
Lanatum, Woolly Graſs.
Leucanthemum, Stitch-wort Graſs.
Murorum, Capons Tail.
Montanum, Mountain Graſs.
Miliaceum, Millet Graſs.
Miliare, idem.
Melinoides, Panick Graſs.
Marinum, Sea Graſs.
Maritimum, idem.
Muriale, Wall Graſs.
Nanum, Dwarf Graſs.
Nemorale, Wood Graſs.
Nemoroſum, idem.
Oculus Caprinus, Haver Graſs.
Phalaris, Canary Graſs.
Phalaroides, idem.
Phœniceum, Darnel Graſs.
Phœnix Graminea, idem.
Pumilum, Dwarf Graſs.
Plumoſum, Feather Graſs.
Plumarium, idem.
Polyanthum, Fern Graſs.

Pratenſe,

Index Latinus.

Pratenſe, Meadow Graſs.
Paniculatum, Mountain Graſs.
Paniceum, Panick Graſs.
Scopulæ, Bent Graſs.
Segetum, Corn or Wheat Graſs.
Schænogroſtis, Ruſh Graſs.
Spicatum, Spiked or Eared Graſs.
Spicatis foliis, Spiked Leav'd.
Statice, Sea Thrift.
Semitale, Way or Wall Graſs.
Typhinum, Cats-tail Graſs.
Triticeum, Wheat Graſs.
Tomentoſum, Cotton Graſs.
Tomentarium, idem.
Tremulum, Quaking Graſs.
Grana Paradiſi, *Cardamomum majus*, Grains of Paradiſe.
Gratiola communis, Common Hedge Hyſſop.
Vera, True Hedge Hyſſop.
Latifolia ——, Broad Leav'd Hedge Hyſſop.
Graminea, Graſs Hedge Hyſſop.
Groſſularia, *Uva criſpa*, Gooſeberry.
Groſſularia ultra marina, *Ribes*, Currants.
Groſſi, *Ficus aridi*, Dry Figs.
Gruinalis, *Geranium*, *Roſtrum Gruinum*, *Gruis aut Ciconiæ*, Cranes-Bill.
Guajacum, *Lignum Vitæ*, Pock-wood.
Gummi Amoniacum, The Gum Amoniacum.
Gummi Animæ, Gum Anima.
Gummi Arabicum, Gum Arabick.
Gummi Copal, The Gum Copal, A Reſolutive.
Gummi Elemi, The Gum Elemni; an admirable Vulnerary.
Gummi Cambogia, Cambogie or Cambogium.
Gutta Gamanda, or *Gemoa*, idem.

H.

Halicacabum, *Alkakengi*, *Solanum Veſicarium*, Winter Cherry.
Americanum, Carolina Winter Cherry.
Halicacabum peregrinum, *Piſum Cordatum*, Heart Peaſe.
Halimus, *Portulaca Marina*, Sea Purſlain.
Harmala, *Ruta Sylveſtris*, *Ruta Syriaca*, Wild Rue.
Haralia, *Cucurbita*, Gourd.
Harbatum, *Peucedanum*, *Fœniculum Porcinum*, Hogs Fennnel, Sulphur Wort.
Harenaria, *Cornu Cervi vel Cervinum*, Bucks-horn.
Haſce, *Thymus*, Thyme.
Haſtula regia, *Aſphodelus albus*, White Aſphodel.
Harundo, *Arundo*, Reed or Cane.
Haronigi, *Doronicum*, Woolfs-bane Antidote.
Hebiſcus, *Althæa minor*, Leſſer Marſh Mallow.
Hedera arborea, Ivy Tree or Wall.
Terreſtris, Ground Ivy, Ale-hoof.
Hederula aquatica, *Hedera aquatica*, *Ranunculus Hederaceus*, Water Ivy, Water Starwort.
Hedera ſpinoſa, *Smilax aſpera*, Prickly Bind-weed.
Hedypnonis, *Cichoreum luteum*, Yellow Succory.
Hedyſorum, Hony Suckle.
Hedyoſmus, *Mentha*, Mint.
Sylveſtris, *Mentaſtrum*, Wild Mint.
Equinus, *Siſymbrium Sylveſtre*, Horſe Mint.
Aquaticus, *Siſymbrium*, Water Mint.
Helice, *Hedera helix*, Barren Ivy.
Helenium, *Enula*, *Enula campana*, Elecampane.
Helianthemum, *Flos Solis Anglicus*, Engliſh Yellow Ciſtis, or Sun-Flower.
Heliochryſum, *Gnaphalium aureum*, Golden Cud-weed.
Heliotropium, Turn-ſole.
Helleborus niger, *Elleborus*, *Veratrum nigrum*, Hellebor Black.
Nothus, Bears-foot.
Niger Sylveſtris, Wild Black Hellebor.
Albus, *Veratrum album*, White Hellebor.
Helleborine, Wild White Hellebor.
Helleborine nigra, Wild Black Hellebor.
Alba agreſtis, Wild White Hellebor.
Helleboraſtrum, Wild Black Hellebor.
Helleboraſter, Baſtard Black Hellebor, Bears-foot.
Heliopus, *Heliotropium*, Turn ſole.
Hemerocallis Cluſij, *Martagon*, *Liligo*, *Liliaſtrum*, *Lilium non Bulboſum*, The Day Lilly.
Heman, *Serpillum*, Wild Thyme.
Hemonitis, *Phyllitis*, *Lingua Cervina*, Moon Fern, Harts Tongue.
Hepatica vulgaris, *Lichen major*, *Ficoraria*, Liver-wort Common or Greater.
Minor, Liver-wort Leſſer.
Nobilis, —— *Trifolia nobilis*, Herb Trinity.
Arborea, *Pulmonaria fungoſa*, Wood Liver-wort, Oak Lungs.
Helxine, *Parietaria*, Pellitory of the Wall.
Herba Anthonij, *Dentillaria Rondoletij*, Lead-wort.
Herba Benedicta, *Caryophyllata*, Avens.
Herba Biſtingua, Horſe Tongue.
Herba Caſta, *Pæonia*, Peony.
Herba Catti, *Mentha Cataria*, Nep or Cat Mint.
Herba Cauſtica, *Ranunculus*, Crow-foot.
Herba Cancri, *Helitropium*, Turn-ſole.
Herba Coxendicum, *Cotyledon*, *Acetabulum*, Pennywort.
Herba Clavellata, *Viola Tricolor*, Hearts Eaſe.
Herba Doria, Doria's or Chiron's Wound-wort.
Herba Dinevtilia, *Conſolida Regalis*, Larks-ſpur.
Herba fortis, *Solidago Saraſenica*, Confound.
Herba Gerardi, *Podagraria*, Gout-wort.
Herba Gallica, *Gallega*, *Ruta Capraria*, Goats Rue.
Herba Hippogloſſum, Horſe Tongue the Herb.
Herba humilis, Humble Plant.
Herba Hungarica Dodonæi, *Alcea*, Vervain Mallow.
Herba Jacobi, *Jacobæa*, Rag-wort, James-wort.
Herba impatiens, *Perſicaria ſiliquoſa*, Wild Mercury.
Herba impia, *Filago*, *Gnaphalium impium*, Wicked Herb, Wicked Cud-weed.
Herba impetiginaria, *Chelidonium majus*, Celandine.
Herba Jovis Barba, Our Common Houſleek.
Herba Leo, *Antirrhinum*, Snap Dragon, Calves-Snout.
Herba Lucis, *Chelidonium majus*, Celandine.
Herba Laſtaria, Sea Spurge.
Herba Laſſulata, *Balſamita major*, *Coſtus hortenſis*, Coſtmary.
Herba Lotus, Trefoil Peaſe.
Herba Lutea, Wold, Weld, Dyers Weed.
Herba minoſa, —— *ſenſibilis*, The Senſible Plant.
Herba Muralis, Pellitory of the Wall.
Herba Paris, *Triphyllos*, True Love, one Berry.
Herba Paralyſis major, Cowſlip.
Herba Paralyſis minor, Primroſe.
Herba Pinnula, *Hyoſcyamus*, Henbane.
Herba rutinalis, *Sphondilium*, Cow Parſnep.
Herba ſtella, *Coronopus*, Bucks-horn.
Herba ſacra, *Tabaccum*, *Petum*, *Nicotiana*, Tobacco.
Herba Scythica, *Glycyrrhiza*, Liquorice.
Herba ſcelerata, *Ranunculus*, Crow-foot.
Herba ſardo, *Ranunculus aquaticus*, Water Crow-foot.
Herba ſinaconis, *Alcea*, Vervain Mallow.
Herba Tunica, *Caryophyllus Hortenſis*, Clove Gilliflower.
Herba Turca, *Herniaria*, Rupture-wort.
Herba Viva, Herb of Life.
Herba Venti, *Anemone*, Anemony, Wind-flower.
Herba Vulcani, *Ranunculus*, Crow-foot.
Herba Ulceraria, idem.
Herba Urbana, *Acanthus*, *Branca Urſina*, Bears Breech.
Herbena, *Verbena*, *Hercularia*, *Matricalis*, Vervain.
Herculana, *Verbena*, *Verbenaca*, idem.
Hermodactylus, The Hermodact. Some Authors will have it to be a Kind of *Colchicum*; but if

if it is, it is a Kind unknown to us. The *Colchicum Hermodactylum*, is not the *True Hermodactylus*, yet by ſome is uſed for it.

Herniaria, *Herniola*, *Millegrana*, *Herba Turca*, Rupture-wort.

Herpacanthe, *Acanthus ſativus*, *Branca Urſina*, Bears-Breech.

Heſperis, *Viola Matronalis*, —— *Hyemalis* —— *Damaſcena*, Single Dames Violets

Heſperis flore pleno purpurante, Double Purple Dames Violets.

Hieracium, *Accipiter*, *Accipitrina*, *Porcellia Gazæ*, Hawk-weed.

Rarum —— *incommune*, Rare or uncommon Hawk-weed.

Hippago, *Hippia*, *Alſine*, Chickweed.

Aquatica, Water Chickweed.

Notha, Baſtard Chickweed.

Hippolapathum folij rotundis, Baſtard Rheubarb.

Hippoſelinum, *Smyrnium vulgare*, *Equapium*, Alexander, Horſe Parſly.

Creticum, Gretick or Candy Alexander.

Hippoſelinon, *Oluſatrum*, idem.

Hippogloſſum, *Bonifacia*, *Biſlingua*, Horſe Tongue Bay.

Hippuris, *Equiſetum*, *Cauda Equina*, *Aſprella*, *Ephedra*, Horſe Tail, Shave-graſs.

Paluſtris, Marſh or Water.

Nuda, Naked Horſe-tail.

Pratenſis, Meadow Horſe-tail.

Hirculus veterum Cluſij, A Kind of Celtick Nard.

Hirundinaria, *Chelidonium majus*, Celandine.

Hiſpidula, *Hedera terreſtris*, *Pes Cati*, *Corona Terræ*, *Chamæciſſus*, Ale-hoof, Ground Ivy.

Terreſtris, *Hedera terreſtris communis*, Common Alehoof.

Minor, Small Ale-hoof.

Montana, Mountain Ale-hoof.

Saxatilis, Stone or Rock Ale-hoof.

Hiucca, *Yucca*, *Caſſavi* or *Cazavi*, Indian Bread.

Vera, *Cazavi*, *Mandiocha*, True Yucca.

Hetich americanum, Potato-like Yucca.

Folijs Aloes, Suppoſitious, or Aloe Leav'd Yucca.

Holoſchœnos, Great Bull Ruſh.

Holoſtium, *Gramen Leucanthemum*, Stitch-wort.

Holoſteum petræum, *Filix ſaxatilis*, Rock Fern.

Holoſteum anguſtifolium, *Plantago Marina*, Sea Plantain, alſo Sea Thrift.

Holoſteum Loniceri, Mouſe Tail.

Hordeum, *Commune*, *ſativum* —— *Crithe*, *Diſtichon*, *Polyſtichon*, Barley.

Agreſte, Wild Barley.

Spurium, —— *murinum*, Way or Wall Barley.

Horminum Hortenſe, *Sclarea*, *Gallitricum*, *Geminalis*, Clary.

Sylveſtre, *Oculus Chriſti*, Wild Clary.

Horminum tridantinum, —— *luteum*, *Colus Jovis*, Jupiters Diſtaff, Garden Clary.

Huniure, *Urtica*, Nettle.

Romana, —— *Hortenſis*, Roman Nettle.

Acuta, —— *minor*, Small Stinging Nettle.

Hyacinthus, Jacinth.

Americanus, American Jacinth.

Orientalis, Oriental Jacinth.

Botroides, Grape-flower'd Jacinth.

Hydropiper, *Perſicaria acris*, *Perſicaria non maculata*, Arſmart Biting.

Hydroſelinum, *Paludapium*, *Apium aquaticum*, Smallage.

Hypecoum, *Cuminum Sylveſtre*, Wild Cumin.

Hypericum, *Perforata*, Johns Wort.

Hypochæris, *Porcellia*, *Hyoſeris*, *Hieracium aſperum*, Swines Hawkweed, or Succory.

Hyoſeris, *Hieracium minimum Cluſi*, idem.

Hypociſtis, The Juice of Ciſtus or Holy Roſe; alſo the Excreſcence or Rape.

Hypogeſon, *Barba Jovis*, *Sedum majus*, *Sempervivum majus*, The Great Houſleek.

Hyoſcyamus vulgaris —— *niger*, Henbane. Common or Black.

Albus, White Henbane.

Hyophthalmon, *Aſter Atticus*, Greek Star-wort.

Hyoſcyamus Peruvianus, *Petum*, *Nicotiana*, Tobacco.

Anglicus, Engliſh.

Virginianus, Virginian.

Hiſpanicus, Spaniſh Tobacco.

Hyſſopus — *hyſſopum*, Hyſſop.

Incelibris, —— *infrequens*, Rare or Strange Hyſſop.

Sylveſtris, *Gratiola vera*, True Hedge Hyſſop.

Sylveſtris nothus, *Gratiola notha*, Baſtard Hedge Hyſſop.

J.

Jacea nigra, *Materfillon*, Black Knap-weed, Matfellon.

Argentea, *Stæbe notha vel ſpuria*, Silver Knap-weed.

Jacobæa, *Flos Jacobi*, *Herba Jacobi*, *Jacolæa Senetio Lobelij*, James Wort, Rag-wort.

Marina, *Cineraria Dodonæi*, Sea Rag-wort.

Jalappa, Jalap, an American Species of Bryony.

Jaſminum, *Jeſeminum*, *Geſſeminum*, Jeſſamy, Geſſamy.

Jaſione, *Campanula magna*, Bell-flower Great.

Minor —— *parva*, Bell-flower Small.

Jarus, *Arum*, *Penis Sacerdotis*, Wake Robin, Cuckow-pint.

Maculatus ——*um*, Spotted Wake Robin.

Non maculatus, ——*um*, not Spotted.

Cuculatus —— *um*, *Ariſarum*, Hooded Wake Robin or Fryers Cowl.

Iberis, *Lepidium*, *Piperitis*, Dittander.

Monſpeliaca, *Flamula Geſneri*, *Dentillaria Lobelij*, French Ditrander, Scar-wort.

Ibiga, *Abiga*, *Iva arthritica*, *Chamæpitys*, Ground Pine, Gout Ivy.

Maritima, *Anthyllis herbariorum*, Sea Ground Pine.

Ibiſcus, *Althæa*, *Malva Paluſtris*, —— *aquatica*, Marſh Mallow.

Illecebra minor acris, *Vermicularis*, Stone Crop Biting, Wall Pepper.

Inſipida, Stone Crop not Biting.

Ilex, The Holm Oak.

Imperitoria, *Aſtrantia*, Maſter-wort.

Impatiens herba Dodonæi, *Noli me tangere*, *Perſicaria ſiliquoſa*, Wild Mercury called Quick in hand; Codded Arſmart, alſo Shrinking Shrub.

Imperatrix, *Athumanticum*, *Anethum Sylveſtre*, *Meum antiquorum*, *Meum*, Spignel.

Indico, *Fœcula Glaſti Indici*, The Fœcula or Settlings of the Indian Woad or Glaſtum.

Inguinalis, *Bubonium*, *Aſter atticus*, Greek Starwort.

Inula, *Helenium*, *Enula*, *Enula campana*, Elecampane.

Inturis, *Capparis*, Capers.

Intybus, *Cichorium*, Succory.

Sylveſtris, Wild Succory.

Ion, *Viola*, Violet.

Hortenſis, Garden Violet.

Sylveſtris, Wild Violet.

Nemoralis, Wild, Jagged or Carolinian Violet.

Jovis arbor, *Quercus*, The Oak.

Jovis barba herba, *Sempervivum majus vulgare*, Our common Houſleek.

Jovis,

Index Latinus.

Jovis Faba, *Hyoſcyamus*, Henbane.
Alba, White Henbane.
Nigra, Black Henbane.
Jovis Flos, *Dios Anthos*, *Lychnis coronaria ſativa*, Campions, or Roſe Campions.
Sylveſtris, Wild Campion.
Segetum, Corn Campion.
Ibhium Theophraſti, *Perasites*, Butter Bur.
Iris Bulboſa, Bulbous Flower-de luce.
Tuberoſa, Tuberous Flower-de luce.
Tuberoſa Florentina, Florentine Orrice.
Tuberoſa Latifolia, Yellow Flower-de-luce, Water Flower-de-luce, Skeg.
Iris humilis, *Chamæiris*, Dwarf Flower-de luce.
Major, Greater Dwarf Flower-de-luce.
Minor, Smaller Dwarf Flower de-luce.
Anguſtifolia, Narrow Leav'd Dwarf Flower-de-luce.
Iris bulbous anguſtifolia major, Greater narrow Leav'd Iris, or Flower-de-luce.
Anguſtifolia minor, The Leſſer narrow Leav'd Iris.
Iris agreſtis, *Spathula fœtida*, *Gladium fœtidum*, Wild Flower-de-luce, Stinking Gladwin.
Iſatis, *Glaſtum*, Woad.
Iſchæmon vulgare, Cocks-foot Graſs.
Itea, *Salix*, Willow.
Iva arthritica, *Abiga*, *Ibiga*, *Chamæpitys*, Ground Pine.
Iva moſchata, idem.
Iucca, *Yucca*, *Caſſavi*, *Cazavi*, Indian Bread.
Jugulans, *Nux jugulans*, Wall-Nut.
Jujube, *Zizypha*, *Jujuba*, *Ziziphus*, Jujubes.
Juncus, *Scirpus*, *Schœnos*, Ruſh.
Acutus vulgatior, *Oxyſchœnos*, Common ſmall hard Ruſh.
Grandis, *Holoſchœnos*, Great Bull Ruſh.
Lævis minor, Small Bull Ruſh.
Aquaticus, Common Water Ruſh.
Juncus odoratus rotundus, *Schœnanthum*, Camels Hay.
Nothus, *Nothum*, Baſtard Camels Hay.
Juniperus, Juniper.
Juſquiamus, *Hyoſcyamus*, *Fabaſuilla*, Henbane.
Albus, White Henbane.
Niger, black Henbane.
Junquillas, *Junquils*, Ruſh Daffodil.

K.

Kali, *Salicornia*, *Salſicornia*, Glaſs-wort, Herb Kali.
Kebikengi, *Ranunculus*, Crowfoot.
Keiri, *Leucoium luteum*, Wall-flower.
Kemum, *Cuminum*, Cumin.
Kenne, *Ligustrum*, Privet.
Kermes, The Juice Alkermes, from the Berry Chermes or Kermes.
Kerva, *Ricinus*, *Palma Chriſti*, Great Spurge.
Kulb, *Milium ſolis*, *Lithoſpermum*, Gromwell.
Kusbor, *Coriandrum*, Coriander.

L.

Ablab, *Phaſeolus*, Kidney Bean.
Labrum Veneris, *Dipſacus*, *Carduus Veneris*, Teaſle.
Fullonum, The Fullers or Garden Teaſle.
Sylveſtre, Wild Teaſle.
Laburnum majus, *Anagris*, The Greater leſs Stinking Trefoil, or Bean Trefoil.
Minus, The Leſſer, which by ſome is thought to be the *Colutea* of *Theophraſtus*.
Labruſca, *Vitis Sylveſtris*, Wild Vine.
Lactaria, *Tithymalus*, Spurge.
Hortensis, Garden Spurge.
Minor, *Ipecacuanha minor*, Small Spurge.
Nemorosa, *Tithymalus Pallens*, Wood Spurge
Marina, *Herba Lactaria*, *Tithymalus paralios*, Sea Spurge.
Laureola, *Daphnoides*, Spurge Lawrel.
Lactuca Leporina, *Sonchus*, Sow Thiſtle.
Lactucella, idem.
Lactuca hortensis, Garden Lettice.
Sylvestris, Wild Lettice.
Sabaudica, Savoy Lettice.
Agnina, Lamb's Lettice, Corn Sallet.
Ladanum, *Labdanum*, Gum of the Ciſtus Shrub.
Ladanum Segetum, *Sideritis arvensis*, Meadow Iron-wort.
Lagopus, *Lagopodium*, *Pes Leporis*, *Trifolium humile*, *Trifolium Triticeum*, Hares foot, or Spiked Trefoil.
Lagopyrus, idem.
Lampatan, *China radix*, China.
Lamium, *Archangelica*, *Galeopſis*, *Urtica mortua*, ——— *mortua*, Dead Nettle, Archangel.
Album, White Dead Nettle.
Rubrum, Red Dead Nettle.
Fœtidum, Stinking Dead Nettle.
Lampſana, Dock Creſs.
Linaria, *Pſeudolinum*, Flax-weed, Toad Flax.
Scopiaria, Beſom Flax weed.
Nothæ, *Pſeudolinaria*, Baſtard Flax-weed.
Lancea Chriſti, *Ophioglossum*, *Lingua ſerpentis*, Adders Tongue.
Lanceola, *Quinquenervia*, *Plantago minor*, Rib-wort, and Rib-wort Plantain.
Lantana, *Viburnum*, Wayfaring Tree.
Lapathum, *Rumex*, Common Field Dock.
Sanguineum ſativum, Bloodwort Dock.
Acutum, *Rumex acutus*, Sharp-pointed Dock.
Aquaticum, *Hydrolapathum*, Water Dock.
Maritimum, Sea or Marſh Dock.
Equinum, *Hippolapathum ſativum*, Monks Rhubarb Dock.
Lappa major, *Bardana*, *Arctium*, *Proſopis*, *Perſonata*, Greater Bur-Dock.
Minor, Leſſer Bur-Dock.
Lapathum unctuoſum, *Bonus Henricus*, Engliſh Herb Mercury.
Laſerpitium, Laſer-wort, the Herb which Yields
Laſer Gummi, The Gum Laſer.
Larix, Larch Tree; that which as ſome ſay, Yields our Common Turpentine.
Lathyrus perennis, *Cicerculum perennis*, *Ervum-Sylveſtre*, Peaſe Everlaſting.
Perennis Sylveſtre, Wild Peaſe Everlaſting, or Tare Everlaſting.
Lathyris, *Cataputia minor*, *Eſula*, Leſſer Spurge.
Lavendula, *Lavandula*, *Pſeudonardus*, *Nardus Italica*, Spike, Lavender.
Laudanum, A Medicine eaſing Pain.
Opiatum, An Opiate Laudanum.
Volatile, Volatile Laudanum.
Specificum, A Specifick Laudanum.
Cathartícum, Cathartick or Purging Laudanum.
Laudata nobilium, *Veronica*, Speed-well.
Laudea veterum, *Laurus*, Bay Tree.
Laver, *Lavacrum*, *Dipſacus*, Teaſle.
Laurentina, *Bugula*, *Conſolida media*, Bugle.
Laurus, *Laurea*, *Daphne*, The Bay Tree.
Laurustinus, The Wild Bay.
Laurocerasſus, The Cherry Bay.
Laurus Alexandrinus, *Hippoglosſum*, Alexandrian Bay, Horſe Tongue Bay.
Laurus Roſea, *Oleander*, *Nerium*, Roſe Bay.

Index Latinus.

Laureola, *Chamædaphne*, *Daphnoides*, *Peplion*, Laurel, alſo Laurel Dwarf.
Leſſipes, *Clinopodium*, Wild Baſil.
Legumen pallidum, Chickling Peaſe.
Lens, *Phaco*, *Phacos*, Lentils.
Lenticula, idem.
Marina, Sea Lentil.
Lens paluſtris, Ducks-meat.
Lenticula aquatica, idem.
Lentiſcus, Lentisk or Maſtich Tree.
Leontopetalon, *Pes Leoninus*, *Brumaria*, Lions-foot, Lions-leaf, Black Turnep.
Lepidium, *Iberis*, *Piperitis*, Dittander.
Leptocaryon, *Nux avellana*, Filberd.
Sylveſtre, Haſle Nut.
Leucacantha, *Carlina alba*, White Flower'd Carline Thiſtle.
Leucanthemis, *Leucanthemum*, *Chamæmelum*, *Chamomilla*, Camomil.
Leucapiper, *Piper album*, VVhite Pepper.
Leucoium luteum, *Keiri*, *Cheiri*, VVall-flower.
Flore ſimplici, Single VVall-flower.
Flore duplici vel pleno, Double VVall-flower.
Leviſticum vulgare, *Laſerpitium tertium Dodonæi*, *Smyrnium Fuchſij*, Our Common Garden Lovage.
Germanicum, German Lovage.
Liguſtum, *Libyſticum*, *Liguſticum*, *Siler Montanum Tragi*, *Ser montanum*, Liguſtick or Baſtard Lovage.
Liguſticum verum, —— *latifolium*, —— *commune*, *Siler montanum*, *Siſelios*, The true Liguſtick or Baſtard Lovage broad Leav'd.
Auſtriacum, —— *anguſtifolium*, *Siler montanum anguſtifolium*, Liguſtick or Baſtard Lovage narrow Leav'd.
Libanotis, *Cervina alba*, Herb Frankincenſe.
Lichen, *Hepatica vulgaris vel major*, *Jecoraria*, Common or Ground Liverwort.
Minor, *Hepatica minor*, Small Liverwort.
Marinus, *Fucus marinus Oſtraceus*, *Lactuca marina*, Oiſter Green.
Arborea, *Pulmonaria fungoſa*, VVood Liverwort; and by ſome Oak Lungs.
Lignum Vitæ, *Guajacum*, Pockwood or Guajacum.
Liguſtrum, *Mahaleb*, *Phillerea*, Privet, Prim-print.
Nothum, *Macaleb*, Baſtard Privet.
Lignum Aloes, *Xyloaloes*, VVood of Aloes.
Lignum Colubrinum, Snake-wood.
Lignum Juniperinum, Juniper-wood.
Lignum Nephriticum, Nephritick VVood.
Lignum Rhodium, *Aſpalathus*, Roſe or Rhodium VVood.
Lilach, *Syringa*, Lilack, Pipe Shrub.
Lilium, *Crinon*, *Crinonia*, *Lirion*, Lilly.
Album, VVhite Lilly.
Americanum, American Lilly.
Agreſte, VVild Lilly.
Anguſtiſolium, Narrow Leav'd Lilly.
Byzantinum, — *Corona Imperialis*, Lilly of Conſtantinople.
Convallium, Lilly Convally, or of the Vally.
Floridianum, Floridian Lilly.
Hemerocallis, Baſtard or Day Lilly.
Imperiale, Imperial Lilly.
Luteum, Yellow or Orange Tawny Lilly.
Martagon, Mountain Lilly.
Montanum, idem.
Nothum, Baſtard Lilly.
Nymphæa alba, *Nenuphar*, VVater Lilly VVhite.
Nymphæa lutea, VVater Lilly Yellow.
Perſicum, Perſian Lilly.
Rubrum, Red or Orange Tawny Lilly.
Rubrum præcox, Early Red Lilly.
Turcicum, Turky Lilly.
Vernum, Lilly Convally or Spring Lilly.
Variegatum, Fritillary, Checquer'd Lilly.
Liliaſphodelus, Aſphodil or Day Lilly.
Lilionarciſſus, *Tulipa*, The Tulip or true Satyrion.
Limodoron, *Orobanche*, *Cauda Leonis*, Broom Rape.
Limonium, pl. *Limonia*, Limon, Limons.
Limonium, *Bugloſſum marinum*, Marſh Bugloſs.
Lingua Cervina, *Phyllitis*, Harts or Deers Tongue.
Laciniata, Fingred Harts Tongue.
Notha, *Hermionitis*, *Splenium*, Baſtard Harts Tongue, or Mules Fern.
Linaria, *Pſeudolinum*, Flax-weed, Toad-flax.
Latifolia, Broad Leav'd.
Scopiaria, *Italorum*, Beſom Flax-weed.
Repens, *Pſeudolinum repens*, Creeping Flax-weed.
Notha, *Pſeudolinaria*, Baſtard Flax-weed.
Lingua avis, *Fraxini ſemen*, Aſh-Keys.
Lingua Bovis, *Bugloſſum Sylveſtre*, Ox Tongue.
Lingua Bubula, idem.
Lingua Pagana, *Hippogloſſum*, *Biſlingua*, *Uvularia*, Horſe Tongue the Herb.
Lingua Serpentis, *Lancea Chriſti*, *Ophiogloſſum*, Adders Tongue.
Lingua Vulneraria, idem.
Linum ſatium, Flax Manured.
Sylveſtre VVild Flax.
Catharticum, Purging Flax, Mill Mountain.
Liquiritia, *Glycyrrhiza hortenſis*, Manured or true Liquorice.
Sylveſtris, VVild Liquorice.
Lirion, *Lilium*, *Crinon*, Lilly.
Liriaſphodelus, *Liliaſphodelus*, Aſphodil Lilly.
Lirionarciſſus, *Lilionarciſſus*, Tulip, Satyrion.
Liſen, *Plantago*, Plantain.
Lithoſpermum, *Milium ſolis majus*, Gromwell.
Minus —— *Sylveſter*, Leſſer or VVild Gromwell.
Repens, Creeping Gromwell.
Lolium, *Æra Plinij*, *Triticum fatuum*, Darnel.
Rubrum, *Phœnix*, Red Darnel.
Lonchitis, *Aſplenium*, Spleenwort.
Vera, Ceterach, True Spleenwort.
Aſpera, *Pſeudolonchitis*, Rough or Baſtard Spleenwort.
Longina, *Lonchitis*, Spleenwort.
Lopina, *Caſtanea*, Cheſtnut.
Lotus arbor, Nettle Tree.
Lotus Herba, Trefoil Peaſe.
Luciola, *Lingua Serpentis vel Serpentina*, Adders Tongue.
Lunaria Arthritica, *Auricula Urſi*, *Sanicula*, Bears Ear, A VVound Wort.
Lutea Plinij, *Lutcum Vitruvij*, *Luteola*, *Herba Lutea*, *Pſeudoſtruthium Matth.* Dyers Weed.
Lujula, *Oxys*, *Trifolium acetoſum*, Wood Sorrel.
Flore albo, Wood Sorrel white Flowered.
Flore luteo, Yellow flower'd.
Lunaria minor, *Selenitis*, Moon-wort.
Lupinus, Lupine, Flat Bean, Fig Bean.
Lupulus, *Lupus ſalictarius*, *Vitis ſalictarius*, Hops.
Sylveſtris, —— *Fœmina*, —— *Septentrionalis*, Wild Hops.
Luteola, *Lutea*, Dyers Weed, Wold, Weld.
Lybica Plinij, *Populus*, The Poplar.
Lychnis ſativa, Campions Manured.
Segetum, Corn Campions.
Plumaria, Feathered Campions.
Sylveſtris, VVild Campions.
Hortenſis, —— *multiflora*, Batchelors Buttons.
Chalcedonica, *Byzantina*, Flower of Conſtantinople.

Index Latinus.

Lycium, *Pyxacantha*, *Spina Buxea*, Box Thorn.
Lycopersicum, *Malum aureum*, *Pomum amoris*, Love Apples.
Lycopsis, *Echium alterum*, VVall Bugloss.
Lysimachia lutea, Loose-strife or VVillow-herb.
Spicata, Spiked Loose-strife.
Non spicata, Loose-strife not spiked.
Siliquosa, Loose-strife Codded.

M.

Macis, Mace; the Spice.
Macropiper, *Piper longum*, Long Pepper.
Magopistana, *Sagittaria*, *Sagitta*, Arrow-head.
Mahaleb, *Phyllyreæ species*, Privet, Prim-print.
Macaleb, *Ligustrum nothum*, Bastard Privet.
Majorana, *Amaracus*, *Sampsycum*, Marjoram.
Hortensis, Sweet Marjoram.
Latifolia, Pot Marjoram.
Sylvestris, *Cunila bubula*, VVild Marjoram.
Hircina, *Tragoriganum*, Goats Marjoram.
Mala insana, Mad Apples.
Malabathrum, *Folium Indum*, Indian Leaf.
Malacocissas, *Hedera terrestris*, Ale-hoof.
Malache, *Malva*, Mallow.
Malva communis, Common Mallow.
Palustris, *Althæa*, Marsh Mallow.
Verbenaca, *Alcea*, Vervain Mallow.
Arborea, —— *Rosea*, *Althæa Frutex*, Shrub Mallow.
Arborescens, Hollihocks.
Major, Garden Mallow, Hollihock.
Malvaviscum, *Malva ibiscus*, *Althæa*, Marsh Mallow.
Malum, pl. *Mala*, An Apple, Apples.
Malum Amoris, Love Apple.
Malum Armeniacum, An Apricock.
Malum Adami vel Musæ, Adams Apple.
Malum aureum, —— *Hespericum*, An Orange.
Malum aurantium, idem.
Malum Caninum, *Malum Mandragoræ*, Mandrake Apple.
Malum Claudianum, Queen Apple.
Malum Citrium, A Citron.
Malum Cotoneum, A Quince.
Malum Cydonium, idem.
Malum Granatum, Pomgranate.
Malum Hespericum, An Orange.
Malum insanum, Mad Apple.
Malum Limonium, A Limon.
Malum Mori, Mulberry.
Malum Medicum, *Citrium*, A Citron.
Malum Mespilum, A Medlar.
Malum Nectareum, A Nectarine.
Malum Persicum, A Peach.
Malum Punicum, A Pomgranate.
Malum Sanguineum, Summer Goldings.
Malum Sylvestre, The Crab Apple.
Malum Terræ, Round Birthwort Root.
Malum Terræ Porcinum, Sowbread Root.
Malum Turcicum, Great round Citron, Shaddock.
Manibot, *Jucca*, *Yucca*, *Hiucca*, Indian Bread.
Manna, Calabrian or Purging Manna.
Manus Martis, *Quinquefolium*, Cinkfoil.
Mandragora Mas, Male Mandrake.
Fœmina, Female Mandrake.
Matriphyllum, *Facea nigra*, Black Knapweed.
Marrubium, *Prassium*, Horehound.
Album vulgare, Common White Horehound.
Nigrum, —— *Hispanicum*, Black Horehound.
Aquaticum, —— *Aquatile*, Water Horeh.
Nothum Spurium, *Stachys*, Wild Horehound.
Martagon, *Lilium Montanum*, Mountain Lilly.
Marum, *Clynopodium Dioscorid.* Herb Mastich.
Repens, Creeping Herb Mastich.
Syriacum, Assyrian Herb Mastich.

Marathrum, *Fœniculum*, Fennel.
Dulce, Sweet Fennel.
Agreste —— *Sylvestre*, *Hippomarathrum*, Horse Fennel, Wild Fennel.
Marinum, *Cenhmum*, Sea Fennel.
Porcinum, *Peucedanum*, Hog Fennel.
Marana, *Stramonia*, *Stramonium*, Thorn Apple.
Minor, *Datura*, Datury.
Marinella, *Pes magnum*, Great Valerian.
Marmarites, *Fumaria*, Fumitory.
Marmorella, *Eupatorium*, *Agrimonia*, Agrimony.
Mastiche, *Lentiscus*, Mastich Tree.
Mastiches, *Laserpitium*, Laser-wort.
Matresillon, *Jacea nigra*, Common Knapweed.
Matricalis, *Verbena*, *Verbenaca*, Vervain.
Matricaria, *Febrifuga*, Feverfew.
Matrisylva, *Periclymenum*, Woodbind.
Matrisalvia, *Sclarea*, *Horminum*, Clary.
Matabalna, *Anisum*, Anise.
Materfilion, *Jacea nigra*, Common Knapweed.
Mater Herbarum, *Artemisia*, Mug-wort.
Meconium, *Succus Papaveris*, Expressed Juice of Poppies, Meconium.
Mecoacanna, *Mechoacan*, Bryony of Mexico and Peru.
Medica, *Trifolium Cochleatum*, Claver Grass, Medick Fodder, St. Foin.
Melampyrum, *Crataegonum*, Cow Wheat.
Melampodium, *Helleborus niger*, Black Hellebor.
Melamphyllos, *Branca Ursina levis*, Smooth Bears Breech.
Melaspermum, *Melanthium*, *Nigella*, Gith, Katharine Flower, Roman Nigella.
Melanthium, *Nigella Romana*, idem.
Melanospermum, *Piper nigrum*, Black Pepper.
Meleagris flos, *Fritillaria*, Checquered Daffodil, Fritillary.
Melocacta, *Melocarduus Echinatus*, Melon Thistle of America.
Melopepo, *Melopepon*, *Melo Moschatus*, Musk Melon.
Melissophyllum, *Melites*, *Melissa*, *Citrago*, Bawm.
Meliandrum Plinij, *Lychnis Sylvestris*, Wild Campion.
Melilotus, *Corona Regia*, *Trifolium odoratum*, Melilote.
Melicha, *Sorgum*, Turkey Millet.
Meline, *Panicum*, Panick, Guinny Corn.
Meline Varronis, *Milium*, Millet.
Melissa, *Melissophyllum*, *Citrago*, *Melites*, Bawm.
Melo, *Pepo hortensis*, Melon or Pompion.
Memecyllon, *Fructus Arbuti*, Berries of the Strawberry Tree.
Memithe, *Glaucium*, *Pomum Amoris*, Apples of Love.
Menianthes Theophrasti, *Trifolium Palustre*, Water Trefoil, Buck Bean.
Menogenion, *Peonia*, Peony.
Mentha sellina, *Cattaria*, *Nepeta*, Nep or Cat Mint.
Mentha, *Cattaria*, idem.
Mentha Saracenica, *Balsamita major*, *Mentha Græca vel Romana*, Costmary.
Mentastrum, *Sysimbrium*, *Sylvestre*, Horse Mint.
Mentastrum aquaticum, Water Mint, Fen Mint.
Mercurialis Anglica, *Bonus Henricus*, English Mercury.
Mercurialis Gallica, French Mercury.
Canina, —— *Sylvestris*, *Cynocrambe*, Dogs Mercury.
Merzenium, *Majorana*, Marjoram.
Mespilus, Medlar Tree.
Meum, *Athamanticum*, *Anethum Sylvestre*, *Meum Antiquorum*, Spignel.
Meu, *Meum*, idem.

Mezereon,

Index Latinus.

Mezereon, *Chamelæa Germanica*, Spurge Olive, Mezereon.
Militaris, *Sedum aquaticum minus*, Small Water Sengreen, or Water Soldier.
Milium, *Cenchros*, *Meline varronis*, Millet.
Millum ſolis, *Lithoſpermum majus*, The Common or Greater Gromwell.
Minus, —— *Sylveſtre*, Small or Leſſer.
Repens, Creeping Gromwell.
Milleſolium, *Militaris*, *Stratiotes*, *Chyliophyllus*, *Achillea*, Yarrow.
Achilleum, *Achilleas*, Achilles or Noble Yarrow or VVound-wort.
Luteum, Yellow Yarrow.
Aquaticum, —— *Paludoſum*, VVater Yarrow.
Fæniculatum, Fennel Leav'd Yarrow.
Millegrana, *Herniaria*, *Herniola*, *Empetron Tragi*, Rupture-wort.
Millemorbia, *Scrophularia*, *Ficaria*, Fig-wort.
Mimmulus, *Nummulus Plinij*, *Nummularia*, Money-wort, Herb Twopence.
Mirabile Peruvianum, *Jaſminum Mexicanum*, Marvel of Peru.
Molybdena, *Dentillaria Rondoletij*, *Plumbago Plinij*, Plinies Lead-wort.
Mollugo, *Rubia notha*, Baſtard Madder.
Mollugo vulgatior, *Gallium album*, VVhite Flower'd Ladies Bedſtraw.
Moly, *Allium Cepeum*, Moly, Onion Garlick.
Momordica, *Balſamita mas & major*, Coſtmary.
Monophyllum, *Unifolium*, One Blade.
Morella, *Solanum hortenſe*, *Solatrum*, Garden Nightſhade.
Lethalis, Dwale, Deadly Nightſhade.
Somnifera, Sleepy Nightſhade.
Circæa, Inchanters Nightſhade.
Arboreſcens, Shrubby Nightſhade.
Morion, *Anthropomorphos*, *Circæa*, *Mandragora mas*, Male Mandrake.
Fœmina, Female Mandrake.
Morſus Diaboli, *Succiſa*, *Nigina Plinij*, *Geum antiquorum quorundam*, Devils Bit.
Morſus Gallinæ, *Alſine Hederacea vel Hederula*, Hen-bit, Chickweed Ivy Leav'd.
Morſus Ranæ, *Nymphæa parva*, *Nymphæa alba minima*, Frog-bit.
Morus, *Sucaminos*, Mulberry Tree.
Mula Herba, Ceterach, True Spleenwort.
Multi radix, *Centaurium minus*, The Leſſer Centory.
Multi Bona, *Petroſelinum*, Parſly.
Muſcari, *Hyacinthus Botroides Moſchatus*, Musked Grape Flower'd Jacinth.
Muſcipula, *Viſcaria*, Catch Fly.
Muſcus, *Bryon Plinij*, Moſs.
Terreſtris, Ground Moſs.
Arboreus, Tree Moſs.
Pulmonarius, Lungwort Moſs.
Quernus, *Quercinus*, Oak Moſs.
Marinus, Sea Moſs.
Myagrum, *Melampyrum*, Gold of Pleaſure.
Nothum, *Pſeudomyagrum*, VVild Gold of Pleaſure.
Myacantha, *Aſparagus*, Aſparagus.
Myoſotis, *Auricula Muris*, *Piloſella*, Mouſe Ear.
Myoſuros, *Cauda Muris*, *Holoſteum Loniceri*, Mouſe Tail.
Myrtillus, *Myrſine*, Myrtle.
Myrtus nobilis, Noble Myrtle.
Myrobalanum, A Myrobalane.
Myrrhis Smyrrhiza, *Smyrnium*, *Conilus*, Cilley, Sweet Cilley.
Myrica, *Tamariſcus*, *Tamarix*, Tamarisk.
Myoperonon, *Doronicum*, VVoolfsbane Antidote.
Myriophyllon, *Milleſolium*, Yarrow.
Myrrha, Myrrh, the Roſin.
Myrtus Brabantica, *Rhus Sylveſtris*, *Myrtus Anglica*, Sweet Gaul.
Myrtus notha, *Pſeudomyrſine*, *Elæagnus Cordi*, idem.
Myxarion, *Sebeſten*, The Fruit Sebelten.

N.

Napellus, *Thora*, *Cappa Monachi*, *Luparia*, Monks-hood, Helmet-flower.
Napus, *Bunias*, Garden Navew Gentle.
Sylveſtris, —— *Agreſtis*, *Bunium*, Wild Navew.
Nana Bauhini, *Ananas*, Pine Apple.
Narciſſus latifolius, Daffodil broad Leav'd.
Flore ſimplici, Single Flower'd Daffodil.
Flore multiplici, Double Flower'd Daffodil.
Narciſſus anguſtifolius, Daffodil narrow Leav'd.
Simplex, Single Flower'd Daffodil.
Flore pleno, Double Flower'd Daffodil.
Narciſſus, *Juncifolius*, Ruſh Daffodil, Junquile.
Flore ſimplici, *Bulbus Vomitorius*, Single Flower'd.
Flore pleno, *Bulbus Vomitorius flore pleno*, Double Flower'd.
Marinus, —— *Littoralis*, Sea Junquile.
Narciſſus nothus latifolius, *Pſeudo narciſſus latifolius*, Broad Leav'd Baſtard Daffodil.
Flore ſimplici, Single Flower'd.
Flore multiplici, Double Flower'd.
Narciſſus nothus anguſtifolius, Baſtard Daffodil narrow Leav'd.
Flore ſimplici, Single Flower'd.
Flore pleno, Double Flower'd.
Juncifolius, Ruſh Leav'd Baſtard Daffodil.
Narciſſus marinus, Sea Daffodil.
Lilio variegatus, Checquer'd Sea Daffodil, Fritillary Daffodil.
Nardus Indica, Indian Spicknard.
Celtica, Celtick Nard or Spicknard.
Cretica, *Phu magnum*, Great Valerian.
Ruſtica, *Aſarum*, Aſarabacca.
Naronica radix, *Iris*, Flower-de-luce Root.
Narthax, *Ferula*, Fennel Giant.
Naſturtium Hybernum, *Barbarea*, Winter Creſs.
Naſturtium hortenſe, Garden Creſs.
Aquaticum, *Syſimbrium aquaticum*, VVater Creſs.
Arabis, *Draba*, Turkey or Arabian Creſs.
Agreſte, —— *Sylveſtre*, VVild Creſs.
Barbarea, Winter Creſs.
Cardamantica, *Iberis*, *Lepidium Campeſtre*, Sciatica Creſs.
Cardamine flore pleno, Double Flower'd Meadow Creſs.
—— *Hybernum*, Winter Creſs.
Indicum, Indian Creſs.
Impatiens, *Noli me tangere*, Impatient Creſs.
Pratenſe flore ſimplici, *Syſimbrium alterum*, Meadow Creſs ſingle Flower'd.
Petræum, Stone or Rock Creſs.
Saxatile, idem.
Natrix Plinij, *Ononis vel Anonis*, *Lutea non ſpinoſa*, *Areſta Bovis*, Reſtharrow, Cammock.
Nenuphar, *Nymphæa alba*, White Water Lilly.
Neottia, *Nidus avis*, *Orchis abortiva*, Birds Neſt.
Nephriticum Lignum, Nephritick Wood.
Nepeta, *Cattaria*, *Mentha Cattaria*, —— *Fellina*, Nep or Cat Mint.
Nerium, *Neris*, Oleander, Roſe Bay.
Nicotiana, *Petum*, *Tobaccum*, Tobacco.
Hiſpanica, Spaniſh Tobacco.
Virginiana, Virginian Tobacco.
Anglica, *Hyoſcyamus luteus*, Engliſh Tobacco.

Index Latinus.

Nidus avis, *Orchis abortiva*, *Neottia*, Birds Neſt.
Nigella, *Melanthium*, Gith, Fennel Flower.
Nigella Romana, *Flos divi Catharinæ*, Katharin's Flower.
Nigellaſtrum, *Pſeudomelanthium*, Cockle.
Nilofer, *Nymphæa*, Water Lilly.
Noli me tangere, *Perſicaria ſiliquoſa*, Codded Arſmart.
Naſturtium impatiens, Impatient Creſs.
Cucumis agreſtis, Wild Cucumber.
Nummularia, *Mimmulus*, *Centummorbia*, Money Wort, Herb Twopence.
Nucula terreſtris, *Bulbocaſtanum*, Ground Nut, Earth Nut.
Nucleus Pineus, *Fructus Pini*, A Pine Nut.
Nux, pl. *Nuces*, Nut, Nuts.
Nux Græca, pl. *Nuces Græcæ*, *Amygdala*, æ, Almond, Almonds.
Nux Heracleotica, — *Preneſtina*, *Avellana*, Filbert Nut.
Sylveſtris, *Corylus*, Haſle Nut.
Nux Indica, *Coccos ferens*, Cocar Nut.
Nux Indica, *Nucula Indica*, Indian Nut.
Nux Jugulans, Wall Nut.
Nux Moſchata, Nutmeg.
Nux Veſicaria, Bladder Nut.
Nux Vomica, Vomiting Nut.
Nymphæa minima, *Morſus Ranæ*, Frog Bit.
Nymphæa alba, *Nenuphar*, White Water Lilly.
Nymphæa rubra lutea, Red or Yellow Water Lilly.

O.

Ocellus Damoſcenus, *Caryophyllus hortenſis*, Carnations, Clovegilliflowers.
Ochrus Lugdunenſis, *Ervilia*, Winged VVild Peaſe.
Ocymaſtrum Valerianthos, Dodonæus's Red Valerian, Baſil Valerian.
Ocymum vel Baſilicum hortenſe, Garden Baſil.
Caryophyllatum, Clove Baſil.
Citratum, Citron Baſil.
Petræum, *Acinus*, *Clinopodium*, Stone Baſil.
Americanum, American Baſil.
Sylveſtre, VVild Baſil.
Ocularia, *Eufragia*, *Euphraſia*, Eyebright.
Oculus Bovis, *Buphthalmum*, *Chryſanthemum Geſneri*, Ox Eye.
Verum, The True Ox Eye.
Album, VVhite Flower'd Ox Eye.
Oculus Chriſti, *Horminum Sylveſtre*, VVild Clary.
Odontis, *Dentillaria Rondoletij*, *Plumbago Plinij*, Pliny's Leadwort.
Oenochora Theophraſti, *Onagra veterum*, *Chamænerium*, *Lyſimachia ſiliquoſa*, Codded Looſeſtrife.
Oenanthe, *Filipendula*, Dropwort.
Anguſtifolia, —— *Foliis Apii*, Narrow Leav'd Dropwort.
Cicutæ facie, Hemlock Leav'd Dropwort.
Aquatica, VVater Dropwort.
Olea, *Oliva*, An Olive Tree.
Oleaſter, VVild Olive Tree.
Oleagnus, *Chamelæa*, VVidow VVail.
Oleum, Oil.
Olivarum, Oil of Olives.
Oleander, *Nerium*, Roſe Bay.
Oliva, pl. *Olivæ*, An Olive, Olives.
Olus Indiacum, *Corcoras*, *Anagallis*, Pimpernel.
Oluſatrum, *Hippoſelinum*, Alexander.
Olibanum, *Thus*, The true Frankincenſe.
Olivum, Oil of Olives.
Olivella, *Oleaſtellus*, A Dwarf Olive Tree.
Olvalidia, *Chamæmelum*, Camomil.
Omphacium, An unripe thing, whether Grapes or Olives, their Juice or Oil.

Onagra, *Chamænerium*, *Lyſimachia ſiliquoſa*, Codded Looſe-ſtrife.
Onobrychis, *Campanula arvenſis*, *Speculum Veneris*, *Caryophyllus Segetum*, Corn Campanula, Corn Pink, Ladys Looking Glaſs.
Onobrychis, *Caput Gallinaceum*, *Crista Galli*, Cocks Head, Red Fitching Medick Fitch.
Onoſma, *Bugloſſum Sylveſtre*, *Echioides*, VVild Bugloſs.
Onocordon, *Gramen Phalaroides*, Canary Graſs.
Ononis, *Anonis*, *Areſta Bovis*, *Remora Aratri*, Reſtharrow.
Onopordum, *Acanthium*, *Carduus Tomentoſum*, VVoolly or Cotton Thiſtle.
Onopyxus, *Carduus Aſininus*, —— *Sylveſtris*, Aſſes or Highway Thiſtle.
Ophioglosſum, *Lingua Serpentis*, Adders Tongue.
Ophioſcordon, *Allium Viperinum*, Vipers Garlick.
Ophris, *Biſolium*, *Pſeudorchis*, *Helleborine quorundam*, Twa Blade.
Paluſtris, Marſh Twa-Blade.
Opium, *Papaveris ſuccus condenſatus*, Opium or the condenſed Juice of Poppies.
Opobalſamum, The Fineſt Sort of Balm.
Opopanax Gummi, The Gum Opopanax, proceeding from Panax or All-heal.
Opſago, *Solanum ſomniferum*, Sleepy Nightſhade.
Opuntia Plinij, *Ficus Indica*, Indian Fig, which Eaten, colors the Urine Red.
Orbicularis, *Artanita*, *Panis Porcinus*, *Cyclamen*, *Cyclaminus*, Sow bread.
Orchis, *Cynoſorchis*, *Teſticulus*, *Teſticuli Canis*, Dogs Stones.
Orchis abortiva, *Orobanche Geſneri*, *Neottia*, *Coagulum Terræ*, Birds Neſt.
Orchis Hircina, *Tragorchis*, Goats Stones.
Orchis Morio, Fools Stones.
Orchis Palmata, Fenny or Handed Stones.
Orchis Serapias, Serapias Stones.
Oreoſelinum, *Petroſelinum*, Garden Parſly.
Origanum, *Cunila*, *Cunila Bubula*, *Majorana nostra vel ſylveſtris*, Origanum.
Orminum, *Horminum*, *Sclarea*, Clary.
Orneogloſſum, *Fraxinus*, Aſh Tree.
Ornus, *Malia*, *Fraxinus*, idem.
Sylveſtris, VVild Aſh or Quicken Tree.
Ornithagalum, Star of Bethlehem.
Album, *Bulbus Leucanthemus minor*, VVhite Star of Bethlehem.
Ornithopodium, *Pes Avis*, *Polygalum Dioſcoridis quorundam*, Birds Foot.
Nodoſum, *Herniaria*, Knotted Birds Foot, a Kind of Vetch.
Orobanche, Broom Rape.
Geſneri, *Nidus Avis*, *Orchis abortiva*, *Neottia*, Birds Neſt.
Orobellon, *Pæonia*, Peony.
Mas, Male Peony.
Fœmina, Female Peony.
Orobus, *Ervum*, *Vicia amara*, Orobus or Bitter Vetch.
Hortenſis, —— *vulgaris*, *Mochus*, Garden Orobus.
Sylveſtris, *Ervum Sylveſtre*, *Catenance Geſneri*, *Lathyrus Sylveſtris minor*, VVild Orobus or Bitter Vetch.
Sylvaticus, *Sylvarum*, VVood Orobus.
Gramineus rubens, *Lathyrus Sylveſtris Gramineus ruber*, Crimſon Flower'd, Scarlet Graſs Vetch.
Creticus, Candy Orobus or Bitter Vetch.
Orontium, *Os Leonis*, *Leo Herba*, *Canis Cerebrum*, *Antirrhinum*, Calves-Snout.

Index Latinus.

Orvalla, Sclarea, Horminum, Clary.
Sylveſtris, Oculus Chriſti, Wild Clary.
Oryza, Oryzon, Arzi, Rice.
Oſteocollon, Conſolida major, Symphytum, Comfrey.
Os Leonis, Antirrhinum, Orontium, Leo Herba, Canis Cerebrum, Calves-Snout.
Oſyris, Linaria, Pſeudolinum, Flaxweed, or Toad-flax.
Notha, Pſeudolinaria, Baſtard Flaxweed.
Latifolia, Broad Leav'd Flaxweed.
Repens. Pumila, Creeping Flaxweed.
Scopea, Scopiaria Italorum, Beeſom Flaxweed, or Toadflax.
Oſtrutium, Imperatoria, Aſtrantia, Maſterwort.
Oſmunda Regalis, Filix florida, —— Aquatica, Flowering Fern, Water Fern, Oſmund Royal.
Othonna Rondoletij, Anemone, Herba venti, Anemony, Wind Flower.
Oxalis, Acetoſa Hortenſis, Lapathum acidum, Rumex acidus, Garden Sorrel.
Sylveſtris, —— minor, Accetoſella, Lapathiolum acidum, Field Sorrel.
Nemoralis, Oxytriphyllum, Trifolium acetoſum, Alleluja, Lujula, Oxys, Wood Sorrel.
Oxys, Lujula alba, Oxytriphyllum album, White Wood Sorrel.
Lutea, Yellow flower'd Wood Sorrel.
Oxya, Fagus, Beech Tree.
Oxyacantha, Amyrberis Seraponis, Haw Thorn.
Oxymyrſine, Ruſcus, Bruſcus, Scopa Regia, Butchers Broom, Knee Holm.
Oxycedrus, Prickly Dwarf Cedar.
Oxyacanthus, Pyracantha, Evergreen Thorn.
Oxyſchænus, Juncus acutus, Common hard ſharp-pointed Ruſh.
Oxyphœnix, Tamarindus, Tamarind Tree.

P.

Pæderota, Acanthus, Bears Breech.
Pæonia, Panthiceraton, Glacyſide, Dulciſida, Aglaophotis, Herba caſta, Peony.
Mas, Male Peony.
Fœmina, Female Peony.
Flore duplici, Double flower'd Peony.
Palatia, Cyclamen, Cyclaminus, Panis Porcinus, Artanita, Sow Bread.
Palma, Phœnix, Date Tree.
Palma Chriſtus, Ricinus, Great Spurge.
Paliurus, Rhamnus terius Dioſcoridis, Jews Thorn, that with which, as it is ſaid, Chriſt was Crowned.
Panaratium Marinum, Hemerocallis Valentina, Pancratium flore Lilij, Scilla Marina, The Poiſonous Sea Squill.
Panava, Lignum Molucenſe, Moluccas Tree.
Panax magna, Panaces magnum, Allheal Great.
Herculea, Hercules's Woundwort, Allheal.
Herculea altera, Hercules's other Allheal Common.
Coloni, Stachys Paluſtris, —— aquatica, Clowns Woundwort, Allheal.
Aſclepia, Æſculapius's Allheal.
Americana, American Allheal, or Woundwort.
Paludapium, Apium, Apium paluſtre, —— aquaticum, Smallage, Water Parſly.
Hortenſe, Apium Hortenſe, —— Criſpum, Garden Smallage, or Sallary.
Dulce, Apium dulce, Sweet Smallage.
Panicum, Melinc, Melinus, Dochon, Panick.
Panis Cuculi, Lujula, Alleluja, Trefolium acetoſum, Oxys, Oxytriphyllon, Wood Sorrel.
Panis Porcinus, Artanita, Cyclamen, Cyclaminus, Palatia, Sow Bread.
Pappas, Battata Anglicana, Engliſh Potatoes.
Hiſpaniarum, Spaniſh Potatoes.
Virginiana, Virginian or American Potatoes.
Papaver Hortenſe, —— ſativum, Mecon, Garden Poppy.
Album ſativum ſimplex, White ſingle Poppy.
Album multiplex, White double Poppy.
Nigrum ſativum ſimplex, Black ſingle Poppy.
Nigrum vel purpureum multiplex, Double Black Poppy.
Rubrum ſativum ſimplex, Red ſingle Poppy.
Rubrum multiplex, Double Red Poppy.
Rhœas flore multiplici, Double Corn Poppy.
Spinoſum, Thorney Poppy.
Papaver ſylveſtre, —— Segetum, —— Erraticum, Papaver Rhœas, Wild or Corn Poppy.
Nothum, Argemone, Argemonia, Baſtard Wild Poppy.
Cornutum, —— Corniculatum, Horned Wild Poppy.
Spumeum, Spattling Poppy.
Papaverculum, Leontopetalon, Pes Leoninus, Brumaria, Lions Leaf, Lions Foot, Oaken Turnep, Black Turnep.
Papillaris, Lampſana, Dock Creſs.
Papyrus, Papirus Nilotica, —— Ægyptica, Paper Reed.
Paralytica alpina, Auricula Urſi, Sanicula Urſina, Bears Ear.
Paralyſis Herba major, Primula veris major Arthritica, Cowſlip.
Minor, Primula veris minor, Primroſe.
Parietaria muralis, Helxine, Herba muralis, Pellitory of the Wall.
Hiſpanica, Pyrethrum, Pellitory of Spain.
Notha, Imperatoria, Maſter-wort.
Paronychia, Whitlow Graſs, Nail-wort.
Folio rutaceo, Whitlow Graſs Rue Leav'd.
Parthenium, Matricaria, Febrifuga, Featherfew.
Paſtinaca latifolia ſativa, Staphylinus latifolius, Garden Parſnep.
Sylveſtris, Elaphoboſcum Plinij, Wild Parſnep.
Inſana, Mad Parſnep, Madnep.
Vaccina, Sphondilium, Spondilium, Cow Parſnep.
Aquatica latifolia, Sium, Broad Leav'd Water Parſnep.
Aquatica anguſtifolia, Narrow Leav'd Water Parſnep.
Paſtinaca tenuifolia ſativa, Garden Carrot.
Sylveſtris, Daucus, Wild Carrot.
Cretica, Daucus Creticus, Candy Wild Carrot.
Pecten Veneris, Scandix, Acus Veneris, Acula Scanaria, Shepherds Needle.
Pection, Conſolida major, Symphytum, Comfrey.
Pedicularis, Pedicularia, Chriſta Galli, Louſe-wort, Red Rattle Graſs.
Peganum, Ruta ſylveſtris, Wild Rue.
Pratenſe —— paluſtre, Thalictrum, Thalietrum, Meadow Rue.
Pentadactylon, Ricinus, Palma Chriſti, Great Spurge.
Pentaphyllum, Quinquefolium, Cinkfoil.
Peplis maritima, Lactaria, Tithymalus paralicis, Herba Lactaria, Small Purple Sea Spurge.
Pepo, Melo, The Great Pompion or, Melon.
Sylveſtris, Wild Pompion.
Melopepon, Musk Melon.
Peplus Dodonæi, Peplos, Eſula rotunda, Round Eſula, or Spurge.
Percepier Anglorum, Scandix minor, Parſly Break Stone.

Index Latinus.

Perdicaria, *Parietaria*, *Herba Muralis*, Pellitory of the Wall.
Perdicium, idem.
Perdicia, *Helxine*, idem.
Perforata, *Hypericum*, *Fuga Dæmonum*, Johns-wort.
Minor, *Hypericum minus*, Leſſer Johns-wort.
Periſterium, *Verbena*, Vervain.
Perfoliata, *Perfoliatum*, *Diaphyllon*, Through Wax.
Periclymenum, *Volucrum majus*, *Caprifolium Matriſylva*, Woodbind.
Periploca, *Apocynum*, Dogs Bane.
Recta —— *major*, Greater or Upright Dogs Bane.
Virginiana, Virginia Silk Graſs.
Virginiana minor, Leſſer Virginia Silk Graſs.
Perſicaria maculata, Spotted or Mild Arſmart.
Non maculata, *Hydropiper*, Biting Arſmart.
Siliquoſa, *Noli me tangere*, Codded Arſmart.
Perpenſa, *Aſarum*, *Nardus Ruſtica*, Aſarabacca.
Sylveſtris, *Aſarina*, Wild Aſarabacca.
Perſolata Plinij, *Petaſitis*, *Peſtifuga*, Butter Bur.
Perſonata, *Lappa major*, *Bardana major*, Greater Bur Dock.
Minor, *Lappa minor*, *Xanthium*, *Bardana minor*, Leſſer Bur Dock.
Pes Anſerinus, *Atriplex ſylveſtris latifolia*, Gooſe Foot.
Pes Avis, *Ornithopodium*, *Polygalum Dioſcoridis quorundam*, Birds Foot.
Pes Galli, *Ranunculus*, Crowfoot.
Pes Leonis, *Sanicula major*, *Stellaria Matthioli*, *Alchimilla*, Ladies Mantle.
Pes Leporinus, *Lagopus*, *Lagopodium*, *Trifolium humile*, *Trifolium triticeum*, Hares Foot.
Pes Vituli, *Arum*, Wake Robin, Cuckow Pint.
Peſtifuga, *Petaſites*, *Perſolata*, Butter Bur.
Petaſites, idem.
Petroſelinum, *Apium Hortenſe*, Garden Parſly.
Sylveſtre, *Selinum*, *Siſum vulgare*, Wild Parſly.
Macedonicum, *Oroſelinum*, Stone Parſly.
Petroſelinum maceum, *Hippoſelinum*, *Smyrnium*, *Equapium*, Alexander.
Creticum, Cretick Alexander.
Petrapium, *Petroſelinum Macedonic*, Stone Parſly.
Petilius flos, *Flos Affricanus*, Affrican Marigold.
Petum, *Nicotiana*, *Herba Regina*, *Tabacca*, Tobacco.
Anglicum, *Hyoſcyamus luteus*, Engliſh Tobacco.
Hiſpanicum, Spaniſh Tobacco.
Americanum, American or Virginian Tobacco.
Peucedanum, *Pinaſtella*, *Fœniculum Porcinum*, Hog or Sow Fennel, or Sulphur-wort.
Majus, Great Hog Fennel.
Commune, The Common Hog Fennel.
Pumile, Dwarf Hog Fennel, or Sulphur-wort.
Phacos, *Lens*, *Lenticula*, Lentils.
Phalangitis, *Phalangium*, Spider-wort.
Phaſganum, *Gladiolus Segetalis*, *Victoralis rotundus*, Corn Flag.
Luteum, Yellow Water Flag, Skeg.
Phalaris pratenſis, Quaking or Trembling Graſs.
Phalangium, *Phalangitis*, Spider-wort.
Phaſeolus, *Smilax Hortenſis*, Kidney Bean.
Coccinus, Scarlet Bean.
Pheilandrinum, *Cicuta Paluſtris*, —— *Aquatica*, Water Hemlock.
Phellodrys, *Suber*, Cork Oak.
Philanthropos, *Agrimonia*, Agrimony.
Philaterion, *Aparine*, Gooſe Graſs, or Clivers.
Philateria, *Polemonium*, Shrubby Trefoil.
Philipendula, *Filipendula*, *Oenanthe*, Drop wort.
Anguſtifolia, *Apii folio*, Narrow Leav'd Drop-wort.
Cicutæ facie, Hemlock like Drop wort.
Aquatica, Water Drop-wort.
Philemedium, *Chelidonium majus*, Celandine.
Phœnix herba vel Jegetum, *Lolium rubrum*, Red Darnel.
Phillyrea, Mock Privet.
Phthiſis, *Pæonia Mas & Fœmina*, Peony Male and Female.
Phthirion, *Pedicularis*, *Criſta Galli*, Louſe wort, Red Rattle Graſs.
Phu majus, *Valeriana hortenſis*, *Valeriana hortenſis*, *Terdina Paracelſi*, Garden Valerian, or Setwall.
Minus hortenſe, *Valeriana minor hortenſe*, Leſſer Garden Valerian, or Setwall.
Peregrinum, —— *rubrum*, *Valeriana rubra*, *Ocimaſtrum Lobelij*, Red Valerian.
Sylveſtre, *Valeriana Montana*, —— *Paluſtris*, Wild Valerian, or Setwall.
Creticum Tuberoſum, Candy Valerian.
Phyllitis, *Lingua Cervina*, Harts Tongue.
Laciniata, Finger Harts Tongue.
Notha, *Hermionitis*, *Splenium*, Baſtard Harts Tongue, Mules Fern.
Picea arbor, *Abies mas Bauhini*, Pitch Tree.
Communis, Common Pitch Tree.
Humilis, Dwarf Pitch Tree.
Picnocamum Anquil, *Eruca notha ſylveſtris*, *Rheſeda*, Wild Baſtard Rocket.
Piloſella, *Myſotis*, *Auricula Muris*, Mouſe Ear.
Pimpinella, *Bipinella*, *Sanguiſorba*, Burnet.
Pinaſtella, *Peucedanum*, *Fœniculum Porcinum*, Hog or Sow Fennel, Sulphur-wort.
Pinus, *Peuce*, Pine Tree.
Pityides, The Kernels of the Pine Cones.
Pinguicula, *Sanicula Eboracenſis*, *Cucullata*, Butter-wort.
Piper agreſte, *Vitex*, *Agnus Caſtus*, Chaſte Tree.
Piper aquaticum, *Hydropiper*, *Perſicaria non maculata*, Biting Arſmart.
Piper nigrum commune, Common Black Pepper.
Album, White Pepper.
Longam, Long Pepper.
Indicum, *Capſicum*, *Capſicum Americanum vel Affricanum*, Red Codded Pepper.
Murale, *Illecebra minor*, *Sedum tertium Dioſcoridis*, Wall Pepper, Small Stone Crop.
Piperitis, *Lepidium*, Dittander.
Piſtachia, *Piſtacia*, *Nux Veſicaria*, Bladder Nut, The Piſtach Nut.
Piſtana, *Sagittaria*, *Sagitta*, Arrow-head.
Piſtolochia, *Ariſtolochia*, Birth-wort.
Longa, Long Birth-wort.
Rotunda, Round Birth-wort.
Repens, Creeping Birth-wort.
Virginiana, Virginia Snake root.
Piſum, *Piſum cultatum*, Peaſe Manured.
Sylveſtre, Wild Peaſe.
Album hortenſe, White Garden Peaſe.
Griſeum hortenſe, Rouncival Peaſe.
Griſeum commune, Common Field Peaſe.
Marinum, Sea Peaſe.
Cordatum, Heart Peaſe
Perenne, Peaſe Everlaſting.
Pityuſa major, *Eſula major*, *Tithymalus minor*, Eſula, or the Leſſer Spurge.
Minor, The Leſſer Eſula.
Pix, Pitch; the Roſin of the Pitch Tree.
Plantago latifolia, Common Broad Leav'd Plantain.
Anguſtifolia, *quinquenervia*, Rib-wort, or Long Narrow Leav'd Plantain.

Index Latinus.

Cervina, *Cornu Cervina*, Buck-horn Plantain.
Aquatica, Water Plantain.
Marina, *Holoſtium*, *Holoſteum*, Sea Plantain.
Platanus, The Plain Tree.
Plumbago Plinij, *Molybdena*, *Dentilaria*, Pliny's Lead-wort.
Planta Leonis, *Pes Leonis*, *Alchimilla*, *Sanicula major*, Ladies Mantle.
Plantanaria, *Xiphidion*, *Enſiculus*, *Sparganium*, *Carex*, Bur Reed.
Plumbago, *Perſicaria maculata*, The Mild (not Biting) Arſmart, Spotted Arſmart.
Pneumonanthe, *Gentiana Autumnalis*, *Campanula Autumnalis*, Calathian Violet.
Podograria, *Herba Gerardi*, *Angelica Sylveſtris*, Gout-wort, or Herb Gerard.
Polycephalus Carduus, Many Headed Thiſtle.
Polium, *Polium Montanum*, Poley, Poley Mountain.
Polyanthemum Dodonæi, *Ranunculus Aquaticus*, Water Crowfoot.
Polymonium, *Triſolium fruticans*, Shrubby Trefoil.
Polygonoides Dioſcoridis, *Vinca pervinca*, *Clematis*, *Clematis Daphnoides*, Perwinkle.
Polyneuros, *Plantago*, Plantain.
Polyſtichon, *Diſtichon*, *Crithe*, *Hordeum*, Barley.
Agreſte, Wild Barley.
Murinum, —— *ſpurium*, Wall or Way Barley.
Polyſpermon, *Atriplex ſylveſtris*, All Seed, Wild Arach.
Polytricum nigrum, *Capillus Veneris*, *Capillaris*, *Adianthum nigrum*, *Trichomanes*, Black Maiden-hair.
Polyacantha, *Carduus ſpinoſiſſimus*, Thiſtle upon Thiſtle.
Polygala recentiorum Amarella Geſneri, *Flos Solis*, Common Milk-wort, Creſs Flower.
Maritima, Sea Milk-wort, Glaux.
Polygonatum, *Sigillum Salomonis*, *Scala Cæli*, *Seracul Monardi*, Solomons Seal.
Polygonum, *Centumnodia*, *Sanguinaria*, Knot-graſs.
Minor, Knawell.
Polytrichum, *Adianthum*, *Trichomanes*, Maiden-hair.
Polypodium, *Filicula*, *Herba Filicularis*, Polypody.
Quercinum, *Querinum*, Polypody of the Oak.
Murinum, Wall Polypody.
Pomum pl. *Poma*, *Malum* pl. *Mala*, An Apple, Apples.
Adami, Adams Apple.
Amoris, Apple of Love.
Armeniacum, An Apricock.
Arantium, An Orange.
Aurantium, An Orange.
Aureum, idem.
Caninum, Mandrake Apple.
Citrium, A Citron.
Citrio, idem.
Citreum, idem.
Claudianum, Queen Apple.
Cotoneum, A Quince.
Cydonium, A Quince.
Granatum, A Pomgranate.
Hiſpericum, An Orange.
Hieroſolomita, Balſam Apple.
Inſanum, Mad Apple.
Limonium, A Limon.
Medicum, A Citron.
Meſpilum, A Medlar.
Mori, A Mulberry.
Nectareum, A Nectarine.
Perſicum, A Peach.
Panicum, A Pomgranate.
Sanguineum, Summer Goldings.
Sylveſtre, The Crab Apple, Cyder Apple.
Terræ, Round Birth-wort Root.
Terræ Porcinum, Sow-bread Root.
Turcicum, Shaddock, Great Round Citron, or Limon.
Populus. Aſpen or Popular Tree.
Albus, White Aſpen, or Popular.
Niger, Black Aſpen, or Popular,
Populago, *Tuſſilago*, *Bechium*, *Farfara*, Colts-foot.
Porrago, *Borago*, Borage.
Porrum, Leeks.
Sylveſtre, Wild Leek.
Vitium, Vine Leek.
Portulaca hortenſis, Garden Purſlane.
Aurea, Golden Leav'd Purſlane.
Viridis communis, Common Green Leav'd Purſlane.
Sylveſtris, —— *Cæpea*, Wild Purſlane.
Aquatica, Watet Purſlane.
Marina, *Halimus*, Sea Purſlane.
Potamogeiton, Pond-weed.
Fontalis, River Pondweed.
Spicata, Spiked Pond-weed.
Potentilla, *Argentina*, *Tanacetum ſylveſtre*, *Argemone*, *Argemonia*, Wild Tanſie, or Silver-weed.
Poterium, *Tragacanthum*, Goats Thorn.
Potentilla major, *Ulmaria*, *Regina prati*, Mead Sweet, Queen of the Meadows.
Porhos, *Aquilegia*, *Aquilina*, Columbine.
Præcocia, *Malum Armeniacum*, An Apricock.
Praſium, *Marrubium*, Horehound.
Album, —— *Vulgare*, Common White Horehound.
Nigrum, — *Hiſpanicum*, Black Horehound.
Aquaticum —— *aquatile*, Water Horehound.
Nothum —— *ſpurium*, *Stachys*, Baſtard Horehound.
Primula veris major, Cowſlips.
Minor, Primroſe.
Pratenſis, Oxlips.
Proſerpina herba, *Chamæmelum*, Camomil.
Proſopion, *Proſopis*, *Perſonata major*, Bur Dock.
Protomedia, *Pimpinella*, *Bipinella*, Burnet.
Prunella, *Conſolida minor*, *Solidago minor*, Self-heal.
Prunum, A Plum, or Prune.
Prunum ſylveſtre, A Bulleis.
Prunellum, A Prunella.
Pſeudocapſicum, *Strichnodendron*, *Amara dulcis*, *Dulcamara*, Bitter Sweet, Woody Night-ſhade.
Pſeudoaſphodelus, *Aſphodelus aquaticus*, Water, or Baſtard Aſphodel.
Pſeudobunium, *Barbarea*, *Naſturtium Hybernum*, Bank, or Winter Creſs.
Pſeudorchis, *Bifolium*, *Ophris*, Twa-blade.
Pſeudo dictamnus, Baſtard Outlandiſh Dittany.
Pſeudo narciſſus, Baſtard Daffodil.
Latifolius flore ſimplici, Broad Leav'd Single Flower'd Daffodil.
Latifolius flore multiplici, Broad Leav'd Double Flower'd Daffodil.
Anguſtifolius flore ſimplici, Narrow Leav'd Single Daffodil.
Anguſtifolius, *flore pleno*, Narrow Leav'd Double Flower'd Daffodil.
Juncifolius, Ruſh Leav'd, Junquile.
Marinus, Baſtard Sea Daffodil.
Pſyllium, *Pulicaria*, *Herba pulicaris*, Flea-wort.
Ptarmica ſylveſtris, *Sternutamentaria*, Sneez-wort.
Pteris, *Filix*, Fern.
Mas, Male Fern.
Fœmina, *Nymphæopteris*, Brake, Female Fern.
Querna, —— *Quercina*, Oak Fern.
Repens, *Dryopteris repens*, Creeping Oak Fern.

Pulicaria,

Pulicaria major, *Coniza major*, *Amellus montanus Columellæ*, The Greater Flea-bane.
Minor —— *Fœmina*, Leſſer Flea-bane.
Pumila, *Chamæconiza*, Dwarf Flea-bane.
Aquatica —— *Paluſtris*, *Conſolida paluſtris*, Water Flea-bane.
Pulegium, *Glecum*, Pennyroyal.
Vulgare, Common Pennyroyal.
Surrectum, Upright Pennyroyal.
Anguſtifolium, Narrow Leav'd Penniroyal.
Pulmonaria, *Lichen*, Lung-wort.
Aurea, *Cherchorus Dalechampij*, —— *Gallorum*, Golden Lung-wort.
Arborum, *Lichen Arborum*, *Pulmonaria fungoſa*, Tree Lung-wort.
Maculoſa, *Symphytum Maculoſum*, Spotted Lung-wort, Spotted Cowſlip.
Pulſatilla, *Apium riſus*, *Herba Sardoa*, Paſque Flower.
Alba, White Paſque Flower.
Rubra, Red Paſque Flower.
Purpurea, Purple Paſque Flower, or Parſly Laughing.
Pyracantha, Evergreen Thorn.
Pyrethrum, *Ptarmica*, Pellitory of Spain.
Pyrethrum ſylveſtre, *Ptarmica ſylveſtris*, Sneez-wort.
Pyrola, *Tintinnabulum Terræ*, *Limonium Cordi*, Winter Green.
Pyrum, pl. *Pyri*, A Pear, Pears.
Pyrus, Pear Tree.
Pyxacantha, *Lycium*, Box Thorn.

Q.

Quemi, *Nigella*, *Melanthium*, Fennel Flower, Gith, or Nigella.
Quercus, *Robor*, *Robur Nigella*, *Drys*, *Jovis arbor*, An Oak.
Quadrifolium, *Lotus herba*, Peaſe Trefoil.
Quinquefolium, *Pentaphyllum*, Cinkfoil.
Quinquenervia, *Plantago minor*, Rib-wort leſſer, Long Leav'd Plantane.

R.

Radiolus, *Phyllitis*, *Lingua Cervina*, Harts Tongue, Deers Tongue.
Radix Cava, *Fumaria Radice Cava*, Hollow Root, Caveous Fumiterry.
Radix dulcis, *Glycyrrhiza*, *Liquiritia*, Liquorice.
Radix Helenæ, *Zizipha*, Bead Tree.
Radix naronica, *Iris*, Flower-de-luce Root.
Radix ſpiritus Sancti, *Angelicæ*, Angelica Root.
Ragioli, *Fœniculum*, Fennel.
Ranunculus communis, *Pes Cervinus*, Common Crowfoot.
Arvus vel arvorum, Field Crowfoot.
Aquaticus, —— *Paluſtris*, Water Crowfoot.
Nemoralis, —— *Nemoroſus*, Wood Crowfoot.
Globoſus, Globe Crowfoot.
Pratenſis dulcis, Sweet Meadow Crowfoot.
Tuberoſus, Knotted or Tuberous Crowfoot.
Repens, Creeping Crowfoot.
Sativus, —— *hortenſis flore ſimplici*, Single Flower'd Garden Crowfoot.
Sativus flore duplici, Double Flower'd Garden Crowfoot.
Sylvarum, *Anemone*, Wind-flower, or Anemony.
Raphanus hortenſis, Garden Radiſh.
Agreſtis —— *Sylveſtris*, Wild Radiſh.
Raſticanus, *Armoracij Plinij*, *Thlaſpi magnum & majus Cordi*, *Thlaſpi alterum Dioſcoridis*, Horſe Radiſh.
Rapetum, *Leontopetalon*, Lions-foot, Turnep Oaken.
Rapiſtrum Segetum, Charlock
Alias arvorum Lonicera, White Field Charlock.
Aquaticum, Water Charlock.
Rapum hortenſe, Garden Turnep.
Album rotundum, White Round Turnep.
Rubrum rotundum, Red Round Turnep.
Longum vulgare, Common Long Turnep.
Luteum, Yellow Turnep.
Rapum Sylveſtre, *Rapiſtrum*, *Lonicerus Matthioli*, Wild Turnep.
Majus, *Rapum non bulboſum*, Cole Rape.
Minus, *Rapiſtrum minus*, Small Wild Turnep.
Rapum Genistæ, *Orobanche*, Broom Rape.
Rapum Terræ, *Cyclamen*, *Cyclaminus*, *Artanita*, Sow Bread.
Rapum Antonij, Double Batchelors Buttons.
Rapunculus, Rampions.
Spicatus, *Alopecuroides*, Great Rampion.
Nemoroſus, Wood Rampion.
Corniculatus, Horned Rampion.
Sylveſtris, *Campanula minor*, Wild Rampion.
Rapuntium, *Rapunculus*, idem.
Reſeda, *Eruca Sylveſtris Notha*, Baſtard Wild Rocket.
Regina Prati, *Ulmaria*, Mead Sweet, Queen of the Meadows.
Remora aratri, *Areſta bovis*, *Anonis*, Reſt-harrow.
Reſina, Roſin.
Pini, Roſin of the Pine Tree.
Terebinthi, Roſin of the Turpentine Tree.
Piceæ, Roſin of the Pitch Tree.
Cedri, Roſin of the Cedar Tree.
Abietis, Roſin of the Fir Tree.
Cupreſſi, Roſin of the Cypreſs Tree.
Laricis, Roſin of the Larch Tree.
Reſta bovis, *Areſta bovis*, *Anonis*, *Remora aratri*, Reſt-harrow.
Rhabarbarum, *Rha*, *Rheon*, *Rha*, Rheubarb.
Indicum vel Turcicum, Indian Rheubarb.
Ponticum, Pontick Rheubarb.
Notham, *Pſeudo Rha*, *Hippolapathum rotundifolium*, Baſtard Rheubarb.
Monachorum, Monks Rheubarb, Garden Patience.
Rhodia radix, Roſe Root, Rhodium.
Rhodium Lignum, idem.
Rhus, *Rhous*, *Fluida Gaza*, Sumach.
Coriaria, Carriers Sumach.
Sylveſtris, Wild Sumach.
Rhododaphne, *Oleander*, *Nerium*, Roſe Bay.
Rhododendron, idem.
Ribes, *Ribeſium*, Currans.
Ricinus, *Palma Chriſti*, Great Spurge.
Rima Maria, *Alliaria*, *Alliaſtrum*, Jack by Hedge.
Rincus marinus, *Crithmum*, *Fœniculum marinum*, Sampire.
Spinoſus, Thorney Sampire, Sea Parſnep.
Aureus, *Chryſanthemum Lobelij*, *Anthyllis major Cordi*, *Anthyllis prima Dioſcoridis*, Golden Flowered Sampire.
Robertiana, *Herba Roberti*, *Geranium Robertianum* Herb Robert.
Robor, *Robur*, *Quercus*, An Oak.
Roccella Tinctorum, *Fucus marinus*, Sea Wrack.
Roraſtrum, *Bryonia*, Bryony.
Rorella, *Ros Solis*, *Roſa Solis*, *Rorida*, Sun Dew.
Roſa hortenſis, Garden Roſe Buſh.
Eglenteria, Sweet Briar.
Canina, Wild Briar Buſh.
Alba, White Roſe.
Rubra, Red Roſe.
Damaſcena, Damask Roſe.
Moſchata, Musked Roſe.

Index Latinus.

Roſmarinus, *Roſmarinum*, **Libanotis** *Coronaria*, Common Roſemary.
Anguſtifolius, Narrow Leav'd Roſemary.
Latifolius, Broad Leav'd Roſemary.
Roſa fatuina, *Pæonia*, Peony Male and Female.
Roſa Junonis, *Crinon*, *Lilium*, The Lilly.
Roſtrum Gruinum, *Gruis aut Ciconiæ*, *Geranium*, Cranes Bill.
Rubeola, Field Madder.
Rubia, *Rubia Tinctorium*, Great Madder.
Synanchia, Quinſey Madder, Crop Madder.
Minor, —— *parva*, Small Madder.
Rubus, *Rubus ſylveſtris*, *Sentis*, *Veperes*, *Batus*, *Cynosbatus*, Bramble Berry Buſh.
Rubus Cervinus, *Smilax aſpera*, Prickly Bindweed.
Rubus Idæus, Raſpberries.
Rubus monococcos, *Chamæmorus*, Knotberry Buſh.
Rubus tricoccocos, *Rubus ſegetum*, Dewberry.
Rumex, *Lapathum*, Dock.
Acutus, *Oxylapathum*, Sharp Pointed Dock.
Folio rotundo, *Hippolapathum*, Baſtard Rheubarb.
Aquaticus major, *Britanica*, Britany.
Ruſcus, *Oxymirſine Bruſcus*, *Scopa Regia*, *Centromyrrhine*, Butchers Broom, Knee Holm.
Ruta hortenſis, *Peganum*, Garden Rue.
Sylveſtris, Wild Rue.
Pratenſis, —— *Paluſtris*, *Thalictrum*, *Thalietrum*, Meadow Rue.
Capraria, *Galega*, Goats Rue.
Ruta montana, Mountain Rue.
Rutula, idem.

S.

Sabdariffa, *Alcea Americana*, American Vervain Mallow.
Sabina hortenſis, —— *vulgaris*, Garden Savin.
Baccifera, Berry bearing Savin.
Sabaler, *Satureia*, Savory.
Sabeteregi, *Fumaria*, Fumiterry.
Saccharum, Sugar.
Saccharina Arundo, The Sugar Cane.
Sacra herba, *Verbena*, *Verbenaca*, Vervain.
Sadeb, *Ruta*, *Peganum*, Rue.
Saffargel, *Malum Cydonium*, Quince.
Safferberamon, *Sparganium*, *Carex*, Sedge.
Sagapenum Gummi, *Ferulæ ſuccus*, Fennel Giant Gum Sagapenum.
Sagina, *Aſperula*, *Spergula*, Great Spurry.
Sagitta, *Piſtana*, *Magopiſtana*, Arrow Head.
Sagittaria, idem.
Salicaſtrum Plinij, *Amara dulcis*, *Dulcamara*, *Solanum arboreſcens*, Bitter Sweet, or Woody Nightſhade.
Salicaria, *Lyſimachia*, Looſeſtrife, Willow Herb.
Salicornia, *Kali majus*, Greater Glaſs-wort.
Salix, *Itea*, *Vincus*, Willow Tree.
Pumila, Dwarf Willow.
Amerina, —— *humilis*, idem.
Salix marina, *Agnus Caſtus*, Chaſte Tree.
Salivaris, *Pyrethrum*, Pellitory of Spain.
Saliunca, *Nardus Celtica*, Celtick Nard.
Salvia Romana, *Balſamita major*, Coſtmary.
Salvia hortenſis, Garden Sage.
Major, *Alba vulgaris*, Common Green Sage.
Major, *Rubra vulgaris*, Common Red Sage.
Minor, —— *Virtutis*, —— *nobilis* —— *anguſtifolia*, Sage of Virtue.
Minor, *altera*, —— *Romana*, — *Abſinthites*, Wormwood Sage.
Variegata, Party colour'd Sage.
Salvia ſylveſtris, —— *agreſtis*, *Scordium alterum*, *Scordonia*, *Scorodonia*, Wild Sage.
Nemoralis, Wood or Garlick Sage, *idem*.
Latifolia lutea, *Verbaſcum ſylveſtre* —— *fruticoſa*, *Lutea*, VVild Yellow Sage.
Anguſtifolia fruticoſa, *Phlomis*, VVild narrow Leav'd Yellow Sage.
Saluſandra, *Nigella*, Fennel Flower, Gith.
Salſirora, *Rorella*, *Ros ſolis*, *Roſa ſolis*, Sun Dew.
Salſaparilla, *Sarſaparilla*, *Volubilis Indica*, Indian Bindweed, Sarſa, Sarſaparilla.
Salvia Vitæ, *Ruta muraria*, *Adiantum candidum*, Wall Rue, or White Maiden-hair.
Sambach, *Faſminum*, Jeſſamy or Geſſamy.
Sambſium Creſcentii, *Braſſica Capitata*, Cabbage.
Sampſucum, *Amaracus*, *Majorana*, Sweet Marjoram.
Latifolium, Pot Marjoram.
Sylveſtre, *Cunila bubula*, Wild Marjoram.
Hircinum, *Tragoriganum*, Goats Marjoram.
Sambucus, *Actæ*, Elder.
Santalum album, *Sandalum*, White Sanders.
Rubrum, Red Sanders.
Luteum, Yellow Sanders.
Sanguis Herculis, *Helleborus albus*, White Hellebor.
Sanguis Draconis, The Gum Dragons Blood.
Sanguis Draconis Herba, *Lapathum ſativum ſanguineum*, Blood Wort.
Sanguinaria, *Cornu Cervi vel Cervinum*, Bucks Horn.
Sanicula vulgaris, *Diapenſia conſolida quinquefolia*, Sanicle, Heal-wort.
Magna, *Alchimilla*, Ladies Mantle, Great Sanicle.
Guttata, Spotted Sanicle, London Pride.
Urſina, Bears Ear'd Sanicle, Bears Ears.
Anguſtifolia, Narrow Leav'd Sanicle.
Sanguiſorba, *Pimpinella*, *Bipinella*, Burnet.
Magna, Great Burnet.
Parva, Small Meadow Burnet.
Sanamunda, Heath Spurge.
Sanicula Eboracenſis, *Pinguicula*, *Cucullata*, Butter Wort.
Saponaria, *Struthium*, *Viola agreſtis Tragi*, Soapwort.
Sarcocolla Gummi, Gum Sarcocol.
Sarax, *Filix*, Fern.
Sarſaparilla, *Salſaparilla*, *Volubilis Indica*, Indian Bindweed, Sarſa.
Saſſafras Lignum vel Radix, The Root or Wood of the Saſſafraſs Tree.
Satureia, *Thymbra*, Savory.
Æſtiva, Summer Savory.
Hyberna, —— *vulgaris*, Winter Savory.
Cretica, —— *Cretenſis*, Candy Savory.
Spicata, *Saxatilis vel Rupis*, Rock Savory.
Sauch, *Malum Perſicum*, A Peach.
Savina, *Sabina hortenſis*, Garden Savin.
Baccifera, Berry bearing Savin.
Satyrium, *Tulipa*, Satyrion, the Tulip.
Saxifragia anglicana, —— *pratenſis noſtra*, Our Engliſh Saxifrage.
Paluſtris, Marſh Saxifrage.
Alba vulgaris, Common White Saxifrage.
Aurea, *Lichenis facie*, *Chryſoſplenium*, *Hepatica paluſtris*, Golden Saxifrage.
Pimpinella, Burnet Saxifrage.
Rubra, *Filipendula*, Dropwort.
Scala Cæli, *Polygonatum*, Solomons Seal.
Scammonium reſina, Scammony.
Scariola, *Endivia*, *Intybus*, Endive.
Sylveſtris, Wild or Field Endive.
Scandix, *Acus Veneris*, *Peſten Veneris*, *Scanaria*, Shepherds Needle.
Scabioſa, *Pſora Ætij*, Scabious.

Index Latinus.

Scabiosa pratensis, Meadow Scabious.
Campestris —— *Segetum*, Corn Scabious.
Ovilla, Sheeps Scabious.
Hortensis vulgaris, Common Garden Scabious.
Schœnanthum, *Schœnus aromaticus*, *Juncus odoratus*, *Unguentarius*, Camels Hay.
Schœnoprassum, Rush Leek, or Cives.
Scilla, *Squilla*, Sea Onion, or Squill.
Sciffima, *Fagus*, Beech Tree.
Sclarea, *Horminum*, *Gallitricum*, *Centrum Galli*, *Geminalis*, Clary.
Scolymus Dioscoridis, *Cinera*, Hartichoke.
Scoparia, *Osyris*, *Pseudolinum*, *Linaria*, Flax-weed, Toad-flax.
Italorum, *Osyris*, Besom Flax-weed.
Latifolia, *Osyris latifolia*, Broad Leav'd Flax-weed.
Repens, *Linaria pumila*, *Pseudolinum repens*, Creeping Flax-weed.
Notha, *Pseudolinaria*, Bastard Flax-weed.
Scopa regia, *Bruscus*, *Ruscus*, Butchers Broom, Knee Holm.
Scorodonia, *Salva sylvestris*, —— *Nemoralis*, Wild Sage, Wood Sage, Garlick Sage.
Scordonia, idem.
Scordatis, *Scordium salviæ folium*, Sage Leav'd Scordium, or Water Germander.
Scordium, *Schordium*, Water Germander, Scordium.
Scorpio Theophrasti, *Genesta spinosa*, Furze Bush.
Seolopendria, *Ceterach*, True Spleenwort, or Ceterach.
Scorodoprassum, Great Mountain Leek Garlick.
Scorpioides, Scorpion Herb, Catterpillars.
Scorpiurum, *Heliotropium*, Turnsole.
Scutellaria, *Lamium peregrinum*, Strange Archangel, or Dead Nettle.
Scorzonera, *Viperaria*, *Viperina*, *Serpentina*, Vipers Grass.
Scrophularia, *Millemorbia*, *Ficaria*, *Chelidonium minus*, Fig-wort.
Secale, *Briza*, *Bryza*, *Farrago*, *Siligo veterum*, Rye.
Securidica, *Hedysarum*, Hatchet Vetch.
Seracul Monardi, *Sigillum Salomonis*, *Polygonatum*, *Scala Cæli*, Solomons Seal.
Sebesten, *Myxos*, The Sebesten.
Seigar, *Nux moschata*, Nutmeg.
Selago Plinij, *Sabina sylvestris Tragi*, Wild Savin.
Seliam, *Rapum*, Turnep.
Seligonion, *Pæonia*, Peony.
Selanion, *Crocus Vernus*, Spring Crocus's.
Seminalis, *Equisetum*, Horse Tail.
Semos, *Betula*, *Beccabungi*, *Anagalis aquatica*, Brook Lime.
Sempervivum major, *Sedum major*, *Athiales*, *Semperflorium*. *Herba Jovis*, Housleek.
Minor, Lesser Housleek.
Semefigi, *Viola Martia*, Our Common March Violet.
Semuda Theophrasti, *Betula*, Brook Lime.
Senis, *Rubus sylvestris*, Bramble Berry Bush.
Sena Alexandrina, Alexandrian Sena.
Alepponis, Aleppo Sena.
Notha, *Celutea*, Bastard Sena.
Sedum major, *Sempervivum major*, *Herba Jovis*, Great Housleek.
Minor, Lesser Housleek.
Seliga, *Saliunca*, *Nardus Celtica*, Celtick Nard.
Selinum Sij foliis, *Sium terrestre Goodyeri*, *Selinum Segetale*, Hone-wort, Corn Parsly.
Senecio, *Erigerum*, Groundsel.
Tragi, *Erigerum tomentosum*, Cotton Groundsel.
Serapias, *Orchis Serapias*, Serapias Stones.
Serpillum, *Serpyllum*, *Thymus sylvestris*, Mother Thyme, or Wild Time.
Seriphium, *Absinthium marinum*, Sea Wormwood.
Serpentaria, *Holosteum anguifugium*, Cats Plantane, Sea Plantane.
Serata, *Ceretta*. } Saw wort.
Seratula, *Centauroides*. }
Serretta, idem.
Sertula Campana, *Melilotus*, Melilote.
Sesama. }
Sesamum. } Oily Pulse.
Sisamum. }
Sesamoides, *Muscipula*, *Viscaria*, *Ixocaylum*, Catch fly.
Seseli, *Sile*, *Seseli Creticum & Æthiopicum*, Hart-wort.
Anglicanum, English Hart wort, or English Green Saxifrage.
Sicla, *Beta alba*. } White Beet.
Sicula, *Beta alba*. }
Sida Theophrasti, *Althæa Palustris*, Meadow Marsh (Mallow.
Sigillum Mariæ, *Bryonia nigra*, *Vitis nigra*, Black Bryony.
Sigillum Salomonis, *Polygonatum*, *Scala Cæli*, Solomons Seal.
Sideritis, *Stratiotes*, *Militaris*, Iron-wort, Soldiers Herb.
Silybum, *Carduus Mariæ*, Ladies Thistle.
Siligo, *Secale*, *Briza*, *Farrago*, Rye.
Siliqua dulcis, *Ceratia siliqua*, *Carobe*, Johns Bread.
Siliquastrum Plinij, *Capsicum*, Guinny Pepper, Indian Codded Pepper.
Silplicium, *Laserpitium*, Laser-wort.
Sinapi, *Thlaspi Plinij*, *Sinapis*, Mustard.
Sativum —— *hortensis*, Garden Mustard.
Sativum Rapi folio, Broad Leav'd Mustard.
Sativum album, White Garden Mustard.
Rusticum, *Nasturtium Tellorum*, *Thlaspi*, Mithridate Mustard.
Rusticum, *Thlaspi minus*, Lesser Mithridate.
Mithridaticum verum, *Thlaspi verum*, True Mithridate Mustard.
Agreste —— *Sylvestre*, Wild Mustard.
Alterum sylvestre —— *Erysimum*, *Irio Plinij*, Hedge Mustard.
Alterum latifolium, *Erysimum latifolium alterum*, Broad Leav'd Hedge Mustard.
Sylvestre verum, *Erysimum verum*, True Hedge Mustard.
Turritis vulgatior, *Turrita Lobelij*, Common Towers Mustard.
Orientale, *Nasturtium Orientale*, *Arabis*, *Draba*, Arabian or Turkey Mustard.
Sinapi Persicum, *Thlaspi*, Treacle, or Mithridate Mustard.
Sile, *Sesili*, Hart-wort.
Silaus Plinij, *Thysselium*, *Apium sylvestre*, *Hipposelinum*, *Smyrnium vulgare*, Alexander.
Sinasbarium, *Mentha aquatica*, Water Mint.
Siser. } Skirrets.
Sisarum. }
Sison, Bastard Stone Parsly.
Sison Syriacum, *Ammi*, *Ammeos*, Bishops-weed.
Sithim, *Larix*, Larch Tree.
Sium, *Pastinaca latifolia aquatica*, Water Parsnep.
Sisymbrium, *Mentha aquatica*, Water Mint.
Smilax, *Convolvulus*, *Volubilis*, Bind-weed.
Smilax aspera, *Rubus Cervinus*, Rough or Prickly Bind-weed.
Smyrnium, *Hipposelinum*, *Apium sylvestre*, Alexander, Horse Parsly.
Smyrrhiza, *Myrrhis*, Cisley.
Solanum halicacabum, *Solanum Vesicarium*, *Alkakengi*, Winter Cherry.
Carolinianum, Carolina Winter Cherry.

Index Latinus.

tm, Capſicum, Guinny Pepper.
aphyllum, Herba Paris, True Love, One Berry.
ſicarium, Alkakengy, Winter Cherry.
hortenſe, Morelle, Solatrum, Garden Nightſhade.
Somniferum, Sleepy Nightſhade.
Circeum, Inchanters Nightſhade.
Arboreſcens, Shrubby Nightſhade.
Deleterium, —— *Lethiferum* —— *Lethale*, Deadly Nightſhade, or Dwale.
Solanum arboreſcens dulce, Amara dulcis, Dulcamara, Bitter Sweet, Woody Nightſhade.
Solatrum, Solanum hortenſe, Garden Nightſhade.
Soldana, Volubilis, Convolvulus, Bind-weed.
Soldanella, idem.
Solanum Lignoſum, Amara dulcis, Bitter Sweet, Woody Nightſhade.
Soler, Milium ſolis, Lithoſpermum, Gromwel.
Solidago, Conſolida minor, Prunella, Self-heal.
Solidago minor, Bugula, Bugle.
Solidago ſaracenica, Conſolida aurea, Herba fortis, Conſound.
Soliſequium, Heliotropium, Turn-ſole.
Sonchus, Cicerbita, Lactuca Leporina, Lactucella, Sow Thiſtle.
Levis, Smooth Sow Thiſtle.
Aſper, Prickly Sow Thiſtle.
Sophia Chirurgorum, Pſeudonaſturtium ſylveſtre, Sophia Paracelſi, Thalictrum, Flix-weed.
Sorbaſtella, Sanguiſorba, Pimpinella, Burnet.
Sorbus, Service Tree.
Sorbus accuparia, Sorbus ſylveſtris, Fraxinus bubula, Wild Aſh Tree, Quicken Tree.
Sorghum, Meline Varronis, Cencros, Poſpale, Millet.
Sparganum, Platanaria, Butomos Theoph. Carex Dodonæi, Sedge, Bur Reed.
Spartum, Geniſta, Broom.
Spinoſum, Geniſta Spinoſa, Furze Buſh.
Spartum Herba, Mat-weed.
Spatula fætida, Xyris, Stinking Gladdon, Spurge Wort.
Speculum veneris, Viola ſegetum vel arvenſis, Onobrychis, Campanula arvenſis, Caryophyllus ſegetum, Venus Looking Glaſs.
Sparagus, Aſparagus hortenſis, Garden Aſparagus.
Sylveſtris, Wild Aſparagus.
Marinus —— *paluſtris*, Marſh Aſparagus.
Spelta, Zea, Ador, Triticum Cinereum vel Griſeum ariſtis munitum, Gray Wheat, Spelt, or Spelt Corn.
Spicata, Potamogeitum, Fontalis, Pond-weed.
Spergula Cordialis, Aſperula, Stellaria, Woodroof, Spurry, Frank Spurry.
Odorata noſtras, Our Common Woodroof.
Flore Cærulea —— *Cærulea arvenſis*, Blew Flowered Woodroof, or Spurry.
Repens, Funcaria Tabernæ mont. Rubra liniſolia aſpera, Woodroof Breakſtone.
Sphondylium, Spondilium, Cow Parſnep.
Spinachia, Spanachia, Olus Hiſpanicum, Spinage.
Spina infectoria, Spina Cerva —— *Cervina, Burgiſpina, Rhamnus*, Buckthorn.
Spinus, Oxyacantha, Haw Thorn, White Thorn.
Spinus niger, Spina ſtyptica, Slow Thorn, Black Thorn.
Spina acuta, Oxycanthus, Oxycantha, Amyrberis ſeraponis, Haw Thorn, White Thorn.
Spina Hirci, —— *Hircina, Tragacantha*, Goats Thorn.
Spina Cervina, Rhamnus, Buck Thorn.
Spina Judaica, Paliurus, Jews Thorn.
Spina Burgi, Spina Cervi —— *vel Cervina, Rhamnus*, Buck Thorn.
Spinamerula, idem.
Spiræa Theophraſti, Viburnum, Viorna Ruellij, Viburna vulgi, Wayfaring Tree.
Spongia, Sponge.
Splyte, Radix cava, Fumaria cavoſa, Hollow Root, Caveous Fumiterry.
Sponſa ſolis, Ros vel Roſa ſolis, Rorella, Salſi roſa, Sun Dew.
Squamaria, Dentaria major, Orobanche, Radix ſquamata, Anblatum Cordi, Tooth-wort.
Squilla, Scilla, Sea Onion, or Squill.
Squinanthum, Schænanthum, Juncus odoratus rotundus, Camels Hay.
Stachys paluſtris —— *aquatica*, Clowns All-heal.
Stachys Fuchſij —— *notha* —— *ſpuria*, Baſe Horehound.
Stache, Myrrha, Myrrh.
Statice quibuſdam, Gramen marinum majus, Great Sea Thrift, or Sea Graſs.
Staphilodendron, Nux Veſicaria Piſtachia, Piſtick or Fiſtick Nuts, Piſtaches.
Staphis agria, Herba pedicularis, Pedunculatia, Pituitaria, Staves-acre.
Stæbe, Jacea, Knap-weed.
Notha, —— *ſpuria*, Silver Knap-weed.
Stæchas, Stæchados, Caſſidony, French Lavender, Stœchas.
Stella Leguminoſa, Ornithopodium, Birds-foot.
Stellaria, Spergula, Aſperula, Woodroof.
Stellaria inguinalis, Star-wort.
Aquatica, Water Star-wort.
Stratiotes, Militaris, Milleſolium militaris, Milleſolium, Achillea ſideritis, Common Land Yarrow.
Achileus, Achilea nobilis odorata, Milleſolium nobile, Noble Yarrow Land, Achilles Noble Wound-wort.
Aquaticus, Milleſolium aquaticum — *vulgatius, Myriophyllon*, Water Yarrow.
Aquaticus violartus, Violet Yarrow.
Fæniculatus, —— *aquaticus Ranunculi flore & Capitulo*, Fennel Leav'd Yarrow.
Succiſa, Morſus Diaboli, Devils Bit.
Stramonium, Stramonia, Pomum ſpinoſum, Thorn Apple.
Struthium, Sapponaria, Viola agreſtis Tragi, Soapwort, Bruiſe-wort.
Strychnodendron, Solanum Lignoſum vel Fruteſcens, Amara dulcis, Dulcamara, Bitter-ſweet, Woody Nightſhade.
Strychnos, Solatrum, Solanum, Morella, Uva Lupina, Nightſhade.
Styrax Gummi vel Reſina, Styrax, or Storax.
Styrax arbor, Storax Tree.
Suber, Quercus ſuberreus, Cork, and Cork Oak.
Sucaram, Cicuta, Hemlock.
Succolata, Chocolata, Chocolet.
Supercilium Veneris, Viola aquatilis, Water Violet.
Sycomorus Italica, Zizipha, Bead Tree.
Sycomorus communis, Sycomore Tree.
Symphoniaca, Hyoſcyamus, Henbane.
Syſynrichion majus, Siſynrichum majus, Bulbi eſculenti genus, Great Spaniſh Nut.
Minus, ſmall Spaniſh Nut, Bulbed Baſtard Flower-de-luce.
Syringa, Flos Philadelphes, Lilach, The Lilach, Lelach, or Pipe Tree.
Synanchice Dodonæi, Rubia Synanchica Dalechampij, Quinſey Madder.
Symphytum, Conſolida major, Solidago major, Oſteocollum, Comfrey.

T.

Tabacum, *Petum*, *Nicotiana*, Tobacco.
Anglicum, *Hyoſcyamus luteus*, Engliſh Tobacco.
Hiſpanicum, Spaniſh Tobacco.
Virginianum, Virginia Tobacco.
Tacamahacca Gummi, Gum Tacamahac.
Tagates Indica, *Flos Africanus*, African or French Marigold.
Major, The Great Noble Velvet African Marigold.
Minor, The Leſſer African Marigold.
Tahaleb, *Lens Paluſtris*, Ducks Meat.
Tamarindus, The Tamarind Tree.
Tamarindi, The Fruit of the Tamarind Tree.
Tamariſcus, *Tamarix*, Tamarisk.
Tanacetum hortenſe, *Athanaſia vulgaris*, Garden Tanſie.
Sativum criſpum, Criſped or Curled Tanſie.
Lanuginoſum, Woolly Tanſie.
Verſicolor, Party Colored Tanſie.
Sylveſtre, —— *agreſte*, *Potentilla*, *Argentina*, *Argemone*, *Argemonia*, Wild Tanſie, Silver Weed.
Tapſus Barbatus, *Verbaſcum*, *Thapſus*, *Candelia Regia*, Mullein, Higtaper.
Nothus, —— *Vilis* —— *Vile*, Baſtard or Baſe Mullein.
Tinearius, —— *Blattarius*, *Blattaria*, Moth Mullein.
Tarchon, *Dracunculus hortenſis*, *Tragum*, *Draco Herba*, Tarragon.
Taraxacon, *Dens Leonis*, Dandelion.
Tartarus, *Tartarum*, Tartar or Wine Lees.
Tarſa, *Tamariſcus*, *Tamarix*, Tamarisk.
Tatula Cluſij, *Stramonia*. } Thorn Apple.
Tatoula Turcis, *Pomum ſpinoſum*. }
Taxus, *Milos Theophr. Smilax arbor*, Yew.
Telephium, *Fabaria*, *Craſſula*, *Ceraunia*, Orpine, Live Long.
Teliphano, *Doronicum*, Wolfs-bane Antidote.
Temuulum, *Folium Indi vel Indum*, Indian Leaf.
Terebinthus, Turpentine Tree.
Terebinthum, Turpentine.
Abietis, Turpentine of the Fir Tree.
Laricis, Of the Larch Tree.
Pini, Of the Pine Tree.
Terebinthi, Of the Turpentine Tree.
Cyprium, Cyprus Turpentine.
Chio, Chio or Scio Turpentine.
Strasburgenſe, Strasburg Turpentine.
Venetiæ, Venice Turpentine.
Terminthus, The Turpentine Tree.
Terramerita, *Curcuma*, Turmerick.
Turpentaria, *Betonica aquatica*, Water Betony.
Tertiola, *Panax*, All-heal, Wound-wort.
Tertionaria Bauhini, *Lyſimachia Galericulata*, The Greater Blew Flowered, or Broad Leav'd Hedge Hyſſop.
Teſticulus odoratus, *Orchies odoratus*, Sweet Cullions, or Ladies Traces.
Tetrahit, *Sideritis*, Iron-wort.
Teucrium, *Quercula major*, *Chamædrys major*, Tree or Shrub Germander.
Tetragonia, *Evonymus*, Prick-wood, Spindle Tree.
Thalictrum, *Thalietrum*, *Ruta pratenſis*, *Ruta paluſtris*, Meadow Rue.
Thalictrum majus & minus, Baſtard Rheubarb, both Great and Small.
Thalietrum, *Ruta pratenſis*, Meadow Rue.
Thapſia latifolia, Great Spaniſh ſcorching Fennel.
Thea, *Theè*, Tea, Thea, or Thee.
Thina, *Larix*, Larch Tree.
Thlaſpi, *Sinapi ruſticum*, *Naſturtium tortuosum*, Treacle Muſtard.
Mithridaticum verum, True Mithridate Muſtard.
Mithridaticum minus, Leſſer Mithridate Muſtard.
Thora, *Aconitum latifolium & montanum*, The moſt Poiſonous Wolfs-bane.
Thus, *Arbor Thuifera*, Frankincenſe Tree.
Thus Reſina, Incenſe, or Frankincenſe.
Thut, *Morus*, Mulberry.
Thymama, *Styrax*, Storax, alſo Storax Tree.
Thymbra, *Saturcia*, Savory.
Æſtiva, Summer Savory.
Hyberna —— *vulgaris*, Common Winter Savory.
Cretica —— *Cretenſis*, Candy Savory.
Saxatilis —— *ſpicata*, Rock or Spiked Savory.
Thymum, *Thymus hortenſis*, Garden Thyme.
Maſticinum, —*latifolium*, Maſtick Thyme.
Citratum —— *Limonatum*, Citron or Limon Thyme.
Sylveſtre, *Serpillum*, *Serpyllum*, Wild Thyme, Mother Thyme.
Theſſelium, *Apium ſylveſtre*, Wild Parſly, alſo Smallage.
Thymelæa, *Chamælea*, Spurge Olive, Widow-wail.
Tilia, *Philyra*, *Tela*, Line, or Linden Tree, Tile Tree.
Tithymalus, *Tithymalus Characias*, i. e. *Valiaris*, Wood Spurge.
Paluſtris, *Eſula major Germanica*, Marſh Spurge.
Paraliſis, *Lactaria*, *Herba Lactaria*, Sea Spurge.
Tintinnabulum Terræ, *Pyrola*, Winter Green.
Tomentum, *Gnaphalium*, *Centuncularis*, Cud-weed.
Tomentitia, idem.
Topiaria, *Acanthus*, *Branca Urſina*, Bears Breech.
Tordylium, *Seſeli Cretenſe*, Hart-wort of Candy.
Tormentilla, *Septifolium*, *Heptaphyllum*, *Confolida rubra*, Tormentil, Set-foil.
Tornſole, *Heliotropium*, *Scorpiurum*, *Herba cancri Ruellij*, Turn-ſole.
Tota bona, *Bonus Henricus*, *Lapathum unctuoſum*, Engliſh Mercury.
Tragacantha, Goats Thorn.
Tragacanthum Gummi, Gum Tragacanth.
Trachelium, *Cervicaria*, *Uvularia*, Throat-wort.
Tragium, *Fraxinella*, *Pſeudodictamnus*, White Baſtard Dittany.
Tragium Germanicum, *Atriplex olida*, Stinking Arach.
Tragon, *Kali ſpinoſum*, Prickly Glaſs-wort.
Tragopogon, *Barba Hirci*, —— *Hircina*, Goats Beard.
Tragopyrum, *Tragotriticum*, *Fagotriticum*, *Frumentum ſaraſenicum*, *Orymum cereale*, Buck Wheat.
Tragoriganum, *Origanum Hircinum*, Goats Marjoram.
Trapezuntica Dactylus, *Laurocerasus*, Cherry Bay.
Tribulus terreſtris, *Saliget*, Land Caltrop.
Aquaticus, —— *Lacuſtris*, Water Caltrop.
Trichomanes, *Adiantum nigrum*, *Capillus veneris niger*, Black Maiden-hair.
Trifolium, *Triphyllum*, *Trifolium*, Trefoil.
Pratenſe, Meadow Trefoil.
Album vulgare, Common White Trefoil.
Purpureum vulgare, Common Purple Trefoil.
Purpureum magnum, Great Purple Trefoil.
Album magnum, Great White Trefoil.
Purpureum minus, Small Purple Trefoil.
Album minus, Small White Trefoil.

Index Latinus.

Cordatum, Heart Trefoil.
Luteum minus, ſmall Yellow Trefoil.
Luteum minimum, ſmalleſt Yellow Trefoil.
Siliquoſum, Codded, or Claver Trefoil.
Triticeum — humile, *Lagopus*, Hare Trefoil.
Piſatum, *Lotus Piſatus*, *Lotus Sylveſtris*, *Lotopiſum*, *Lotus ſiliquoſus*, Peaſe Trefoil.
Odoratum, *Lotus urbana vel hortenſis*, ſweet Trefoil, Garden Claver.
Fragiferum, — *Veſicarium*, Strawberry Trefoil.
Stellatum, —— *Capitulis Stellatis*, Starry Trefoil.
Aſphalites —— *Bituminoſum*, ſtrong ſcented Trefoil.
Arboreſcens, *Cytiſus verus*, Right Tree Trefoil.
Arboreſcens vulgare, Common Tree Trefoil.
Paluſtre —— *Paludoſum* —— *Hircinum*, Marſh Trefoil, Buck Bean.
Cochleatum, *Medica*, Snail Trefoil, St. Foin, Medick Fodder, Claver.
Acetoſum, *Alleluja*, *Lujula*, Wood Sorrel.
Fruticans, *Polemonium*, Shrubby Trefoil.
Tripolium, Sea Star-wort.
Triſſago, *Chamædrys*, *Iva Arthritica*, *Abiga*, Ground Pine, Gout Ivy, Field Cypreſs.
Maritima, *Anthyllis Herbariorum*, Sea Ground Pine.
Triticum, *Siligo*, Wheat.
Album —— *ariſtis albis*, *Siligo ariſtis munitum*, White Wheat.
Rubrum ariſtum —— *ſpicis rubris*, Red Wheat Awned.
Rubrum, *Spica mutica*, Red not Awned.
Album muticum, *Siligo ſpica mutica*, White Wheat not Awned.
Griſeum, —— *Cinereum*, *Ariſtis munitum*, *Ador*, *Spelta*, Gray Wheat, Spelt, or Spelt Corn.
Ramoſum, —— *ſpicis multiplicis*, Many Ear'd Wheat.
Indicum, *Frumentum Indicum*, Maize Wheat.
Vaccinum, *Cratæogonum*, Cow Wheat.
Triticum amyleum, White Starch of Wheat.
Triphyllon, *Trifolium*, Trefoil.
Tuber terræ, *Cyclamen*, *Cyclaminus*, *Panis porcinus*, Sow Bread.
Tulipa, *Satyrium verum*, The Tulip, or True Satyrion.
Tulipa præcox alba, Early White Tulip.
Præcox purpurea, Early Purple Tulip.
Præcox rubra, Early Red Tulip.
Præcox lutea, Early Yellow Tulip.
Media alba, Mean White Tulip.
Media purpurea, Mean Purple Tulip.
Media rubra, Mean Red Tulip.
Media lutea, Mean Yellow Tulip.
Media viridis, Mean Green Tulip.
Serotina, Late Flowering Tulip.
Notha, Baſtard or Dwarf Tulip.
Turbith, *Herba Lactaria Meſues*, *Alypum Actuarij*, Turbith.
Turpetum, idem.
Turritis, —— *vulgatior*, *Turrita Lobelij*, Towers Muſtard.
Tuſſilago, *Farfara*, *Farugium*, *Faranum*, *Bechium*, *Ungula Cabalina*, *Populago*, Colts-foot.
Tynus, *Tinus*, *Lauruſtinus*, Wild Bay, Dwarf Bay.
Typha, *Typha aquatica*, Cats Tail, Reed Mace.
Typhium Theophraſti, *Tuſſilago*, Colts-foot.

V.

Vaccaria, Cow Baſil.
Vaccinia nigra, *Vitis Idæa Theophraſti*, Black Whorts, or Bilberry.
Paluſtris, *Vaccinium paluſtre*, Marſh Whorts, or Bilberries.
Vaccinia Nubis, *Rubus Monococcus*, *Chamæmorus*, Cloud-berry, Briar.
Valeriana hortenſis, *Phu majus hortenſe*, *Valeriana major hortenſis*, *Terdina Paracelſi*, Garden Valerian, or Set-wall.
Minor hortenſis, *Phu minus hortenſe*, Leſſer Garden Valerian
Græca —— *Peregrina* —— *Cærulea*, Greek Valerian.
Cretica —— *Tuberoſa*, Candy Valerian.
Indica —— *Mexicana*, *Tripolium Dioſcoridis*, Indian Valerian.
Rubra, *Phu peregrinum*, *Ocimaſtrum Lobelij*, Red Valerian.
Sylveſtris —— *paluſtris*, Wild Valerian.
Venerea, *Acorus*, Reed Aromatick, Flag Sweet Smelling.
Vepres, *Rubus ſylveſtris*, Bramble Berry.
Veratrum, *Helleborus*, Hellebor.
Album, White Hellebor.
Nigrum, Black Hellebor.
Nothum, *Helleboraſter*, Baſtard Hellebor.
Verengena, *Malum inſanum*, Mad Apple.
Verbaſcum, *Thapſus*, *Tapſus barbatus*, *Candelia Regia*, Mullein.
Nothum, —— *Vile*, Baſtard or Baſe Mullein.
Tinearium, —— *Blattarium*, Moth Mullein.
Verbaſculum, *Primula veris minor*, *Aliſma ſylveſtre*, Primroſe.
Verbena, *Verbenaca*, *Herculana*, *Matricalis*, *Exupera*, *Herba ſacra*, Vervain.
Vermicularis, *Illecebra*, Stone Crop, Wall Pepper.
Veronica mas, *Veronica Pauli*, *Betonica Pauli* —— *Paulina*, Speed-well, or Pauls Betony.
Veronica Pauli, idem.
Veſicaria, *Alkakengi*, *Solanum Veſicarium*, Winter Cherry.
Alba vel Caroliniana, Carolina Winter Cherry.
Veſicaria peregrina, —— *Piſum Cordatum*, Heart Peaſe.
Vernix, *Juniperi Reſina*, *Sandaracha Arabum*, Juniper Gum.
Vetonica, *Betonica*, Betony.
Aquatica, Water Betony.
Viburnum, Wayfaring Tree.
Vicia, pl. *Viciæ non amare*, Tare, or Vetch not Bitter.
Sativa —— *vulgaris*, Common Tare or Vetch.
Sylveſtris, *Cracca magna*, *Arachus*, *Vicia magna*, —— *Dumetorum*, Great Wild Vetch.
Sylveſtris minor, *Arachus minor*, *Cracca minor*, Leſſer Wild Tare or Vetch.
Sylveſtris alba, *Flore albo*, —— *Nemorum*, *Galega altera Dodonæi*, —— *Onobrychidis flore*, Wild White Tare.
Perennis, *Lathyrus perennis flore luteo*, Tare Everlaſting.
Lutea foliis Conuolvuli, *Aphaca*, *Aphaca ſylveſtris*, *Orobanche Theophraſti*, Yellow Wild Vetch.
Lactea, *Aſtragalus*, *Aſtragalus nothus*, *Aſtragaloides*, Milk Vetch.
Equina, *Solea equina*, *Ferrum equinum*, Horſe Shoe Vetch.
Securidaca, *Hedyſarum*, Hatchet Vetch.
Avitia, *Ornithopodium*, *Pes avis major & minor*, Birds-foot Vetch.
Lentiſimilis, *Anthyllis Leguminoſa*, Common Kidney Vetch.
Glycyrrhizata, Liquorice like Vetch.
Vicia amara, *Orobus*, *Ervum*, Bitter Vetch, or Orobus.
Hortenſis, —— *vulgaris*, Common Orobus.
Cretica, —— *us*, Candy Orobus or Bitter Vetch.
Sylveſtris,

Index Latinus.

Sylveſtris, Lat. *ſylveſtris minor*, VVild Orobus, or er Vetch.
Sylvarum —— *patica*, VVood Orobus.
Sylvarum latifo *Phaſeolus ſylvarum*. *Arachus Dodo* Broad Leav'd VVood Orobus, or B Vetch.
Sylvarum anguſa, Narrow Leav'd Orobus.
Graminea rube *drobus Gramineus ruber*, Scarlet Graſch.
Victorialis mas, *Alliunguinum*, Vipers Garlick.
Victoriola, *Hippogloſſu* Horſe Tongue.
Vinca pervinca, *Clema* *aphnoides*, *Chamædaphne Plinij*, Perwi
Vinciboſcum, *Periclym*, Wood-bind.
Vincetoxicum, *Aſclep* *Hirundinaria antiqua*, Swallow-wor
Vinum, Wine.
Hiſpanicum, Sp Wine.
Canarienſe, Can Wine.
Album & rubru White and Red Wine.
Viola hortenſis, *Viola* *ia*, *Ion*, March Violet.
Surrecta —— *fru*, Wild Upright Violet.
Sylveſtris vulga Common Wild Violet.
Laciniato fdio Cniana, Wild Jagged or Carolinian Vi
Dentaria, *Oralis*, Toothed Violet.
Arvenſis —— *etum*, *Campanula arvenſis*, Cor Vio
Matronalis Heſis, Dames Violet.
Flammea —— *icolor*, *Herba trinitatis*, Flame olet, Hearts Eaſe.
Viola Lunaris, —— *haria*, *Bolbonach*, *Lunaria odeta*, Stin Flower.
Mariana, overy Bells.
Matrona, *Heſris*, Dames Violet.
Nigra, — *Maia*, March Violet.
Tricolor, *Herba* *initatis*, Hearts Eaſe.
Viorna, *Clemati* *era* *Matthioli*, *Vitalba Dodonæi*, Travele Joy
Virga aurea, *Leuraris Plinij*, Golden Rod.
Viperaria, *Scorzoa*, Vipers Graſs.
Virga Sanguinaria *rnus*, Cornel Tree.
Virga Paſtoris, *Dcus major*, Wild Teaſle.
Vitis, *Vitis Vinif* —— *ſativa*, Manured Vine.
Foliis Lacin, Parſly Vine.
Sylveſtris - *Sterilis*, Wild Barren Vine.
Vitis alba, —— *lveſtris alba*, VVhite Bryony.
Nigra, *Syris nigra*, Black Bryony.
Viſnaga, *Gingidi* Tooth-pick Chervil.
Viſcum, *Ixos*, *Ixenealmi*, Miſſelto.
Viſcum, Birdlime
Viſcaria Dodonæi *ſcipula*, Catch Fly.
Vitalba, *Craſſula*, *Thium*, *Ceraunia*, Orpine.
Vitex, *Agnus Caſ* *Salix Marina*, Chaſte Tree.
Viticella, *Balſmi* Balm Appte.
Vitis Idea, *Vicin* VVhorts or Billberries.
Vitraria, *Parie* Pellitory of the Wall.
Vitrum, *Glaſtum*, oad.
Viurna, *Vior* *Gratis altera*, Travellers Joy.
Ulpicum, *Alium h* *nſe*, Garlick.
Ulmaria, *Ban* *Capri* *Hirci*, *Regina prati*, Mede Swe Meaow Sweet.
Ulmus, Elm ee.
Ulticana, *Solum ſomni* *rum*, Sleepy Nightſhade.
Ula Cabata, *Tuſſilo*, *Farfara*, *Bechium*, Coltfoot.
Unedo, *Arbus*, Strawberr Tree.
Unifolium, *Mo* *phyllum*, *Coledon ſylveſtre*, One Blad
Umbellicus Veris, *Cotyledon*, *Acetabulum Herba Coxelicum*, Navel-wrt, Penny-wort.
Vulemus, VVarden Tree.
Volubilis, *Con* *lvulus*, *Smila* Bind weed.
Urinaria, *Dens Leonis*, *Dandelion*, Pis-a-Bed.
Urtica mors —— *martua*, *Lamium*, Archangel.
Purpurea, Red Archangel, or Dead Nettle.
Alba, VVhite Archangel, or Dead Nettle.
Fœtida, *Galeopſis*, Stinking Dead Nettle.
Lutea, Yellow Archangel.
Urtica Urens, Stinging Nettle
Major, Great Stinging Nettle.
Minor, The Leſſer or moſt Stinging Nettle.
Romana —— *hortenſis*, Roman or Garden Nettle.
Uſtilago, Burnt VVheat or Corn.
Uſnea, *Muſcus*, *Bryon Plinij*, Moſs.
Terreſtris, Earth or Ground Moſs.
Arboreus. Tree Moſs
Pulmonarius, Lung-wort.
Marinus, Sea Moſs
Uva Criſpina, *Berberis*, Barberries.
Uva Criſpa, *Grossularia*, Gooſeberry.
Uva Lupina, *Sambucus aquatica*, VVater Elder.
Uva Marina, *Traganes*, *Tragos Matthioli*, Sea Cluſter, Sea Grape.
Uvularia, *Laurus Alexandrinus*, *Hippoglossum*, Horſe Tongue Bay.
Vulgago, *Aſarum*, Aſarabacca.
Vulvaria, *Atriplex olida*, Stinking Arach.

X.

Xanthium, *Bardana minor*, *Lappa Minor*, Leſſer Bur Dock.
Xanium, *Melanthium*, *Nigella Romana*, Katherine Flower, Roman Nigella.
Xyloaloes, *Lignum Aloes*, VVood of Aloes.
Xylobalſamum, Balſam VVood.
Xyphium, *Gladiolus*, *Enſis*, *Segetalis*, *Villerialis rotundus*, Corn Flag.
Xyloſteum, *Periclymenum*, VVood bind.
Xyris, *Spatula fœtida*, Stinking Gladden, Spurge VVort.
Xylum, *Bombax*, *Goſſipium*, *Cotum*, Cotton Plant.
Xyphidion, *Sparganium*, *Platanaria*, *Carex*, Sedge, Bur Reed.

Y.

Yebet, *Anetum*, Dill.
Yucca, *Hiucca*, *Jucca*, *Cazavi*, *Caſavi*, Indian Bread.
Yucca vera, *Mandiocha*, *Cazavi verum*, True Indian Bread.
Yucca malvæ foliis, *Hetich Americanum*, Mallow Leav'd or Potato-like Yucca, or Indian Bread.
Yucca foliis Aloes, Aloe Leav'd, or Suppoſitious Yucca or Indian Bread.

Z.

Zacintha, *Cichorea Verrucaria*, VVart Succory.
Zarſaparilla, *Sarſaparilla*, Common Sarſa.
Zambac, *Jaſminum*, Geſſamy.
Zarund, *Ariſtolochia*, Birth-wort.
Zedoaria, Zedoary.
Zea, *Spelta*, *Far*, *Triticum Griſeum*, Spelt Corn, Our Gray VVheat.
Zerumbeth, *Zedoaria*, Zedoary.
Zinziber, *Gingiber*, Ginger.
Zizania, *Lolium*, Darnel.
Zizipha, *Ziziphus*, Bead Tree.
Zizypha, *Jujube*, Jujube.

Eplicit INDEX LATINUS.

INDEX MORBORUM.

A.

Abortion ing, Asarabacca, Birthwort, Bryony, Centory, Citruls wild, Coquintida, Ferne, Hore-hound, Savin, Staves Acre, Wake pin.

Ab tion to pre, Burnet, Comfrey, Coffee, Med'ary, Mofs, Madder, Nightfhad Periwinkle, Plantane, Poppy, Purslewort or Grafs, Ribwort, Ruffiakeweed, Teafle, Yarrow, and all fuch Herbs as are good to ftop the Courfes.

Aches of the nut, Arfmart, Bearsbrech, Bryony, Camomil, Catmint, Elder Dwarf onewort, Goatwort, Heliebor, Jameswort, Lavender, Marjoram, Prifle, Sage, Spikenard, Swallowort, Trefoil, Woodbind.

Aches cold rife, Dittander, Saffron, Turmerick.

Afterbirth to pul, Alexander, Angelica, Camomil, Chervil, Dittany, Dropwort, Fenel, Garnick, Hartwort, Holly Rofe, Horehound, Horfe-Tongue, Lilly, Adder. Mallow, Mugwort, Penny-Royal, Poley, Radifh, Rue, Tanfie, Wake Robin.

Agues to help Betony, Calatnian, Violet, Camomil, Coltsfoot, Coriander, Dauert, Felwort or Gentian, Fetherfew, Hartseafe, Hartwort, Heath, Idebor, Hops, Horehound, Knotgrafs, Liverwort, Lovage, Muftard, Pepper, Plantane, Rheubarb, Stonecrop, Tobacco, Trefoil, Yarrow.

Ague Shivering to Help, Angelica, Birthwort, Butterbur, Calamint, Camomil, Johwort, Maſterwort, Pellitory, Pepper, Rue, Savin, Southernwood

Agues Quotia, Sea Holly. Maudlin, Radifhfeeds.

Agues Tertia, Agrimony, Cinkfoil, Dodder, Elder, Hemp Water, Hyſſop. Hypericon or Johnswort, Liverwort, Onions, Pepper, Rhubarb, Smallage Trefoil, Vervain.

Agues Quam to Cure, Aſarabacca, Bryony, Bugle, Camomil, Centory, Cinil, Confound, Dodder, Fumitory. Hellibor Black, Holly Sea, Ha, Hyſſop Hedge, Hypericon, Laſerwort, Madder, Marjoram, Mewort, Miltwait, Periwinkle, Radiſh, Salpion, Smallage, Sneezw, Spearwort, Thiſtle, Time, Turnſole, Trefoil, Turnep, Vervain, Vip, Graſs, Virginsbower, Wake Robin, Wormwood.

Air infected reſiſt, Juniper, Maſterwort, Rue.

Anthonie y, Adders Tongue, Alkanet, Allfeed, Brooklime, Buckthorn, Bloſs, Coriander. Danewort. Ducksmear, Fetherfew, Fleawort, Goberries, Hemlock, Hounds Tongue, Houſleek, Lentils, Mandrake, Nutſhade, Pellitory, Pondweed, Poppy, Rhubarb, Rue, Saffron, Thit, Wheat. Woad.

Apoplexy, Guls Wild, Fennel, Gilliflowers, Lavender, Lilly, Madder, Marjra Maſterwort, Mellilot, Pellitory, Primroſe, Sage, Thiſtle, Vine

Apoſtemes to heat, Bearsbreech, Garlick, Melilot, Moly, Onions, Rye.

Apoſtemsto Allay, Adders Tongue, Allſeed, Chickweed, Daiſy, Flax, Liverwt, Madwort, Nightſhade, Poppy, Privet, Vervain.

Appetite to uſe, Apples, Barberries, Bellflower, Bettony, Broom, Calathian, Vlet, Cherries Black, Croiswort, Currans, Dragons, Elder, Goats-ard, Goofberries, Horehound, Lettice. Lupins, Maſterwort, Mint, uſtard, Pepper, Purſlain. Radiſh. Rampion. Sampire. Savory. Skirt, Sorrel, Vine, Wa uts, Whorts, Woodr of, Wormwood.

Aſtringents ſtrengthen the Stomach, Bowels and Joints, &c. Arrowhead, Avens, afil, Bears Ear, Birds Eye, Budsfoot, Bloodwort, Bramble, Buckſho, Buck Beans, Bugle, Burnet, Cabbage, Caltrops, Carraways, ervil, Toothpick, Cinkfoil, Colewort. Coralwort, Cranes bil, Cfwort, Cudweed, Cummin, Cypreſs, Dock, Earthnut, Elder, Elive, Ferne, Flower gentle, Fluellin, Fumitory, Goſeberrybuſh, Hesfoot, Harts Tongue, Hawkweed, Herbtwopence, Ironwort, Kisweed, Knotgrafs, Ladysbedſtraw, Ladysmantle, Lavender, Lens, Liverwort, Looſtrife, Lungwort, Madder, Marjoram, Meadſweet, Melilot, Mercury, Milkwort, Mock-Privet. Moonwort. Mſs. Motherwort. Mouſe Ear. Matherwort, Mugwort, Myrtle, Nalwort, Nightſhade, Orpine, Panick, Periwinkle, Plantane, Plmans, Spicknard, Pondweed, Primroſe, Rattle, Rice, Roſe, Roſemy, Rhubarb, Ruſh, Saffron, Sage, Sanicle, Selfheal, Shepherds Ndle, Shepherds Purſe, Solomons Seal, Southernwood, Sow Thiſtle, picknard, Stone Crop, Strawberry, Sundew, Tanſey, Throwax, oatwort, Tormentil, Turnſole, Trefoil, Twablade, Vervain, Vet, Vine, Walinut, Whorts-Winter-Green, Wormwood, Yarrow.

Attenuating herbs, Chickweed, Mountain, Cocks-head, Creſſes, Cudweed, Dany, Dragons, Dyersweed, Elder, Felwort. Ferne Wall, Flower de Luce Garlick, Germander, Gladdon ſtinking, Heath, Hemp-Water, Lavder, Leehs, Lovage, Marjoram, Maſterwort, Maidenhair Mouſe, Muſtard, Onions, Parſly, Parſnep, Paſqueflower Radiſh Savory Saxifrage, Scabious, Smallage, Southernwood, Woodbind, Wormwood.

B.

BAck wk and pained, Comfrey, Clary.
